621 As the woman's daughter's children grow up and marry, the woman's son persuades his wife's relatives to allow him to take 591 his wife to live in his home village. If he is a polygynist he usually takes the senior wife, but he may take the other or others as well. His own daughters now marry uxorilocally in the village if their mother is still alive. If the parents live long enough their daughter's daughters in turn marry and build their huts there. A crisis comes when either the man or his wife dies. The children have to decide whether to stay where they are or to move back to their own matrilineal village. If they do stay at their father's village they form the nucleus of a patrilaterally-linked group. As they grow older the senior male of their matrilineage may come to live with them. Through the years while this internal differentiation is developing within the village, the huts are decaying and being rebuilt. While new hut sites are being selected the physical form of the village is reflecting the continuing social differentiation.

621 At the same time gardens are being planted and crops reaped 361 each year. The soil in the first garden sites has probably been depleted already and is either lying fallow or is under cassava.

166 [1] Usually the same-heir of a woman, i.e. her daughter's daughter.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

As garden land becomes scarcer, members of the village have probably approached patrilateral or affinal kinsmen in other villages for personal grants of land. The lands immediately surrounding the village have long since become depleted and crops will only thrive on lands some miles away; then the village moves its site. How long it will be before this becomes necessary, depends on the fertility of the soil. Most villages must move eventually. When they do they may move a few hundred yards only, or on the other hand, they may select a site thirty to forty miles away. Whether the site is far or near, the migration is not a mass movement of the village as I have so far assumed for the purposes of analysis. As a rule a few villagers, including the headman, move first. The headman may be there a year or more before the second lot of villagers move. They usually move in sorority-groups so that when they build at the new site they place their huts in sections. Thus, the internal social organization of the village is reflected in the same way as before. The whole move may take three or four years before it is completed.

This process of development of the village and its gradual and continual reformation is sometimes hastened by the conflicts that appear within it. I have from time to time mentioned various conflicts that have led to the split of a village and the subsequent migration of one of its sections. The new section sets up a small hamlet in a distant locality, especially if the reason for its secession was sorcery. Here the general process of evolution is started anew. Its parent village, however, is strengthened by the migration since the dissident elements have left it. It continues to carry on its existence and to throw off other villages from time to time.

The number of villages, in the area I studied, is increasing with the increase of population, but the average size of each village remains constant and appears to have done so for many years.[1] But at the same time some villages as entities are disappearing while new ones are being formed. A few new villages become resorbed by their parent villages when for some reason they cannot continue their separate existence. Other villages fragment and do not split. The individual village members leave the village and go their separate ways. Very frequently when

[1] See the argument in Chap. II, p. 40.

1: Tew E-4 (no date) 1950 FT7 Yao FT7

even competing with the Arabs for the inland trade.[1] At some uncertain date there were two migratory movements away from the original home of the Yao. The first was a scattering from Hill Yao to surrounding hills, possibly due to internal dissension.[2] The next movement was caused by an attack of the Makua between 1850 and 1870.[3] One party moved northward, finally settling in Tanganyika, as has been mentioned. Four parties moved south into Nyasaland.

(a) *Achisi Yao*, who first moved from Mwembe to Michisi hill, and then to Nyasaland, where they are represented by those under Katuli Native Authority.

(b) *Amasaniqa Yao*, who first moved to Limaniqa hill, near the Lutwisi river, and then to the south-east of Lake Nyasa, where their descendants are now under Makanjira Native Authority.

(c) *Amangoche Yao*, first went to settle at Mangoche, near Fort Johnston. They were later driven out of Mangoche, by the last group, and scattered.

(d) *Amachinga Yao*, first went to the vicinity of Mandimba hill, near the source of the Lujenda river. They were ousted from this fertile valley by the attacks of the Lomwe, and came into Nyasaland in four parties.

One party of Machinga Yao under Nkata (later called Jalasi, or Zarati) attacked the Yao at Mangoche, drove them south and themselves finally settled there. Another party under Nsamala came with Nkata as far as Mangoche, then turned off to Chisai hill in the Fort Johnston area. A third group, under Malemia and Mtumanja, moved down to the Domasi valley via Isale hill, where they were attacked by the fourth Machinga group, under Kawinga. The latter had also accompanied Nkata's party as far as Mangoche, then crossed the Shire river to the west; here they were attacked by the Maseko Ngoni under Chidiamoja and moved south-east to Chikala, which they occupied until defeated by the British. Liwonde, the brother of Kawinga, moved to the Shire river.

The Amangoche Yao, after they had been scattered by the Amachinga, settled some in the Chiunda part of Dedza district, some at Mount Zomba, some migrated to Ndirande hill near Blantyre, some to Sache hill, some to Chiradzulu, Ngabodi, Malawi, and Nduda hills. These Amangoche Yao constitute about half the Yao population in Nyasaland.[4]

The Yao invasion of Nyasaland was not an organized military expedition, like that of the Ngoni. The first immigrants came peacefully in small kinship groups. They took advantage of Nyanja factions to consolidate their position, until, by 1876, when the Church of Scotland Mission was established at Blantyre, the Yao were a ruling class dominating the earlier inhabitants.[5] At the same time they vigorously carried on their slaving activities. In 1893 Thompson noted that the fertile country of the watershed between the Ruo and the Shire rivers was uninhabited because of Yao raids.[6]

The Yao of Nyasaland suffered from Ngoni raids, but were never subject to them. Several tributes have been paid to their soldierly qualities,[7] and indeed it took five years from 1891, when the Protectorate was declared, before the Yao were subdued and the slave trade, to which they had been principal parties with the Arabs, sup-

passed. Two contingents of Sikhs were sent unsuccessfully to take Kawinga's fortress in Chikala in 1894; Makanjira was defeated in 1894, Kawinga, Jalasi, Matipwiri, and Tambala in 1896.[1] They were later allowed to return, but they were not recognized as chiefs by the Administration.

The end of tribal wars and of slave-raids made large defensive settlements unnecessary, and the peace saw the splitting up of communities, which rendered the task of the Administration more difficult. The abolition of domestic slavery, by reducing the power of headmen, further contributed to the tendency to live in small scattered settlements. In 1912 the Nyasaland District Administration Ordinance was passed with the object of concentrating the villages into larger communities.

The first movement of Yao from Portuguese East Africa to Masasi took place about the end of the 1890's. According to one account they were originally expelled from the territory between Matola's and Usangu by the Mazeko Ngoni.[2] Then the Makua attacked them, breaking up the tribe still more, so that they migrated north to Masasi, the south-west of the Makonde plateau, and the banks of the lower Ruvuma. At Masasi they were again attacked by Ngoni, but defeated them, and then retired to the Makonde plateau, where they were again attacked by Ngoni. There is a tradition that at some time after 1892 the region was toured by an emissary of the Sultan of Zanzibar, 'Bakisi', who gave the whole country to Matola, a Yao chief, to rule from Newala. In the area between Masasi and the Ruvuma river the Yao are in a majority and politically supreme over their neighbours the Makonde, Makua, Ngindo, Matambwe, and Ndendo.[3] At Mtua, on the Makondi plateau, there is a settlement of Yao who were rescued from the Ngoni on the east shore of Lake Nyasa by Captain Engelhardt, and transferred there. These in outward appearance could hardly be distinguished from the Swahili of the coast.[4]

Demography

The Yao population of Nyasaland has increased steadily but its relation to the total population has not increased:

1901		1931		1945	
Yao population	Percentage of total population	Yao population	Percentage of total population	Yao population	Percentage of total population
189,363	15·0	246,[illegible]	15·0	281,[illegible]	15·7[illegible]

Even in the predominantly Yao areas the population is not homogeneous, either tribally or linguistically. In the three areas in which there are a large number of Yao (Kawinga and Liwonde of Zomba district and Nyambi of Fort Johnston), they represent roughly 48·6, 75, and 73 per cent. of the total population, the next most numerous section being Ngoni (Lomwe) immigrants from Portuguese East Africa.[5] Some Ngoni call themselves Yao when questioned.

The density in these areas is respectively 67·5, 32, and 32 per square mile.[6] This

chiefs. Mpumbe's village, which in 1947 was about 2½ miles from Kawinga's court village Nanyumbu, was originally one of Jalasi's adherents. Mpumbe fled with many others when the British attacked Mangoche in 1896. He went to the place where Lake Amaramba spills into the Lujenda River in Portuguese East Africa. When things seemed more peaceful, Mpumbe did not return to Jalasi's area, but preferred to seek his son Ngongondo, who had fled with a section of the village to Kawinga's area. He found Ngongondo at approximately the present site of the village, and settled with him. Ngongondo later moved eastwards to his present home in the Liwonde area. Both village headmen have achieved a certain amount of prestige in their new chiefdoms. Mpumbe was once a court assessor of Kawinga, and now holds girls' initiation rights. They have lost all touch with their former chief and are most unlikely to return to him.

A considerable number of Kawinga's villages moved into Mpona's and Chamba's areas, when they returned to the Protectorate. Their descendants to-day say that they did so because the soil was better in those areas than in Kawinga's.

Shortly after the British expedition, i.e. between 1896 and 1900, the Portuguese Government launched a punitive campaign against the Africans along the Portuguese-Nyasaland boundary. Many thousands of refugees came pouring into the Protectorate. Most of these were Mpotola and Nguru. The great majority settled where they crossed the boundary, i.e. round Chiuta, and Ngokwe chiefdom arose from some of them. After the Portuguese campaigns ended many other migrants came into the area. All those questioned gave Portuguese ill-treatment as the reason for their coming across.

During the first decade of the century the movement, as in the initial invasion, was predominantly south-westwards—from Lake Chiuta towards the Shire River and Highlands. Now, however, the movement is gradual. The first movement of a group may bring it just within the boundary. Then the next movement may take it to the south and west deeper into Nyasaland. Some of my village case histories show this. Table III sets out some movements within Kawinga-Liwonde area (except Chiwalo).[1] I asked about the place of origin of all the villages

[1] I use Kawinga-Liwonde area to include the chiefdoms Kawinga, Liwonde, Mpona, Chamba, Ngokwe, Chikweo and Chiwalo.

The Characteristics of the Three Categories of Headmen

In Table V I have set out the ethnic affiliation of the headmen in the three categories and also the dates of arrival of Newcomers in the Kawinga-Liwonde area. This table shows that

622
563
167

TABLE V

Numbers of Village Headmen who are Aborigines, Invaders and Newcomers

Total . . .	25	205	22	153	105	73	42	32	59	716

* In Ngokwe area, 39 villages are classified as Invaders who came into Nyasaland as refugees from the Portuguese military actions at the close of the nineteenth century.

easily the great majority of villages has come into the area since the White conquest. On the other hand, only 3·5 per cent are Aborigines. Just over a quarter (28·6 per cent) are direct descendants of the original Invaders or headmen of villages which have branched off from these. The remainder (67·9 per cent) are the Newcomers who have submitted themselves to the Invaders. Far more Newcomers came in during the decade following the White conquest than in any of the more recent decades.[1] We cannot argue directly from these figures that the greatest influx of Newcomers into Nyasaland took place before World War I. Newcomers in the more recent decades may be as numerous but may be passing out of the area more quickly, and therefore are not recorded in my survey. On the other

[1] Ngoni immigration in 1918–27 was due to exceptional causes.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

623 hand, all villages tend to disappear in time. We should there-
543 fore expect more of the headmen who came in during the
167 earlier decades to be forgotten, and the trend should be more pronounced than it is. In fact we know from other sources that immigration of the Nguru, who represent about one-half of the Newcomers, was greatest before 1930, and it is almost certain that the figures do reflect the change in the amount of Nguru immigration, and that the factors which may operate against the trend are not important. As a whole the set of figures suggests that immigration is slowly coming to an end.

622 The Aborigines are all Nyanja. Among the Invaders, 70·2 per
543 cent are Yao, 25·9 per cent are *Mpotola*, and the remainder 3·9 per cent are Nyanja and Nguru. The *Mpotola* Invaders are practically all in the Ngokwe and Chikweo areas, so that in the other areas (i.e. in Liwonde, Kawinga, Chamba and *Mpona*) the Yao represent 94·9 per cent of the Invaders; the remainder are *Mpotola*. Under Ngokwe and Chikweo who are *Mpotola* chieftains, 54·5 per cent (48 of 88) of the Invaders are *Mpotola*, and 37·5 per cent are Yao, and the remaining 8·0 per cent are Nyanja and Nguru. Among the 486 Newcomers, 35·8 per cent of the headmen are Yao, 15·4 per cent *Mpotola*, 43·8 per cent Nguru and 4·9 per cent are mainly Nyanja. In general, therefore, we may say that the Aborigines are all Nyanja; the Invaders are Yao in the major area and *Mpotola* in the other area; and the Newcomers are predominantly Nguru from Portuguese East Africa, though there is a fair proportion of Yao who have come from other Nyasaland districts.

There are significant differences among the three categories of
622 headmen in their religious affiliations. In general there are more
795 Moslems (71·8 per cent) among all headmen than Christians or
797 Pagans. But there are more Moslems among the Invaders than among either the Aborigines or the Newcomers.[1] There are more Pagans among the Newcomers, but the proportion of Christians among the Aborigines and the Newcomers is about equal (25·0 per cent and 21·9 per cent). These differences in religious affiliations are consistent with the different historical backgrounds of the two groups. The Invaders are the descendants of the Yao slavers, who in the past had been in intimate

[1] Invaders = 90·1 per cent; Others = 63·9 per cent; Diff. of per cent = 27·2; S.E. of diff. = 3·7; C.R. = 7·2; $p < 0{\cdot}0001$.

3:Stanner D-5 (ca. 1912) 1922 FT7 Yao FT7

That these several sections of the Wayao differ in many respects may be seen by comparing the Amangoche of *Africana*[1] with the Amachinga of this article. I am not sufficiently conversant with the Amangoche to make a definite statement on this point but I am inclined to believe that after longer residence and wider knowledge, Macdonald would have found that some of his statements needed revision. Those whom he considered the "Yao proper" but whom I prefer to speak of as the Amangoche seem to have a considerable admixture of Anyanja, since their language contains many Chinyanja words and many of their customs are practically those of the Anyanja. I am of the opinion that the Amachinga may be regarded as more typical of the Wayao, and except when ambiguity might arise, I shall speak of them as the Yao.

The original home of this Bantu speaking people is uncertain; in historic times all the sections of the Wayao were originally grouped in that part of Portuguese East Africa around the hill called Chao, whence they probably derived their name, Wa Chao or Wa Yao. About the middle of the nineteenth century, as the result of inroads by neighboring tribes of Abako from the southeast, and raids by the Makwangala, a branch of the Angoni of Zulu origin, from the northwest, disruption of the Yao people occurred, and the divisions mentioned above, moved toward Nyasaland. The Mamanga branch settled for the most part along the eastern shore of Lake Nyasa but a sub-section known as Tambala Yao reached the west side of the lake. The Machinga made a settlement near Lake Chiuta under a number of old chiefs, including Malenya (Nakutumbe), Kawinga, Chawinda, Kalindula, and Mazio.

The descents of the Makwangala again caused the Wayao to move on from Chiuta to Nawinga on the Mikoko stream. Here Malenya suffered another defeat at the hands of the Angoni; many of his people were driven off and taken to the neighboring Angoni country where they were held in captivity for some time. Finally they were rescued by the enterprise of one of Malenya's old men, Kalungula, who went alone to the Angoni, saying that he wished to live with them and with his own brethren. One day, he asked the Angoni if they would like to see their captives dance, and when they assented, he called the Yao together, and clapping his hands to keep time, he began to sing one of their dance songs. Gradually he gathered all the Yao into the village open space, dancing and singing; then, keeping to the same air, he told them why he had come, using their own language which the Angoni did not understand. "Malenya, our chief, remains at the Mikoko stream. It is not far off. We must all join him again. Now dance for joy. If anyone does not return them, it is his own fault." Then, a few at a time, the dancers left the crowd and stole away into the bush and, as night came on, they all made off and reached Malenya's camp in safety.

Malenya's people were again attacked by the Angoni, and on this occasion they defeated their enemies. The Angoni retreated and skirting Zomba mountain, reached the third

3: Stanford D-5 (ca. 1912) 1922 FT7 Tao FT7

River at Mpindi where they intended to settle. Here, an old chief, knowing that their presence would cause trouble, persuaded them by talks of many cattle far away on the other side of the river, to cross over, and there they remained.

Kavinga and Malenya, then, to avoid further raids from the north went down to the Upper Shiré River near Lake Pamalombe, Kavinga going to Mvera, while Malenya stayed on the east side of the river among the Anyanja, claiming friendship with them because they have many of the same clan names. Later, Malenya moved up to the highlands about fifteen miles north of what is now Zomba, and Kavinga went to Chikala. Malenya was friendly with the Anyanja chief, Chenyani, who was of his clan, and was therefore able to buy from him for a red blanket all the country from the Likwenu stream to the Namadi River, a district thirty to forty miles long. There he people settled.

Kavinga was once again attacked by the Makwangwala from the north, but beat them back, after which they returned to the country whence they came — German East Africa near Lake Nyasa. The Angoni chief was killed in this battle, and the story goes that two Yao captives were told off to carry the embalmed body back to the Angoni country for burial. As they were not provided with food for the journey, the two men began to eat the corpse. After several days, this was discovered; one of the men was killed but the other escaped to tell the tale. These were barbarous days, and the Yao relate that after raiding a village, the Angoni would leave a pot cooking on the fire with the body of a child in it, well covered with leaves, so that when they had gone away with their booty and the villagers who had taken refuge in the forest returned hungry, they would start eating the leaves and then come upon the body of the child, and having eaten of the juices of a human body, they would have committed a terrible sin.

The immigration of the Amachinga into the country around Mangochi mountain caused the Amangoche Yao settled there to move. They passed into the Ntondya and Mlanje districts, and invaded the country of the Anyanja. The chief, Malenya, known as Nakwambo died about 1880, and was succeeded by his nephew, a sister's son, according to the Yao custom. This nephew, Wandalama, then took the name of Malenya.

In consequence of this succession there was considerable bad feeling between Wandalama and the other aspirant to the chieftainship, his cousin, Kanenja. The latter moved down to the plain below Zomba mountain to the south, where he gathered about him a band of friends and endeavoured. Malenya decided to attack him and with this purpose, sent two messengers, Wapiti and Mayondola, asking Chikwi and his Angoni to come and do the job for him. Led by Nyamuka, Nyamadi, and Kalanji, the Angoni came from the Shiré River opposite Ntondya, via Mulanje. They attacked and routed Kanenja who, owing to the thick country, managed to fall back with most of his people toward Lake Chilwa. Here he was received by his cousin, Chimombo, a son of Nakwambo, and father of my interpreter, Chenga, who ruled among the Anyaw. Afterwards, he moved to Mpindi on the Shiré where he built a stockaded village.

* Died July 14, 1916.

3:Stanner D-5 (ca. 1912) 1922 P77 Yao P77

After the defeat of Kumtaja, Chikusi and his Angoni routed Kumtumanja, a brother of Malemya, who had also been making a nuisance of himself. Kumtumanja, who suffered from a large hydrocele, is supposed to have lost his balance on account of this impediment, and fallen into a stream where he had stopped to drink and to have been drowned. 175 167 648

The Angoni still burned for more warfare, and Malemya, fearing that with his work done, they might prove a nuisance to him, turned them on to the Amangoche Yao around Blantyre. Thither they set off on a raiding expedition and returned to their own country via Chiwalenda. This raid took place in 1884.

During the next few years, Kawinga, who had always held a grudge against Malemya for having got ahead of him to the best country, occupied the chief with raiding and warfare. In 1891, Wamlalenza died, and was succeeded by Chimala, the son of his sister, Chidgero, and at the present time, he is the reigning Malemya.

It is of these Amachinga Yao under Malemya that the following notes are written. I have gone at some length into the history of these people in order to disarm criticism by those who, familiar with other sections of the Wayao, may not agree with all my statements.

Life History. Generally speaking, the life of the Yao native in the old days was full of 181
more spiced with the excitement of intertribal warfare. He cultivated his crops, kept a few goats and chickens, and relieved the monotony by hunting. Even domestic slavery was not a great hardship, nor did the Yao probably suffer from coast slave-raiding to the same extent as many other tribes. As children, they are wont to spend their days free from care, seldom reprimanded, and rarely or never physically chastised. During youth, the more 897
easy lot is theirs, with the addition from time to time of a few small tasks; minor household duties for the girls, such as drawing water, sweeping the hut, and "minding" the baby, while the boys hoe or fetch and carry for their fathers in the village or in the bush. Left to their own devices, they play games,[1] dig out rats' nests, or shoot birds with bows and arrows.

Now, as formerly, when they are about five years old, the girls usually go to live with their grandmother who may then have a number of children around her; or several girls of a somewhat more advanced age may sleep together in a hut dormitory. Boys of this age all live in a big hut called *ngombo ja chachanda*, "the boys' dormitory." This is their quarters until one by one they leave to get married. The girl, similarly, remains in the girls' dormitory or with her grandmother until she is taken in marriage.

Puberty. The first interruption of this placid life of youth is the event of puberty or the 831
first initiation ceremonies.[2] Formerly, these ceremonies took place after puberty but of late years, as is pointed out elsewhere, they are performed much earlier.

Child betrothal. Betrothal in childhood or before birth is not uncommon. A woman 584
learning that some friend of hers is pregnant will arrange that if a girl is born, her son will marry the friend's daughter, or a man taking a fancy to a little girl will asket her as his

[1] Vide infra, p. 365. [2] Vide infra, p. 366.

6: Mitchell E-5 (1946-1947) 1949 FT7 Yao FT7

They are semi-subsistence cultivators who own no cattle and whose diet is therefore largely vegetarian, viz. sorghum and maize-meal with ground-nuts and beans and certain leaves together with a small quantity of cassava roots. 105

Marriages are contracted early in life with little difficulty and ceremony. Formerly girls were espoused as mere children, and this still happens, but whether the custom is falling away or not I could not check quantitatively because the memories of the old women who had been married as children forty or fifty years ago could not be relied upon. Table I shows the ages at first marriage for a sample of 121 married women for whom this information was available. 582

Where marriage takes place so early we can expect that the mean age when child-bearing commences will also be early. Table II shows the median age of mothers at the birth of their first child. 163

TABLE II. *Age of Mother at Birth of First child*

Present age-groups of mothers	Age of mother at birth of first child									Total	Median age at birth of first child
	10½–15	15–17	17½–20	20–22½	22½–25	25–27½	27½–30	30–32½	Over 32½		
Under 30	9	16	14	17	6	4	..	..	..	74	17·9
30–45	10	14	10	9	4	7	3	4	3	66	19·8
Over 45	1	7	9	9	3	6	1	3	1	46	20·6
Totals	20	37	31	35	13	17	6	7	4	186	19·3

From these two tables it is clear that nearly all women in the community are married early and that child-bearing commences very soon after marriage.

Table III shows the conjugal status of all women over the age of 15. 162

TABLE III. *Conjugal Status of all Women over the Age of 15*

Present age-groups	Never married	Wives of			Divorcees	Widows	Total
		Monogamists	Polygamists	Labour migrants			
Under 20	29	15	3	4	..	..	47
20–30	3	27	18	9	9	3	79
30–45	1	31	19	3	9	3	70
Over 45	..	14	10	1	11	16	52
Total	37	87	50	17	29	24	248

Here we see that of all women under 45 (194), 141 (73 per cent.) are married, though only 87 (45 per cent.), i.e. the wives of monogamists, have their husbands living permanently with them. Another 40 (20 per cent.) were married to men who were married to other wives, so that while their husbands were not living with them permanently they were nevertheless with them periodically. Eighteen other women (9 per cent.) were married to men who had left to work outside the area and hence were not living with their wives at all at the time of the survey. Visits by men to places of work outside the area may last 2 years or more. It should [595] [591] [167]

[P.142 A]

II. THE POLITICAL STRUCTURE
Before the whites came

173
643
167

It is difficult to picture what the political organization of the Yao was like before the Whites came into the area, but informants—especially the old men—do describe the conditions that existed in the early days, and in addition to this, there are some useful reports in Duff Macdonald's book[1] which was written before European influence was strongly felt.

Informants describe the movements of the Yao into Nyasaland in terms of small family groups under the leadership of a male matrilineal relative.[2] These leaders bear the same names as certain of the village headmen to-day, and the present village headmen claim to be their matrilineal descendants. Among the kin-group leaders were such outstanding personalities as Kawinga, Liwonde and Nkata.[3] These men were military and commercial leaders and much of their prestige derived from their prowess in trade and war, pursuits which in those days were intimately interdependent. People nowadays describe the chiefs as possessing many slaves, guns and gunpowder and having great "strength". In the history of the chiefs Nkata, Liwonde and Kawinga the pattern of conquest is similar. A group of village headmen under each chief moved into Nyasaland to settle either by treaty as Nkata who settled with a clan-relative among the indigenous Nyanja, or by direct conquest as Kawinga. After settling down they started sending out forces to subdue local chiefs until the boundary of the territory of some other powerful chief, usually another Yao, was reached. When this happened a definite territory was agreed upon by the two chiefs. Within this territory the population was increased by immigration from other areas or by slavery. Village headmen moved from a less to a more powerful chief because of the security he offered them. They were said to "seize the leg"

II. The Political Structure
BEFORE THE WHITES CAME

173 643 167 (*kukumula lukongolo*), i.e. to surrender to the chief in the area. Also the chief sent out expeditions to capture slaves or he purchased slaves with the cloth and beads he had exchanged for ivory at the East coast.

643 421 Within his territory certain privileges and rights were held by the chief and he had certain religious duties to perform in which the unity of the people in the territory was expressed. In general the chief had rights over any ivory either found or hunted in his territory. If a dead elephant were found the tusks belonged to the chief, though he usually rewarded the finder with cloth. [224] If a man killed an elephant the tusk that lay on the ground belonged to the chief while the other belonged to the killer. The killer's tusk was in- [439] cluded in the chief's caravan to the coast and its value paid in cloth to the killer when the caravan returned.

643 657 The chief was also entitled to an annual tribute of food and beer from all villages in his area, but this was used to entertain visitors who came to the court-village.

643 782 The chief's religious duties lay mainly in propitiating the spirits of his ancestors on occasions when the community at large, in contrast to the chief's own private affairs, was either threatened or directly affected. The most obvious occasion was immediately before the rains came when flour was poured on the tree shrine and the spirits of the ancestors asked for good rains. Later when the rains were over a similar sacrifice was made asking for a good harvest. Sacrifices to the ancestors were also made on two other public occasions. They were made when some calamity had occurred or was believed to be impending. A run of unsuccessful campaigns induced Cingwalugwalu, a son of the Yao chief Mponda near Fort Johnston, to ask his father's father's brother to make sacri-

I. REGION OF MOZAMBIQUE

YAO, MAKUA-LOMWE, MAKONDE

In the region between Lake Nyasa and the east coast of Africa, between the Lukuledi river in the north and the Zambezi in the south, there is a congeries of peoples whose culture is very similar over the whole area. They are the *Makonde* group, the *Yao* and the *Makua-Lomwe* peoples. Of these only the Yao has been studied in detail. The scanty information about the other inhabitants of the region will be summarized after the fuller summary of the Yao material, so that points of similarity and difference may appear more clearly. Fortunately for this procedure the Yao occupy a central position, from which they may be taken to represent in many ways the culture of the neighbouring peoples. 101 171

The *Makonde* inhabit the Makondi plateau between the Lukuledi and Ruvuma rivers (39° and 41° longitude). Closely related to them are the *Matis*, on the plateau of that name, south of the Ruvuma; the *Muera*, north of the Lukuledi river, on the Rondo plateau; and the *Matambwe*, in the Ruvuma valley. It is possible that the *Ngindo*, *Ndonde*, and *Ndendule* should also be included. This group seems to be culturally and linguistically distinct in several points from the Makua and Lomwe, and the Yao, although they have in common the main features of political and social organization. 130

The region of the *Yao* is between the Ruvuma, Lujenda, and Luchilingo rivers. They also extend into Nyasaland and Tanganyika Territory. 131

The *Makua* occupy the area between the Lujenda and Lurio rivers and the coastal strip from the mouth of the Lurio nearly to Quilimane. 130

The *Lomwe* are sometimes regarded as a sub-branch of the Makua, but probably have as much right to be called a separate tribe as the Yao. They are bordered by the Makua on the north, east, and south, and by Marevi on the west. South of them, around Quilimane and east of the Mlanje[1] mountains, are the *Chuabo*,[2] related to the Makua and Lomwe, and also the Podzo, on the south bank of the Zambezi delta.

The region is forested lightly or heavily, and varies in character according to the elevation, soil, and humidity. The coastal belt from Mozambique northwards has thorn-bush vegetation, thick in parts, giving way to light forest and grassland farther inland. In the uplands there is good forest, broad-leaved and evergreen, and deciduous trees near the lake district. Throughout the territory there are narrow strips of richer vegetation along the watercourses, and along the coast mangrove swamps occur at intervals. In the highlands the mornings and evenings are cool and pleasant for eight months of the year, and it is even cold at night in May and August, temperatures of 50° and 60° F. being common in the day. In the hot season the heat is severe, especially in the valley of the Ruvuma. The mean annual rainfall for Mozambique is 39.50 in. and for Likoma on the lake, 39.9 in.[3] 133 132

The people are primarily cultivators, but the Yao keep cattle in the highlands. Both Yao and Makua traded with the Arabs and were energetic slave-raiders. The coast Makua and most of the Yao are Islamized. 135

764 performed these services used to enter a special relationship of privileged familiarity with
767 the village of the dead. This has died out in Nyasaland, but accounts of *Utasi*[1] among the Yao at Masasi and Songea suggest that something of the kind is still practised.

Chiefs and headmen are not buried outside the village, as are other persons. They used to be buried before their own huts, but now in the centre of the village. Shrines were raised over their graves, at which offerings of beer and flour were made. If the village was moved the pot of beer sunk into the ground at the chief's grave was also removed and reinstated at the new site. A dead slave was buried by his fellow slaves; normal rights of sepulture were denied to suicides and to persons who had died in taking the poison ordeal (that is, convicted sorcerers).[2]

OTHER DISTINCTIVE CULTURAL FEATURES

301 The Yao have a tribal mark of two short cuts on each side of the face between the
304 eye and the ear.[3] Their women did not wear the *pelele*, lip-ring, although their neighbours the Makua and Makonde did;[4] the fashion seems to have spread to south Nyasa
171 in the 1880's, as many travellers commented on it, without distinguishing whether the wearers were Yao, Nyanja, or Lomwe.[5] The women used to pierce the left *ala nasi* and insert a metal or lead stud, *cipini*.[6]

MAKUA-LOMWE

TRIBAL AND SUB-TRIBAL GROUPINGS AND DEMOGRAPHY

Nomenclature

The *Ma-* in *Makua* is not a prefix, but part of the name. Variant spellings are *Makua*, *Makua*, *Makuane*. They are sometimes referred to by the name of one subdivision, the Mudo Makua, and called *Aseto* or *Meto*.[7]

The *Lomwe* (also spelt *Lomwe*) are called *Alolo* by the Yao, and are also frequently called *Angoro* (*Ngoro*) which is an old name for the people of the region.[8] Any of the *Makua-Lomwe* peoples who have migrated into south Nyasaland are collectively termed *Ngoro* in official reports; Ngoro is a hill in the region of Portuguese East Africa, whence they come, but they should not be confused with the Ngoro of Tanganyika.[9] Another name for them is *Arolomo*.[10] *Alolo* is incorrectly applied to all the Lomwe; it has a stricter application to the Cuabo from Quilimane.

843 842 *Pregnancy and childbirth.* An event of the first importance in the Yao world is the first conception or rather the "quickening" with the first child, *Lilaw*; this is described below, together with the other ceremonies of the *Unyago*.[1] After the ceremony of *Lilaw*, the period of waiting until the birth of the child passes without further event. A point of medical interest is that native women suffer in many cases from "morning sickness" during pregnancy. That they may have perverted appetites is also recognized, grain husks and crabs being among the things most commonly desired. As the Anyanja,[2] the Yao believe that the child develops from the semen of the male, although the growth of the child is in some way connected with the mother. [71]

844 When labor commences, the woman retires to the bush a few hundred yards away from her house, attended by some friend, seldom a midwife, and never by her own people, though the mother and the mother-in-law will probably be near the spot. If labor is not completed by evening, they return to the house and the birth may take place actually within its walls. [71] The attitude assumed in labor is the same as that adopted by the Anyanja,[3] the patient semi-reclining in the arms of another woman who sits behind, grasping her belly. The vulva is smeared with a decoction made from the bark of the *mpoza* tree as a lubricant, but no other help is given. *Kumbuli* is the name given to the place of confinement; *m'buli* means the house where the woman remains for a period after the confinement. The Yao recognize the protruding bag of amniotic fluid and call it the "oil-gourd". "*Chinani chikanicha?* (The oil-gourd, has it broken?)." They wait until the placenta is delivered before dividing the cord. This is done with the sharp edge of the outer covering of a maize stalk or sugar cane; a knife is never used. The section is made near the placenta or half-way between it and the child, after tying the proximal end with a bark string.

The woman who receives the child at birth is the *ambuwanga*, friend or godmother. If the infant is born in the bush, she carries it back to the house whither they go as soon as labor is completed. The mother herself, unless she is very ill, goes out shortly afterwards and buries the placenta in the ash-heap, using a stick to dig the hole, never a hoe.

847 After the birth, the mother and child must remain in the house until the umbilical cord separates, during which time the husband does not enter, though he may come to the door to look in at the child.

The day on which exit from the house is made, the floor is entirely replastered with mud. 852 553 303 The baby's head is shaved and a cross is made upon it with *mpeza*, a kind of red pigment. The husband may then receive the child and in the case of a first-born, it is he who gives it its name; other children may be named by the *ambuwanga*, the mother, or the aunt.

When the mother leaves the house to appear in public, the *ambuwanga* who put her *lilaw* on,[4] removes it.

So long as the infant remains in the house, care must be taken as to persons allowed to handle it. A woman who has recently had a menstrual period or cohabited with her husband,

[1] Vide infra, p. [illegible]. [2] Stannus, op. cit., p. [illegible]. [3] Ibid. [4] Vide infra, p. [illegible].

The *wali* thus remain for about a month under the care of their guardians, during which time they receive most valuable instruction as to their behavior to others, especially to their elders and to members of the opposite sex. Their faults are brought home to them and many little pieces of advice given. They are taught the household duties which will be their lot thenceforth and they are forewarned of approaching puberty and what it means to them. 881

During this period their child-names are not used and until their new names are assigned to them, they are called after birds and animals, generally some of the smaller animals, e.g. *Anyingalwe* (*mpingalwe* = the shrew rat), *Alitawala* (*litawala* = a big species of rat), *Analyelye* (*nyelyelye* = the shrew). I have been unable to ascertain whether these have any totemistic significance. 551

The girls are usually given a fright to impress on them the danger of lions; one night an imitation of a lion approaching their enclosure is made when all is dark; then all of a sudden one of the *chewani* armed with big thorns instead of claws will spring upon one of the girls, generally picking out the worst behaved.

When the term of instruction is completed, they again adjourn to *Chiputo* for two days where *Unyago* is danced on the first night by women, on the second night by men. The first day is spent by a party of men and women in the bush, preparing figures of animals and their dress for the dance. The women wear a small garment of bark-cloth called *matakapaiule*, a word which literally means "buttocks of a frog" but which is used with the meaning of trousers and refers in this case to the fact that the bark-cloth is sewn round the upper part of each thigh into a garment like a pair of knickerbockers. Round the abdomen and chest are worn bands made of short pieces of small, decorticated millet stalks; similar bands are worn on the legs and arms, two on each thigh, two on the leg, one at the wrist, below the elbow, and one round the upper arm. In the dark these give the body the appearance of being painted in alternate bands of black and white. They also wear a headdress of the same material. 292 301

On the first evening of the return to *Chiputo*, this party of women appears after dark; they dance in a row, advancing and retiring in step, swinging their arms and moving their bodies to exclamations of *Bi-di! Bi-di!* Other women dress up as men, wearing long beards made of *likanga*, a kind of fibre plant.

The second night, the representations of animals made of grass and bamboo framework supported by men appear, the elephant, the rhinoceros, and various antelopes being the common figures, also the zebra made of painted bark cloth. These animal figures are similar to the *ciwapa* or *ciwapa* of the *Anyanja* and to those of the *Awisa*,[1] but the *nachimwa* is unknown among the Yao. 171

During all these presentations at *Chiputo*, the *wali* seated on mats are the chief spectators and are duly frightened by the performances of the last two days.

3:Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

137 278 cajiba is a more deadly poison and is not used in the poison ordeal but is administered with intent to murder; it is usually given mixed with beer or in porridge. Death is said to be caused in a few hours. *Lipembele:* the Yao name of beetles belonging to the genus *Mylabris*, found in large numbers in June and July in the native gardens where they do much damage to the bean crops. The name is, I think, more especially applied to a species with 136 278 yellow bands, those with red markings being said to be harmless. These beetles are prepared for poisoning food by frying and then grinding into a powder. In this form, they are administered with intent to murder or they may be taken for suicidal purposes, five or six beetles being used. These beetles contain cantharidin in a greater proportion than cantharis itself. The symptoms described by the natives as occurring after exhibition are constipation followed by high fever, and death eight hours later. This same beetle is known to other tribes and is the *nsewe* of the Anyanja.

The bile of the crocodile, *ngenge* (*ndulu*, Chin.); *ngenge* and *ndulu* also are used, meaning the gall-bladder. Crocodile gall has the reputation of being a powerful poison over nearly the length and breadth of Africa. It is known, I think, to all the tribes in Nyasaland. In this district, they qualify their beliefs by saying that the bile of crocodiles from Lakes Chilwa and Chiuta which do not eat men is not poisonous. The poison is also said not to be used on the Lower Shiré River where, and where only, crocodiles are eaten as food by the natives. Among the Yao, the gall-bladder is removed with the contained gall, dried, and then ground in a little mortar or on a stone. The dose of the powder is said to be as much as would cover a sixpence. Symptoms are said to be great pain in the stomach, swelling and discoloration of the tongue, and loss of speech. Public destruction of the gall-bladder of any crocodile which has been killed is said to be the custom on the West Coast of Africa, and the same is true of some tribes in Nyasaland as at Kotakota, but so far as I am aware, this is not done among the Yao. [171]

The gall of other animals is similarly used, but among the Yao I am not quite certain of the species. Lipiri, the puff-adder, certainly is utilized, and I think other snakes, such as *Nahukuti*, a grey, ash coloured snake, *Lisapi*, a water-snake six feet long, and *Sungu*, the scowling snake. Certain lizards are also employed, such as *Likundumbu*, and frogs, both *Chinde* and the running frog, *Chimwemwe*. Scorpions too have found a place among poisonous preparations, so it is said, and likewise, the bile of some mammals. Bamboo fibre, animal hair, the bones of fish, and ground glass, I have also heard mentioned as being administered with the desire to produce a fatal result.

Papal cases made of twigs and the contained pupa (species of the family of *Psychidae*) called *chikwangu* or *chikwa ngwi* (from *kwa-kwa*, "to eat" and *ngwi*, "fire-wood") are said when eaten by cattle to cause death. I cannot vouch for the truth of this nor can I say whether they are ever given to man.

137 278 A wild yam, *mbwa* (*mulupa*, Chin.) is poisonous if not well boiled and the water thrown away, but is not used as a poison so far as I know. The same is true of *ngenge*, a kind of cucumber.

3: Stanton D-5 (on. 1912) 1922 FT7 Tao FT7

never leave any food outside at night, not even the chaff from the grain she has been pounding, but these most miserable of beings be attracted by it.

Chimwe is a word common to several tribes and among them appears to have various shades of meaning. Among the Wayao, the dwarfs are "the little people" of the legendary order. They rob the gardens and come not among the pumpkins; their little footprints can be seen where they have passed hither and thither; fruits and vegetables that they touch will become bitter. To prevent these disasters, the Yao, at the time when their crops are ripening, place different kinds of vegetables at cross-roads, hoping thereby to satisfy the dwarfs and prevent them coming into the gardens. As far as I am aware, the dwarfs have nothing to do with fairies and are in no way connected with *Mwaupe*, to be mentioned below, as Macdonald believed.[1] The chimwe is variously said to be "like a man but rather like an animal." He has two legs but goes on all fours.

The Yao describe another legendary race of "little people" who used to live in this country and who may still be met with, — "who knows?" They were of a very small stature, grew long beards, were very wealthy, quarrelsome, and fierce, and carried spears. When anybody met one, he was immediately asked: "*Mwandwale Jumpi?*", "From how far did you see me?" and it was always well to pretend to have seen the little man coming a long way off and make him believe he was considered quite a big person; if you said "Hallo, I have only just spotted you!", he would immediately spear you. They are commonly supposed to dwell on the tops of high mountains and are iron workers. They are called the *Mwandwale Jumpi*.

There is no relation as far as I know between these two classes of "little people," but I think these stories go to uphold the theory recently enunciated by Hastings Gulliford in his Huxleian Lecture (1914) that folk-lore fables of lobgoblins, etc., have a basis in fact. He believes that dwarf races at one time were to be found, possibly over a very wide area of the globe. In this country, I think it may be that we see the transition from historical facts to true fairy stories.

The Anyanja have the same legend about these "little people," the usual recurrent "where did you see me?" It is indeed not only wide-spread throughout this country, (the Ahenga and Ankonde in North Nyasa district speak of the mwandwanwale who ask the same question), but there is a very similar legend among the Akikuyu in British East Africa.[2]

The chimwe is doubtless the chimwi of the Anyanja, mentioned in Scott's dictionary,[3] as Miss Werner[4] has suggested, for one finds that among the Anyanja at the southern end of the Protectorate, the chimwe is described as having only one side to his body so that he is invisible when viewed from the off side, thus resembling the chimwe who has one half of his body made of wax.

3:Shannon D-5 (ca. 1912) 1922 FT7 Tao FT7

Amusements. Among the natives of east central Africa, the chief form of amusement, 521
apart from dancing, might be said to be sitting and chatting; it is interesting to note that there is a word to express "sitting up all night talking." Often the younger members of the community will gather about one of the older men and listen to his stories of travel or fighting in the old days, and some men gain quite a reputation as raconteurs. Or again riddle-asking is indulged in to pass the time. Women and girls do not assist at these sittings.

Among the Tao youth, wrestling, *ku-lingana* (from *ku-linga*, to try), is practised 526
with a firm grip and no leg-work; the victor always accentuates his victory by hitting the man who is down, and pummelling his face with his fist or a stone.

A ball game, played originally with a ball of native rubber from which it derives its name, *mpira*, is a great favorite among boys. A dozen or more are divided into sides but all mixed up together. The ball is then thrown into the air to a member of the same side, any of the opposite side jumping into the air to try and catch it, accompanied by the clapping of hands to time.

"Hide-and-seek," *chijwanjwan*, and "touch," *chow* or *chaukile* (*chipiani*, Chin.), are played by boys.

Chimuqu: toward the end of the ball game, when it is decided to finish, each boy as he catches the ball puts it to his nose to smell (*ku-muqu*, to smell). He is then "out." At the end of a game of "touch" played in the water, when one touches another, he jumps out of the water, puts his cloth up to his nose "to smell," and is then "out." His cloth may be thrown to him to "smell" while still in the water, after which he gets out without hurry. The object is not to be the last "in." I am unable to explain this custom.

Kamale-kamu is played by girls, naked, from "dof" the mohammedan month when outdoing anything. 524

Mikankao: the Board and Counter game is played in nearly every Tao village. Dr. Sandeman[1] has given a very complete account of a number of the games played by the several tribes in Nyasaland and I need add nothing to his explanation of the methods of playing.

Similar games are widespread throughout Africa and are well known in the West Coast under the same methods. The several games are played, either simply with holes in the ground and small stones, or with a board and a kind of seed procured from Zanzibar. The board is called *mikankao* and the pebbles or seeds or other counters "*mamiro*" (*ijimiro*). Dr. Sandeman uses this word as the name of one of the games. The *Angoni* call the counters *mamiro*. The holes in the board or in the ground (Pl. XXII, fig. 10) are called *ipata* (sing. *chipata*) from *ku-pata*, to strike, hunt, or put down with a thud, to "plant down," and refers to the way the counters are "planted down" in the holes on the board when playing. The large container at the end of the board is simply to hold the counters out of play and is called *mpamba*, "the house," or *kitoko*, "the hole." The counters are

[1] Sandeman G. Sandeman, "Native games of Central Africa," Journ. Anth. Inst., 1903, vol. 33, p. 156-159.

844 believes that she will die. The man's representatives are therefore able to establish the child's paternity from the birth-pang confessions of the woman.

846 The child is kept in the hut where it was born, for six or seven days, while the umbilical cord dries and falls off. During this time (*kwali*) the child is unnamed, and (559) it is named only when it is taken out of the hut. Should it die during this period of seclusion it remains unnamed and is referred to by a special term (*kiepa*, pl. *matepa*). (128) I have therefore been able to enumerate live births by means of the distinction made between miscarriages and still-births (*kwanaga*) and children who lived long enough to be referred to as *matepa*. After the birth of the child the woman may not have 846 intercourse for four or five months. To do so would be to endanger the life of the (855) child with a disease called *ndoka*,[1] which is contracted by a sexually inactive person 834 when he comes into contact with a sexually active person. The husband may have intercourse with a second wife, but must take care to medicate himself so that he does not endanger the life of his child. When the child is about 4 or 5 months of age the parents perform ritual intercourse and medicate the child against the mystical dangers of sexual activity; sexual relations are then resumed.

834 The Yao say that a second child should not be born while the first is still being (855) suckled. Since lactation continues for about two years I am uncertain whether 764 monogynists remain continent, as they say they do, or whether *coitus interruptus* is 842 practised. It is quite usual for husbands to become labour migrants when their children are still very young. I have known women to write to their husbands who are away working and tell them to return because their children have 'grown', i.e. have been weaned. Labour recruiters had difficulty in recruiting men immediately after the soldiers had been demobilized at the end of the war, because the women objected, saying that they had remained childless long enough and the men must first wait until children were born. However, actual examination of birth-dates (163) shows that children are sometimes born within a year of one another and sometimes there are quite big gaps. The two-year gap between children is probably an ideal which few attain.

5. The Estimation of Fertility

(a) *Sundbarg's Age Divisions*

128 As a preliminary estimate of fertility, Sundbarg's trichotomy of ages may be considered. The argument behind this division of the population into Youth, Middle Age, and Old Age is that those populations with a high proportion of youth have a greater tendency to increase. Table V shows this trichotomy for the Yao with the same material for some other populations shown for comparison. Where the gross reproduction-rate is known for the period shown in the table, this is included.

128 At any one time a certain proportion of the population is absent from the area, 162 usually at some labour centre. Hence the proportions of the population are distributed abnormally. In all there appeared to be a total of sixty-three men, women, and children absent from the hamlets, who would otherwise have been living there. Hence in Table V these have been included in the totals in the 'Yao with absentees' proportions.

[1] A disease of this sort is believed in by many Central African tribes. Among the Nyanja-speaking peoples it is known as *ciwapi*.

(191)

Table V shows that the age-distribution for the Yao sample is very similar to certain other populations commonly held to have high birth-rates. There appears to be some correlation between the proportion of youth in a population and the gross

reproduction-rate. Judging from the material presented in Table V a high gross reproduction-rate may be expected among the Yao where the proportion of youth is much higher than in the case of those whose gross reproduction-rates are quoted.

(b) The Proportion of Children under 5 to Women 15-50

Fertility may be judged more accurately than by the stickometer by considering the proportion of children under 5 to the total number of women between the ages of 15 to 50, i.e. the fertility ratio.* In the whole sample there were 147 children under 5 and 150 women between the ages of 15 to 50. This is a ratio of 966 children per 1,000 women. However, women who are going away from the area for a long time, as, for example, wives of men who are going with their husbands to some labour centre, possibly in South Africa or Southern Rhodesia, usually leave their weaned children with their matrilineal relatives. This means that the ratio quoted (966 per 1,000) is, in reality, an over-estimate of the true ratio. In order to arrive at a nearer estimate of the ratio we must consider the children actually born to women in the sample. Table VI classifies all children both dead and surviving born to women between the ages 15 to 55. From this table we adduce that there were 150 women between the ages 15 to 50 (for whom details were available), and among them they had 147 surviving children under the age of 5. This is a fertility ratio of 778 per 1,000 women. Table VII shows the fertility ratio for 18 countries with their gross reproduction-rate for the same period as the fertility ratio.

* It is more usual to take the number of women between 15 and 44, though recently the age-group between 20 and 49 has been used. I have taken the age-limits 15 to 50 because of the early age of marriage, and because it appeared that the average age of cessation of child-bearing is about 50 (see Table VIII). For a discussion of the suitability of this measure of fertility when birth registration is not practised, see T. Lynn Smith, *Population Analysis*, McGraw Hill Book Co., New York (1948), p. 198.

(199) [b] Same used the age-limits up to the [illegible] publication.

There is, as one would expect, a close association of the fertility ratio with the gross reproduction-rate. In fact, the product moment correlation coefficient for this series of data is [illegible]. By fitting a straight line to the series of points it is possible to make an estimate of what we could expect the Tao gross reproduction-rate to be on the basis of a fertility ratio of 7·18. When this is done, the expected gross reproduction-rate falls between 2·99 and 2·43.* It is not suggested that this figure is a reliable estimate, since the mortality rate in the first five years of life must affect the association between the two measures. There are almost certainly differences in this respect between the relatively advanced countries, used to derive this estimate, and the people with whom this paper is concerned. This estimate is used here merely to check the estimate of the gross reproduction-rate arrived at by other means, basing such procedure on the assumption that differences in child mortality are not sufficient seriously to upset the correlation.

(v) *The Number of Children born to Mothers*

Table VIII shows the number of children born alive to women in the sample by age-groups. The Cohrichs, in their survey of population in Ufonde District in

16.3 last twenty to thirty years, and that it was then returning to normal since the
(27) number of live births in the under-50 age-groups agree in the two surveys, but the figure for the over-50 age-groups is substantially lower for the Tanganyika material than for the Yao.

11.9 The Culwicks, Fortes, and Schapera have used the number of live females born
(12.8) to women past child-bearing as an indicator of the gross reproduction-rate. It was
16.3 not possible to record whether the women in this sample had passed the menopause or not. From Table VIII we see that there is no upward trend in live births per woman over the age of 50. We may therefore take this age as representing the age at which child-bearing ceased. There were 43 women over the age of 50 and they had between them borne 133 live females. This is an average of 3·13 per female.
(3.1) This differs substantially from the figure that the Culwicks arrive at in their study, viz. 1·56.[1] It agrees, however, with the estimates made for the Tallensi (3·1)[2] and for the Tswana (2·34).[3]

There are, however, some serious objections to the use of this figure as a measure of the prevailing gross reproduction-rate. First, it does not take into account those mothers who did not survive the child-bearing period. If it is only the most fecund who die before menopause, we are, in fact, dealing with a sample which is unrepresentative, in that the least fecund are automatically selected. The opposite may also be true, of course, but the fact remains that such an estimate is based on an unrepresentative sample of mothers. Second, it represents the average fertility prevailing over the last fifty or sixty years. If there has been a large change in the fertility at some time during this period, this is included in the average and obscures the rate which prevails now. For example, the material presented by the Culwicks shows that the gross reproduction-rate must be higher than 1·56. The low figure in this case, they suggest, is caused by the famine which followed a rebellion in 1906.

(d) A More Direct Estimate of Fertility

12.8 In order to arrive at a figure which would reflect conditions prevailing more
16.3 recently, a series of tables was constructed, which showed (according to my census sheets) the number of children born in each year between 1917 and 1946, and the number of women in the different five-year age-groups for each of those years. Hence each woman who appeared in the first year (1917) was also counted in 1918. As each new year was considered some had turned 50 and were excluded, and others had turned 15 and were included. Therefore a gross reproduction-rate was calculated for each year from 1917 to 1946. These rates were averaged by adding together the number of women shown in each five-year age-group for five years and adding the number of children born during those five years, and by dividing to arrive at average specific fertility rates. The five-year averages were as follows:

1917–21	4·18	1932–6	2·23
1922–6	3·33	1937–41	3·22
1927–31	3·12	1942–6	2·83

There appears to have been a definite trend in this series, falling from the end of the

[1] The total of 3·13 children per woman was divided by 2 in order to arrive at the number of females per woman.

evidence. On the appointed day she dances, *kupina mzimu*, to dance the spirits, or *kusewula*, to rave or prophesy, and in the ravings of the dance she calls out the name of some party who is afterwards accused of being the sorcerer or witch. Followed by a crowd of excited spectators she dances through the village spear in hand, stopping here and there to dig up charms or medicines which the supposed witch has buried in the ground as the instruments of his occult practices. It is only in cases of supposed special difficulty, or when the magnitude of the supposed crimes demands that special measures be adopted for their detection, that the services of such a witch detective are called in. In ordinary cases these appeals are made to the divining oracle who consults his "bone" as a means of discovering crimes of this nature.

Among the Tsee the human being is believed to be the sole possessor of a *linda*. I have been unable to discover any trace of a theory that the *linda* may pass into any animal or inanimate object and thus confer upon it the nature or power of a fetish. Such belief is cherished among the Angoni and Achewa tribes to the westward by Nyasa and the upper Shire River, and the intelligent Tsee is aware of this, but he states that among his people no such belief exists. Even charms which have the effect of healing or warding off disease, or of protecting the wearer from war or wild beasts or other danger by land or water, are supposed to possess this power without any idea of their being possessed by a *linda* or other spirit influence. The nearest approach to such a theory is in the case of certain powerful "doctors" who have obtained special medicine by means of which, at death, they can transform themselves into lions, leopards, crocodiles, etc. Lepers also are sometimes supposed to become hippopotami. But both of these cases must be regarded rather as transmutations of body than transmigrations of soul.

It will be thus seen that the nature of the human *linda* is closely allied to that of the *mzimu*, which are the inspiring agents in madness and in the ecstasy of prophecy or lamentation. What the origin of these inspiring *mzimu* is, or to whom they belonged when in bodily life, the Tsee holds no theory. He is content to accept them as they are, *mzimu tsyse*, "Just *mzimu* and nothing more," as he says.

It is, however, when we follow the disembodied *linda* after death and consider its position and power in the other world that we find ourselves in a region of higher spiritual activities.

In dreams or in fainting fits the *linda* leaves the body but only to return to it with the awakening consciousness. At death, however, it leaves its earthly abode never to return. It is now spoken of as having gone to *mulungu* or *ulungu*. This word, which lies at the basis of all Tsee theories of the place of the soul after death, will be dealt with later on as regards its derivation and connections in the Bantu family of languages. In its actual use it bears two significations.

1. The word *mulungu* is in the first instance applied to the human soul or *linda* after death when it is considered as an inhabitant of the spirit world. Even in life a man, when he meets with any piece of good luck, will be heard to say, "It's my *mulungu*," as if his soul had an influence in determining the character of his

A Note on Ceremonial Purification among the Wa'Tao, Nyasaland. 55

By Elspeth Sanderson, M.B.C.S., F.R.G.S.

One of the efforts of Europeans informers in Africa is the breaking up of tribal organization and discipline. The rights of the individual being no longer subordinated to the common good, customs formerly observed by the village community as a whole die out, while those affecting the individual are still practised.

This tendency is well seen in the ancient ceremonies of purification among the Wa'Tao which are now rarely performed collectively, though the rulers, however highly "educated," still goes to the doctor to obtain the necessary medicines for removing, for instance, the contamination caused by contact with a corpse.

These collective ceremonies have already been described by various writers in respect of both Nyasaland and elsewhere,[1] but the Tao rites have not, I think, been given in detail, and the following notes may not, therefore, be altogether valueless.

The *Pyapile* ceremony (*kupyapile*, "to sweep") is common to most Bantu tribes. In the simplest form it is said to be performed annually by the Wa'Tao, at the beginning of the twelfth month, most of the months (lunar) being kept by means of a "calendar."[2] The whole village is thoroughly "spring-cleaned," all rubbish

* At this, where the game is played on Sundays' night in the morning, Father Sanderson kindly sang, the song in Spanish was:—

Tiere, pere, quando te vengo,
Tiere, pere, hay mas
Tiere, pere, ahora yo vengo,
Tiere, pere, I shall not be there any more.

Words respected, gesticulate, in the hidden talk.

1 Sir Harry Johnston, K.C., "The Bantu Tribes," pp. [illegible], 1910. Annual Report, Bureau American Ethnology, 1904.

2 Frazer, "Golden Bough," II., 176, 180.

3 A "calendar" consists of a strong bark or two pegs in the wall of the house, or between two poles, on which are threaded twelve pieces of rock, bamboo or cocoanuts. One of these is moved to the other end of the string each time a new month is seen.

Africa. We have no record of how many villages have been lost to the Southern or Northern area from Kwinga-Liwonde area, so that we cannot evaluate the significance of the loss of 64 villages from Southern area, and of only 11 from the Northern area. The density of population in Mikanda's area is 268 per square mile, and the average density of the Shire Highlands is about 150-6. It may well be that there is now a movement out of the Shire Highlands into the low density populated Liwonde-Kwinga area.

THE PRINCIPLE OF PRIMACY

Migration and invasion have been the keynote of Machinga history: village headmen recount with pride how their ancestors moved into Nyamkumbi with their bands of slaves and followers. "The East" is the traditional home of the Yao and even young men who have never been there proudly say, "We come from the East". This sentiment is reflected in the belief that the rains from the east are beneficial and give rise to good crops, while the rains from the west are detrimental and cause

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

crop failures. Also I was told that important village headmen are buried with their heads pointing to the east.

The Yao concept of the past is reflected in the principles of political organization of these Machinga chiefdoms. The invasion is the datum point from which rank mainly stems. We may classify modern headmen into: those who were in the area before the Yao invasion, i.e. the Aborigines; the Invaders; and those who have come in since the invasion and have had to submit themselves to the Machinga chief, i.e. the Newcomers. The principle behind this classification of headmen is fundamental to Yao political structure. Stated most simply it is the rule that MacDonald quoted in describing the development of local organization: 'However large the settlement may become the man that is first in is the chief or headman.'[1] This is, of course, somewhat of a simplification, but the rule contains the essence of the principle. It was reversed for the Aboriginal Nyanja because the Yao subjugated them. But the claims of the Nyanja chiefs to rank because they had occupied the land first were recognized by the Yao who absorbed them into the social structure in positions of high rank.

But the principle holds among the Yao themselves, and for the Ngoni in their movements after the White conquest. The operation of the principle is clearest in the structure of small local areas such as Chiwalo's. When Chiwalo's area was first settled, just after World War I, there were large tracts of unoccupied land. The first headmen to move into this region were Cigwaja, Kapulowa, Nyanja, Makata and Mumbwa. The local chief Chiwalo followed Cigwaja, but as Cigwaja was one of the broader headmen under Chiwalo during the period of invasion, he now recognized Chiwalo as the chief. The area that is now Chiwalo's chiefdom was divided out among these five headmen. As other headmen came into the area they had to approach one of these five for land rights. These, when granted, were granted irrevocably in a block to the new village headman who then had sole rights to distribute the land afterwards. If he had the land to spare, he may have granted a portion of it to yet another village headman, and this action was also irrevocable. The land occupation pattern in any particular area is therefore extremely complex, because in addition to the village garden areas, indivi-

II. THE POLITICAL STRUCTURE BEFORE THE WHITE CRISIS.

173
683
167

It is difficult to picture what the political organisation of the Ewe was like before the Whites came into the area, but informants—especially the old men—do describe the conditions that existed in the early days, and in addition to this, there are some useful reports in Duff Macdonald's book[1] which was written before European influence was strongly felt.

Informants describe the movements of the Ewe into Nyanland in terms of small family groups under the leadership of a male matrilineal relative.[2] These leaders bear the same names as certain of the village headmen to-day, and the present village headmen claim to be their matrilineal descendants. Among the kin-group leaders were such outstanding personalities as Kwaiga, Limmale and Nkata.[3] These men were military and commercial leaders and much of their prestige derived from their prowess in trade and war, pursuits which in those days were intimately interdependent. People nowadays describe the chiefs as possessing many slaves, guns and gunpowder and having great "strength". In the history of the chiefs Nkata, Limmale and Kwaiga the pattern of conquest is similar. A group of village headmen under each chief moved into Nyanland to settle either by treaty as Nkata who settled with a clan relative among the indigenous Nyanja, or by direct conquest as Kwaiga. After settling down they started sending out forces to subdue local chiefs until the boundary of the territory of some other powerful chief, usually another Ewe, was reached. When this happened a definite territory was agreed upon by the two chiefs. Within this territory the population was increased by immigration from other areas or by slavery. Village headmen moved from a less to a more powerful chief because of the security he afforded them. They were said to "seize the leg"

II. THE POLITICAL STRUCTURE BEFORE THE WHITES CAME

173 (Sukumale Sakongale), i.e. to surrender to the chief
648 in the area. Also the chief sent out expeditions
167 to capture slaves or he purchased slaves with the cloth and beads he had exchanged for ivory at the East coast.

643 Within his territory certain privileges and rights
921 were held by the chief and he had certain religious duties to perform in which the unity of the people in the territory was expressed. In general the chief had rights over any ivory either found or hunted in his territory. If a dead elephant were found the tusks belonged to the chief, though he usually rewarded the finder with cloth. If a man killed an elephant the tusk that lay on
[p. 24] the ground belonged to the chief while the other belonged to the killer. The killer's tusk was in-
[p. 25] cluded in the chief's caravan to the coast and its value paid in cloth to the killer when the caravan returned.

643 The chief was also entitled to an annual tribute
651 of food and beer from all villages in his area, but this was used to entertain visitors who came to the court-village.

648 The chief's religious duties lay mainly in
712 propitiating the spirits of his ancestors on occasions when the community at large, in contrast to the chief's own private affairs, was either threatened or directly affected. The most obvious occasion was immediately before the rains came when flour was poured on the tree shrine and the spirits of the ancestors asked for good rains. Later when the rains were over a similar sacrifice was made asking for a good harvest. Sacrifices to the ancestors were also made on two other public occasions. They were made when some calamity had occurred or was believed to be impending. A run of unsuccessful campaigns induced Cingwalangwale, a son of the Tao chief Mpondo near Fort Johnston, to ask his father's father's brother to make sacri-

and Yao tribes, who then predominate. These peoples seem to have come from different parts of the continent. Their languages, despite a common Bantu descent and much recent borrowing, remain as distinct as possible and are obviously not modern dialects of one more primitive tongue; their original social structures must, however, have been similar enough to attract them to each other, for they have so intermarried and their customs so fused, that one can now scarcely distinguish their ways of life and village organization. Indeed, while homesteads of apparently pure Nyanja and Yao still predominate, every considerable district contains members of both tribes, with some people, at least, of mixed descent; moreover, and although one perceives a difference of character and manners, and trace it to the influence of Mohammedanism on the Yao, one may well be unconsciously exaggerating. This account of relationship terms, (with brief reference to underlying social structure), must be taken, therefore, to cover the fusion of two once-separate tribes, and Nyanja and Yao equivalents must unless otherwise stated be understood as identical in meaning. In fact, Nyanja often prefer Yao terms to their own.

How far can one take the Nyanja-Yao social structure in order to study it? Ngoni immigrants in this district are few, and their original patrilineal social system has largely succumbed to the customs of these earlier comers. The matrilineal system of the still more recent and numerous Lomwe immigrants is, I believe, (though my evidence is inquiry), exerting a considerable influence on the somewhat dissimilar but also matrilineal Nyanja and Yao.

1: Yao, E-4 — (no date) 1950 FZT Yao FZT

(iv) Another group is on the south-west side of the lake, north of the Ngoni at Dedza and east of the Ngoni of Ntcheu district.[1]

Although these are the main concentrations of Yao, smaller communities are scattered through most of the districts of south Nyasaland.

Homage

Nothing is known of the history of the Yao before their settlement at Mumbo.[2] Their contact with the Arab traders from the east coast had probably continued for one years before the Europeans arrived.[3] When Lacerda wrote in 1798 the Yao were

were competing with the Arabs for the inland trade.[1] At some uncertain date there were two migratory movements away from the original home of the Yao. The first was a scattering from Hill Yao to surrounding hills, possibly due to internal dissension.[2] The next movement was caused by an attack of the Makua between 1850 and 1870.[3] One party moved northward, finally settling in Tanganyika, as has been mentioned. Four parties moved south into Nyasaland.

(a) *Achisi Yao*, who first moved from Mwembe to Mchisi hill, and then to Nyasaland, where they are represented by those under Kanali Native Authority.

(b) *Amanenge Yao*, who first moved to Limanga hill, near the Lurwisi river, and then to the south-east of Lake Nyasa, where their descendants are now under Makanjira Native Authority.

(c) *Amangoche Yao*, first were to settle at Mangoche, near Fort Johnston. They were later driven out of Mangoche, by the last group, and scattered.

(d) *Amachinga Yao*, first went to the vicinity of Mandimba hill, near the source of the Lujenda river. They were ousted from this fertile valley by the attacks of the Lomwe, and came into Nyasaland in four parties.

One party of Machinga Yao under Nkaw (later called Jalasi, or Ewali) attacked the Yao at Mangoche, drove them south and themselves finally settled there. Another party under Nawinda came with Nkaw as far as Mangoche, then turned off to Chisai hill in the Fort Johnston area. A third group, under Makenda and Mtumanja, moved down to the Domasi valley via Isale hill, where they were attacked by the fourth Machinga group, under Kawinga. The latter had also accompanied Nkaw's party as far as Mangoche, then crossed the Shire river to the west; here they were attacked by the Mawko Ngoni under Chidzungu and moved south-east to Chikala, which they occupied until defeated by the British. Liwanda, the brother of Kawinga, moved to the Shire river.

The Amangoche Yao, after they had been scattered by the Amachinga, settled some in the Chiwanda part of Dedza district, some at Mount Zomba, some migrated to Ndiwanda hill near Blantyre, some to Isuke hill, some to Chiwalanda, Ngabudi, Mulanje, and Nkala hills. These Amangoche Yao constitute about half the Yao population in Nyasaland.[4]

The Yao invasion of Nyasaland was not an organized military expedition, like that of the Ngoni. The first immigrants came peacefully in small kinship groups. They took advantage of Nyanja factions to consolidate their position, until, by 1891, when the Church of Scotland Mission was established at Blantyre, the Yao were a ruling class dominating the earlier inhabitants.[5] At the same time they vigorously carried on their slaving activities. In 1891 Thompson noted that the fertile country of the watershed between the Ruo and the Shire rivers was uninhabited because of Yao raids.[6]

The Yao of Nyasaland suffered from Ngoni raids, but were never subject to them. Several tributes have been paid to their military qualities,[7] and indeed it took five years from 1891, when the Protectorate was declared, before the Yao were subdued and the slave trade, in which they had been principal parties with the Arabs, sup-

passed. Two contingents of Sikha were sent successfully to take Kawinga's fortress in Chikala in 1892; Makanjira was defeated in 1892, Kawinga, Jalasi, Mariyawiri, and Tambala in 1896.[1] They were later allowed to return, but they were not recognized as chiefs by the Administration.

The end of tribal wars and of slave-raids made large defensive settlements unnecessary, and the power saw the splitting up of communities, which rendered the task of the Administration more difficult. The abolition of domestic slavery, by reducing the power of headmen, further contributed to the tendency to live in small scattered settlements. In 1912 the Nyasaland District Administration Ordinance was passed with the object of concentrating the villages into larger communities.

The first movement of Tao from Portuguese East Africa to Mwani took place about the end of the 1890's. According to one account they were originally expelled from the territory between Marabi's and Unango by the Mandwe Ngoni.[2] Then the Makua attacked them, breaking up the tribe still more, so that they migrated north to Mwani, the south-west of the Makonde plateau, and the banks of the lower Ruvuma. At Mwani they were again attacked by Ngoni, but defeated them, and then retired to the Makonde plateau, where they were again attacked by Ngoni. There is a tradition that at some time after 1890 the region was toured by an emissary of the Sultan of Zanzibar, 'Bakiri', who gave the whole country to Matola, a Tao chief, to rule from Newala. In the area between Mwani and the Ruvuma river the Tao are in a majority and politically supreme over their neighbours the Makonde, Makua, Ngindo, Matumbwe, and Ndendo.[3] At Mtwa, on the Makondi plateau, there is a settlement of Tao who were rescued from the Ngoni on the east shore of Lake Nyasa by Captain Engelhardt, and transferred there. These in outward appearance could hardly be distinguished from the Swahili of the coast.[4]

Demography

The Tao population of Nyasaland has increased steadily but its relation to the total population has not increased.

1921		1931		1945	
Tao population	Percentage of total population	Tao population	Percentage of total population	Tao population	Percentage of total population
[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]

Even in the predominantly Tao areas the population is not homogeneous, either ethnically or linguistically. In the three areas in which there are a large number of Tao (Kawinga and Liwonde of Zomba district and Nyambi of Fort Johnston), they represent roughly 48%, 75, and 75 per cent. of the total population, the next most important racial being Ngoni (Lomwe) immigrants from Portuguese East Africa.[5] Some Ngoni call themselves Tao when questioned.

The density in these areas is respectively 63.5, 30, and 50 per square mile.[6] This

appointed elder in the operation by the marriage service. The couple are referred to 585
elder disputes to the service, and to consult the diviner in case of sickness.* After the
rite these two service have special responsibilities towards the couple; grievances
are referred to them, and they must be present when adultery cases are heard in
court. If the marriage witness ceremony has not been performed, the relationship is
not regarded as legal and no adultery compensation can be claimed by the husband.

Divorce used to be a private affair, which was merely signalled by one party giving 586
to the other an arrow as a token of separation.* Nowadays all divorce cases go to court.
The woman is usually asked to choose between her husband and the adulterer, and
the compensation paid to the former, if she decides to leave him, is higher—amount-
ing to about ten. A man can be sent away from the village by his wife's kin, but if he
has given no grounds for divorce he can claim compensation and will also take back [178]
any gifts made to his wife. A few small gifts to his mother-in-law are not reclaimed.
Divorces are easily obtained and frequent. Grounds for the divorce of a man may
include failure to pay hut tax, one of the specific duties of the husband.

The custom of making a marriage payment is recorded by Johnson* (on the east 583
coast of Lake Nyasa) as a relatively new adoption. When given it is divided between 177
the bride's father, mother, and mother's brother and brother.*

Slavery

Domestic slavery was an important institution in the Yao social system. Slaves were 587
obtained by capture, purchase, or in compensation for injury.* A man would pay a
debt by giving slaves (wives or members of his matrilineal kin group) to his creditors.*
A man might voluntarily endure himself to a man having charge of many women, as
a means of obtaining a wife.* The children of a free man and a slave woman were not
enslaved, as their father could not take them from the village of their mother's
matrilineal, who had the right to sell them.* Slaves took part in the ordinary life of the
village; women slaves ranked as junior wives of their masters and shared the usual
work of women. Men might be supplied with guns for hunting or might accompany
their masters to war, trade for them, spin, weave, sew, make baskets.* The institution [589]
of domestic slavery was an expression of a dominant motif in Yao culture—the associa-
tion of status with a large number of dependents. Its abolition by the British was in
itself a major blow to the prestige and authority of the chiefs.

Information about the social organization of the Yao in Portuguese East Africa is 184
scanty, but it is in agreement with what is known of the Nyamdanda Yao; Shebel, who 602
knew the Yao in Lindi district, Tanganyika Territory, confirms the correctness of
Duncan's account of the South Nyasa Yao.

The Yao came into Nyamdanda in small parties of hunters. Their experience and 175
their superior weapons were enabled them to dominate the Nyanja among whom they
settled, and today they dominate the population of the Southern Province. They are [181]
organized into loose groups of villages, under petty, independent chiefs. They were [61]

never to have had any large-scale central political organization, and their history is full of occasions when one group of Yao has attacked another. Even within his own area the authority of the chief was not, apparently, sufficiently strong to prevent one village breakaway from raiding his neighbours; the chief maintained no standing army.[1] The chief held certain rights and privileges. He was entitled to the ground tusk of any elephant found in his territory (the finder was rewarded after it had been sold, with a cloth); he received tribute in food,[2] with which he entertained visitors. He took a share of the spoils of war and was also entitled to annual labour service and to a gift when he made a new burial place. Apart from his military and judicial responsibilities, he had authority to settle when and where initiation ceremonies should be held.[3] The right to hold these ceremonies was sought after by the village headmen as a mark of prestige. The chiefs or headmen of certain families had the right to wear a white cloth bound round their turbans as insignia of rank.[4]

In addition the chief had a certain ritual status. He was thought to incur mystical danger by contact with death, and so was not allowed to attend a funeral nor to eat a chicken brought by a messenger announcing a death, nor to accompany his military expeditions. He was supposed to have great power through special medicines. He had to make offerings to the ancestors, especially in affairs concerning the whole people, such as drought or epidemic. He was expected to give a burial cloth at the death of an important man. At his death a period of social disorganization was recognized, members of his village were allowed to pillage and rape, until he was buried.

Succession to the chiefly office was matrilineal. The chief's position was based partly on his status as the senior male of his own matrilineal kin group, partly on his wealth. His command over slaves, guns, and carriers to the coast was greater than that of others, and from these his military strength was derived, for a chief was powerless without his following of dependants. The chief of the area was also headman of his own village. In fact, the position and duties of a village headman (except that he could not exact tribute)[5] reproduced in small scale those of the chief. The headmen also were in mystical danger through contact with death and were the channel through which the ancestors were approached in affairs concerning the village. They, too, built up their prestige and wealth by slaving activities. They seem to have been largely independent of the chief, carrying on slave raids of their own, and if they could gain a sufficient following, they might break away from the chief, and set up their own chiefdoms.[6]

The chief ruled through a hierarchy of headmen. His councillors were superior headmen, placed over a number of village headmen. Commoners could approach the chief only through the councillor in whose area their village belonged. The councillor's special duties were to report daily to the chief on the affairs of his district, to advise, and to arbitrate in the chief's own domestic affairs, e.g. in conflicts between the chief and his brothers and nephews. The councillors were not necessarily relatives of the chief,[7] but were chosen on account of their general status in the community, and their

CHAPTER II

THE HISTORICAL BACKGROUND TO THE MODERN SITUATION

BEFORE THE WHITE CAME

TO understand the Yao we must start with the Arab colonization of the east coast of Africa. We know that the Arabs had colonized it as early as A.D. 700. They were a mercantile people, and their trading was so well advanced that by the end of the twelfth century they had founded Kilwa, due east of the north end of Lake Nyasa, as an entrepôt.[1] When Vasco da Gama sailed up the east coast in 1498, he found that the Arabs had well-established posts all along the coast. The Portuguese and the Arabs became rivals for the trade of the African interior, and this rivalry was to continue for many centuries. In 1698 the Imam of Oman drove the Portuguese out as far south as Cape Delgado, and the Arabs had sole control of the east coast[2] up to that point.

The Yao say that their traditional home is between the Lujende and Rovuma Rivers, east of Lake Nyasa. There can be no doubt, therefore, that Arab trading expeditions passed through the Yao territory, especially since the Rovuma Valley is the most convenient route into Central Africa from Kilwa. We can be fairly certain that Yao contact with the Arabs began at least 200 years before the Europeans came.

Although it is fairly certain that the Jesuits from the Zambezi had explored the Shire Valley and the Lake regions, they left no easily available records of the inhabitants of those areas.[3] One of the earliest references to the Yao is recorded by Dr. Francisco José de Lacerda in a letter dated March 22nd, 1798, addressed to the Minister of State of Portugal. In it he explains his pro-

[2] Fage, A., *Economic History of Tropical Africa* (London, 1956), 19.

[3] Burton mentions in a footnote to Lacerda's *Journey to the Cazembe in 1798*, John Murray (London, 1873), 33, that a missionary Jesuit also became resident in this area from 1788 to 1797.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

passed visit to the Kanembu of Lagwila regions, known then as the Wiza country. It is quite obvious that the Yao were serious competitors with the Portuguese for the land trade. Lagwila writes:

> The dry goods hitherto imported into this country [i.e. Wiza country], have been bought by the Majao, indirectly or directly, from the Arabs of Zanzibar and its vicinity. Hence these people received all the ivory exported from the possessions of the Cazembe; whereas formerly it passed in great quantities through our port of Mozambique.[5]

It is reasonable to assume that because of their geographical position the Yao had conducted a considerable trade between the interior and the coast, mainly cloth and guns for slaves and ivory—the two were inseparable since the cheapest means of transporting ivory to the coast was by slaves. The Yao trade in slaves led to their major conflict with the British.

When Livingstone made his expedition up the Rovuma in 1866, he found abundant evidence of the influence of the Arabs. Speaking of the Yao chief Mataka, he says: "He gave me a square house to live in, and indeed most of the houses here are square, for the Arabs are imitated in everything."[6] Livingstone mentions in particular the trade in slaves that the Yao were conducting in Kilwa. He records that:

> The Waiyas generally are still the most active agents the slave-traders have. The caravan leaders from Kilwa arrive at a Waiyas village, show the goods they have brought, are treated liberally by the elders and told to wait and enjoy themselves, slaves enough to purchase all will be procured: then a foray is made against the Manganja who have few or no guns. The Waiyas who come against them are abundantly supplied with both by their coast guests. Several of the low coast Arabs, who differ in nothing from the Waiyas, usually accompany the foray, and do business on their own account.[7]

Even before Livingstone had made his expedition up the Rovuma Valley, there had been a large-scale movement in all directions of the Yao from their traditional home. The tradition is that the name Yao is taken from a hill, grass-covered but

tudow, which is situated somewhere between Mwembe (in Portuguese East Africa) and the Lochilingo Range.[1]

It is convenient to divide the history of the Yao into two major episodes: *firstly* the movement from the Yao Hill to other hills, and *secondly* the movement into and within the Nyasaland Protectorate.

Episode I: The Scattering of the Tribes from the Yao Hill

The *exact cause of the scattering of the tribes from their* traditional home is not clear. Yohannah B. Abdallah suggests that it must have been some internal dissension.[2] Whatever the cause, the tribe broke up into a number of sections, each of which settled at yet another hill from which it took its name. Abdallah lists ten divisions[3] but we need consider only the four that penetrated into British Nyasaland.

These were:

1. The *Achisi Yao*, who settled at Michisi hill.
2. The *Amasanigo Yao*, who settled near the Lisanigo hill (near the Lurwisi River in Portuguese East Africa).
3. The *Amangoche Yao*, who settled at Mount Mangoche near Fort Johnston, south of Lake Nyasa.
4. The *Amachinga Yao*, who settled near the Mandimba hill. They are called Amachinga because of the serrated edge of the range in which the Mandimba hill is situated. [*Lisinga—a fence.*]

Episode II: The Displacement of the Divisions from their Homes[4]

In time, each of the four sections mentioned found its way into Nyasaland. Briefly the details are:

1. The *Achisi Yao* are represented in Nyasaland by the people under Native Authority Katuli in Fort Johnston district. The 1945 Census showed that there were 12,187 Yao under this chief, i.e. 4·3 per cent of the total Yao population of British Nyasaland. However, not all Yao under Katuli are Achisi Yao, and there are no doubt Achisi Yao elsewhere in small numbers; but even

if we estimate the total proportion as 5 per cent, it is still a small and relatively unimportant group. 175

2. The *Amasaninga Yao* are represented in British Nyasaland by the people under Native Authority Makanjira, and they are roughly 5 per cent of the total population of the Yao of the Territory. Makanjira himself is said to have been of Nyanja origin. He moved first to the Lisaninga Hills, where he acquired a mixed following of Amasaninga Yao and Nyanja; and then by conquest he moved on to the area round Fort Maguire, where he is now established. There are offshoots of the group in Dowa district across Lake Nyasa.

3. The *Amangoche Yao* are of much greater importance, and at present constitute about half of the Yao population of the Territory. During the early part of the nineteenth century, while this group was at Mangoche mountain, it was successfully attacked by the Amachinga Yao under Nkata and Kawinga, and scattered in all directions. Most of the people migrated southwards and settled in the Shire Highlands, where Mlumbe, Chikowi, Kapeni, Matipwiri and other representatives are found to-day.

4. The *Amachinga Yao*[1] were probably displaced from their traditional home, at Mpedimba on the Lujenda River in Portuguese East Africa, by attacks from the Lomwe inhabitants in the east. They say that wide-spread famines followed the war and forced most people to migrate. Present-day representatives of this group are Nkata, Jalasi, Mponda, Kalembo, Nsamala, Nyambi, Kawinga, Liwonde, Malemia and Ntumanje in the Port Johnston and Zomba districts.

The Yao invasion into Nyasaland was not a military incursion of the Ngoni type. Definite evidence on the exact form of the invasion is not available, but informants maintain that many of the first immigrants came into the country peacefully and in family groups (*mbumba*). Often the immigrants found succour with Nyanja groups. Sometimes this hospitality was claimed because the Yao had the same clan names as the Nyanja. The Yao soon took the opportunity presented by internecine struggles among the Nyanja to consolidate their position in the country.

[1] For a more detailed history of this group, especially of the Malemia group, see Stannus, H. S., 'The Wayao of Nyasaland', *Harvard African Studies*, iii (1922), 223 ff.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

175 When Livingstone passed the Lake in 1866 he found Mponda living in approximately the same place as his successor does to-day, and he mentioned that Kawinga was living on the west of Lake Malombe.[1] He also mentioned that the Machinga dominated the whole of this area, showing that by this time there had been considerable movement into it. When the Church of Scotland Mission was established at Blantyre in 1876, Duff MacDonald recorded that the disposition of the chiefs was as follows: Mlumbe to the north-west of Zomba; Kapeni near Blantyre at Sochi; Mpama at Chiradzulu; Kawinga at Chikala; Malemia on the south-west side of Mount Zomba, and the Matipwiri at Mount Mlanje.[2] These groups, except for Kawinga, still occupy the same positions to-day. At this time most of the movement into Nyasaland had ceased, and the Yao invaders had already set themselves up as rulers over the indigenous Nyanja. At the same time the Ngoni were making frequent forays into the Shire Highlands and the rest of Southern Nyasaland, so that the position was far from stable.

162 The distribution of the Yao to-day reflects the history of their movement into Nyasaland. The districts nearest and fanning out from the point of entry into Nyasaland, viz. the area due east of Fort Johnston, contain the largest proportion of Yao. The more distant the districts are, the smaller the proportion of Yao in them.

The Entry of the Missionaries

797 The Missionaries were the first Whites to settle in Nyasaland. When he was in Britain in 1858, Livingstone had recommended 175 the Shire Highlands as a suitable place for the establishment of a Mission. Inspired by his reports, the Universities Mission to Central Africa was founded, and in 1861 Dr. Mackenzie was sent out to establish the Mission. It was an ill-starred venture.[3] From the sociological point of view its significance is that it

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

initiated the relationships of Black and White in Nyasaland; and its failure was partly a result of the ambivalent attitude to colonial peoples at that time. The people of Britain were horrified at the cruelties of slavery, but the Mission drew upon itself severe public censure because it took up arms against the Yao slavers in its vicinity. The Mission had to face a very difficult problem. It was ostensibly a teacher of the Gospel. Yet about it the Yao were performing deeds of violence, robbery and murder, and were taking slaves from the Nyanja inhabitants in the area. At the same time hundreds of fugitives and runaway slaves were seeking protection at the Mission. To take in fugitives and runaway slaves was, in African eyes, as political an action as to take physical action against the slavers. Should the Mission close its eyes to these un-Christian barbarities, since they were a part of the secular life of the people, or should it take action against them? Livingstone had had no compunction in releasing slaves, and the U.M.C.A. followed his lead, and not only took in fugitives but actually carried out assaults on parties of slave-raiders. This was the time when the first of the Yao groups under Mpama and Kapesi were penetrating into the highlands. The indigenous Nyanja, whose political and military organization was very weak, ranged themselves around the Missionaries, and tried to use them against the Yao invaders. The situation soon developed into a struggle between the Missionaries and the Yao slavers, in which the Nyanja headmen played very little part. Disaster followed upon disaster, and eventually the Missionaries decided that it would be politic to withdraw from the highlands and allow the situation there to stabilize before they returned. In Britain, however, public opinion had been roused by their militant treatment of the slavers, and the Mission, after losing three of its members, including Bishop Mackenzie, through illness, was moved to Zanzibar in 1862.

After 1862 there were a few expeditions to Nyasaland, but none of great political importance. In 1876, a second and this time successful settlement was made in the Shire Highlands. The Church of Scotland founded a Mission in Blantyre, which comprised a lay section of artisans and a clerical section of preachers. It was particularly careful that any political action should be taken by the lay, and not by the clerical, members,

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

because it was anxious to avoid the censure which its earlier colleagues had suffered. This Mission also felt it could not stand by and see cold murder done in front of its eyes. Yet fugitives came to it as they had to the U.M.C.A., so that the Mission, despite its unwillingness, was inexorably drawn into political relationships with the Yao in the area. The lay members severely punished certain wrongdoers. Eventually an African was murdered at the Mission. They tried the murderer, found him guilty, and allowed a local headman to execute him. The Home Authorities looked upon this action as a trespass from the Mission's proper function. The Mission suffered severe public censure, and several of the lay members were dismissed. It was clear that a Mission in the Territory could not be a mission alone; it could not escape the political implications of the situation, and for the success of its venture some civil authority had to be established.

The Establishment of British Rule

In the meantime Livingstone's publications were bringing the horrors of the slave-trade home to the people of Britain, and more and more pressure was exerted to bring it to an end. As a result, in 1878, Captain Elton, the Consul at Mozambique, obtained permission to conduct an expedition to Lake Nyasa to enquire into the slave-trade. The British population in the Shire Highlands was now increasing so much that in 1883 a British Consul was appointed. From then on, until the close of the century, Britain followed a militant policy against all slave-traders, amongst whom were the Yao. No active steps were taken to institute a formal government over the territory, until in 1889 the Portuguese appeared at the confluence of the Ruo and Shire Rivers with a large military expedition which they maintained was scientific. Accordingly, on November 21st, 1889, the Acting-Consul declared the territory north of the Ruo to be a British Protectorate. The next year, Mr. A. Sharpe made treaties with most of the Native chiefs in the area. These treaties were later ratified by the Anglo-Portuguese convention of June 1891. It is clear that the British Government was protecting the treaty chiefs against the slave-raiders, and ensuring that no other European power assumed responsibility for this service.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

The pacification of Nyasaland after this was largely the suppression of the slave-trade. The Commissioner of the Protectorate (H. H. Johnston) wrote in 1891:

I felt bound to make our Protectorate of Nyasaland a reality to the unfortunate mass of people who are robbed, raided and carried into captivity to satisfy the greed and lust of the Yao race, these again being incessantly incited to engage in interminable war and slave-raiding forays by the Arab and Swahili slave-traders who travel between Nyasaland and the German and Portuguese littoral. The big men in this part of the Protectorate with whom it behoved me to deal and whom I must either persuade or coerce into acceptance of an anti-slave policy and sufficient subservience to the new administration as would put an end to further civil wars and inhumane practices, were the following:

Makanjila and Kasumbe, ruling on opposite coasts of the south end of Lake Nyasa.

The Makandanje clan of chiefs (Tshindumba, Zarafi, Nkaza) which dominates the country between the east bank of the upper Shire, Lake Pamalombe and the Portuguese boundary.

Mponda, the powerful chief holding the Shire where it leaves Lake Nyasa, and possessing a large tract of country along its western bank.

The Angoni chief Tshikusi, who dwells behind Mponda.

Tshingwalo-ngwalo and Masmara, Yao chiefs along the western bank of the upper Shire, half-brothers and lesser heirs of Mponda.

Liwonde, chief ruling an exceedingly rich tract of land along the east bank of the upper Shire.

Tshikusi, the great Angoni chieftain dominating all the hill country between the west bank of the Shire and the Portuguese frontier.

Kawinga, one of the most powerful of the Yao chiefs who dwells near the north-west corner of Lake Shirwa and who commands a great slave-route to the coast, and lastly

Tshikumba, who after being for ten years a roving bandit living on the plunder of the missionary caravans between Blantyre and the upper Shire, has at last settled down on Mount Mlanje to a steady career of slave-trading.[1]

Except for the two Angoni, all the chiefs mentioned are Yao, and three of them, Jalasi, Kawinga and Liwonde, were forbears of the chiefs in whose areas I made my study. The history of the Administration's activities of the next five years is almost

[1] *Papers relative to the Suppression of Slave Raiding in Nyasaland.* C. 6699 (1892). Commissioner Johnston to the Marquis of Salisbury, Nov. 24th, 1891.

2: Mitchell K-5 (1946-1949) 1954 F77 Yao F77

mainly a story of the subjugation of this lot of chiefs. Acting-Commissioner Sharp wrote in his annual report in 1897: "The Yaos . . . were the chief slave-raiders for the Arabs, and in consequence nearly all our expeditions for 1891 to 1895 were undertaken against various sections of this tribe."[1] The British South Africa Co. had made available a sum of £10,000 a year for providing a police force. As early as 1891, a raid was made on Cikumbu, a Yao slave-trader who had attacked a European coffee plantation in the Mlanje area. After this, there was a continual series of punitive expeditions against various native groups, usually after some slaving incident which precipitated British action. Captain Maguire was killed in 1892 by Makanjila's men, and shortly afterwards the British forces suffered a reverse at the hands of Jalasi. Unsuccessful attacks had been made on Kawinga's stronghold at Chikala. In 1893, two contingents, each of 100 Sikhs, arrived, and with this force more active measures were taken to control the slave-route to Quilimane through Mlanje district. In 1894, the Yao chief Makanjila was attacked and thoroughly defeated. In 1895, there was a concerted effort by the chiefs Kawinga, Jalasi and Matipwiri to oust the British from the Highlands. This commenced with an attack by Kawinga on the friendly chief Malemia, in Zomba area. A force was sent to protect the Missionaries at Domasi, and it stopped the main onslaught. After that, the stronghold of Chikala was scaled and Kawinga completely dislodged. He retreated to the east, and Matipwiri and his relative Mirimanje were captured. The power of these chiefs was completely broken and no more expeditions were necessary. In 1896, Kazili, a neighbour of Jalasi's, was captured and in the same year Liwonde, who had so far eluded capture, was apprehended and sent as a political prisoner to Chiromo in the extreme south of the Protectorate.

In the meantime the Portuguese were making similar punitive expeditions into the region due east of the Protectorate, and many refugees came into the Territory from Portuguese East Africa. Notable amongst these were the Mpondas groups under Chikweo and Ngokwe, who are to-day settled near Lake Chiuta.

In those parts of the Territory where military action was no longer necessary the framework of the Administrative system was

[1] *Annual Report*, 1896. C. 8438, p. 12.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

were erected. As early as 1895 the Protectorate was divided into Administrative divisions and Collectors were appointed in each. Coinage was issued; a hut tax of 5s. was introduced; European claims to land and mineral rights were settled with the chiefs—all large estates were issued with certificates of claim; and a postal system was initiated. The old order of independent chieftdoms had gone for good and the Africans had to adjust their way of living to a new order.

The Village as a Unit in Pre-White Times

Though there are earlier records of villages among related tribes, the earliest we have of the Yao are those of Livingstone.[1] In the records of his journeys up the Shire and the Rovuma Rivers, he states that the people lived in villages. Rowley's reports[2] of the Shire Highlands in 1861 show that the Nyanja were organized in villages similar to those of to-day, but the best reports on the Yao village are by Duff MacDonald, who worked as a missionary in the Shire Highlands and the Zomba area from 1878 to 1881. Duff MacDonald published both a general ethnographic account of the Yao around Blantyre and a journal of day-to-day events on the mission. From these descriptions we are able to reconstruct much of the political organization of Yao groups before the Whites came to Nyasaland. Though the information from these early accounts about the internal structure of villages is scant, the reports of the importance of domestic slavery are good, and this is valuable in assessing its effect on the internal structure of modern Yao villages.

From MacDonald's description it appears that each Yao chiefdom was a congeries of almost autonomous villages. The headmen of these villages recognized the superiority of one of their number whom we may call 'chief'. The unity of each village and its corporateness were expressed in many ways. One of these was in connection with the worship of ancestor spirits. MacDonald writes:

> [The village headman] is the recognized high priest who presents prayers and offerings on behalf of all that live in his village. . . . It

2: Mitchell E-5 (1946-1949) 1956 F77 Yao F77

175 622 is his relatives that are the village gods. Everyone that lives in the village recognizes these gods but if anyone removes to another village he changes his gods. He now recognizes the gods of his new chief. One wishing to pray to the god (or gods) of any village naturally desires to have his prayers presented through the village chief, because the latter is nearly related to the village god, and may be expected to be better listened to than a stranger.[1]

In this quotation the word 'chief' is used for village headman. In Yao the same term is used for both the *chief* of the country and the *chief* of the village (*mwenye*).

175 672 681 682 It is clear from MacDonald's description that foreign villages were looked upon as undifferentiated wholes. When discussing punishment in general he writes:

We find that almost every offence may be punished by death, but when an offender is not redeemed, the particular punishment is left to the headman of the injured party. For instance, if a headman of Kumpama's go and say, 'Chinyonso has killed a subject of mine; I have caught a subject of his and want to kill him,' the chief's answer will be, 'He has done you wrong, do according to your heart (*pali mtima wenu*).' The punishment is thus inflicted not by the criminal's own chief, but by the injured party, and it may fall, not on the guilty person, but 'on one connected with him.'[2]

For example, he describes how some children had been carried off from Che Lomoni's village one night in 1880.

Towards the end of 1880 [he recounts], Che Lomoni, a Blantyre headman, captured two men from Mpingwi, and put them in slave-sticks. They belonged to the village that had kidnapped the children a few months before, and native law did not require proof that the men were personally guilty. They were undoubtedly innocent. Still they were kept in close confinement till their friends returned the captives in February.[3]

175 622 The village headman—called the 'owner of the village' (*anyene mzi*)—was the representative of the village in all public transactions, and also the representative of such higher authority as existed, to the village members. Duff MacDonald writes: 'A chief represents and is responsible for all his people. If anyone wish to treat with a native village it is with the village

[1] MacDonald, *Africana*, i, 65.

2: Mitchell E-5 (1946-1949) 1956 F77 Yao F77

chief that he must deal. If we give a present to a village it is to the village chief that we must give it'; and, 'It is when a man transgresses against his own village chief that *personal responsibility* is brought home to him. When he transgresses against another village, his own chief pays for him.'[1] The village headman accepted liability for offences committed by his villagers against members of other villages, but could punish his own villagers by fines and by putting them into slave-sticks. Within the village, according to MacDonald,

> The headman cannot make his villagers hoe his farm for him, or do such private work. Neither does he exact tribute from them. . . . Still he expects them not only to stand by him in war, but to support his government on all occasions, and to render special assistance in the trial of judicial cases. . . . He may pronounce a capital sentence, or order as large a penalty as the fine of four slaves—especially if he be a higher headman. But his judgements may be complained of by any of his free subjects (only such appeals are rare, unless by parties that want to leave his village altogether). His decision may be revised by some other headman, as the ruler of the village from which his own settlement broke off; but the ultimate appeal is to the chief of the country. While the village headman settles all smaller disputes without troubling the chief, he usually reports graver cases.[2]

The Chief and the Village Headmen: the Political Process

The village headmen in any particular area recognized the superiority of one of their number, the chief of the land (*anyone ntambo*). MacDonald classifies the headmen under one chief as follows:

1. Chief's blood relatives, usually called 'younger brother'.
2a. Settlers or refugees (*alamdi*) who have come over with a large following from a hostile chief.
2b. Men who have gained the chief's favour by their services and been sent to occupy new spots in the kingdom.

'Other village headmen arise when a large village increases and sends forth smaller hamlets.'[3] All in the territory of a chief were integrated by a chain of authority. As he explains,

> 1. Headmen are under higher headmen and under the chief.

[1] MacDonald, *Africana*, i, 186. Original italics.

2: Mitchell E-5 (1946-1949) 1956 FTT Yao FTT

175 566 622 643

2. Free men are under their elder brother in the first instance, but they may carry their cases to the headman of their village or even to the chief of the country.
3. Slaves were entirely under their own master.[1]

The headmen's subservience to the chief is described in the following passage:

In all public transactions the headman represents his village. He receives the chief's orders and sees them carried out. When he kills an elephant he sends one of the tusks to the chief. Should he kill [651] twenty elephants he is not expected to give up twenty tusks—two or three would be sufficient. If he shoots a large buck he gives one haunch of venison. For all such tributes he expects to receive in return a present (generally a little powder). . . . He is expected to [646 943] attend the chief's parliaments unless he is under an elder brother in which case he is not allowed to speak, except when especially commissioned. Headmen are expected to report all cases of war, but they often attack enemies without telling their chief beforehand, saying, [721] 'Let him hear of the enterprise when it succeeds.' Yet this is dangerous unless they are sure of success, and well acquainted with the chief's private sentiments. On reporting an attack they present the chief with part of the booty. In times of war each headman when summoned, must follow his chief's flag, otherwise his village is burned [647] down, and all that fail to escape are killed or enslaved.[2]

175 578 622 643

Yet within the framework of this organization villages were markedly autonomous. MacDonald's description, which I have just quoted, brings this out very well. Elsewhere he writes: 'The chief may often have less influence than powerful headmen, and we have known cases where he simply contented himself with grumbling when his headmen acted contrary to his desire.'[3] The chief did not differ greatly from his more powerful headmen. A certain amount of ritual in terms of ancestor worship embellished his position, and he had some ascendancy over village headmen to whom he had given land. Yet, in the last analysis, the chief had to rely on his personal following and military power to subjugate headmen who were becoming too powerful. The chief was therefore in direct competition with his subject village headmen, and involved in a constant struggle with them for followers. MacDonald describes how the chief himself was a

[3] MacDonald, *Africana*, i, 155.

2: Mitchell E-5 (1946-1949) 1956 F27 Too F27

village headman and had to administer his dues and relatives in his village in the same way as a village headman.[1] MacDonald shrewdly observes:

> Where the chief was occasion to interfere with his subordinates he generally consults his own interest. He will say to a headman, 'I see that you have been behaving badly to that subject of yours. You cannot get on with him: he must leave you and come and dwell in my own village.' The chief thus secures another servant.[2]

Another writer observed, '*As a chief's power consists of the number of his subjects the loss of a man is a serious matter.*'[3]

A village headman also tried to strengthen his position against the chief and against other village headmen by attracting to himself as many followers and dependants as he could. The process whereby a man might increase his status is described as follows:

> However large the settlement may become, the man that is first in the field is the chief or headman. In course of time he adorns his position by acquiring wealth. He may shoot some buck and get possession of their skins. With these he goes to the Mangoni country and buys slaves. An old person he obtains for a single skin, but a young slave costs two, and women cost much more than men. The female slaves thus bought are his junior wives and he keeps them busy in hoeing the farm, and all such female duties. The male slaves he employs in farming, building, making baskets, sewing garments and such masculine pursuits. He keeps all these persons strictly at their duties, and at the same time welcomes an opportunity of selling them at a profit. If his daughters were unmarried, he would give them slave-husbands. The natives aim at 'replenishing the earth and subduing it'. As it is no expense for them to rear families, they are all desirous to have many children.

Besides this increase of the village from the chief's own resources, there may be an accession of freemen. After the settlement is begun, a man may come to its founder and say, 'I wish to live with you.' The village chief gives him permission and calls him 'younger brother'. The newcomer brings his family, builds a house, and cultivates a farm in the same way as his chief. A freeman may leave his present chief and take up his abode with another, whose subject he becomes. His former chief has no longer any authority over him

175 622 691 695 whomever. But a man often decamps by night taking with him many down belonging to his fellow-citizens; he then goes to some influential chief who may be only too glad to give the fugitive ground and to establish him as a sub-chief. Women who thus leave are detained by their former chief, who welcomes every opportunity of shooting or capturing them.[1]

175 559 622 693 681 In this way village headmen, by increasing their following, increased their power against the chief. MacDonald records:

When a person has acquired several villages, he becomes a higher headman, intermediate between the chief and the owner of a single village. Each headman lives in the village he likes best, and leaves his 'headmen' to manage his other villages. But a headman of great ambition often places his 'headmen' all around him, decides their cases, and practically governs a small kingdom of his own. If he lives far from his chief, one might suppose that he was quite independent. When a quarrel arises between the chief of the country and an important headman, the latter may rebel, and found a new kingdom, thus depriving the old chief perhaps of one-third of the villages in his dominion.[2]

MacDonald cites the case of Mkanda of Chiradzulu, who was at first a headman of Kabtgama's but rebelled, and went to live on the southern side of the mountain.[3] He also observes that on the other hand, 'a headman may keep up his chief's authority in a district that the latter could not otherwise hold'.[4] Elsewhere he says:

In and around his own village the chief of the country is a terrible power, and his government is supported by the most prompt and severe punishments. But in distant parts of his dominions, where influential headmen live, he may be little known, although as a matter of theory he is supposed to settle all graver disputes even in remote villages.[5]

175 693 The history of the Yao chieftaincies in MacDonald's time, and as told to me by my informants, is that of constant division into independent chiefdoms. In the Zulu and Bemba polities a strong state structure included a pattern of civil war and the main-

sources of the whole state under a new king,[1] but the Yao political units seem to have split into two factions when divisions appeared within them. The dissident faction left the parent chiefdom and established itself somewhere else as an independent entity.

The picture my informants have given me substantiates MacDonald's account, though his contact was mainly with Mangoche and not with Machinga Yao. My informants, however, placed greater emphasis than he did upon the importance of trade with the coast. A slave-trading trip was not a venture which the ordinary village headman could undertake with equanimity. The journey to the coast, to Quilimane or to Kilwa, was long and arduous, and strong military protection against bandits was needed. A caravan could only be sent by a chief or someone of like status, so that the coastal trade became the monopoly of the chiefs. Headmen who had ivory and slaves to send to the coast included them in the chief's caravan. When it returned, the headmen were able to collect calico and beads to the value of their contribution. Gun-powder also seems to have been a chief's monopoly. Thus, in fact, he did have some physical control over the military activities of his subject village headmen, since he could withhold supplies of gun-powder if he wished. But in a society where minor chieftains were inimically poised against each other, the maxim 'a chief without people is nothing' had much more significance than it has to-day: a village headman's ultimate sanction was that he could withdraw his support from one chief and give it to another.

The Effects of Slave Conquest

It was into a society thus organized that the first Missionaries came. I have already described how the Missionaries, by taking in runaway slaves, and by occasional armed combat, entered into political relationships with the chiefs. With the establishment of the Protectorate, the policy, clearly expressed in Sir Harry Johnston's letter,[2] was to stamp out slavery. This was done in numerous campaigns against the Yao chiefs[3] so that by

693

that the superior British militia had completely subjugated all the Yao chiefs who had resisted them.

British power initially became merely an element in the political relationships of chiefs: they used it against their rivals, as Kalembo used it against Cingwalungwalu,[1] or Malemia against Kawinga. Yao chiefs did not unite in the face of their common enemy.[2] As the campaign against the slave-traders progressed, however, Yao chief after chief fell to superior British arms. They, who only a few years earlier were accepting the submission of refugees, themselves had now to 'grasp the leg of the White people'.

It is clear that they looked upon their submission to the Whites in much the same way as they looked upon the submission of refugees to themselves. To submit to a man was to accept slave or near-slave status. According to informants, Kawinga sent a large tusk of ivory[3] to the British as a placatory gift. His ceremonial knife, and the knives of his important headmen, were taken from them by Robert Codrington, Assistant Collector of the northern part of Zomba.[4] A chief with whom I was once discussing slavery expressed neatly the attitude of the Yao chiefs to their subjugation. He said: 'There is no slavery to-day—we are the slaves of the Government'. The chiefs who returned to the Protectorate, therefore, returned as subjects, and were fully aware of this. In the new regime, the former chiefs had to recognize a superior authority and the British Administration provided the framework within which the old rivalries had to be replayed.

The chief's position in relation to his subjects as a result of this catastrophic change was, of necessity, weakened. When the slave caravans stopped, the chief's source of wealth disappeared, and with it much of his power. He was no longer much wealthier than his subjects. The wants of the people could now be more easily satisfied by the numerous trading stores which

[1] Mitchell, J. C., 'The Political Organization of the Yao of Southern Nyasaland', *African Studies*, viii, 3 (Sept. 1949), 141–59.

[2] Johnston maintains that Mataqwiri, Jalasi and Kawinga had planned a joint attack against the British in 1895. If this is so, the attempt was completely unsuccessful. See Johnston, H. H., *British Central Africa*, Methuen & Co. (London, 1897), 130. See p. 30.

[3] *The British Central African Gazette*, ii, 18 (Nov. 15th, 1895), reports that Kawinga sent in some ivory as 'indemnity' but was told to pay more and to send in 60 more guns.

[4] They are to-day in the Southern Rhodesia National Museum, Bulawayo.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

began to appear in the Territory. The chief in this situation had the same wants as his subjects but was in no way able to satisfy them. He was precluded by his position from becoming a labourer and thus securing a cash income, while his subjects, until recently dependent on his monopoly for their wealth, had been drawn into the new economy of the Protectorate and were comparatively affluent.

The cessation of warfare and slavery thus affected the prestige of the chiefs seriously. The Administration's policy was at first to impose a fine of guns on those who broke rules. In July 1894, for example, Chapola village on the south-west corner of Lake Malombe was fined 30 guns for being in possession of slaves.[1] Later the Administration introduced an ordinance requiring the registration and licensing of guns, and many guns were confiscated on account of breaches of this regulation. Not only were the Yao disarmed, but the Administration also punished those who broke the peace. At the same time the Government was pursuing an active policy against domestic slavery. For example, in the village of Chapola mentioned above, 26 slaves were released. The slaves, formerly bound to their masters by the physical sanction of being liable to death at his hands in cases of desertion, were now liberated. It is not surprising to find the Collector at Mlanje reporting, in 1895, that the power of Kosirimanja and Matipwiri was failing, and that they were losing people.[2]

Statements of informants confirm that slaves were then starting to leave their erstwhile masters to set up villages of their own. In 1904, the Administration reported: 'The tendency is for the old large communities to be broken up; for the small man to collect a surrounding of friends and go off and build new hamlets in other localities'.[3]

From my own investigations, there appear to have been two possible reasons for this. First, communities may formerly have lived in consolidated groups in order to protect themselves from slave-raiders and other assailants. With the disappearance of the slaver and of war, the bond of the need for security would,

2: Mitchell E-5 (1946-1949) 1956 FFT Yao FFT

therefore, be weakened, and the component parts of the village scattered. This is what the Administration argued when it wrote about the split-up of communities: 'This tendency is to some extent gratifying, in that it originates in the native's sense of his complete security under the existing Government.'[1] I have not much evidence that this is true, and in fact do not think it is. Second, there is little doubt from my village histories that the slave-groups attached to various village headmen were deserting their former masters and setting up independent villages.

It is significant that the report speaks of the 'old large communities'. Duff MacDonald, writing of the Blantyre area in the period 1877-81, says: 'Usually the natives live in small villages containing 10 or 11 huts, occasionally in large villages containing three times as many. They do not like to pack themselves closely. In time of peace few villages contain more than 100 people.'[2] Hynde, writing of the Domasi area, says: 'Sometimes a village consists only of five or six huts; more commonly twelve or twenty and rarely above thirty. The chief's village at Domasi consists of more than 100 houses but that is an exceptional case. The villages occur at intervals of quarter to one mile.'[3] In July 1895, the Collector at South Nyasa made a census of all the villages on the west bank of the Shire (64 villages). These were mainly Yao, but also included some Nyanja. The modal size of villages, calculated from his published figures, is 26 huts.[4] The reports of MacDonald and Hynde agree well, although they describe different areas. The Collector's average was slightly larger, but one is not sure that he has not included two or three settlements under one headman. A village, Changali, was marked as having 217 huts, but a note indicated that they were scattered. Also the numerical accuracy is not above question because a large proportion of hut totals end in 0 or 5, indicating estimation rather than enumeration. From my own observation, the arithmetic mean of a sample of 37 villages in two separate areas was 11 huts (mode was 8 huts).

It seems, therefore, that the optimum size for Yao villages has always been about 10 to 15 huts, and that the disintegration

2: Mitchell E-S (1946-1949) 1956 FTT Tao FTT

owed by the Administration in 1912 was in fact the break-up of larger communities under important village headmen. These communities were, as is evident from MacDonald's writings, largely made up of slaves and their descendants. In the light of the internal structure of modern villages, I believe that the fragmentation going on at that time was due to the breaking of the bond between capture and slave—a bond formally reinforced by physical sanctions that included the killing of a slave by his captor. Therefore, while the groups thus linked to the headman may have moved out of his village, his matrilineal kinsmen, who were bound to him by bonds of deep sentiment and religious beliefs, remained. The irredeemable 10 to 15 huts were therefore likely to have been those of the headman's own matrilineal kinsmen. When the Administration ascribed the continuing tendency all over the Protectorate to the splitting up of villages into small family groups[1] it was probably describing the splitting off of descendants of slave-wives to found villages of their own. While this process of readjustment was going on, the Administration stepped in with legislation designed to control what it considered to be unchecked social disorganization. The Administration spoke of the necessity to

> build up an organization to control the rising generation of natives who, finding themselves without the restraining influences to which their parents were accustomed, have of recent years evinced an inclination to emancipate themselves from the disciplinary responsibilities of village life and obedience to authority, and to adopt habits prejudicial to native family life.[2]

To accomplish this task the Government introduced the District Administration (Natives) Ordinance of 1912. This was the Ordinance about which the Administration wrote in 1913:

> Framed, as it has been, in accord with native ideas and practice, it is a measure which none the less avoids the defects of the archaic system of tribal rule and which has as its aims the gradual formation of a subsidiary local government by means of Sectional Councils of Headmen chosen as far as possible by natives themselves and presided over by the District Resident.[3]

[3] Murray, *Handbook*, 129.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

Under this Ordinance, the Administration provided first of all for the formation of 'villages'. A Rule made under Section 3 of the Ordinance and published in Gazette Notice No. 113 of 1913, gave the Resident the power to concentrate the native population, where necessary, into organized villages of not less than 20 huts and to disallow the erection of isolated huts. 'In order to give effect to this policy the erection of new huts was to be confined to existing villages, and the occupants of isolated huts were to be instructed to remove, as opportunity offered, to an approved village.'[1]

The Ordinance then proceeded to create a line of authority from the District Resident to the villagers through Village Headmen and Principal Headmen. Districts in the charge of Residents were divided into Administrative Sections. A Principal Headman was put in charge of each. The Sections in turn were sub-divided into Village areas (groups of villages), each in the charge of a Village Headman.

Under the Ordinance, Principal Headmen and Village Headmen were given specific duties and responsibilities in their respective areas. The Principal Headman, for example, was:

> to be responsible for the good order of his Administrative Section, the maintenance of discipline, the reporting of crime and the apprehension of criminals, sanitation, the control of the movement of cattle, reporting outbreaks of epidemic disease, and for any other matters in the interest of law and order and the general welfare of the native community.[2]

The Principal Headman was also to 'secure the attendance at the Magistrate's court of natives whose presence was required in connection with deceased estates, remittances, government labour and so on, and to exert his influence to accelerate the payment of hut and poll taxes'. These duties in turn devolved upon Village Headmen—they were responsible for their smaller areas as the Principal Headmen were responsible for the larger.

Unfortunately we have no information about the way in which Principal and Village Headmen were chosen. Murray records that

> Residents were not necessarily to recommend those natives who had hitherto been recognized as Chiefs or Headmen. It was considered

[1] Murray, *Handbook*, 132.

[2] Murray, *Handbook*, 130.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

that in some cases the previous records or age of such persons would be found to be such as to preclude their selection to transact the responsible duties of Headmen under the Ordinance, and in such circumstances Residents were to consider the claims of other natives of good standing, intelligence and reputation residing in the section, who, having assisted the Resident in native administrative matters in the past, might be expected to carry out the duties efficiently, and who, at the same time, were known to enjoy the confidence of the natives with whose supervision they were entrusted.[1]

Elsewhere Murray writes, 'The system introduced by the Ordinance was in no way intended to revivify or perpetuate government by native chiefs. The position of Principal Headmen under the Ordinance was in no sense to be similar to the archaic one of the chief.'[2] Yet in the area in which I worked it was precisely the traditional chiefs who were made Principal Headmen—Jalasi, Mpambi, Kawinga, Liwonde and Malemia. In retrospect it is difficult to see how it could have been otherwise. Considering the sentiment attached to the chief in Yao society, it seems scarcely possible to conceive of leaders who 'enjoyed the confidence of the natives with whose supervision they were entrusted' who were not chiefs in the traditional sense.

In spite of its avowed intentions not to 'revivify or perpetuate government by native chiefs', the Administration proceeded to invest the traditional chiefs with its own power. 'Residents', Murray writes, 'were to indicate carefully by their attitude towards and dealings with Principal Headmen the fact that they were officially recognized as chiefs of their respective sections and that, as such, they were entitled to the respect and obedience of their people.'[3]

It would be wrong to imagine that the military actions at the end of the last century had completely destroyed chieftainship. Those who had resisted the Whites were driven out of British Territory but were allowed to return very soon afterwards. These chiefs then took up the threads of their life as best they could under the changed conditions. The degree to which the new Administration had become a force in Yao politics is illustrated by an entry in the District Book in Zomba. Kawinga III had died in August 1905, and the record reads: 'There were two

175 622 643 648 claimants to the succession, Kumlomba and Chiwalo. Their claims were really very equal and His Majesty's Commissioner (April 1906) called in Kumlomba and the most important headmen and decided the succession by their vote.' District Books have many entries dating before 1912 showing that the Administration did not consider chiefs and village headmen insignificant.

The appointment of village headmen needed the approval of the Provincial Commissioner, but presumably the recommendation came from the District Resident. It is reasonable to suppose that the District Resident in turn had discussed appointments with the principal headmen. Whatever the mechanics of the appointment, however, the outcome was that most village headmen who held positions of prestige in the indigenous system of ranking became village headmen under the Ordinance.

The District Administration (Natives) Ordinance thus made official the unofficial relationship which had previously existed between the Administration and the chiefs and the village headmen. The traditional relationship of chief to village headman and village headman to villager, however, became suffused with a new significance. These relationships had become part and parcel of the extensive administrative organization of the British Empire.

The Modern Administrative Structure[1]

648 642 643 The Native Authority Ordinance of 1933 and the Native Court's Ordinance provide the legislative framework for the modern administrative system. Under Section 23(*a*) of the Native Authority Ordinance, the rules, orders, proclamations, notices and appointments made under the District Administration (Natives) Ordinance were not repealed. The duties which had so long been incumbent upon chiefs and village headmen, therefore, continued unaffected.

The chief, however, was set up at the centre of a bureaucracy and given autonomy in a number of directions. The Native Court's Ordinance gave him legal powers to inflict punishment on his subjects; the treasury under his authority could raise

[1] I have dealt in some detail with the position of the chief in the modern situation in my article 'Political Organization of the Yao of Southern Nyasaland'.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

claims to primacy, and by the ideology of the kinship system is equivalent in status. In Jalasi's area, once again, the indigenous status of the chieftaincy is shown by the Administrative recognition of Jalasi against Mkumba, who was a minor chief, and Namwera, who had come to 'ask land from Jalasi', and who had to give some slaves and some ivory for his chieftaincy rights in the area.

The relationships of Native Authorities to each other to-day are thus fixed partly by the Administrative structure, and partly by their historical backgrounds, and I have indicated that the structure the Administration imposed in the Yao areas was very largely determined by the indigenous structure which existed at that time.[1] The Administrative system to-day, therefore, supports the traditional structure.

The five chiefdoms with which this study is concerned stretch from Zomba in the south, almost to Fort Johnston to the north-east of the Shire River. These chiefdoms are Malemia in the north of Zomba district, whose area lies along the Malosa range of mountains north of Zomba as far as Mount Chaoni. Liwonde district stretches from Mount Chikala and Mount Chaoni in the south to Mount Msili in the north. This district contains the chiefdoms of Liwonde and Kawinga and the minor chieftains under them. In Fort Johnston district which stretches from the north of Mount Msili to Lake Nyasa are the chiefdoms of Jalasi, Nyambi, Katuli, Makanjila and an Nyanja chief Nankhumba. The chiefdoms of Jalasi and Nyambi abut those of Kawinga and Liwonde, and it is with these that we are mainly concerned.

Malemia, whose clan-name is *amwale*, was apparently the first of the Machinga chiefs to move into present-day Nyasaland from present-day Mozambique.[2] His group moved south-west past the north end of Lake Chiuta and settled for a while on Mount Msili. Malemia was closely followed by Nkata, from whom the Jalasi chieftaincy developed and whose clan-name was *ambewe*, and his 'father' Mkumba, who moved in westwards past the north end of Lake Chiuta into the Mangoche Highlands. Here, together with the help of Kawinga and Liwonde, they attacked the so-called Mangoche chiefs (Mlumbe, Chikowi, Kapeni,

[1] Chap. II.

[2] The history of this chieftaincy is set out more completely in 'An Outline of the Social Structure of Malemia Area'.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

631 Matipwiri, etc.), displaced them southwards and so established
643 chiefdoms of their own. Mkumba moved to the south and
175 Nkata set up a fortress on Mount Mangoche, from which vantage-point he resisted British conquest for many years. Kawinga and Liwonde, whose clan-name was also *ambewe*, had moved in with Nkata but continued across the Shire River to settle in the Kongwe Hills to the west of Lake Malombe. Later, Kawinga and Liwonde re-crossed the Shire and moved south-eastwards until they reached Mount Chikala. This in the meantime had been occupied by Malemia. Kawinga and Liwonde succeeded in dislodging Malemia who retired to the Malosa Range, where he is situated to-day. Liwonde then left the mountain to settle on the east shore of the Shire River.

631 The arrangement of these particular chiefdoms in Administra-
643 tive districts therefore reflects the social relationships among the chiefs. Between Malemia and the two *ambewe* chiefs, Kawinga and Liwonde, there is an uninhabited forest reserve and a mountain range. Liwonde and Kawinga who can trace their descent
[611] matrilineally from a common ancestress and who are to-day perpetual[1] brothers, together with their minor chiefs, share the Liwonde district. In spite of the opposition of these two chiefs which arises from their position as chiefs of independent chiefdoms, they sometimes meet and visit each other. Chiwalo, who from the Administrative point of view is under Kawinga, is in fact more closely related to Liwonde and has much more to do with him. But Chiwalo's headmen usually appeal to Kawinga, not Liwonde, in their difficulties. Within Kawinga's area at a funeral or an installation ceremony of an important headman in the northern areas, representatives of the nearby chieftaincies Ngokwe, Chikweo, Chiwalo and Kawinga will be present. In the south, the representatives of only Chamba, Mposa and Kawinga are likely to be present. Headmen, if they come from Liwonde's area, do so because of kinship connection and not because they are representatives of Liwonde.

The relationships of Jalasi and to some extent Nyambi, with Kawinga and Liwonde, are much more distant. Kawinga and Liwonde stand opposed to Jalasi in spite of the fact that Jalasi shares their clan-name. I have never known of Jalasi coming to visit Kawinga or Liwonde. Jalasi's area extends well down

[1] i.e. the offices are fixed perpetually in this relationship. See p. 122.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

643 him about the laws it intends to introduce which affect his people. The Administration transmits new Ordinances and Regulations to the chief and he must then relay them to the village headmen. When it advises the chief of a new law it thereby advises the people of his chiefdom.

The Origin of Villages in Modern Chiefdoms

195 621 We have thus far been looking at the chiefdom as an organization of villages united by their common interests in and association with one chief. But the villages that compose the chiefdom are not all equally closely integrated into the political structure. This is most clearly seen against the background of how the modern chiefdoms came into being.

175 621 563 By the time that the 1912 Ordinance was introduced the social composition of the chiefdoms had undergone some change from what it was before the White conquest. Before the White conquest the Yao chiefs had overcome the indigenous inhabitants of Southern Nyasaland. Some of these had been allowed to remain in the area as subjects. Others were enslaved. There were some Nguru, Nyanja and Mpotola village headmen who had come to seek the protection of the Yao chiefs.

175 621 166 During the conquest, the territory was thrown into confusion, and villages fled in abandon from their own into neighbouring chiefdoms both in Southern Nyasaland and Mozambique. When the Administration allowed the chiefs to return, most of the important village headmen and their followers returned with them. Kawinga, for example, was allowed to return, not to Mount Chikala but to the area immediately to the north of it. He brought back with him most of his important headmen who had fled with him to the country of the Mpotola chief Nkanyela, in Mozambique. Jalasi was allowed to return from Portuguese Territory in 1906,[1] not to his mountain fortress Mangoche, but to a smaller hill Sakalwe some miles to the east. He gathered round him a few of his important headmen.

When hostilities ceased, there was a certain amount of internal readjustment. Some villages which had fled to other chiefdoms in the Protectorate started to come back while others stayed behind. To-day there are villages here and there which had left their chiefdoms in the confusion and had then joined their present

[1] District Book, Fort Johnston.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

chiefs. Mpumbe's village, which in 1947 was about 2½ miles from Kawinga's court village Nanyumbu, was originally one of Jalasi's adherents. Mpumbe fled with many others when the British attacked Mangoche in 1896. He went to the place where Lake Amaramba spills into the Lujenda River in Portuguese East Africa. When things seemed more peaceful, Mpumbe did not return to Jalasi's area, but preferred to seek his son Ngongondo, who had fled with a section of the village to Kawinga's area. He found Ngongondo at approximately the present site of the village, and settled with him. Ngongondo later moved eastwards to his present home in the Liwonde area. Both village headmen have achieved a certain amount of prestige in their new chiefdoms. Mpumbe was once a court assessor of Kawinga, and now holds girls' initiation rights. They have lost all touch with their former chief and are most unlikely to return to him.

A considerable number of Kawinga's villages moved into Mposa's and Chamba's areas, when they returned to the Protectorate. Their descendants to-day say that they did so because the soil was better in those areas than in Kawinga's.

Shortly after the British expedition, i.e. between 1896 and 1900, the Portuguese Government launched a punitive campaign against the Africans along the Portuguese–Nyasaland boundary. Many thousands of refugees came pouring into the Protectorate. Most of these were Mpotola and Nguru. The great majority settled where they crossed the boundary, i.e. round Chiuta, and Ngokwe chiefdom arose from some of them. After the Portuguese campaigns ended many other migrants came into the area. All those I questioned gave Portuguese ill-treatment as the reason for their coming across.

During the first decade of the century the movement, as in the initial invasion, was predominantly south-westwards—from Lake Chiuta towards the Shire River and Highlands. Now, however, the movement is gradual. The first movement of a group may bring it just within the boundary. Then the next movement may take it to the south and west deeper into Nyasaland. Some of my village case histories show this. Table III sets out some movements within Kawinga–Liwonde area (except Chiwalo).[1] I asked about the place of origin of all the villages

[1] I use Kawinga–Liwonde area to include the chiefdoms Kawinga, Liwonde, Mposa, Chamba, Ngokwe, Chikweo and Chiwalo.

extant in Kawinga's section, which had arrived since the White conquest. My enquiries about the headmen who are recognized by Government were easy, but for those who are not recognized I had to rely on the memories of my informants and I know that many were left out. I am not aware of any bias, but realize that wide generalization from the figures is not safe. A glance at Map II shows that Ngokwe area is the most north-easterly area and Chamba the most south-westerly. The others are intermediate. Of the 75 villages only two had moved counter to this direction, i.e. from Mposa to Liwonde in a north-westerly direction.

I have no measure of the number of villages which have moved entirely out of the Kawinga–Liwonde area, either to other parts of Nyasaland or back to Portuguese East Africa. I have never heard of a village's moving back to Portuguese East Africa, though I have heard of their moving westwards and southwards, and of a few moving northwards.

In Table IV, I set out the origin of villages which have arrived in Kawinga–Liwonde area since the White conquest, and which are still there. This table shows quite clearly, that by far the biggest influx into these areas has been from Portuguese East

Africa. We have no record of how many villages have been lost to the Southern or Northern area from Kawinga-Liwonde area, so that we cannot evaluate the significance of the gain of 64 villages from Southern areas, and of only 35 from the Northern areas. The density of population in Malemia's area is 268 per square mile, and the average density of the Shire Highlands is about 156·6. It may well be that there is now a movement out of the Shire Highlands into the less densely populated Liwonde-Kawinga area.

THE PRINCIPLE OF PRIMACY

Migration and invasion have been the keynote of Machinga histories: village headmen recount with pride how their ancestors moved into Nyasaland with their bands of slaves and followers. 'The East' is the traditional home of the Yao and even young men who have never been there proudly say, 'We come from the East'. This sentiment is reflected in the belief that the rains from the east are beneficial and give rise to good crops, while the rains from the west are detrimental and cause

3: Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

That these several sections of the Wayao differ in many respects may be seen by comparing the Amangoche of *Africana*[1] with the Amachinga of this article. I am not sufficiently conversant with the Amangoche to make a definite statement on this point but I am inclined to believe that after longer residence and wider knowledge, Macdonald would have found that some of his statements needed revision. Those whom he considered the "Yao proper" but whom I prefer to speak of as the Amangoche seem to have a considerable mixture of Anyanja, since their language contains many Chinyanja words and many of their customs are practically those of the Anyanja. I am of the opinion that the Amachinga may be regarded as more typical of the Wayao, and except when ambiguity might arise, I shall speak of them as the Yao.

The original home of this Bantu speaking people is uncertain; in historic times all the sections of the Wayao were originally grouped in that part of Portuguese East Africa around the hill called Chao, whence they probably derived their name, *Wa Chao* or *Wa Yao*. About the middle of the nineteenth century, as the result of inroads by neighboring tribes of Alolo from the southeast, and raids by the Makwangala, a branch of the Angoni of Zulu origin, from the northwest, disruption of the Yao people occurred, and the divisions mentioned above, moved toward Nyasaland. The Masaninga branch settled for the most part along the eastern shore of Lake Nyasa but a sub-section known as Tambala Yao reached the west side of the lake. The Machinga made a settlement near Lake Chiuta under a number of old chiefs, including Malemya (Nalutumbo), Kawinga, Chenkula, Kalimbuka, and Maole.

The descents of the Makwangwala again caused the Wayao to move on from Chiuta to Naminga on the Mikoko stream. Here Malemya suffered another defeat at the hands of the Angoni; many of his people were driven off and taken to the neighboring Anguru country where they were held in captivity for some time. Finally they were restored by the enterprise of one of Malemya's old men, Kulungala, who went alone to the Angoni, saying that he wished to live with them and with his own brethren. One day, he asked the Angoni if they would like to see their captives dance, and when they assented, he called the Yao together, and clapping his hands to keep time, he began to sing one of their dance songs. Gradually he gathered all the Yao into the village open space, dancing and singing; then, keeping to the same air, he told them why he had come, using their own language which the Angoni did not understand. "Malemya, our chief, remains at the Mikoko stream. It is not far off. We must all join him again. Now dance for joy. If anyone does not return there, it is his own fault." Then, a few at a time, the dancers left the crowd and stole away into the bush and, as night came on, they all made off and reached Malemya's camp in safety.

Malemya's people were again attacked by the Angoni, and on this occasion they defeated their enemies. The Angoni retreated and skirting Zomba mountain, reached the Shiré

[1] Macdonald, op. cit.

3: Stanmus D-5 (ca. 1912) 1922 FT7 Yao FT7

175 167 148 River at Mpimbi where they intended to settle. Here, an old chief, knowing that their presence would cause trouble, persuaded them by tales of many cattle far away on the other side of the river, to swim over, and there they remained.

Kawinga and Malemya, then, to avoid further raids from the north went down to the Upper Shiré River near Lake Pamalombe, Kawinga going to Mvera, while Malemya stayed on the east side of the river among the Anyanja, claiming friendship with them because they bore many of the same clan names. Later, Malemya moved up to the highlands about fifteen miles north of what is now Zomba, and Kawinga went to Chikala. Malemya was friendly with the Anyanja chief, Chenyani, who was of his clan, and was therefore able to buy from him for a red blanket all the country from the Likwenu stream to the Namadzi River, a district thirty to forty miles long. There his people settled. [131]

Kawinga was once again attacked by the Makwangwala from the north, but beat them back, after which they returned to the country whence they came — German East Africa near Lake Nyasa. The Angoni chief was killed in this battle, and the story goes that two Yao captives were told off to carry the eviscerated body back to the Angoni country for burial. As they were not provided with food for the journey, the two men began to eat the corpse. After several days, this was discovered; one of the men was killed but the other escaped to tell the tale. These were barbarous days, and the Yao relate that after raiding a village, the Angoni would leave a pot cooking on the fire with the body of a child in it, well covered with beans, so that when they had gone away with their booty and the villagers who had taken refuge in the forest returned hungry, they would start eating the beans and then come upon the body of the child, and having eaten of the juices of a human body, they would have committed a terrible sin. [726 266]

The immigration of the Amachinga into the country around Mangoche mountain caused the Amagoche Yao settled there to move. They passed into the Blantyre and Mlanje districts, and invaded the country of the Anyanja. The chief, Malemya, known as Nalutumbo died about 1880, and was succeeded by his nephew, a sister's son, according to the Yao custom. This nephew, Wandalama, then took the name of Malemya.

In consequence of this succession, there was considerable bad feeling between Wandalama and the other aspirant to the chieftaincy, his cousin, Kumtaja. The latter moved down to the plain below Zomba mountain to the south, where he gathered about him a band of friends and malcontents. Malemya decided to attack him and with this purpose, sent two messengers, Nkopiti [1] and Mapondela, asking Chikusi and his Angoni to come and do the job for him. Led by Nyamuka, Njeremoli, and Kabayi, the Angoni came from the Shiré River opposite Blantyre, via Matope. They attacked and routed Kumtaja who, owing to the thick country, managed to fall back with most of his people toward Lake Chilwa. Here he was received by his cousin, Chimombo, a son of Nalutumbo, and father of my interpreter, Chonga, who ruled among the Anyasa. Afterwards, he moved to Mpimbi on the Shiré where he built a stockaded village.

[1] Died July 14, 1914.

3: Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

After the defeat of Kumtaja, Chikusi and his Angoni routed Kumtumanja, a brother of Malemya, who had also been making a nuisance of himself. Kumtumanja, who suffered from a large hydrocoele, is supposed to have lost his balance on account of this impediment, and fallen into a stream where he had stopped to drink and to have been drowned. 175 167 648

The Angoni still burned for more warfare, and Malemya, fearing that with his work done, they might prove a nuisance to him, turned them on to the Amangoche Yao around Blantyre. Thither they set off on a raiding expedition and returned to their own country via Chiradzulu. This raid took place in 1884.

During the next few years, Kawinga, who had always held a grudge against Malemya for having got ahead of him to the best country, occupied the chief with raiding and warfare. In 189[illegible] Wandalama died, and was succeeded by Chisala, the son of his sister, Chisigure, and at the present time, he is the reigning Malemya.

It is of these Amachinga Yao under Malemya that the following notes are written. I have gone at some length into the history of these people in order to disarm criticism by those who, familiar with other sections of the Wayao, may not agree with all my statements.

Life History. Generally speaking, the life of the Yao native in the old days was full of ease spiced with the excitement of intertribal warfare. He cultivated his crops, kept a few goats and chickens, and relieved the monotony by hunting. Even domestic slavery was not a great hardship, nor did the Yao probably suffer from coast slave-raiding to the same extent as many other tribes. As children, they are wont to spend their days free from care, seldom reprimanded, and rarely or never physically chastised. During youth, the same easy lot is theirs, with the addition from time to time of a few small tasks; minor household duties for the girls, such as drawing water, sweeping the hut, and "minding" the baby, while the boys hoe or fetch and carry for their fathers in the village or in the bush. Left to their own devices, they play games,[1] dig out rats' nests, or shoot birds with bows and arrows. 181 857

Now, as formerly, when they are about five years old, the girls usually go to live with their grandmother who may thus have a number of children around her; or several girls of a somewhat more advanced age may sleep together in a hut dormitory. Boys of this age all live in a big hut called *nyumba ja chachanda*, "the boys' dormitory." This is their quarters until one by one they leave to get married. The girl, similarly, remains in the girls' dormitory or with her grandmother until she is taken in marriage.

Puberty. The first interruption of this placid life of youth is the onset of puberty or the first initiation ceremonies.[2] Formerly, these ceremonies took place after puberty but of late years, as is pointed out elsewhere, they are performed much earlier. 881

Child betrothal. Betrothal in childhood or before birth is not uncommon. A woman learning that some friend of hers is pregnant will arrange that if a girl is born, her son will marry the friend's daughter, or a man taking a fancy to a little girl will select her as his 584

[1] Vide infra, p. 267. [2] Vide infra, p. 246.

They do not form a representative sample though they were casually selected for study and are fairly well scattered in the district in which they are situated. 125

In all there were 762 men, women, and children normally resident in the hamlets. This represents about 1·2 per cent. of the total population of the area. By normally resident, I mean that these people are considered to be members of the hamlets, and if they were absent, were away on only short visits of, say, about a month. 162

I have thus counted polygynists as normal members of the hamlets, but have taken care to ensure that they were not included again if their second wives were in another hamlet of the groups studied. Men, women, and their children who had gone outside the area to seek work, for example, were not included. 125

The ages of all members of the population were estimated by relating the birth of the individual to some notable event, the date of which is known. In these hamlets it was always possible to find some old relative who could place the birth of younger people as occurring between notable events. After the two dates between which the birth occurred had been fixed, it was then possible to fix the date of birth more accurately by asking the older people to indicate the approximate size of the child at subsequent events, by picking out a suitably sized child in the village.

The following is the skeleton chronology used in this survey. 125 175

1870 Migration of Kawinga group from Kongwe Hill.
1881 First attack by the Makwangwara Angoni.
1884 Second attack by the Makwangwara Angoni.
1895 British attack on Mount Chikala, the stronghold of Kawinga.
1896 British attack on Mount Mangoche, the stronghold of Jalasi.
1905 Death of Kawinga of the Anthill.
1907 The departure of Mr. Hoare, Collector of Revenue, from the Chikala Station.
1908 Small-pox epidemic.
1915 Government regulations about the number of huts to a village (District Administration (Natives) Ordinance, 1912).
1914 Commencement of the First World War. This is a notable event because of the fighting in German East Africa, in which many Nyasaland African troops took part. Also many men were used as porters carrying war goods from the railhead to Fort Johnston on Lake Nyasa.
1918 End of First World War.
1919 Influenza epidemic.
1921 General famine. This is known locally as *sala sa Jim*, lit. 'the hunger of Jim'. Jim was an African Government clerk whose duty it was to dispense food to the starving populace.
1930 The coming of the famous *mchape* witchfinders. These people, trading on the beliefs of the population, induced practically the entire people to drink a potion to protect themselves from witchcraft. It is a most memorable event in the history of the area.[1]
1933 The introduction of Indirect Rule.
1940 The commencement of recruiting for the Second World War. The Liwonde district supplied a good proportion of men for the Army.
1946 End of the Second World War, i.e. the return of the soldiers.

The important thing about such a chronology is that the events should be deeply 121 125

7: Hetherwick M-5 (ca.1900) 1902 FT7 Yao FT7

SOME ANIMISTIC BELIEFS AMONG THE YAOS OF BRITISH CENTRAL AFRICA.

By the Rev. Alexander Hetherwick, M.A., F.R.G.S., of the Blantyre Mission, British Central Africa.

175 The original home of the Yao tribe may be roughly described as the large and lofty plateau which lies to the east of Lake Nyasa, and is bounded by the Rivers Rovuma and Lujenda. Forty years ago, about the time that Livingstone first entered the country, they began to be pressed on the north by the Magwangwara, and on the east by the Makuwa tribes. These invasions caused them to move, some westward down to the shores of Laka Nyasa or the banks of the Upper [134] Shire River, and others southward to the Shire Highlands, Mount Zomba and the eastern slopes of Mount Mlanje. In every case they succeeded in either subjugating or expelling the original Maravi or Mang'anja inhabitants of these districts, and in no case have they lost their own independence.

175 Till about fifty or sixty years ago the Yaos were untouched by any external influences, and when at that time the Arab and coast trader from Kilwa and 177 Zanzibar began to treat and trade with them they appear to have been little affected by contact with these visitors. Only a few of the younger men aped at [797] following Mahommedan tenets, and these they only grafted on to their still cherished belief in the old faiths of their fathers. The Koran, or a few of its texts, was added to the many other charms they had already hung about their necks. The faith which the first missionaries found them in possession of when they entered the country twenty-five years ago may therefore be held to be the unadulterated creed of the tribe from time immemorial.

774 The foundation of the Yao religion is to be found in the *liaolu*, the soul, shade or spirit which every human being possesses, and which is the inspiring agent in his life. They profess to give no definite description of the nature or characteristics of this soul. In their minds however it is allied with the shadow, and would seem to bear to the body the relation which a picture has to the reality. Their word for a shadow is *chiwilili*, which is also the term that they use to denote a picture, and pictures they associate with the shades or shadows of the dead. I have known natives refuse to enter a room where pictures were hung on [123] the walls "because of the *masolu*, souls, which were in them." The photographic camera was at first an object of dread, and when it was turned upon a group of natives they scattered in all directions with shrieks of terror. "The European,"

III. THE ENTRY Of The Whites

175 797 648 The first settlements in Nyasaland were in the Shire Highlands where a Church of Scotland Mission was built in 1876. In 1878 the African Lakes Company was founded to take over the trading activities of the Mission. As the White population grew the necessity for some non-missionary organization to regulate the relationships between Africans and the growing body of White settlers, who now included planters and traders as well as missionaries, became more and more pressing. Eventually in 1883 a British Consul was appointed. In 1891 to meet the activities of the Portuguese, a Protectorate was established and the military measures that had been proceeding against the slave traders were now intensified.

175 648 The military police used by the British authorities had arms which the Yao could not withstand, and even the most successful of Yao military groups was soon destroyed. Breech-loading rifles outshot the Yao's muzzle-loading guns and cannon were also used by the British in some actions. The British had a force of Sikhs well-trained in military manoeuvres. Even the previously impregnable Mount Cikala, so long held by Kawinga and his forces, was successfully assaulted. The superior arms of the British left an indelible impression on the Yao who had long conducted successful military campaigns, and in due course these arms came to be identified with the force of the value system of the Whites. One of the more immediate results of the success of White armaments was that certain Yao chiefs seized the initiative and used the British forces as a tool in their own political machinations. The history of the rise of Kalembo, although his country is outside the area of study of this paper, is interesting in this respect. Before the Whites came Kalembo, younger brother of Msamala, who was the father of the notorious Mponda, was an insignificant character. Just before the

8:Mitchell E-5 (1946-1947) 1949
[P.1458] FT7 Yao FT7

III. The Entry OF THE WHITES

175 648 British started actively to pacify the country, the sons of Mponda were at war with each other and Cingwalungwalu was on the way to dominating the whole of the west of the Shire River bank above the Murchison falls. After the British had demonstrated their efficiency by a few attacks on some of Nkata's forces, Kalembo approached the British leader and complained of the war in his territory. The British forces accordingly attacked and destroyed Cingwalungwalu's forces thereby leaving the way open for Kalembo to establish himself under the British wing as an important chief of the west bank of Lake Malombe. Amongst the chieftancies studied in this paper there appeared to have been no direct use of the British military forces in internal politics.[1] The Whites in this way immediately became a factor in tribal political organization. First of all some chiefs endeavoured to use the military force of the Whites directly in their tribal politics. Later on as military actions came to an end the power of the Whites continued to be tapped by chiefs and other personalities in the political structure in order to manipulate the tribal political set-up to their own advantage. In the main the power of the British Administration though still an active agent in tribal politics is now present as an abstract and invisible but nonetheless potent force. How this is done to-day I hope to be able to show by an analysis of the interaction of chiefs, African civil servants and village headmen.

101 175 619 643 As a foundation to this view of Yao politics, the detailed history of the three chieftains Kawinga, Liwonde and Nyambi is illuminating. Kawinga, Liwonde and Nyambi all belong to the same division of the Yao tribe, i.e. Macinga. There are about nine such divisions but only four are to be found in Nyasaland. The Acisi live near the Portuguese East African border in the Fort Johnston area (Katuli's area) and the

8:Mitchell E-5 (1946-1947) 1949 FT7 Yao FT7

[P. 145C]

648
175

[1] There is some evidence that Mgosa the son of Lowanda may have helped the British forces to subdue a neighbouring chief, Cambia the son of Kawinga.

101 Amasininga in the Makanjila area of Fort Johns-
619 ton District, i.e. to the east of the south end of
the Lake near Fort Maguire. These two divisions
● 175 are insignificant when compared with the other
two divisions in Nyasaland. The third division
643 is the Mangoce Yao now settled around Blantyre,
while the last division, the Macinga, are settled
between Fort Johnston district and Zomba.
These divisions arose from a breaking up of the
Yao tribe which originally occupied the territory
between the Rovuma and Lujenda Rivers in what
is now Portuguese East Africa. These divisions
are not very significant to-day. Members of a
division recognize that they are more closely
related to each other than to the members of
another division, but this does not appear to
affect modern political life in any way.

619 The first Kawinga, Liwonde and Nkata[1]
all belonged to the Macinga division which had
175 settled near the tip of Lake Amaramba where it
empties into the Lujenda River. From this place
551 of origin, the groups associated with these early
643 leaders moved into Nyasaland. In addition to
belonging to the same division of the Yao tribe
the three leaders mentioned also had the same clan-
name, viz. *ambeme*.[2] The term that I have trans-
lated as clan-name is the Yao word *lukoryo*,
which may also be translated as "kind" or "sort".
Thus, if one asks a man the "kind" or "sort"
of Yao he is, his answer may refer to the major
divisions as above, i.e. Macinga or Mangoce
or it may refer to the clan-name. Clan-names are
inherited matrilineally, but holders of the same
name are unable to trace their descent from
a common ancestor. People with the same clan-
[582] names formerly did not marry but this prohibi-
tion has fallen away. For the commoners the
clan-name seems to have lost most of its signi-
ficance but it is carefully remembered in the royal
lines and lines in which the rank of a village head-
man is passed down.

643 The present Kawinga and the present Liwonde
551 can trace their descent matrilineally from a com-
175

643 551 175 [601]

mon ancestress. The first Kawinga and the first Liwonde were maternal brothers and to this day Kawinga and Liwonde call each other "brother". Nyambi however was a sister's son of an early leader Mkumba who was the father of Nkata, and their clan-name was *awilani*. Nkata therefore called Nyambi "father".[3] Nkata was the first to move into Nyasaland and Mkumba and Nyambi followed afterwards. Later the Nkata name was dropped and an Arabic name Zarafi, corrupted to Jalasi, was substituted. Hence the present Jalasi calls the present Nyambi "father". Kawinga and Liwonde both call Nyambi *alamu*, or brother-in-law, it is said because one of the early Nyambi's married a woman who bore the clan-name of *imbewe*.

643 175 648

The groups under Kawinga and Nkata entered Nyasaland and gradually expanded until Jalasi, as he became known, dominated the area around Mount Mangoce in the present Fort Johnston District, and Kawinga, safely ensconced on Mount Cikala, dominated most of the area north of this point. Jalasi, Kawinga and Liwonde were heavily defeated by British forces in 1895–6 and driven out of British Territory. Later on they were allowed to return after they had been ordered to surrender and effectively disarmed. When they had returned, the chiefs were virtually ignored and as far as can be ascertained the effect of the British government was to destroy the power of the chiefs and substitute the system of British administration for theirs. Nevertheless, it is apparent from entries in the District Book that even though it were not the official policy, the administrating officers considered it important that the chiefs should maintain some power. Thus when Kawinga III died in August 1905 the District Book records: "There were two claimants to the succession, Kumlomba and Chiwalo. Their claims were really very equal and H. M. Commissioner (April 1906) called in Kumlomba and the most important headmen and decided the succession by their vote." The

643 report goes on to say that the newly elected chief
175 Kumlombe "had been mad once and still has a weak looking face and is a weak man. He has
648 no real influence with his people and is ruled by his young men's advice. He means well but does not act on his own ideas sufficiently."[1] This comment shows that even though the Administration may have acted on this occasion for the preservation of peace, to the Yao it seemed to be approving their indigenous institution in appointing the successor. Informants say that when Kawinga IV died in 1913 his successor Chiwalo, who was the unsuccessful claimant of the report in the District Book, was able to succeed to the name against some Yao opposition, because of his influence with the administration.

As early as 1903, only seven years after the last military action was taken against a Yao group, the position of the defeated chiefs in the new political structure was being considered. Thus the Report of the Protectorate 1903–1904 reads: "A somewhat difficult question for consideration is the extent of power which should be allowed to native chiefs. Before British influence was established a chief had unlimited powers of life and death, and was able to keep his people in order. He did so not by kindness, but through fear. At the present day, when chiefs are not allowed to use any of their old methods, the people formerly subject to them often refuse to obey or to take any notice of their directions. The tendency is for the old large communities to be broken up: for the small man to collect a surrounding of friends and go off and build new hamlets in other localities. There are very few chiefs in British Central Africa who are of great assistance to the Magistrate so far as judicial work goes. There are, of course, notable exceptions, but as a rule it is not safe to give any power to native headmen."[2] I feel that the view of chieftainship expressed in this report is erroneous and that the chief was never as powerful over all his subjects as the 1903 administration assumed. Also the break-up of large communities,

643 I feel, was not due to a break-up of the chief's
175 power but rather to a breakdown of domestic
648 slavery and the system of sanctions that lay behind it, thereby freeing slaves who started setting up their own homesteads. It illustrates that the social system was fundamentally disturbed by the changes wrought by British domination as early as 1903.

643 This process continued until the Administration
622 saw fit in 1912 to introduce legislation to prevent
175 further splitting up of communities and to give a certain amount of power to "paid native local
648 authorities . . . who shall be responsible to the District Residents for the good order and administration of their villages or areas." [3] Hence with the passing of the District Administration (Natives) Ordinance 1912, the Administration began to recognize the indigenous political functionaries and to absorb them into the general political machinery of the Territory. In this Ordinance, village headmen were recognized as possessing a certain amount of power over the people who lived in their villages. Amongst the village headmen one was to be recognized as a Principal Village Headman. The Ordinance made it clear that the position of the Principal Village Headman was in no way to be regarded as similar to the old tribal position of chief. Though the Ordinance further warned that persons who were formerly chiefs were not necessarily to be appointed Principal Headmen, it should be noted that many Principal Headmen were in fact such people. Thus, in 1912, the leadership position of certain headmen in the Territory, though always recognized by the Africans themselves before that date, was further officially recognized and they were given specific powers by the British. "Residents were to indicate carefully by their attitude towards, and dealings with, Principal Headmen the fact that they were officially recognized as chiefs in their respective sections and that, as such, they were entitled to the respect and obedience of their people." [4] Nevertheless it was planned to have a structure

648

[1] Recorded in the District Book at the District Commissioner's Office in Zomba.
[2] Annual Reports of the Territory 1903-4 quoted in S. S. Mkwaso, *Handbook of Nyasaland*, (London: 1932), p. 128. [3] S. S. Mkwaso (1932). [4] S. S. Mkwaso (1932), p. 130.

643 in which the District Commissioner would be
622 the real authority with the Principal Headmen
175 as his subordinates, to carry out certain well-
648 defined duties under his instructions. The Principal Headmen were expected to assist in the concentration of the huts in accordance with the new regulations concerning village headmen and the villages they controlled. Measures for the sanitation in the villages, sweeping and cleaning of villages, the construction of refuse-pits and latrines, were included in the Ordinance and the responsibility for this devolved upon the headmen. Village headmen were also expected to report crimes, abnormal illnesses and deaths, and so on. A clause specifically stated that no power to hear

[TEXT CONTINUES TOP OF P. 149B]

IV. THE PRESENT POSITION

643 In order to illustrate the structure of the political
175 divisions with which we are dealing, I shall
648 outline the make-up of the three districts under the Native Authorities Kawinga, Liwonde and
131 Nyambi (see accompanying map).

It will be recalled that Kawinga and Liwonde trace their descent from a single ancestress three generations back from the present Kawinga and five generations back from the present Liwonde. The groups under the leadership of these two brothers Liwonde I and Kawinga I, entered Nyasaland in the early part of the nineteenth century and after various campaigns in Mount Mangoche area migrated across the Shire River at Mvera and took up their position on Kangwa hill. Here the second Kawinga died. Shortly after this the groups were displaced by Ngoni raids and they recrossed the Shire River and moved southwards to displace another Yao chief, Malemia, from Mount Cikala (near Zomba), which stronghold Kawinga held until they were displaced by the British attacks in 1895. Liwonde at first occupied the neighbouring range Caoni but soon moved down to the Shire River. He too was displaced by British attacks and fled with Ka-

[TEXT CONTINUES MIDDLE OF P.149B]

643 and determine petty native cases was conferred
622 upon the headmen, though the District Commis-
175 sioner was supposed to seek their advice when
648 necessary.

Therefore, from the time of conquest a pattern of superordination of the Whites and subordination of the Africans was established and the indigenous political system remained largely without official recognition until the Native Authorities Ordinance was passed in 1933. The major change wrought by this Ordinance was that Native Courts were planned and instituted by the Native Courts Ordinance of the same year. At the same time a Native Treasury was founded.

IV. The Present POSITION

643 wings to Portuguese East Africa. They were
175 allowed to return later and they took up their
648 positions in an area roughly outlined in the early
131 part of this paper. At the same time, owing to military action by the Portuguese a certain number of refugees were crossing the border into the Lake Chuta area of Nyasaland.

THE present Bantu population of the Shiré Highlands in South Nyasaland consists of four major groups :

1. The Nyanja tribe, the country's earliest known inhabitants, whose language is closely allied to that of the Sena and Tete people on the Zambesi and the Senga on the Loangwa, but whose origin is uncertain. In 1858 Livingstone found various branches of this tribe settled throughout South Nyasaland.

Y
[175]

2. The Yao tribe, numbers of whom between 1860 and 1870 were driven southwards from their home in Portuguese East Africa by the neighbouring Amakua 'Walolo. These fugitive Yao fell upon the unwarlike Nyanja, conquered and subjugated their chiefs, and finally settling among them, intermarried to a certain extent.

3. A sprinkling of Ngoni, that branch of the Zulu whose flight from Chaka, wanderings in East Africa and ultimate settlement in Nyasaland and Portuguese East Africa, are familiar history. In the Shiré Highlands Ngoni are found only in small scattered groups, for their real home is the "Angoni Highlands" of central Nyasaland.

4. Recent immigrants from various tribes in Moçambique, given by Nyanja and Yao the indiscriminate name of "Lomwe", (i.e., possibly, "people from Lomwe Hill") or more rudely, "Nguru", (i.e. "people who speak indistinctly, like drunkards").

and £30 per annum. It is profitable to carry fresh fish inland by bicycle even as far as Blantyre,[1] as the shore price to the retailer is 4*s.* a load, which later may fetch from 16*s.* to 24*s.*[2] Yao on the south-west lake shore grow an excellent quality rice.[3] Rice is also grown near Lake Chilwa, but is mainly sold in the market organized near the lake shore by the Agricultural Department.

Division of Labour

The man builds the house, hunts, fishes, makes the nets, baskets, grain-store, game-traps, and, in the old days, the bark-cloth. He cultivates the tobacco. He cuts down the trees and may help with the hoeing and harvesting. The woman hoes, muds the floor of the hut, sweeps, cooks, brings firewood, draws water, brews beer, makes the pots and pipes.[4]

Land Usage

There are two types of garden in the Yao areas south of Lake Nyasa: one the ordinary garden in which the staples grow, and second, gardens along the stream beds. These latter are especially valuable for providing out-of-season crops. In addition most householders have a few small plots for tobacco and ground-nuts.

The main garden is cultivated by the slash-and-burn method, common in Central Africa. The Yao, unlike the Bemba, garden occupies the whole area cleared. Burning is done just before the rainy season (October–November). The ash and soil are hoed into elongated mounds and grain is planted along the ridges. Gardens may be cultivated for more than five years. In the second and subsequent years of cultivation the stalks and weeds are piled up and burnt. There are signs of soil impoverishment. The gardens are cleared in August, and heaped to dry for burning. After the burning the seeds are planted in late November. By February and March green maize is available to supplement the diet, and by the end of April the crops are ready to be harvested. The maize is stored in wicker containers, while sorghum is stored in the huts on a stand. Cassava is planted in large mounds made by turning the turfs over, so that the roots are outside the mound and the vegetable matter inside. Legumes are planted in smaller gardens, or interplanted with the main crop. Ground-nuts are stored, after being shelled, in mud-plastered wicker containers, designed to be rat-proof. Tobacco is planted at the sides of the streams for hand-watering in the seedling stage, and then transplanted about January. The leaves are ready to be plucked about April and soon afterwards they are marketed. Sweet potatoes are planted in the rainy season, and are ready for eating in May. The stream gardens yield out-of-season crops—maize, beans, pumpkins, and also sugar-cane, which is used in the initiation ceremonies.

Craftsmanship

The Yao have few skills. All cultivation is by hoe; axes and knives are their only other technological equipment. The men make mats from reeds and palm leaf, and the women make pottery. The huts are strongly built from poles laced with bamboo and plastered with mud. The roof is thatched with grass. Under Arab influence the

1: Tew E-4 (no date) 1950 FT7 Yao FT7

Yao make square houses.[1] Panelled doors and glass windows, deck-chairs and palm furniture are becoming more and more popular. The men wear long Moslem robes and the women are clothed in cotton. In the rural areas there are usually a few craftsmen who still ply their trades as carpenters and blacksmiths, though the latter no longer smelt, but use scrap-iron.

Labour Migration

Statistics are not available for the Yao of Portuguese East Africa or Tanganyika Territory. Yao constitute 34 per cent. of the total population of South Nyasa district, 15 per cent. of upper Shire, 11 per cent. of Blantyre and Zomba.[2] The proportion of labour migrants in these districts was in 1937 as follows:[3]

District	*Adult males fit to work*	*Percentage of emigrants*	*Number producing economic crops*	*Number of subsistence producers*	*Emigrants not heard of since 1930*
South Nyasa .	24,230	27·1	2,912 (12%)	12,025 (49%)	873
Upper Shire .	14,673	15·9	2,555 (10%)	16,629 (67%)	233
Blantyre . .	25,330	15·6	3,788 (15%)	10,165 (40%)	986
Zomba . .	16,679	12·4	7,720 (29%)	9,040 (33%)	553

South Nyasa district, which is unfertile waterless bush with a long history of famine and food shortage, has the highest proportion of labour migrants. Upper Shire, though not fertile, is more prosperous, benefiting from the tobacco- and cotton-growing industries, and from the dried-fish trade.[4]

SOCIAL ORGANIZATION AND POLITICAL STRUCTURE[5]

Kinship and Local Grouping

Among the Yao succession is matrilineal and marriage mainly matrilocal. According to some informants succession formerly passed down the line of brothers, as with the Bemba, but it now passes direct to the eldest sister's eldest son, or to descendants of other sisters in order of seniority.[6] Chiefly succession follows the same rule, but the most senior may be set aside for a more suitable candidate.[7]

Clan names, *lukoyo*, are inherited matrilineally, and formerly designated exogamous units,[8] but the marriage prohibition has now ceased to operate. Holders of the same clan name are unable to trace descent from a common ancestress, and for commoners clan names seem to have quite lost their significance; they are, however, carefully remembered in the chiefly lines and in other lines of hereditary rank, such as village headmen.

Within the general kinship grouping of the clan, a smaller group is recognized,

[1] Werner, 1906, p. 144; Macdonald, 1882, vol. i, pp. 20–2, describes a round hut.

[2] 1931 Census information is taken because the district boundaries were changed between 1931 and 1945, so that the information in the 1945 Census would not be susceptible of comparison with that given in the 1937 Survey of Male Adult Population in the *Bell Report*, Appendix A.

expressed also in the speeches by the marriage sureties. The couple are exhorted to refer disputes to the sureties, and to consult the diviner in case of sickness.[1] After the rite these two sureties have special responsibilities towards the couple; grievances are referred to them, and they must be present when adultery cases are heard in court. If the marriage witness ceremony has not been performed, the relationship is not regarded as legal and no adultery compensation can be claimed by the husband. 585

Divorce used to be a private affair, which was merely signalized by one party giving to the other an arrow as a token of separation.[2] Nowadays all divorce cases go to court. The woman is usually asked to choose between her husband and the adulterer, and the compensation paid to the former, if she decides to leave him, is higher—amounting to about 10s. A man can be sent away from the village by his wife's kin, but if he has given no grounds for divorce he can claim compensation and will also take back any gifts made to his wife. A few small gifts to his mother-in-law are not reclaimed. Divorces are easily obtained and frequent. Grounds for the divorce of a man may include failure to pay hut tax, one of the specific duties of the husband. 586 [431]

The custom of making a marriage payment is recorded by Johnson[3] (on the east coast of Lake Nyasa) as a relatively new adoption. When given it is divided between the bride's father, mother, and mother's brother and brother.[4] 583 177

Slavery

Domestic slavery was an important institution in the Yao social system. Slaves were obtained by capture, purchase, or in compensation for injury.[5] A man would pay a debt by giving slaves (wives or members of his matrilineal kin group) to his creditors.[6] A man might voluntarily enslave himself to a man having charge of many women, as a means of obtaining a wife.[7] The children of a free man and a slave woman were not emancipated, as their father could not take them from the village of their mother's master, who had the right to sell them.[8] Slaves took part in the ordinary life of the village; women slaves ranked as junior wives of their masters and shared the usual work of women. Men might be supplied with guns for hunting or might accompany their masters to war, trade for them, spin, weave, sew, make baskets.[9] The institution of domestic slavery was an expression of a dominant motif in Yao culture—the association of status with a large number of dependents. Its abolition by the British was in itself a major blow to the prestige and authority of the chiefs. 567 [554]

Information about the social organization of the Yao in Portuguese East Africa is scanty, but it is in agreement with what is known of the Nyasaland Yao; Heckel, who knew the Yao in Lindi district, Tanganyika Territory, confirms the correctness of Stannus's account of the South Nyasa Yao. 184 602

The Yao came into Nyasaland in small parties of kinsmen. Their experience and their superior weapons soon enabled them to dominate the Nyanja among whom they settled, and today they dominate the population of the Southern Province. They are organized into loose groups of villages, under petty, independent chiefs. They seem 175 [621] [631]

return to the *lupanda*, where the initiates are welcomed by their friends. An essential part of the ceremony which takes place at this stage is the exhibition of animal shapes made by the *m'micira*, with mounds of earth outlined in flour. These animal shapes differ from lodge to lodge. On the last night before the return to the village the initiates undergo a ceremonial bathing, each boy being carried to the stream by a woman, who thereafter is addressed as 'elder sister'. Finally, with new names, and freshly oiled and decorated, they march to the chief's village to be redeemed by him from the *m'micira* with gifts of cloth. After initiation it is a deadly insult to call a boy by his child-name. All who pass through initiation together consider themselves bound by mutual obligations of hospitality.[1]

Girls' initiation takes place in three stages. First, there is *ciputu*, the general initiation before puberty, which corresponds to the boys' *lupanda*. It takes place at the same time of year, and though it lasts for less than a week, its conclusion is celebrated at *lupanda* jointly with the conclusion of the boys' initiation. A hut is built in the bush, like the long dormitory of the boys, and four days are spent in dancing and singing. Each girl (aged about eight years) is accompanied by a sponsor, a woman friend who continues to be her mentor during subsequent rites, and who assists in giving the girl instruction in her womanly duties. At the end the girls are bathed and anointed, dressed in new clothes, and each is carried to *lupanda* by her sponsor. Here they prove their skill in dancing and receive gifts from their friends. Ritual defloration follows the *ciputu* initiation.[2] Among Mohammedans, clitoridectomy used to be performed by a woman operator, but, it is said, was discontinued in about 1903 on account of the heavy mortality.[3]

After this first general celebration, first pregnancy and first birth are the occasions of separate rites for each girl. According to some informants there were once two ceremonies connected with pregnancy. One, for the young married men whose wives had not yet conceived, used to take place at the same time as *ciputu*; each man was attended by a woman sponsor not his wife, given good advice, and put through various tests of manhood. Mitchell does not confirm the present existence of this ceremony, but in the old days if a man was betrothed or married to a child going through her *ciputu* he had to accompany her.

The *litiwo* ceremony takes place when a young married woman quickens with child for the first time.[4] The woman, with her sponsor and the married women of the neighbourhood, went out in procession for a ceremony of singing and dancing and instruction to the young couple, followed by a feast. Nowadays no men are allowed to attend *litiwo*. A child born of a woman who had not undergone this rite used to be buried alive; nowadays her *ayene mbumba* is charged by the chief.

Finally, six days after the first child is born, its naming ceremony forms a last initiation rite for its mother. The husband is formally led into her hut by her sponsor and the married women of the neighbourhood, and the child is taken out for the first time to the accompaniment of feasting and dancing.

Most Yao men and women act as sponsors of initiates at least once, and all parti-

cipate yearly in the great initiation festival for boys and girls. Consequently as they repeat each year the lessons of their own initiation, the ceremonies are the main vehicle of Yao culture.[1] 881 852

There are also two Moslem ceremonies:

(1) *Jandu*, the boys' Moslem baptism, which takes about seven days, and is usually worked in with *lupanda*: 881 852

(2) *Nsondo*, the girls' Moslem baptism, which is the same as *jandu*, 177

but usually quite separate from *ciputu*. It is important that the wife of a Moslem should have her *nsondo* so that she knows how to prepare the food properly at Ramadan.

Menstrual and Other Taboos

Menstruation is held to be dangerous. A special mat is used by the woman during this time, and is rolled up and kept during the rest of the cycle. The hut is completely replastered after menstruation. Intercourse during menses leads to disease of the man. 841 834 Sexual contact is dangerous to persons at certain other periods: during initiation ceremonies, during mourning, and for babies who have not been through the protective rite. The danger is thought to lie in *ndaka*, a dread disease characterized by swelling. This may be transmitted by salt in the food. Deaths are often attributed to 'salt'. Much of the significance of the mourning is that medicines are prepared which protect the mourners against the dangers attendant on sexual activity.

Burial Rites

News of a death must be sent to the chief by a messenger carrying a single fowl. 764 The chief gives a present of calico for wrapping the body, and a goat for the burial [203] men. These are called *awilo*, neighbours unrelated to the dead, who volunteer for [431] certain duties. They prepare the body for burial and carry it in procession to the graveyard outside the village. No uninitiated person is allowed to see the funeral. All who attend the burial are prohibited from sexual intercourse for one month. After this time the prohibition is lifted by a ceremony of beer drinking and feasting, and on the following day all fires in the village are extinguished, and then relit; and the mourners are shaved. A year later beer is brewed for a final ceremony.

For a period after her husband's death a widow is unclean, and has to be purified 768 by ritual intercourse with a man who is paid. The widow is not allowed to remarry 589 for two or three years. A widower leaves his wife's village, after receiving a parting gift. The widows of ordinary persons are not inherited. If a man has himself a 'name' [587] (rank and social position), he has an heir, who inherits also the wives of his predecessor. But if the heir (the maternal nephew) has married a cross-cousin (mother's brother's daughter) he would not consider the wife's mother as his inherited wife.

Before the burial the dead man's hut used to be destroyed, together with his possessions. Immediately afterwards a consultation is held as to whether retaliatory 764 action against sorcerers is called for. The *awilo*'s duties include not only the conducting of the burial, but also the subsequent inquiry and the conduct of the second 767 ceremony, the beer drinking, at which they shave the mourners. A man who has

436 calico currency was an impossibility.'[1] The Africans could hardly have resisted the change over to a money economy. The taxation system introduced in 1893 was based on the Governor of
436 Zululand's Proclamation III of 1887, and ruled that a tax defaulter
651 was liable to be conscripted for labour until he had earned the
687 amount of his tax. Coffee estates owned by Whites in the Highlands were at the same time in need of labour.[2] Tax was then taken in kind but it was soon changed to cash as a further inducement to Africans to come on to the labour market. The Africans were forced into the cash economy of the Protectorate even if they were unwilling. The measures were so successful that in 1899 the *Gazette* announced that the labour market in Blantyre was flooded.[3]

Modern Economic Structure

● 177 In modern Nyasaland, the wants of the Africans have become
511 even more varied than they were in the earlier days. Most younger men wear European-type clothing and shoes. Many own bicycles and sewing machines. Many houses have glass windows and panelled doors and most of them are furnished with some rough furniture which has been bought from local craftsmen. Many have beds and mosquito nets. Few women cannot boast of enamel dishes to replace their clay pottery or china cups to replace drinking gourds. The food habits of the peoples too have broadened. Most households use sugar these days, and many people drink tea. I should say that all households occasionally buy soap. Certainly all need salt, which formerly was burnt from the saline grass around Lake Shirwa or dissolved out of special soils in Portuguese East Africa. The stock-lists of an Indian-owned village shop in Chiwalo's area and of an African-owned canteen in the same area, which I have set out in Appendix A, indicate the range of the wants of the modern African.
434 It is clear that these wants are over and above food require-
463 ments. The people in these tribal areas live primarily on the

845 one of Malenga's men died, after giving birth to quintuplets, some thirty years ago. Deformed children are buried alive. A large number of children is always hoped for and where polygamy is practised, some families are of considerable size, although the mortality [165] among young children is very high. It is, of course, very difficult to state the child-bearing period among natives. It does not start so early as is commonly supposed, and I think the menopause is found within about the same limits as among Europeans.

Death. Natives of Nyasaland live to a good old age. That such is not the case I have 761 found to be one of the many fallacious beliefs concerning natives which should be relegated 165 to the realm of exploded theories, as I have pointed out elsewhere.[1]

Death in old age is recognised as a natural event but apart from this, all sickness and death were formerly and are still to a large extent looked upon as the result of the machinations of some person, an idea which forms the outstanding feature in their belief in witch- [754] craft, *uawi*.[2]

Here I shall mention the ordinary customs in the case of death. During the last hours 763 of a mortal illness, a man is tended by his wife or wives; the head wife sits constantly supporting his head on her lap or against her breast. A woman is similarly tended by her mother, sisters, and friends. As unconsciousness sets in and the extremities become cold, they say, "His spirit has gone and only the heart remains alive."

The native does not like the idea of lingering on and a man on his death-bed will say to his sons, "Now watch me that I die quickly." He may take medicine to help him over that time or he may give his sons instructions as to what to do. Should a man linger unconscious for a long time, friends will ask his sons, "Did he give you any instructions?" If he has done so, the sons will then carry them out. This perhaps consists of bathing themselves in medicines left by their father, while they stand on the roof of his house. Sometimes, the natives say of a lingering case, "Ah, perhaps he has eaten of a tortoise's heart!" [825] knowing the phenomenon of the tortoise's heart and believing that by partaking of it, the same property can be conferred on the heart of a man.

764 When death is manifest, the body is covered with a cloth by a brother, a son, or some other person in attendance. The eyes are closed, the mouth shut, and at the present time, [177] the body straightened out. This, however, is a recent practice copied from the Anyanja, Europeans, and Mohammedans.

764 News of the death must be sent to the chief, and a messenger goes to his village where the chief and his people sit in the village open space. He carries a fowl in his hand. The 203 present of a single fowl always denotes bad tidings. One of the chief's men, seeing the stranger approach with the single fowl, will jump up and take the bird. He is joined by the others and they go away to the cross-roads where they kill the fowl, pluck it, cook it and eat it. In the meantime, the messenger delivers his news to the chief who will produce from his house about eight yards of white calico; if the deceased has been a much respected

[1] Hugh S. Stannus, 'The life-span of negroes', (*Lancet*, April 11, 1914, p. 1052). [2] Vide infra, p. 268.

3: Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

code of morals is imparted which is far reaching for the social welfare. Macdonald makes the statement that "when a girl is initiated, she must find some man to be with her on her return; otherwise she will die."[1] Speaking with reserve as to what happened among the Amangoche around Blantyre Mission thirty years ago, I believe that no such practice is or was part of the Machinga Yao ceremonies. I have heard similar stories from other Europeans but I am inclined to discredit the whole idea as a practice among any section of Yao. Of the Anyanja, I cannot speak with the same conviction. Similarly I believe that the practice of artificial dilatation of the vagina is foreign to the Yao though possibly introduced in some places from the Swahili. 881 177 832

At *Lupanda* and *Chiputu*, the youth have to undergo a good deal of hardship which is all for their benefit, but year by year, as civilization progresses, greater numbers forego these ceremonies. Their manners and morals suffer in consequence, and one is forced to acknowledge with the "old people" that the younger generation, decked in European clothes, with an air of smug self-conceit, no longer shows that decorum and self-respect which characterise the older, unsophisticated natives. My experience with regard to the attitude of natives to their initiation ceremonies differs from those related in *Africana* and I am afraid that Macdonald's native friends[2] were laughing at the inquisitiveness of the white man and not at their own experience. 881 177

In the *Journal of the Royal Anthropological Institute* for 1913,[3] Dr. Davey and I gave a short account of part of the ceremony at *Lupanda*. Since then, through the friendliness of some of the chiefs in Zomba district, I have been present at several more ceremonies. I have collected a number of fresh observations and made a complete set of sketches of the *inyago* or images in relief made on the ground at one of these ceremonies. I have also a complete account of the boys' ceremonies from a celebrated master of ceremonies or *m'wichila* as he is called, named Mlemala (Kumpika) of Che-chamba, in his own words, with his own songs. In writing down the songs, I have simply recorded the words, without giving the many full and partial repeats, and I have never attempted to score down the airs to which they are sung. 881 124

In the account given below I shall follow Mlemala's practice, giving such variations as I myself have observed. It will be understood that each *m'wichila* has his own way of doing things so that there may be many variations in detail.

Lupanda: Every year, a certain number of boys in a group of villages reach the age at which the ceremony is commonly performed. In response to requests made by the village headmen, the chief appoints a date on which the *unyago* shall be held; this is usually towards the end of the dry season (September) but before the long grass of the bush has been burnt, as this affords the necessary privacy to those taking part. 881

woman guardian shows to her man red and white beads in her hand and tells him that white indicates health while red means sickness, thereby pointing out to him their deep-rooted beliefs in the diseases associated with intercourse or association with women during menstruation. 881 842

Then follows a test of manhood. The women guardians put little pieces of stick (*lukwi* – sticks or firewood) on their heads and sing: [533 539]

"Ngumpe nikwumpu lukwi kwa mnuku'chawuno liu!"
"I must give my wife (when sick) firewood of the *mnuku* although it gives lots of ashes!"

What is meant is that when his wife is ill, the husband should fetch the firewood even though he does not know which woods give least ash; the *mnuku* tree gives many ashes. The little piece of wood a few inches long with a notch in the middle is then handed to the young man by his guardian. He places it on the ground in front of him, kneels down, and with a small axe he attempts to divide the stick at the notch. If he is successful, he is greeted with cheers, clapping, and much rejoicing. By proving his power to hit straight, he has also established his manhood; it is prophesied that he will soon have children. Should he miss through nervousness, shouts of derision welcome him and his guardian shows her disgust with his performance. If he is a young fellow well-liked in his village, he may be allowed to make a second attempt. After this ceremony, each couple bathes each other in their shelters by pouring water over the head and body without removing the clothes, thus making brotherhood. Forever after the man must treat this woman with great respect, must not address her for some time, and then only after making her a small present.

The woman guardian picks up the two pieces of the broken *lukwi* and on the morning before they all leave *Chiputu*, the mother or sister of the young man gives her a string of red or white beads saying, "These are to bind up the bundle of wood." The man's guardian binds up the pieces of wood with the beads and gives it to her man. When they have returned to the village, they go to the young man's wife and he presents them to her. The guardian, however, steps in and slips off the beads which she keeps, while the wife, pleased at her husband's success, drops the two pieces of wood into the fire.

During the weeks that the girl *usili* remain under instruction in the village, those young men who have been *ku-lukwi* sleep in one big enclosure away from their wives and do not cohabit until after the second return from *Chiputu* is made.

Another *ku-lukwi* test sometimes, I believe, introduced into Yao ceremonies but really one practiced by the Mpotola people and not proper to the Yao, is as follows: [177]

The guardian lies on the ground, wearing a small loin-cloth, and holding beads in her clenched hands, red in one, white in the other. Her man standing at her feet, bends over her and projects saliva on to her abdomen through a rolled up leaf held between his lips, at the same time choosing one of her hands. If he chooses the hand containing the white beads, he is hailed with delight as a man indeed, but should he choose the hand containing

3:Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

Strophanthus is specially reserved for poisoning arrows and it is doubtful if it is ever given by mouth; *Kombe* is the name used in this country, but there are two species of strophanthus in Nyasaland, *Strophanthus kombe* and *Strophanthus courmontii*. The seeds and bark are used and, less commonly, the root. They are mixed with the roots of a shrub called *Ndwazimba*, pounded together and boiled, and the liquid used to anoint the arrows. The use of poisoned arrows is a Manyanja custom adopted to some extent by the Yao.

137 278 [07] [226]

A number of poisons are also employed in catching fish, *Ngunga* and *Mtuta* being the most common, also *Kamsimbile Ngachi* (*Nkodzi*, Chin.), and *Chingunga*.

Witchcraft. In my article on the Anyanja,[1] reference is made to witchcraft and *mfiti*. Beside the Nyanja *mfiti* or the Yao *mazwi*, all tribes as far as I know in Nyasaland have firmly fixed among their beliefs, the conception of the supernatural human-flesh eater. It is a little difficult to define the term *mfiti* or *mazwi*, as it has come to have the somewhat generalised sense of one who practices witchcraft, but the original meaning is defined by Scott,[2] a person who has acquired the knowledge of occult medicine by which he can kill his fellow men; "what makes the power so dreaded is not that the *mfiti* exercises this power for reasons of spite but (as is supposed), to eat the body of his victim." It is at once interesting to note that the word *mfiti* does not belong, according to Scott, to the personal class of nouns but to the *gu-as* class, which seems to imply that they believe a *mfiti* to be something outside the idea of a person. Among the Anyanja in Zomba district, however, the word belongs to the first class of nouns (the personal class) as also does *mazwi* in Chiyao.

754

The natives believe that any man in a village may be a *mfiti* or it might be more correct to say, is capable of changing into a *mfiti*. *Ufiti* is the state of being a *mfiti;* in Chiyao, *uazwi*.

As I have pointed out under *Diseases*, practically all illness and death are thought to be due to the machinations of some person or persons. The inciting motive which may cause a man to compass the death of another may be spite, revenge, etc., or the desires of *uazwi*. Until recent years, when the Government legislated to put down witchcraft, the charges of *uazwi* were everyday occurrences. Whether or not the prevalence of the idea of cannibalism has any substance in correspondingly frequent practice has never been and now probably never will be surely proved. Duff Macdonald believes it to be so.[3] It is true that native graves have been and are still rifled and that the graves of some Europeans have been so opened in the past, as I have learned from eyewitnesses. It seems probable that the graves were tampered with by natives with the object of removing the human remains, possibly to be eaten or to obtain portions of the body to use as charms. Mr. L. T. Moggridge,

3: Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

and the baskets and pots. A wooden dish *ubini* may be seen occasionally, but of late years, this has been generally replaced by enamelled articles. 415 [77]

Around the entire hut, or simply enclosing a yard behind it, there is often a fence about five feet high. In the enclosure thus formed, many household duties are performed, such as the pounding and sifting of grain. The grain store *upulus* often stands in this yard with the pigeon-loft and possibly a hen-house or goat kraal; these are sometimes found in the open space at the front of the house. If a grain store is built within the hut itself, it is then known as *ubunga*. Near the pigeon-loft will be seen a pole with prongs supporting an old pot with water for the pigeons to drink. In a tree in the bush nearby, there may stand a beehive, consisting of a bark cylinder. Similar cylinders are sometimes used as pigeon-houses. 361 343 [231]

The large pots for brewing beer are usually set in the yard or on the back veranda, together with a basket of split bamboo for carrying fowls, *chitetete* (Yao and Chin.). 415

Gourds. Gourds are grown in the village for use as vessels of various kinds. Different shapes serve different purposes; names are given them according to use rather than shape, though these more or less coincide. Ladles for water or beer, *mawale* or *upao* (*nawaro* or *chiko*, Chin.) are usually long-handled gourds (Pl. XIV, figs. 7, 8, 9). Drinking vessels for beer, etc. *chipunda* and a specially large one, *ntawala* are usually of the shape illustrated in Plate XIV, fig. 1; sometimes they are like fig. 5, but this shape is more commonly used for water. *Lipache*, the type illustrated by fig. 2, is also used for drinking or for holding gruel. Oil flasks, *chiani* (*itupa*, Chin.), are usually of the double-bellied type (figs. 4 and 6). Salt bottles, *chitumbe* (*chiguru*, Chin.), are similar to oil flasks. Rattles, *sanje*, used at dances etc., are also made from gourds, often from those with tuberosities (fig 3). Other uses for gourds include pipes, snuff-boxes, enema funnels, and resonators for musical instruments.

Pottery. The art of pot-making appears to have been known to the Yao for a very considerable period. There is no history relating to its introduction among them. The art is in the hands of the Yao women. As among all Nyasaland tribes, a particular kind of clay is used and no admixture with any binding substance is made. The pots are simply moulded by hand from base to brim and, without the aid of any wheel or other device, wonderful symmetry is attained. 323

After drying, the pots are fired by being set on their bases on the ground and a wood fire is made round and above them. They are then sprinkled with an infusion of the *ngumyuse* or *ntumbi* tree, a head of millet being used for the purpose, after which the pots are set upon a fire and millet husks are thrown into them and allowed so to be incinerated. These customs, a kind of christening of the pots, "insure their turning out well."

No glaze of any kind is used, but they are sometimes colored red by boiling with a pigment called *ngumu*, prepared from a red sediment found in sluggish streams. The preparation of *ngumu* is in the hands of men and women who make a trade of it, such as a man called

3: Stannus D-5 (ca. 1912) 1922 FT? Yao FT?

3. *M'tungwi*: this large double basket one half of which fits over the other like a cover, is now very common among the Yao; it was copied from the Swahili *kjimundu*. The body is made in the same way as the other baskets, but each half has a broad rim of wood which is always cut profusely into patterns (Pl. XVI, fig. 13, and Pl. XVII). 285 415 [177]

4. *Chimumbi*: the beer mug, a small hemispherical basket rendered waterproof by smearing with a sticky substance prepared from the pounded stem of the *mpono* tree or from the root of the *mpona* plant mixed with charcoal (Pl. XVI, fig. 12).

5. *Lisungulo* (*lupe*, Chin.): the beer strainer made in the shape of *chikungu*, but the strips of bamboo forming the warp and the weft are of different thickness, so that spaces are left for the fluid to run through (Pl. XVI, fig. 14).

Mats. In years gone by the Yao made a rough kind of plaited matting of split reeds called *chipondo*; it is not seen today. Another type of mat seldom used today is the *lichiko* (*chiko*, Chin.), made of a number of reeds of equal length bound together by several rows of interlacing string (Pl. XVI, fig. 7). Reeds are also used to make the *mpono* (*mpone*, Chin.) (Pl. XVI, fig. 10). When dry they are split and fastened out with the smooth surfaces all on one side. A number of reeds so flattened lying side by side are then sewed together with native string, and form a clean, smooth mat for sitting or sleeping. 285

Mats made of plaited strips of sun-dried palm leaf are now in common use, the art of making them, I believe, having been introduced from the coast. Large mats of this kind called *liambi* are used in the chief's courtyard (Pl. XVI, fig. 9). Smaller ones called *mkoko*, or by the old people *mdungu*, made from the leaf of the wild date palm, are used for sleeping (Pl. XVI, fig. 6). Since the advent of the European, mat making has become an important industry, and *liambi* and *mkoko* are to be found in every European house.

A still finer kind of mat, circular in plan and stained in patterns, has lately been introduced by the Swahili. Red and black dyes are generally used; the red is either *mpono*,[1] or a stain called *mchenda* prepared from the bark of a tree called *mnembe*; the black dye is made from the root of a vine, *lilwungu* (*chikwa*, Chin.), the itch bean. [386]

The matting made of these strips of palm leaf is in the form of a ribbon from three to six inches wide, according to the fineness of the strips. The ribbon of matting is sewed into the form of a cylinder by plaiting the edges of the ribbon together in a large spiral. This cylinder of matting is then cut down one side and laid flat, and the cut edges finished off with a plaited mat border (Pl. XVI, fig. 8). It will be seen that, owing to the way they are made, these mats are never quite rectangular. The ribbon of matting used for the circular mats is narrower still and sewed round and round in a flat spiral fashion.

Cloth. The Yao in years gone by made a woven cloth, but the art has long since died out, and I have never seen a piece of native-made cloth. I imagine, inasmuch as bark-cloth is still worn by the poorer people, that the native-made woven cloth was only worn by the few, probably the chiefs. The older cloth was undoubtedly bark-cloth, worn, as I 286

[1] Vide supra, p. 341.

3: Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

two feet high and fifteen inches in diameter, hollowed out from above for about two-thirds of its length. Many are made with a kind of base or stand, and some have roughly carved bosses on the outside; these are called "the breasts," doubtless emblematical of women, a large part of whose life is spent in preparing flour (Pl. XV, fig. 15). 412 [532]

The fire-stick. Matches are becoming more widespread year by year and soon the knowledge of how to make fire with a fire drill will be lost. The method employed among the Yao is as follows: a flat surface is cut on a piece of partly rotted wood. In the middle of this a small depression is made, and on one side of the piece of wood a groove is cut leading from the flat cut surface. The piece of wood is held firmly on the ground by one person with a piece of old scorched cloth or some charred sticks at the base of the groove. A second person, by rolling a stick of hard wood rapidly between his hands with the point directed against the depression on the flat surface in which a little sand has been placed, drills a hole into it. The heat developed is sufficient to cause the powdered rotten wood to start smouldering. This is then turned out on the cloth, which is gently waved in the air till it catches fire (Pl. XV, fig. 16). 372 [177]

Boats. With the exception of a small coracle-like vessel, *likuŋgwa*, made of rough bark and used for crossing streams, the Yao have no boats. The dug-out canoes which they use at the present day are made for them by the Anyanja. In addition to the bark boat, they use a kind of raft made from the pith tree, *bunguwa*. 501 [539]

Tobacco. The use of tobacco in some form is universal among the tribes of Nyasaland and the Yao are no exception. The method of use varies among the different peoples; smoking, chewing, and snuffing are all practiced, but while the Anyanja is essentially a pipe-smoker, the Yao takes snuff, although I think only lately he has also taken up smoking and chewing. A short time ago, a Yao who chewed would have been laughed at. The Anyanja do not chew but take snuff to a certain extent; the Angoni who do not smoke or chew are inveterate snuff-takers; the Atumbuka, Atonga, Asenga, and Ankonde are pipe-smokers and in lesser degree snuff-takers. 276

Tobacco is called *sesa* (*fodia*, Chin.). It is prepared by sun-curing the leaf, which is then rolled up into a twist and allowed to dry further. The common tobacco pipe consists of a clay bowl, often ornamented, and a reed stem; it was formerly called *ekilonga*, but is now known as *kalio* (Pl. XV, fig. 11). For hemp, *chamba*, the Yao use a water pipe called *ndundu* (*ngundu*, Chin.); this consists of a bamboo water container from which projects a reed stem surmounted by a clay bowl (Pl. XV, fig. 12). The word *ndundu* is also used for a tobacco pipe.

When tobacco is chewed, a little lime paste *ensubala* made from small shells is put in the mouth "to bring out the flavor," a small clay jar being used to carry the *ensubala*.

Both the Wayao and the Anyanja prepare snuff by grinding the broken-up tobacco leaves with a stone in a potsherd; the powder is then turned out into another sherd and warmed over a fire. A few drops of a preparation called *mapodi* is added for flavor. *Mapodi* is

3:Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

Peas, *ansuma* (*Pisum sativum*), are grown in abundance. There are two other varieties: *mbaa* (groundnuts), and *chindawira*. 244 262

Sweet potatoes: *mbatata* (*Ipomoea batias*), of which the natives are very fond; they distinguish a red and a white variety, *mbatata ayanjejeu* and *mbatata ayaiwaru*.

The tuber-like root of a bush called *ayambu* is also eaten, likewise the young underground shoots of a palm tree. The leaves of the sweet potato and the leaves of many wild growing plants are collected by the women and cooked like spinach; the flowers of pumpkins are used in a similar way. Of fruits eaten, the banana, *lipombo*, takes first place. A very large number of species of *Eugenias* are grown, including *mulumbuka*, *mbinga*, *sukali*, *nasiri ampunga*, *kabuta* a dwarf banana, *kaigwa* a wild banana, and *mangu*, the plantain. The paw-paw is found all over the district. There are several varieties of pumpkin, *lyungu*, including *mbonda*, *chindondoli*, and a very large species called *mtwa wa ngwena*, "the crocodile's head." Varieties of cucumbers include *kapuka* and *kabitungula*. 262 222

A large number of wild fruits are eaten, among them figs, *bakuja* (*Ficus*), *kiutu* (*Uapaca*), *chitili* and *liunga*, the fruits of two species of *Landolphia*, *matonga* or Kaffir oranges (a species of *Strychnos*), *chikundu*, the fruits of *Hyphaene* (palms), *matwatwa* (*Myrianthus*) a wild tree belonging to the mulberry family, and others, *ndowa*, *makangandembo*, *ndondoyoko*, *chingulungulu*, *chindogolya*, *malembe*, *likwenda*, etc. The seeds from the heads of bulrushes (*Typha*) are mashed up and eaten.

All fish are eaten except the *ngunga*, which always causes urticaria. 262

The flesh of all the antelopes, of course, sheep and goats is eaten greedily; only bushbuck is avoided by some people as it is said to cause a skin eruption. Elephant is shunned by many on account of its rough skin, also rhinoceros because of the ulcers which it often has on its body, and hippopotamus on account of the marks on its back which are thought to be akin to leprosy. People eating the flesh of these animals are supposed often to sicken with leprosy, the pachydermatous skin, the ulceration or anaesthetic depigmented patches of that disease being reproduced, as the case may be. Few will eat pig or warthog on account of the digging habits of these animals. It is thought they may sometimes grub up bodies from graves. These flesh taboos may be due to Mohammedan influence. The lion, hyaena, and fox no one would touch, as they are supposed to be connected with *uawi*,[1] but the heart of the lion might be eaten to acquire courage. Few will touch leopard flesh, but Kasungu's descendants do so. All will eat of the flesh of the serval cat but very few of the common wild cat. The rock rabbit, *ngungwaiva* (*mbira*, Chin.), is refused by most Yao as it is a "beast without shame," having no tail to hide what should in decency be hid. Very few will partake of the baboon, but monkey is acceptable to many. A few reject porcupine, supposing they will break out in spots, while the zebra may cause stripes, and none will touch the skunk. No one eats *sunja*, a mouse that is believed to die if it crosses a path. All kinds of rats are eaten, but the shrew-rat and cane-rat only by boys. Snakes 262 753 [77] [834]

[1] Vide supra, p. 286.

3: Stanmus D-5 (ca. 1912) 1922 FT7 Yao FT7

no one will touch. With the exception of carrion birds such as the crow and the hawk, most birds are considered fit to eat. The hornbill is not eaten, as it is supposed to carry part of a corpse on its nose.[1] Fowls form a regular article of diet, but some taboos in this connection are mentioned elsewhere.

Eggs are eaten only by children and old people; that is, by those outside the child propagating age. Milk is never consumed in any form. They say, "What a disgusting habit, to suck the juice of an animal while it is still alive!"

Pregnant women will not eat certain things lest the child be born with some deformity, such as the snout of a pig, or the white stripes of a zebra.

Art and decoration. Sculpture can hardly be said to be an art known to the Yao. The only piece of stone work I have ever seen was a granite boulder, on the surface of which cup-holes had been made for the game of *Bao* (Pl. IV, fig. 4).

Of late years, individuals here and there have begun carving wooden figures of men and animals. The Yao, of course, make no idols. It is uncertain exactly how long it is since any of these people started producing wooden figures. I should think that this art has sprung up within the past twelve or thirteen years, that is to say, since there has been a market for them among European residents. In the first place only natives and some of the common animals, the eland and leopard, were represented; since then, many animals and Europeans have been copied. The native is extraordinarily clever in reproducing characteristic features in dress, etc., so that a Portuguese is easily distinguished from an Englishman. The little models in ivory of animals and native household objects, made by the Swahili people on Lake Nyasa, have never been copied by the Yao. Neither do they make clay images of men and cattle as do the Zulu-descended Angoni and cattle-keeping Wankonde. No native would allow any wooden figure to remain in his house for fear of ill luck; the women especially would look askance at them, fearing some misfortune in their next pregnancy. Little wooden figures of birds, however, are sometimes seen affixed to the point of the hut roof.

The making of carved figures, then, is of recent introduction, or rather is a recent event in the evolution of the Yao, as they were not taught but self-inspired in the work.

The ability to make representations of objects by drawing appears in the same way to originate spontaneously here and there as a sport. Natives with a talent for drawing are found among all the tribes, and among the Yao, it is said, there have always been some who have been able to draw. Naturally enough, their reproductions are made on the walls of their houses, and their subjects are generally animals of the forest, sometimes men and houses, or some other object of particular interest[2] (Pl. VIII, fig. 1). I also give sketches of some other drawings I have noted (Pl. XVIII); the line figure of a man at Makanjila's

[1] Vide supra, p. [illegible].

[2] Cf. A. Werner, 'A Native Painting from Nyasaland,' *Journ. Afric. Soc.*, London 1908, vol. 8, no. 30, p. [illegible].

3:Smanus D-5 (ca. 1912) 1922 F77 Yao F77

301 of bamboo fastened together at one end on the flat side by binding with string, the free ends being sharpened to form the teeth of the comb. If the fastened end is ornamented with beads sewed on in patterns, the comb is called *lisumulo* (*lu-sumulo*, to comb). *Lisumulo* lie

[B24] *shinguendulo* from *lu-nguendulo*, to be sticky, is the name of a small comb worn purely for ornament. On either side of the base of this comb, pieces of wood variously shaped are glued with the sticky juice from the root of the *shinguendulo* tree. In this way, a sort of inlay is produced. Pieces of tin cans are sometimes substituted for wood. Women occasionally wear in their hair the small *shimulo* knife used for tattooing and shaving.

302 The natives taken readily to perfumes of European introduction, but previously he was

● [177] not an entire stranger to the use of such commodities. *Mbolo*, the bulbous root of a kind of grass which grows near water, contains some aromatic principle which has a pleasant odor. The stem is bent around and fixed into the bulb; this is then covered with beads and slung around the neck. *M'ongwa*, the Mlanje cedar, is also used, as well as the fruit of a shrub called *chiungwa*. These substances are scraped into the castor oil used for anointing, and give it a pleasant odor.

No pigments are used on the body. As a sign of great rejoicing, the head and face and perhaps the whole body are covered with ashes, but the natives do not even paint the face with flour as can [illegible] usual [illegible].

301 Bands of beads [illegible] around the head, either as a simple band or a band finished off with a bunch in one spot, [illegible] with a tassel. Finger rings are worn made of ivory, shell hoof and horn, lead, and iron wire. There is also a great variety of bracelets and anklets, a list of which is given below.

Chipunda: made of plaited grass, worn chiefly by little girls and women who cannot afford more expensive bracelets. As many as half a dozen may be worn on the wrist.

Likungulu (pl. *makungulu*): single circles of solid brass, one half to three quarters of an inch in diameter, worn by women usually as anklets, one or two on each limb. They may still be seen on some of the old women, but as they cause much discomfort, they have gone out of fashion. A man used to be very proud to see his wife adorned with so much wealth and she was content to be so hobbled by her vanity. The hammering up and pulling open of the *likungulu* circle in order to remove it cost a fowl.

Chilungu: a brass bracelet of small calibre; *lilungu* (pl.) signifies a spiral cylinder made from the same thick brass wire covering the entire forearm.

Likwinjili: like *chilungu* of thin brass or iron wire, worn on arms and ankles.

Ching'ombe: a bracelet of fine brass wire wound round a slender cane. All the brass comes from the coast.

Likuno: a large ivory bracelet worn by men and women.

[237] *Ulungu:* ("stiff tail hairs of an animal"), the bracelet made of the tail hairs of the elephant or the gnu.

Lidoko: the bracelet made from elephant hoof.

3: Stanner D-5 (ca. 1912) 1922 F77 Yao F77

that she is tattooed more profusely on the buttocks and legs. The circlet of beads was formerly made like *mapanda* with a bark-cloth core, called *ntumbo* or *ndule* (*to-wule*, to slip off), referring to the *ndule* being slipped off over the legs. The fashion now is to wear single strings of beads; each string is of one color but all the strings are different and perhaps number a dozen or more.

Lipembe: a bead belt three-inches wide, worn by Yao women near Lake Nyasa. A bead apron, *Ranjere*, is also worn by them but not near Zomba (Pl. VI, fig. 2).

A woman removes her beads when she is "unclean," that is: (a) during the menstrual period, (b) during the period of mourning for a near relative when coitus is forbidden, (c) before the birth of a child and afterwards until such time as she may resume intercourse with her husband.

A large variety of beads has long been used by the Yao. There are some rarely seen now which were much prized in years gone by, while others are of quite recent introduction. There is no evidence that they themselves made beads and there are few which are probably not of European manufacture.

Clothing. The Yao used bark-cloth before the introduction of woven materials. The older people may still be seen in it and it is used in most of the ceremonies. At one time, they also used to weave a cloth called *likumunde* from a native cotton plant. This has been given up since the introduction of imported materials.

For the method of wearing cloth, see Pl. II, fig. 2. The very poorest people wear only a strip of calico round the *pudenda*, held in position by a string round the waist hanging long behind and in front; this is called *ntuthu*. Yao women, when menstruating, wear under this a little piece of cloth called *likondi*; it is only worn at this time and not always as in certain other tribes.

Warfare. Fighting has naturally played a large part in the life of the Yao as among other African tribes, but at no time were these people a trained fighting race. Warfare was of a desultory character consisting mostly of raids by one feudal chief upon another. A party of men belonging to a chief at enmity with another, meeting some of his followers would challenge them, "*Ahombe*, who are you for?" The name of the rival chief in answer was the sign for battle to begin. A false answer would never be given to gain an advantage. When about to throw a spear, the thrower calls to his adversary.

The Yao have possessed guns for a long time. Going out to fight, the Yao used to leap from one foot to the other, and spin their guns around in their hands. They made their own stocks for the rifles. They also used to make a small, cast-iron cannon about three feet long, called *kombola*, "a little nose." It was carried in the arms and was touched off by a torch. Drums called *ngoje* were taken into battle. There is an old war drum at Malenya's village, taken in 1886 by the old Malenya from a Mang'anja chief called Mkokombo who lived near Lake Chiuta. Since then, this drum has always gone into battle with Malenya. Around it his men would dance and anyone who had killed a man in battle would run up to it and spit upon it in salutation.

3:Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

Both before and after the introduction of guns, the Yao used spears, *lipunga*, and bows, *ulunja*. The spear is a five foot long throwing spear with metal head and wooden shaft. No shield was used. Bows and arrows are made from the wood of the *tuse* or *pimbingula* tree. The string is made of tendon. A double-bellied bow called *ulunja wa ulumu* was sometimes used, but, I believe, originally came from the Anyanja. The arrows, *mpumbe*, have a metal arrow-head, and were often poisoned with *kombe*. 411

Hunting. The same weapons are used in hunting: the gun, the spear, and the bow and arrow. Smaller bows and arrows made with bamboo or reed shaft are also employed for shooting birds; one of the arrows has a blunt wooden head and serves to stun the bird. 224 411

From the Anyanja, the Yao learned the use of a harpoon for spearing the hippopotamus. The harpoon is a heavy spear-head of iron about eighteen inches long, attached to a rope and float. From the Anyanja, also, was learned the use of the falling block with spear for killing hippo. [177]

Elephants are caught in staked pits, and the larger antelopes are similarly trapped in pits with the sides sloping inwards towards the bottom, so that as the animal falls lower and lower with exhaustion, it is eventually suffocated. 224

Small buck are driven by dogs into nets set for long distances in the forest, and then speared or shot. Traps are also set for these smaller antelope and for many other small animals, rodents, etc. Birds are shot or trapped. Bird-lime is also employed. It is prepared from the juices of a number of trees by pounding the vegetable matter in water; the sticky mass so made is applied to sticks or poles. The sticks are placed near drinking places so that the birds alighting to take water become entangled. The poles are affixed to trees so that they appear to be the topmost boughs; this the native does, recognising the common habit of birds to sit on the very top of trees. The strength of the bird-lime is made according to the size of the bird he wishes to catch. [231] 223

Fishing. I am not sure how far the Yao is a natural fisherman. Not long ago he used only a many-pronged spear to catch his fish. Since then, he has acquired from the Anyanja the knowledge of making fish-traps and nets, and of using the fish poison. When the Yao came to live and intermarry among the Anyanja, there was one practice of the latter which they would not adopt and which caused a good deal of ill-feeling. A Mang'anja man coming home after fishing always used to prepare the fish and, leaving some ready to cook, he cooked others for his wife, bringing her water at the same time to wash her hands. After eating her own fish, she cooked the rest for her husband. A Yao would never cook for his wife. 226 [578 563]

Traps. The following is a list of some of the traps I have found in use among the Yao. The sketches will serve to explain their mechanism better than a lengthy description. Some are very ingeniously made, and most recall similar traps made in other parts of the world. 224

1. *Lulungi lwa litumbu*, a trap for the cane-rat (Pl. XIX, fig. 1).
2. *Lulungi lwa mbindi*, a trap for sharp-toothed gnawing animals, so called from

3:Stanous D-5 (ca. 1912) 1922 FT7 Yao FT7

224 *ndindi*, a joint (of bamboo) which slides down the string next to the noose so that the captured animal cannot bite or gnaw through the string (Pl. IV, fig. 3; Pl. XIX, fig. 3).

3. *Lukwaji* has *mulende* or *ndimwa*, a trap for water-rats (Pl. XX, fig. 7).

4. *Lukwaji* has *ngunda*, a trap for the partridge (Pl. XX, fig. 3).

223 5. *Chijumba* also *ijuwi*, "the house for birds," also used to trap small animals (Pl. XX, fig. 2).

6. *Lukwaji* has *lukwi*, a trap for the neck (of guinea fowl) (Pl. XX, fig. 4).

7. *Lukwaji* has *ndilimata*, a trap for the tread (of the guineafowl); *ku-limata*: to put the foot down, to tread. The string square is about 8 × 4 inches (Pl. XXI, fig. 2).

8. *Liwowa*, a trap made of split bamboo. A bird going to pick up the grain is caught by the head when the trap is released by the string which the trapper pulls (Pl. XXI, fig. 3).

9. *Lwaw* has *ijuwi* or *ngwa*, a bird-trap made of netting on a hinged frame-work, operated by a string (Pl. XXI, fig. 4).

[224] 10. *Lilimo*, a falling stone trap for mice. Rats are said to pull off the trap with their tails and are never caught (Pl. XXI, fig. 1).

10a. The same trap set for catching birds (Pl. XXI, fig. 2).

11. *Mulidya*: (*lidi* = hanging loose), a noose for small birds, set on trees (Pl. XX, fig. 1).

[674] 12. Fowl thieves use a very simple contrivance consisting of two grains of maize threaded on one end of a piece of string some six inches long, at the other end of which is attached a leaf folded up into the form of a cone. The fowl, enticed by the maize, swallows the two grains and the attached string, so that the cone is drawn over its head; it is then helpless and is easily picked up by the thief, who has only to pull on the string to remove the leaf.

224 13. *Chipwumbu*, a hollow cylinder of wood with noose activated by a wooden spring, for catching rats (Pl. XXI, fig. 5).

14. *Chipute*, a similar trap made of bark, for mice.

15. *Lilwa*: a plaited bamboo cone into which a rat forces its head to get at the bait, but finds, when it tries to withdraw, that it is caught by sharpened pieces of bamboo projecting backwards into the cone (Pl. XX, fig. 6).

227 16. *M'wanyi*, a fish-trap of the same design, from the Anyanja (Pl. XX, fig. 5).

17. *M'ejwa*, a fish-trap on the lobster-pot principle, often set in gaps in a fence built across a stream, copied from the Anyanja trap called *mwe* (Pl. XXI, fig. 7).

[177] 18. *Njiwi*, also I think from the Anyanja, consists of a long basket-work, extinguisher-like arrangement which is slapped down over a swarm of small fish; the hand is introduced through an aperture in one side and the fish removed (Pl. XXI, fig. 6).

3:Stanner D-5 (ca. 1912) 1922 FT7 Yao FT7

524 called *bowa*; *makowe* or *nambowe*, the words given by Dr. Sanderson, are not known to the Yao in this district. There is a simple game played among the Anyanja children and therefore called *chiwa* (shellfish or for children), but the common game played is more difficult as shown by Dr. Sanderson. *Mchombwe* is being partly displaced by a Swahili variety called *bao*, or often by the Yao, *ulwa* (Pl. IV, fig. 4). I may here also point out that the words *mawe* and *nade*, which Dr. Sanderson uses for the Manyanja and Angoni varieties of the game, are often replaced by *nyiwe* and *tawa*.

[m]

857 Yao children play at keeping house in little grass *structures*, made near the village or in the fields, while their parents work. Children who can only toddle may be seen practising dancing the steps of their elders. The boys play with miniature bows and arrows made of a kind of grass, *ewe*, and make a toy dart-tube, *uti* (Pl. XXII, fig. 5). Little dug-out canoes eighteen inches long are made for them to sail in pools.

857 Among the lads in a village, games of fighting are much indulged in; two sides are opposed and their weapons are of various kinds. Sometimes each is armed with a length of
526 bamboo, into the hollow end of which sand and pebbles are put, representing powder and shot. This end of the bamboo is then rapidly swung in the direction of the "enemy" and will discharge the sand and pebbles into the face of the opponent. This is called *uti ja mwanga* ("gun for sand"). The boys are sometimes armed with maize cobs for throwing at each other.

Chiwere is another form of fighting. Armed with a collection of small stones, each flicks his stone at the enemy with very good aim, using the fore-finger of the right hand to propel the stone, the index of the left hand acting as trigger and the left thumb as the spring. The name comes from *wer* the sound of the whizzing stone as it goes through the air.

In a pool opposing sides fight with rudimentary syringes made of bamboo, driving streams of water into each other's faces. This is called *pierwa*, from the sound of the stream of water, or *uti ja mani* ("gun for water"). In the water they also play *chitwinyichinga*, (*ku-twinyichinga*, to press down). Boys are ranged on two sides; each tries to "*ntik...*" one of the opposing side and put him down into the water, holding him down between his legs. An old water trick is for a boy to go down to the bottom and there squat with his face turned upwards, the mouth stretched wide open by the fingers; viewed from the surface the face looked flat and very grotesque. There is also diving for *mawa*, *chitiwiliko* (*ku-tiwiliko*, to dive for).

A kind of skipping, called *chiwere*, from *wer wer* the sound of the rope as it goes round in the air, is a great favorite. A man with a heavy rope about fifteen feet long, with a bundle of grass at the free end enclosing a lump of heavy wood or stone, swings it round and round his head. The faster it goes, the higher it will fly out, while the boys in turn run in and jump over it. Sometimes a boy is caught by the rope and gets a nasty blow, occasionally resulting in a broken limb.

3:Scanned D-5 (ca. 1912) 1922 FT7 Yao FT7

Taking advantage of the natural inquisitiveness of youth, a favorite trick for making money is for a man to appear in a village making pretense of having a peep-show, something contained in a covered basket or in a cloth. On payment of some small amount, the youth is allowed to peep in, maybe only to see a dead mouse; finding he had been "done," he of course bursts out laughing and, anxious that all his companions should also be "done," he does not "give it away" and so the peep-show man makes quite a good living. 857 673 543

Yao girls play with dolls of two kinds, *likde*, made from little gourd-like fruits called *likwape*, and others called *mwanache*, "a child," made from maize cobs. These dolls they carry about on their backs as mothers do their children. *Likde* is made of three of these little spherical fruits glued together with beeswax; on the one which represents the head, seed, red and blue, of the *ulungwipe* tree are cemented in rows to represent hair, and often beads, as in the *nchanda* method of hair-dressing. One sees similar dolls made for the children of other tribes. Thus, among Mombera's Angoni, a doll called *mwana*, "a child," is made in a dumb-bell form of two small spherical gourds joined by a bundle of sticks bound together with string and wax; on the head-piece string is cemented to represent hair. Their children also play with little clay images of cattle and men, a custom they have preserved from their old Zulu ancestors but foreign to the Yao. The Ankonde children have carved wooden dolls not seen in any other tribe. *Mwanache* is made from a maize-cob by shredding the papery coverings of the cob; on these shreds are threaded white and red varieties of maize to represent beads, or the shreds are plaited into a number of tags to represent hair. 857 524

Latterly, the children have taken to making hoops and show considerable skill in driving them with a piece of bent reed (Pl. XXII, fig. 8), while the older boys make two-wheeled representations of bicycles with a very clever imitation of all the parts of the machine. [m]

The whipping-top, *mangulpe* or *mangwape* (*ngwali*, Chin.), is found among the boys' toys. It is made of a conical piece of wood with a flat top and no metal peg. It is started spinning by pulling off the string wound round the top. The whip consists of a piece of string fastened to the end of a stick. Sometimes tops of large size are used, and two boys whip them from opposite sides (Pl. XXII, fig. 4).

A game called *chipute* is played by youths; it takes its name from *ku-puta*, to strike, and refers to the action of striking with a finger the hand in which a bean is guessed to be. A spiral is drawn with the finger in the sand with a central point to represent a village, and a tail-piece prolonged on one side to a second point which represents a slave-market on the coast. Along the line, a number of other points are demarcated to represent sleeping places en route. At the village, two white beans are put to represent the two players and with each is a smaller brown bean to represent his slave. At the slave-market are placed a variety of beans to represent trade-goods, calico, beads, etc. Each of the two players in turn shakes a single bean in his closed hands and then closes the hands, separating them at the

857 To the index:

539 "(This one is) the leg of an ox which walks on the plain!"

To the thumb:

"*Chimwene*"

"The fish"

857 *Cat's Cradles* are known as *ukingwa*, "the spider's web" (Pl. XXIII). The position
524 of the string on the hands is as in Position I of Miss Hadden's book and this is followed by Opening A, given by the same author.[1] (Pl. XXIII, figs. 1, 2.) Three methods of arriving at the same figure, which is called "the net," are shown here (Pl. XXIII). Variety C is followed by the making of a knot, figured in C 13, known as "the child." There are probably a number of other forms made by natives, but these, which I saw one of my women patients make, will serve as an example.

Musical Instruments. The number of instruments proper to the Yao appears to be
534 small, indeed probably only two in number, the *mangwanyende* and the *chilipuka*, with perhaps the three holed flute, *ukimbire*.

The former is constructed on the principle of a xylophone; it consists of two trunks of banana trees laid on the ground and held in position by stakes. They are not quite parallel but approach each other somewhat at one end, being from one to two feet apart; on these rest cross-wise a number of pieces of wood of varying thickness and length, kept in position by pegs driven into the banana trunks on each side of each billet. These are struck with sticks by a single player, or by two persons sitting on opposite sides of the instrument. Another variety is found in which the pieces of wood, which may have holes bored in them to effect differences in sound, are arranged over a hole scooped in the ground (Pl. V, fig. 1).

The *chilipuka* consists of a piece of plank hollowed out to form a resonator on which are fixed a number of keys of bamboo or metal of different lengths. These are arranged across a bridge, and the free ends are set in vibration by twanging with the fingers.

[FT] The instrument now most commonly seen is the *ussu* which was introduced, I think, from the coast about 1890 to 1900. It is a type of guitar.

An instrument played by women — and this again is of recent introduction among the Yao — is the *mkungulu*, which consists simply of a stick of wood about a yard long to which is affixed a single string. One end is held between the teeth, the other in the hand; it is twanged by being struck with the thumb and finger of the other hand close to the mouth, which is opened to different degrees, and gives a variety of notes resembling those of a jews' harp.

The *ching'wengang'wengu* and drums are referred to under *Dancing*.

[1] Kathleen Hadden, Cat's cradles from many lands, New York, 1906.

3:Stanner D-5 (ca. 1912) 1922 FT7 Yao FT7

Chindimba: the *chindimba* songs are the favorites among all the older people. They have been in late years partly replaced by others, but, at the present time, there is a tendency to return to them; they are staid in tone and the dance is sedate. *Chindimba* is always played at mourning. While the whole company sits around in a circle with the drums at one side, a couple of people do the dancing in the middle. The drums used are a *chingwanga*, two *ichumu*, and a *likuti*. With the commencement of drumming, a man well known for his songs steps out into the middle and begins singing; he is followed by another man or maybe a woman who sings a second part; the two singers are generally people who have found that they sing well together. Two such people will be welcomed, and they may sing many songs, while any young upstarts who do not sing well together, will be given to understand that their performance does not meet with approval. People have their favorite songs, and there may be much heart-burning if an old man finds some one else singing a song that he considers especially his own. As they sing, they dance their peculiar shuffling steps. (The words of some of these songs are given later.) 535

Sukupe: an Angoni dance sometimes danced by the Yao. It resembles *chindimba* in that all sit singing and clapping while, one at a time, men dance in the open space to time given by bamboo sticks knocked together. The songs are all hunting songs.

It is impossible to describe the steps used in all the dances; for each dance, they differ, of course, and except by a cinematograph film, they cannot be reproduced. The movements of the feet are ordinary stepping motions or patting of the ground with the feet, the actual excursions being very small, so that in most cases it is impossible to devise any means of making out the steps. To enable them to perform these steps, they commonly dance with the knees bent, the buttocks protruded behind, and the back arched. In some cases, this attitude is extreme. [516]

There is a larger series of dances which, to the uninitiated spectator, appear to resemble each other very closely. The general plan of the dance is as follows. The drums are placed in the middle; around them in a circle are the dancers and outside these, the onlookers. The circle may be thirty or forty strong, composed of men only or of men and women as the case may be. Commonly, the ring of dancers is divided into two halves, each half being headed by a leader who sings the song, all joining in the refrain, while the onlookers do the clapping. When the drums begin, they all walk round in a circle, but at a given signal, one of the drums gives out a new time, and the whole circle starts dancing with short, shuffling movements already described, usually progressing in the circle, sometimes going backwards, sometimes facing the drums or turning right around in the line.

M'kwanda is a dance of, I believe, recent introduction which has replaced to some extent *chindimba*, much to the disgust of the older people who dislike the innovation. They shake their heads and say, "*Chilumba chimwalle!*" "The world is finished." The drums used are *likuti*, *ulipulipu*, *mukwa*, and *chingwanga*. It is danced by men and youths only. [177]

Njonda or, as it was known some years ago, *ngwambuli*, is danced like *mkwanda*, but the

case *mwavi* might be administered; if adjudged guilty the accused would be burned on a pile of wood. M 695

Evidence is given without taking any oath; a false witness is not punished. M 696

Justice is occasionally summary. At Mponda's, after conviction of adultery with one of the chief's wives, a man's throat was cut on the spot. Drowning was the usual punishment with Mponda.

Punishments for all offences practically meant payment.

CUSTOMS, SALUTATIONS, ETC.

The correct salutation among Machinga Yao and Mañanja on meeting is clapping the hands, the hands in front of and at right angles to the body parallel to each other, thumbs against the fingers. The clapping should be continued for ten minutes after having passed; after passing a chief it should be continued for half-an-hour. M Y 576

Another form consists in slowly beating the breast with the right hand, the head slightly inclined forward. The lower in station makes salutation first to the higher, a man to a chief, a woman to a man; exception is made in the case of an old woman, who is saluted by the man. Scattered all over the country a raising of one or both arms is a common form of salutation, but is probably only a corruption of the military salute. M Y [554] [888]

Slapping of the nates or thigh with the right hand is also seen, among old men usually. In imploring mercy from, or on the first occasion of meeting, the chief, a man lies prone on the ground and catching the foot of the chief, puts it on his neck—a sign of absolute submission. Women kneel at the approach of a man. Words and expressions of salutation are few—*Moyo* (=heart) being the only old expression used. Now commonly one hears a word (sounding like *mōnī*) probably a corruption of good morning, and the Swahili greeting *Sukuari* with the double hand-shake of Mohammedans. M Y [201] [562] [177]

A man returned to his village after an absence rests awhile, then his wife comes to him and kneeling greets him, *moyo*, her husband returning *moyo*.

Years ago, a man of any importance was received with firing of guns and shouting. A headman is received now with *Ntungululu*, the women wobbling their tongues in their mouths. Ashes are put on the head as a sign of joy. M Y [152]

In the morning the husband and wife do not greet each other, but in the village friends "give each other good morning" (=*Moyo*). On waking in the morning, a woman cracks all her joints (=*Kulim chala*). She then massages her husband and cracks the joints of his fingers. M Y [512] [576]

One man wishing to see another goes to his house, and squatting outside the door cries "*Icho!*" three times (=there), at the same time clapping his hands. If no answer be given he goes away, even though he knows the man is within, no answer meaning that the inmate does not wish to be seen. If invited to enter he does so, the man of the house rises and gives him salutation. He makes small M 574 576

Maravi FR4

M Y 252 M Y 264 spoon into a clean shallow basket or on to a plate. The *ndiwo* or relish, consisting of vegetables such as beans or a kind of spinach, a little fish or chicken, is cooked in a separate pot, and round these those about to eat collect. Washing their left hands in water, they take some of the porridge and making a sausage shape of it, dip it in the *ndiwo* and then cram it into their mouths.

M Y 217 258 Salt was obtained either from natural deposits or from "salt earth" on a stream bank near Fort Johnston, or from the ashes of burnt *bango* reeds or *machedza*; by a method of percolation through porous pots.

M Y 271 515 The native rather drinks between meals—water. After eating he may wash his mouth out and clean his teeth, using the frayed end of a piece of wood as a brush.

M Y 273 *Alcohol.*—With the exception of the people living on the lower river, who drink fermented palm juice,[1] beer is the common alcoholic beverage. Beer is made from maize (*chimanga*) or millet (*mapira*); the crop of the latter is very largely used for beer making; it makes the best beer and is certainly preferred by Angoni.

Gruel is prepared by boiling flour with water; after an hour leaven (*chimala*) is added fermentation sets in; and it may be drunk the next day; it is the sweet beer, *mtibe* or *ontondera*. On the second day it is again boiled and is allowed to cool; the third day more leaven is added (*chikutikwo*); the fourth day fresh gruel is made, and the contents of the original pot, now called *nganga*, is added to it, making two pots of beer. It may be drank the same day while hot or allowed to cool and taken on the second day.

Food-stuffs.

M Y 262

1. Maize (*chimanga*), millet (*mapira*, *mawere*), rice (*mpunga*).
2. Cassava—sweet potato.
3. Beans and peas of many varieties.
4. Pumpkins, cucumbers, melons (*drungu*, *mkuka*, *chibwende*).
5. Many kinds of leaves growing wild—also pumpkin leaves, of which a kind of spinach is made.
6. Bananas (*paw-paw*), sugar cane and reeds are sucked.
7. White ants, locusts, honey.
8. Numbers of small animals are eaten by Chipeta, Angoni, etc. With the spread of Mohammedanism this is going out; rats, mice, hares, rock-rabbit, etc. Chipeta will eat dog, and I once saw one eat baboon. Frogs, shell-fish, snakes, crocodiles, crows, vultures, eagles, are never eaten. M Y [177]
9. Fish (*nsomba*), fresh or dried, is much eaten, thirteen varieties being enumerated.
10. Chickens, ducks, wild birds that they may snare.

[1] Spirits used to be made by distilling from beer and banana-and palm-juice by means of a pot and a gun barrel.

4: Stannus D-5 (ca. 1909) 1910 FT7 Yao FT7
Maravi FR4

Gaga, the residue after pounding maize, is eaten by the women. No oils are used in cooking, but of fat and suet any native is very fond. Meat may be dried and smoked if in large quantity: flesh, fish and fowl is commonly roasted on spits; small pieces of chicken may be made into a kind of stew with beans and eaten as the relish. When on a journey the fire is commonly made against a tree. The cooking vessels are cleaned before use, not after. The fried fish eaten is often partly decomposed, and meat which is very high, even with maggots, is cooked and eaten, maggots and all. M Y 262 [252] [251] [984] [264]

Tabu.—Bushbuck is not eaten by many natives, as they say it feeds near graveyards. Fowls are not eaten by some, as this diet causes them to vomit; a snake-catcher never eats vegetables, and at the same time puts medicine on his hands. Many abstain from the flesh of certain animals as certain skin diseases are said to be caused thereby; all such diseases bear the name *wukwenga*. M Y [753]

A man who loses a relation by drowning takes an oath that he will never again eat fish, and never drink water from such lake, river, etc. Here the idea is of course simply to avoid eating part of the relation.

A Nyanja and Machinga will not eat the flesh of the hippopotamus, because on the body they say there are the marks of a string round the loins and of a mat on his back, adding that long ago he was a man. Animals of prey would never under any circumstances be eaten. Milk used never to be drunk by an adult, as it was said to cause a man to become as a child. A man would not dare to drink woman's milk as it was said he would surely die of dysentery. M [825] M [272]

Tobacco, etc.—The smoking of tobacco was a custom introduced from the coast. Chewing was general among Machinga and Yao men and women, while the Angoni and Mañanja snuffed. With the tobacco a little lime, made by burning shells, was taken in the mouth. Giddiness and sleepy sensations were experienced after chewing. The Nyasa and Awisa smoke a bubble-bubble, the water vessel being a large sausage-shaped gourd with a reed stem supporting a large bowl of *mbabou* wood, sometimes very nicely carved (Plate XXVII, Figs. 5 and 7). The Amyanja smokes a pipe with the bowl made of clay and the stem of bamboo (Plate XXVII, Fig. 6); these are made by the women. Tobacco is grown in nearly every village, a large-leaved rather coarse variety; it is sun-dried and rolled up into hollow rings 6 inches in diameter and 3 inches broad. For snuff (*Fodia wonunas*) the sun-dried tobacco is further dried over a fire on a pan, when cold it is ground on a stone with a smaller stone by the women, and with it is mixed some ashes of the *ngoas* fig-tree. M Y 276 [177]

At Blantyre I obtained a water-pipe made of bamboo stem; this was the water reservoir; a stem of reed supports a little clay bowl. The mouth is placed over the upper end of the bamboo. Bhang (*cannabis indica*) is smoked in a pipe of this kind.

AGRICULTURE.

The people live by cultivating the soil. Both sexes help in hoeing and planting, the collecting of the crops being mostly done by women. The hoe is the M Y 241

4: Stannus D-5 (ca. 1909)1910 FT7 Yao FT7
Moravi FR4

M Y 501 When a number are working they take time from the front man, the rear man steering with his ordinary paddle. The passengers sit in the middle, a chief towards the stern. They never lose sight of land even in crossing the widest part of the lake. Stones are now used occasionally as anchors up the lake; grass houses are made to shelter canoes. The smaller canoes are 2 feet to 2½ feet high, the very large ones used to be 4 and 5 feet high; except on the lower river, where canoes have ends similarly shaped, they are made with a bow more pointed than the stern and having a beak (Fig. 15). There is no ornamentation and no figure heads.

M Y [422] In every lake-shore or river-side village or collection of huts will be found one or more canoes; these belong to some one man, others using them paying a fee. At the launching of a new canoe, beer is made and the women dance, and medicine is made for its safe journey.

SWIMMING.

M 481 Not even all lake-shore natives swim, though most do. The art is learnt in childhood and not taught. They are not very fast swimmers, and I do not think could swim very far. They sometimes dive head first and practise staying under water. They swim rather like a dog, both arms coming a little out of water, but not a trudgeon stroke; arms are kept straight. They sometimes swim on the side, but never use the ordinary breast stroke.

GAMES.

M Y 524 Several games are played resembling the game of *ubau* introduced from Zanzibar (Mancala); *ubau* is played on a board in which rows of holes have been cut; beans are used as counters.

Mchombua.—A game found among Anyanja and Machinga; it may be played on a *ubau* board, but is often played in holes made in the ground with stones. The Angoni game *chipalapala* is played in the same way. At Fort Anderson is a lump of stone in which hollows have been made similar to those made in the ground. It is the only piece of stone-work I know in the country. Children and women play knucklebones (*mdodo.*)

A man tries in one breath to keep saying *mbiri-biri-biri* . . . ., while another makes a pile of stones from another pile of ten, taking one at a time, saying, "To take and put it there makes one," etc. Men play at guessing in which hand an object is hidden, or one out of ten men sitting in a house has to guess with whom a certain object is. No forfeits.

Tandande (=the spider) is cat's cradle.

Tiali (hide and seek), one hiding, five or six seeking.

M Y [177] There are no dice games. Cards were introduced from the coast before the advent of Europeans into the country; the games are various and difficult to follow

M Y 526 A slip-shod kind of wrestling is practised by Anyanja youths; the Machinga

7: Hetherwick M-5 (ca.1900) 1902 FT7 Yao FT7

SOME ANIMISTIC BELIEFS AMONG THE YAOS OF BRITISH CENTRAL AFRICA.

By the Rev. Alexander Hetherwick, M.A., F.R.G.S., of the Blantyre Mission, British Central Africa.

175 The original home of the Yao tribe may be roughly described as the large and lofty plateau which lies to the east of Lake Nyasa, and is bounded by the Rivers Rovuma and Lujenda. Forty years ago, about the time that Livingstone first entered the country, they began to be pressed on the north by the Magwangwara, and on the east by the Makuwa tribes. These invasions caused them to move, some westward down to the shores of Lake Nyasa or the banks of the Upper [131] Shire River, and others southward to the Shire Highlands, Mount Zomba and the eastern slopes of Mount Mlanje. In every case they succeeded in either subjugating or expelling the original Maravi or Mang'anja inhabitants of these districts, and in no case have they lost their own independence.

175 Till about fifty or sixty years ago the Yaos were untouched by any external influences, and when at that time the Arab and coast trader from Kilwa and 177 Zanzibar began to treat and trade with them they appear to have been little affected by contact with these visitors. Only a few of the younger men aped at [797] following Mahommedan tenets, and these they only grafted on to their still cherished belief in the old faiths of their fathers. The Koran, or a few of its texts, was added to the many other charms they had already hung about their necks. The faith which the first missionaries found them in possession of when they entered the country twenty-five years ago may therefore be held to be the unadulterated creed of the tribe from time immemorial.

774 The foundation of the Yao religion is to be found in the *liaolu*, the soul, shade or spirit which every human being possesses, and which is the inspiring agent in his life. They profess to give no definite description of the nature or characteristics of this soul. In their minds however it is allied with the shadow, and would seem to bear to the body the relation which a picture has to the reality. Their word for a shadow is *chiwilili*, which is also the term that they use to denote a picture, and pictures they associate with the shades or shadows of the dead. I have known natives refuse to enter a room where pictures were hung on [123] the walls "because of the *masolu*, souls, which were in them." The photographic camera was at first an object of dread, and when it was turned upon a group of natives they scattered in all directions with shrieks of terror. "The European,"

563 groups presents a problem to be considered but for the main purposes of this paper a brief comment is sufficient.

The Nyanja people who were allowed to remain in the areas, continued to live in their village communities in much the same way as the Yao did. In fact the Nyanja and the Nguru are so similar in culture to the Yao, that it was possible for them to fit into the Yao social structure fairly easily. For example, in Mposa's area Mbande and Mbeta are recognized by the local Yao sub-chief as important personages since they were the indigenous chiefs in the area before the Yao came in as invaders. Both, for example, have adopted [554] the Yao practice of wearing a red band round the head to indicate rank. Both have the right to conduct the Yao indigenous initiation ceremonies. At one meeting I attended Mbande was allowed [554] to sit in a chair while the only other person to do so was Mposa himself. This is a mark of honour since no commoner is allowed to sit in a chair in the presence of the chief.

In the same way the Nguru immigrants have come in small groups of matrilineal kin and have settled either in hamlets alone or set up small hamlets in close vicinity to kinsmen. Their headmen in turn have been absorbed into the general political structure though they have their own language and distinguishing cultural traits. Thus some Nguru initiate their boys according to their own *cidototo*, though others will allow their boys

[Text continues top of P. 151B]

V. THE POLITICAL STRUCTURE

642 177 The accompanying diagram is designed to summarize the main types of interaction that take place in the political structure of the three areas. Interaction between the social personalities in the political structure can be said to take place in reference to certain sets of values. One set of values is that which the Yao recognize and believe to belong to the White people. Another set of values they recognize and subscribe to as their own. A chief may interact with a village headman because he has broken a regulation which

[Text continues bottom of P. 151B]

563 to be initiated according to the Yao custom (*lupanda*). In general, the Nguru headmen are village headmen in the same way as the Yao are and they follow the same pattern in political behaviour.

563 621 At the moment, throughout the areas, the various tribal groups live in kinship clusters so that under one Yao administrative headman there may be two or three unrelated Yao kin-groups and possibly one or two Nguru groups living quite separately. Though the population in the area as a whole is mixed, usually the village groups are tribally homogeneous. So far little inter-marriage has taken place. I shall not here analyse this situation, though it is politically pregnant. In many ways the Nguru immigrants [711] are more progressive than the Yao. Most Yao in this area are professed Moslems and do not attend the local schools which are Christian. However, the missions have been more successful among the Nguru and they are becoming more educated and advanced. A good proportion of the Government posts in the area is filled by Nguru for this reason. This is most significant in the context of the general situation as will become apparent in the description below. For the rest of the paper I shall consider the political structure as I see it, in terms of the social personalities in the structure, and the presence of these non-Yao groups is implicit in the rest of this analysis.

V. The Political STRUCTURE

648 642 the Administration has persuaded the chief to pass and the full significance of which lies in 177 a system of European values. These systems of values are foreign to each other in many features. Opposition between the two groups, White and Black, must arise if their behaviour is affected by different sets of values. The Yao, for example, believe that most deaths are caused by sorcery and claim the right to take punitive measures against the sorcerers. The Whites do not believe in this and prevent punitive action against people

177

who are, to them, innocent. The diagram has been divided obliquely to represent these two systems or fields of values. The division of the diagram into two parts depicts a major rift in local political relationships. While some political relationships, as say between village headmen, do not directly manifest this cleavage, in most, as say the chief with his subjects, though the Whites are not present in person, they are there in the context of the interaction. This will become evident as the analysis proceeds, but at this point it is sufficient to observe that the Whites and the White system of values are an integral part of the modern Yao political organization.

642
177
534
648

In addition to this, there is a hierarchy of status roughly conforming to the placing of the social personalities in the diagram, i.e., the White Administrator is of higher status than the African Civil Service which is roughly on the same level as the chiefs, but both are on a higher status than the Native Authority's clerk and officials are. The lines represent the main direction of interaction.

648
563

1. *The White Administrator and the African Civil Service*

By the White Administrator I mean the District Commissioners, Agricultural Officers and other Government officials who come into contact with the African populations, particularly in the rural areas. The social distance between a White person in general and the Africans is much larger than that between, say, an African chief and his meanest subject. Social interaction on an intimate basis cannot take place between chief and Administrator mainly because their relationship is dominated by the pattern of all South African territories, where White does not interact intimately with Black. I have already stated that not many Europeans come into the area. Those Whites that do come into the area are immediately accorded the status of an Administrative Officer and are apt to be thought of as such, though they may not be so. The Yao clearly recognizes that the Labour Recruiter is a different sort of person from the Missionary and both differ from District Commissioners, but

692 side the kin-group are usually settled by the arbitration of a local village headman or the chief. What decides whether a case is tried by a village headman or a chief seems to depend largely on the seriousness of the case and hence the amount of compensation that it involves. A quarrel between a village headman and his heir for example was settled by a local village headman, the compensation in this case being a matter of 2/- and a pot of beer. More serious cases are taken to the chief for arbitration and whether the cases are then tried in the court or not depends on the type of case. Certain cases are known to conflict with the system of values of the Whites. They are tried by the same court assessors and arbitrated in by the same chief who preside in the context of the Native Courts Ordinance, but they are handled by an entirely different procedure. Thus, a case involving the accusation of sorcery or the breach of a taboo leading to death and compensation claims is arbitrated on by the chief acting in terms of the indigenous value system. These cases take place outside the court-house, usually at the chief's hut, and are not recorded as a court case at all. The chief awards compensation in the same way but it is not recorded as in ordinary court cases.

Cases which are known not to conflict with White values are tried in the court-house if compensation of some value is involved. If we exclude from consideration the cases following a breach of the N.A.'s regulations we find that the recorded court cases are almost entirely about compensation for adultery, petty theft and assaults. Here the chief and court assessor function as social personalities acting in reference to a set

[TEXT CONTINUES TOP OF P.158B]

VI. GENERAL
Summary

642 177 I have tried to describe the political structure of the Yao in Liwonde, Kawinga and Nyambi sub-areas in terms of the interaction of social personalities in a structure briefly summarised in the diagram. The aspect of the social personality perceivable in set situations of social interaction

[TEXT CONTINUES BOTTOM OF P.158B]

692 of White values which coincide with their own.

Informants say that the position of the village
692 headman in contrast with that of the chief is
643 getting progressively weaker. They maintain
622 that cases once tried by the village headman are now taken to the chief's court. Whether this is true or not is difficult to ascertain. The fact that there is some sanction on the guilty party to settle the compensation if he is tried in the chief's court, probably pays a part. The compensation awarded is recorded in the Court Case book and the chief is empowered to keep a man under remand until it is paid. The chief sometimes supports the village headman against recalcitrant subjects. A man once refused to pay a compensation awarded against him by a village headman. The village headman referred the case to the chief who said to the man: "As you have disobeyed the order of the village headman it means that you have insulted me, the District Commissioner and the Governor". But in general there is a tendency for the central authority to be strengthened and the chief emphasizes his relationships to the White Administration in order to consolidate his position of dominance over his headmen. At a succession ceremony of a village headman the chief who had supported an unpopular candidate said: "This man has been chosen by me and the Governor agrees with me". Clearly in this insecure situation the chief saw himself against his subjects, and as part of the White Administration. He uses his power in this political situation to establish a dominance over the headmen, that he could never have established before the White men came (see p. 144).

VI. General
SUMMARY

642 depends on the field of values in which the inter-
177 action is taking place. To illustrate this with a simple example, when the court messenger exacted a levy of 1d. from each garden-owner in the area where the sacrificial cloth had been stolen from the tree-shrine, they saw in him a

R.Mitchell E-5 (1946-1947) 1949
[P.159 A] PT? Yao PT?

642
177

representative of the chief, acting as he was in terms of a system of values indigenous to the Yao. If during the same trip he informed the villagers that the village roads should be cleaned, to the people he would appear as a representative of the chief who is representative of the Administrator and is acting according to a value held by the Whites and embodied in a regulation governing the cleaning of village roads. Two sets of values intermingle in daily life and social personalities are seen first in this guise and then in that depending on the particular interactional situation. Thus the chief, when he is addressing villagers and village headmen, sees himself opposed to them and shows himself to the people as a representative of the White system of values and emphasizes his bonds with the District Commissioner and the Governor. Talking to the Agricultural Officer he sees himself opposed to the White system of values and opposes contour ridging, saying that unlike the traditional system of agriculture it encourages white ants in the gardens.

642
186

At the same time the White value system, symbolized to the Africans mainly by the Administration, is becoming an integrating force in their life. The otherness of the White system of values emphasizes the unity of their own. Formerly hostile, chiefs are now living at peace under the

9:Lawson Y-5 (ca.1940)1949 FT7 Yao FT7
MARAVI FRY

[P. 180C]

n 161 and Yao tribes, who there predominate. These
[174] peoples seem to have come from different parts
[197] of the continent. Their languages, despite a
common Bantu descent and much recent borrowing, remain as distinct as possible and are obviously not modern dialects of one more primitive tongue ; their original social structures must,
[177] however, have been similar enough to attract them to each other, for they have so intermarried and their customs so fused, that one can now scarcely distinguish their ways of life and village
n 101 organization. Indeed, while homesteads of apparently pure Nyanja and Yao still predominate,
619 every considerable district contains members of both tribes, with some people, at least, of mixed descent ; moreover, and although one perceive a difference of character and manners, and trace it to the influence of Mohammedanism on the
7 Yaos, one may well be unconsciously exagger-
[601] ting. This account of relationship terms, (with brief reference to underlying social structure), must be taken, therefore, to cover the fusion of two once-separate tribes, and Nyanja and Yao equivalents must—unless otherwise stated—be
n [177] understood as identical in meaning. In fact, Nyanja often prefer Yao terms to their own.

n How far can one isolate the Nyanja-Yao social structure in order to study it ? Ngoni
177 immigrants in this district are few, and their
602 original patrilineal social system has largely succumbed to the customs of these earlier comers. The matrilineal system of the still more recent and numerous Lomwe immigrants is, I believe, (though my evidence is fragmentary), exerting a considerable influence on the somewhat dissimilar but also matrilineal Nyanja and Yao.

9:Lawson T-5 (ca. 1940)1969 FT7 Yao FT7
[P.181A] MARAVI FRY

For the most profound influence comes from Europe. Modern large-scale economics engulfing primitive small-scale economics, legislation by Protectorate Government, contact with Christian Missions and with European ways of life and thought—these together are shaking Nyanja and Yao society to its foundations. Constructive elements they do, of course, contain, but rebuilding on the ruins has hardly begun. In order to understand the present with its problems and promises for the future, we must know something of the past; the traditional Nyanja and Yao relationship system is the key to this past which I would try here to put into your hands. It is not yet too late to grasp. The greatest changes began within living memory, and where village and family life has been revolutionized, relationship terms are still untouched. Hence, if we study the more conservative members of the tribes in the light of these terms, we should be able to piece together a fairly accurate outline picture of their original society. I make no attempt here to analyse in detail their relationship system: a study of the mutual responsibilities and interdependencies inherent in it, and the changes it is now undergoing, would require many years, and its results fill a large volume. This paper may, I hope, serve as an introduction to another's study, made before it is too late.

Nyanja society differs from any modern European social group in three ways: it is matrilineal; it is matrilocal; by the traditional practice of bilateral cross-cousin marriage, (i.e. marriage to the daughter of one's mother's brother, or, equally, of one's father's sister) its ties of blood and affinity have become interdependent.

Our English society, like that of the pure Ngoni, is patrilineal, the child belonging primarily to its father's family and the son inheriting wealth, social status and sometimes political power from his father. The Nyanja child, on the other hand, belongs primarily to its mother's group; a boy inherits social and political status from his mother's brother, and a girl from her maternal grandmother. These relatives on the mother's side arrange the children's marriages and have throughout life more authority and

10: Sanderson D-5 (ca. 1920)1922 FT7 Yao FT7

The men and boys now pass through the arch in order of seniority; each splashes 751
himself with the water in the trough, but neither speaks nor rinses the mouth. The 796
women come next, led by the head-wife of the chief; the latter rinses her mouth
and, instructed by the doctor, repeats a prayer similar to that uttered by her husband.
The remainder of the women merely splash themselves, like the men, before passing
through the arch. All then return to the village, where the *yapjila* is continued.

Finally the doctor takes the hammer-head from the trough and hands it to
the chief, who rubs the haft into it, and, a hoe having been placed on the ground,
goes through the form of forging the latter by beating it with the hammer. He
then scrapes the ground with the hoe as if clearing a plot overgrown with grass;
he does not dig with it as in hoeing up the ground for planting seed. After this
rite the chief again bathes in medicated water similar to that in the trough, and the
ceremony is complete.

Whereas the *yapjila* ceremony and its adjunct, the rite of the arch, are now [178]
but rarely performed, no Yao will omit the rite of purification after a death in his 751
family. This ceremony consists of two essential parts, both protective against 764
the *ndoko*, a disease characterised by dropsy and supposed to be contracted by 796
contact with a corpse, or by association, especially by sharing a meal, with those who 783
have been in such contact. The first of these parts is bathing in certain medicines,
which protects the bather from *ndoko*, and the second consists of a sort of communion
meal, shared by all friends and especially relatives with those who have been
contaminated, and designed to protect those friends and relatives.

The decoction for bathing is made by soaking the roots of *lupondondati* and 751
kandondo in water, together with the bark of *mkowere*, one piece each from the 783
east and west aspects of the tree; the water assumes a reddish tint, and the whole 824
body is bathed. 765

The communion meal consists of porridge made from any kind of flour or of [262]
rice, and some spinach leaves. In the latter some scorched and powdered root of
mtondwapilo is mixed, with a little salt. All near relatives of the deceased must
partake of this meal, as well as their wives and their near relatives; part is carefully
put aside for the use of any relative unable to be present at the ceremony.

Latterly, since the spread of Islam among the WaYao, this rite has become [177]
confused with the distribution of food to the poor at the funeral of a Muslim, and [777]
the Arabic word *sadaqa* ("charity") is now generally used for it, to the exclusion
of its wider, correct meaning.

It may be mentioned here that after the death of a child the father is denied 765
access to his wife for a period of about three weeks, and the first act must be one 787
of entire abstinence.

MEREDITH SANDERSON.

11: Sanderson D-5 (ca.1920) 1920 FT7 Yao FT7

RELATIONSHIPS AMONG THE WAYAO.

By MEREDITH SANDERSON,
Medical Officer, Nyasaland Protectorate.

Introductory.—Various writers have attempted to give English equivalents to the Yao terms describing relationship, or have alluded to the outstanding features of the system, but I am not aware that anybody has hitherto worked out the whole system. [12]

Although it is very similar to other classificatory systems, I feel that a description of it may not be quite valueless, more especially on account of the evolutionary changes that are taking place.

The WaYao are a Bantu tribe, exogamous but not totemic, which until the middle of the last century inhabited that part of Central Africa lying to the East of Lake Nyasa, particularly in the valleys of the Lujende and Rovuma rivers. Up to that time the tribe had not extended far from the area indicated except perhaps in a northerly direction, but owing to constant intertribal war in their own territory the Yaos then invaded and conquered a large part of the neighbouring territories, especially to the south, in what is now called Nyasaland. [10] [3]

I have said that the WaYao are not totemic, and that statement is correct at the present time. Opinions differ, however, as to how recent their loss of totemism is; though their initiation ceremonies are generally regarded as totemic, even there, in my opinion, the evidence is not conclusive, and there remains no suspicion of totemism outside those ceremonies. [19]

It should be mentioned that Islam is much more prevalent among the Yaos than among their neighbours, but its influence is not yet so deep-rooted as greatly to obscure the pure tribal customs, except to a certain extent among the rising generation. [19]

To facilitate description the relationships are given in tabular form, the relationship being given with reference to one man or woman. [12]

In Table I, Column 1 describes the relationship, Column 2 gives either the nearest equivalent of the Yao term, or, if none, the actual term. Columns 3-6 give the various relations of the person named in Column 1, as they would be named by the man or woman under consideration. [6]

For example, the brother of (a)'s father (Column 1) is regarded as (a)'s father (Column 3), the wife of (a)'s father's brother is (a)'s aunt (Column 3), their child a his "brother" or "sister" (Column 4), and so on (see Table I).

office tended to become hereditary. Each councillor had his own village which he 631
administered as a headman. A second set of officials were the court assessors, *mapungu*, who, unlike the councillors, were not in charge of villages of their own in addition to their court duties. Their office was not hereditary and they were chosen for their wisdom and their debating ability. They lived at the court of the chief and their main [692]
duty was to sift the evidence in the judicial cases which came before him.

The village headmen were expected to send elephant tusks to the chief (receiving [651]
small gifts in return), and to invite him to a yearly beer drink. Like the chief, the village headman governed through a council of the most important men in his village. They 631
constituted a kind of village court over which he presided, and in the old days he 692
could give capital sentence, or award a fine of as many as four slaves. Appeal from his decision lay to the court of the superior headman, or to the chief. Important cases would be reported direct to the chief. Most crimes would be settled by compensation. In cases of murder, several slaves were paid to the kin of the victim, and a fine for spilling blood to the chief. When compensation was handed over, the recipient always returned some part of it as sign that friendship was restored.[1]

Macdonald's further account of the treatment of crime shows how weak was the 696
political organization, in spite of the apparent orderliness of the system of inferior and superior courts. A murderer caught red-handed might be killed at once. If captured alive he might be ransomed on payment of a fine of from four to twenty slaves, [567]
some of whom might be killed to accompany the dead. If the murderer escaped a relative of his would be captured and ransomed. This applied to murders occurring among parties friendly to one another and living in the same village. If the murderer was from another village, the injured village, if strong enough, would fall upon the other and kill and enslave the inhabitants. If not strong enough, the chief might be called in to help to annihilate the guilty village.[2]

Modern Administration

631
In the whole of Nyasaland there must be between thirty and forty Yao chiefs. In 622
the districts of Liwonde, Fort Johnston, and Zomba, where 60 per cent. of the Yao 178
population is concentrated (1931 boundaries), there are at least fifteen such chiefs. Not all those who have the rank of chief in the old Yao system are recognized as Native Authorities or even as Sub-Native Authorities by the Nyasaland Administration, and many Sub-Native Authorities would be full chiefs in the Yao system, and quite independent of the Native Authorities under whom they are placed.

Nowadays the chief has lost many of his former claims to status. He no longer has monopoly of the trade to the coast, for goods are brought in by Indian traders and bought by African tobacco growers or returned labour migrants. He can no longer use his slaves to increase his wealth by running slaving expeditions. His tribute of food and ivory has ceased, and he can no longer entertain lavishly, but he is still expected to give burial cloths and to make gifts to headmen on their succession to office. Some of his councillors have been made court assessors, and are paid for those duties, but others are expected to work for him unpaid. Some chiefs do reward councillors who retain their traditional status but are not officially recognized as assessors by the

[1] Macdonald, 1882, vol. i, pp. 156–8; Bateman, c. 1922, p. 279.
[2] Macdonald, op. cit., pp. 170–1.

1: Tew E-4 (no date) 1950 FT7 Yao FT7

622 631 178 Administration, but many cannot afford to do this. The people regard the taxes they pay to the Administration as a substitute for the chief's tribute. As the Native Authority the chief appears to be responsible for tax-collection, as the tax-clerk lives at the court.

631 622 693 The chief is responsible to the Administration, among other things, for latrine construction and for punishing the infringement of various regulations. His main duties are judicial, as judge of the Native Authority Court. The bureaucracy attached to the Native Authority includes a number of functionaries, e.g. Kawinga's, in 1947 one of the larger courts, had 1 court clerk, 1 assistant court clerk, 1 community worker, 1 forest guard, 1 agricultural demonstrator, 1 sanitary inspector, 9 court messengers, 2 caretakers, 4 garetta men, 1 market clerk, 1 market sweeper, 6 court assessors. These are paid by the Native Treasury. Court assessors help in the arbitration of cases. The key position at court is held by the court clerk, and usually he is not a Yao, but an Nguru, who, because he is literate, is the medium of all written communications to and from the chief. The court sergeant is the correct channel of approach to the chief, and the court messengers represent the chief to the villages.

631 622 The territory of a Native Authority is divided into 'administrative villages', under officially recognized and paid headmen. Within these areas there are clusters of huts, which do not form officially recognized administrative units, but which are none the less villages under their own hereditary headmen. The administrative village headman is responsible for the payment of taxes in his area, and for the observance of various regulations. He is usually a man with some standing in the Yao social system: one who has the right to conduct a boys' initiation ceremony, or to wear the head-band signifying rank. His authority is derived partly from his status as a senior kinsman, partly from his status as a village headman. If the administrative village under him includes a number of hamlets unrelated to the administrative village headman, he will delegate his responsibilities in these hamlets to their own headmen. Consequently, since village headmen perform administrative duties, whether they are officially recognized or not, there is competition among them for the official posts. In order to bring pressure to bear on the chief to make him concede marks of rank, they may threaten to move out of his area, and so to deplete his following. In spite of this bargaining tool, the position of the village headman *vis-à-vis* the chief is said to be getting progressively weaker. Cases once tried by them are now being taken to the chief's court, and the latter is able to draw on the power of the Administration to establish his dominance over the headmen.

631 648 [117] The chief in the modern system stands as the representative of the people to the white Administration, and as the representative of the white Administration to the people. One reason for the lack of direct contact between the Administration and the people is the fact that Yao is not the official language of the district, and therefore Yao interpreters are necessary.

There are some occasions when the chief and his officials perform the functions proper to their office under the old social system. The white Administration is not concerned with their ritual functions, nor with initiation rites, nor does it take cognisance of witchcraft offences. Accusations of witchcraft are judged by the same personnel as accusations of theft or adultery, but they are not dealt with in the court house, nor recorded in the book.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

the last rite the owner of the oblational basket exacts a payment of threepence or so from each parent. The headman does gain financially from the initiation ceremony, but it would be wrong to imagine that this is the only reason why he should want to have the right to hold it. The competition for the rights, which are limited to a few, is part of the general political process whereby village headmen compete for privileges and advantages over their fellows.

Village headmen may hold either the boys' or the girls' initiation ceremonies, or both. Sometimes, when they hold both, they delegate the girls' ceremony to a younger brother or some other relative without referring to the chief. For example, Kawinga's clan relative and important retainer, Ngalawanga, had the rights to both initiation ceremonies, and he allowed his perpetual 'son' Isa [1] to hold the girls'. Also in Nyambi area, Majaja, who had both initiation rights, allowed his perpetual 'son' Nantunga to have the girls' ceremony. It is generally conceded that the right to hold the boys' initiation ceremonies is more valuable than the right to hold the girls'. H. L. Duff, writing in 1906, had also noticed this when he wrote:

> The respective ceremonies seem to be considered as on a somewhat different footing, for the boys' *inyago* can properly be held only at the village and under the patronage of, so to say, the paramount chief of the neighbourhood, whereas the girls' initiation may take place under the auspices of an inferior headman. This distinction is still jealously observed and any breach of the chief's privileges is apt to lead to bitter dispute.[2]

The sanction the chief holds over the headmen in this respect is mystical. A village headman believes that the initiation will be a success (that is, that the initiands will be free from the harm of wild beasts and illness, or the circumcision wounds of the boys will heal quickly and well), only if the approval of the chief's ancestors is obtained. He cannot hold the initiation ceremonies, unless he has obtained the basket from the chief.

Most people still follow tribal initiation customs, but in the extremes of the area in which I worked, religious ideas are bringing about a change. In the north in Jalasi's area where Islam

[1] The first Isa was the son of Ngalawanga and this relationship is preserved by the modern incumbents of the headmanships. See Chap. V, p. 122.

[2] Duff, H. L., *Nyasaland under the Foreign Office* (London, 1906), 312.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

881 is most powerful, there is a tendency for the Islamic initiation
178 ceremony for boys, *jandu*, and the Islamic initiation ceremony
795 for girls, *nsondo*, to displace the tribal equivalents, *lupanda* and
622 *ciputu*. These Moslem initiations are conducted by Moslem
554 teachers (*mwalimu*) and are not controlled by the chief. Though it also involves the circumcision of the boys, *jandu* is very much shorter and the boys are secluded for only a week. Some say it is becoming more popular because it is less expensive for the boys' parents. In Chiwalo's area the two ceremonies are run concurrently. The boys and girls go through the normal segregation rites at the beginning of the ceremony, but an *mwalimu* circumcises the boys according to Islamic practice. At the aggregation rites at the end of the period of seclusion, the star and crescent appears as one of the symbols along with the whale (*namungumi*), antelope (*mbalapi*), leopard (*cisuwi*), and the other tribal effigies which are shown to the boys. Christianity in the south has had a similar effect. The Missions actively discouraged initiation ceremonies in the past. Many of the people in Mposa's and Malemia's area have dropped the custom, or have integrated prayers and other parts of Christian ritual into the ceremonies, though circumcision is steadfastly retained. The effect of these changes is that the important ritual control the chief had over the ceremony has been undermined, and so the prestige attached to it has also begun to fade in these areas. What I describe about the prestige of village headmen and the rights they have to initiation ceremonies is only partially true, and is falling away daily. The correlation I seek to establish is also disturbed by the fact that among the Nguru there is a slightly different initiation ceremony (*cidodoto*) for boys. Most Nguru send their boys to the Yao initiations but there are still some who hold their own traditional ceremonies. These are not within the mystical control of the chief so that some Nguru headmen are outside the competition for the initiation rights. I should say, however, that most compete with the Yao for Yao initiation rights so that this factor is not as disturbing as appears at first sight. In addition, village headmen who move into a new area usually must obtain the permission of the chief before they may use the initiation rights they held before coming into the area.

622 There are other indicators of the general high rank of village
554 headmen. Junior headmen, like commoners, must give a special
576

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

headmen is higher than among the Aborigines or the New-comers. It also shows quite clearly that the chief's direct relatives hold more of the privileges associated with rank than his clan relatives do, and they in turn hold more than his non-relatives. 622 554

The Political Process as a Struggle of Headmen Against the Chief

Modern chiefdoms appear to be organized on essentially the same principles as those described by Duff MacDonald. A chiefdom is headed by a chief and under him his subjects are organized in villages. Each village is represented by a headman, who stands in a relationship to the chief and to other village headmen, according to the prestige of the group he represents. This prestige is determined partly by his historical association with the chief in his past military exploits, partly by the size of his village, and partly by the prestige he has had in other areas. These elements were significant in Yao polity before the advent of the Whites, as we have seen from Duff MacDonald's description. Village headmen then were continually involved in a struggle for power among themselves and against the chief.[1] The struggle for power among village headmen continues to-day though in a changed context. Military power is no longer the object of the competition between them: the struggle for followers has become transmuted into a struggle for tax-payers. In harmony with the new political and economic situation a successful headman is not rewarded by military superiority, but by Government recognition and an official emolument. 643 622 554 178

At the same time, the chief whose power in the pre-White days resided in his armed forces, nowadays draws on the power of the White Administration to exercise his authority over his village headmen. His position is strengthened by Government decree and he does not hesitate to threaten to use it if necessary. Although the prestige of chiefs is higher than that of any of the village headmen, the difference in prestige between any chief and his most important headman is not very great. They are treated with almost the same deference by the minor village headmen and commoners, and they are referred to by the same term (*mwenye* = chief). The chief or an important village headman

[1] See Chap. II, p. 34.

The chief or an important village headman

[60] is usually addressed by a kinship term, either *baba* (father) or
643 *ambuje* (master or grandparent). When he is referred to, his
622 name is not used. Village headmen are owners or wardens of
554 villages (*aryene misi*) but only those headmen of some standing
178 are referred to as *mwenye*.

Important village headmen, like the chief, are in mystical
643 danger from pollution by death. They cannot come to the hut in
622 which a corpse is lying; and they cannot eat the chicken which
554 has been brought to them by relatives of the deceased to announce
761 the death. Like the chief too, an important headman may be buried in a tomb in his village and not in the graveyard.

But an important element in their relationship nowadays is
643 that the Administration will support the chief against a village
622 headman when it comes to a trial of strength, and that a headman
554 these days is precluded by modern conditions from setting up
578 chiefdoms as he did in the old days. Village headmen therefore
691 must struggle for power against their fellows and the chief within the modern Administrative framework. Some attempts are made to resist the power of the chief but these are rarely successful. The dispute between Liwonde and Ndenda illustrates this.

Ndenda was an Nguru headman, who in 1947 had 284 tax-payers under him (Liwonde, the chief, had 186 in his village). Ndenda had come into Liwonde's area before the White invasion and had surrendered with his relative Mlelemba, to Liwonde. The second Liwonde had given him both initiation rights but, unlike his relative, he did not have the right to wear a scarlet headband.

In 1938 or thereabouts, Liwonde decided to move his village site from the Shire River to its present site about half-way up the Great Rift scarp. He sent two of his young men to look for a suitable site, and to plant some mango trees there when they had found one. Ndenda heard of this and sent one of his men to take Liwonde's men into custody. He took their hoes away and then told them to go back to tell the chief they were planting in his (Ndenda's) land. In due course Liwonde moved up to his new site, and asked Ndenda why he had taken the hoes away and whether he owned the country, i.e. was the chief. Ndenda now argued that Mlelemba's ancestors had been given the rights of chieftainship over this area and that the first Mlelemba in the area had given Liwonde some elephant tusks for these rights. Liwonde replied that the chief has a right to tusks and that many had given tusks to him but were not entitled for that reason to rights of chieftainship. Liwonde handled this situation by calling a meeting of the village headmen in the area. They assembled

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

of his malice towards him, might equally be called upon to do this. The person makes a statement to the effect that he bears no malice and hopes that the sufferer will be well. For example, a woman in Cikoja village who was called upon to 'blow water' during the labour pains of her mother's younger sister's daughter's daughter,[1] because they had quarrelled over a sifting basket, put some water in her mouth, spat it out and said: 'Those words I spoke: the basket is mine. This is my child. Both are mine. When I spoke and asked my child about it, they were not words to place in my heart, so that to-day we should have to go to the diviner because my child is hitched[2] and be accused because of the sifting basket. These words I push aside. I do not know whether there are other words that we fought about, but if they are these, my daughter's child come out!'[3] Sometimes the ancestors are specifically invoked, '*Conde, conde ŵamasoka* . . .' 'Please, please, O spirits . . .' This is a public confession of the tension within the lineage and it allows the lineage leaders to attempt to straighten out the difficulties, as they did in this case.[4]

These beliefs in mystical dangers of one sort or another which beset the matrilineage as the result of bad feelings within it, have the effect of constraining matrilineage members to maintain peaceable relations among themselves and are, therefore, conducive to maximum solidarity.

It is clear from MacDonald's writings that in earlier times the periodic offerings to the spirits of the ancestors was a valuable way in which the solidarity of the matrilineage was expressed. With the introduction of Islam and Christianity these sacrifices have disappeared. I have not worked in Christian areas long enough to be able to say whether the ancestor cult still persists. In the northern area, however, I can say that the ancestor cult survives as part of the practice of Islam. Periodically, feasts are held in

[1] See the history of the division in Cikoja lineage, pp. 165–6.

[2] *Kukolekwa*, i.e. the child cannot be born.

[3] *Une maloŵegala cisclo cila cangune. Aju mwanangu. Yosope yangune. Pinawecetaga nikwusya, kumbusya mwanangu, nginiwa maloŵe gakwika kuntima, gati mpaka lelo nikwenda kucisango cakolekwa mwanangu nikumkamula une ligonga lya cisclo. Celego ngututako. Kwalini nagapali gani getuwa kanganile nambo nagagaga maloŵe gakwe, cinukulu cangu cikopoce.*

[4] I have drawn attention to the cathartic effect of accusations of sorcery and public confession of guilt in a paper, 'A Note on the African Conception of Causality', *The Nyasaland Journal*, v, 2 (July 1952), 57–8.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

613 memory of the ancestors. These are called *sadaka*[1] and are
769 similar to those held at the end of the mourning period. They
are usually held when one of the lineage members has had a
●178 dream about an ancestor. The senior members are told of this and interpret it to mean that a feast in his memory should be held. The women cook a meal of mush and relish and on an appointed day the members of the matrilineage who live within a reasonable distance gather at the village of the senior section and share the feast. During this feast Islamic texts are chanted in Arabic. It is clear that in this situation the context of the meeting is exactly the same as that of the old offerings made by the lineage leader at the shrine-tree. The common ancestor is recalled and the matrilineage by meeting reaffirms its solidarity.

The Localized Matrilineage

613 The matrilineage may itself be localized in the form of a
621 hamlet or small village, as in Ali Kasunka village. It has 9 huts situated about half a mile from Chiwalo's court house in Kawinga's area. The genealogy, hut plan and census are set out in Appendix B. I summarize the genealogy here to show how the hut owners in the village are related. The village is about 300 yards across and about a quarter of a mile from the main road.

Ali Kasunka (C6),[2] the warden of the village, formerly lived in a village known by his mother's brother's name Msilo (B1). Ali Kasunka is the son of the chieftain Mposa in Kawinga's area. The village of Msilo still exists in Mposa area. Ali Kasunka and his sisters moved out of Msilo village and established a hamlet in Malemia's area near Zomba township. While they were there Ali Kasunka went to work as a domestic servant in Zomba. One day the sister of the cook in the household in which he was
[695] working came down to visit her brother. She became Ali Kasunka's second wife (he was already married to a woman from Malemia area) and lived with him in Zomba. She was the daughter of the present chief Chiwalo, and was living at her

[1] Sanderson says that this is derived from the Arabic word *sadaqa* which means 'alms'. Sanderson, M., on 'Ceremonial Purification among the Wayao, Nyasaland', *Man*, xxii, 55 (June 1922), 91–3.

[2] The reference number is to assist the reader to identify the person on the genealogy in Appendix B.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

621 this happens the husbands take their wives to their several villages with them.

Throughout this general process the links between groups of any particular area are constantly changing but the general pattern remains constant. A village expands outwards, and the various patrilaterally-linked groups, and often some of the segments of the dominant lineage, form hamlets separate from each other. The dominance of one of the local headmen over the others is still recognized and the general pattern of primacy is maintained. Some of the earliest villages in the area remain intact through many years. Villages which were small hamlets twenty or thirty years ago, when they had just moved into the area, have become relatively senior. Many headmen who were senior then have moved, or their villages have disintegrated, or ceased to exist. Other villages have moved in and are ranked lower. Thus through time the rank of any one headman may have changed, but the ranking system and the relationships of senior to junior headmen remain unaltered.

621 The general process is the same for the whole chiefdom,
622 though there is less overall structural change than in smaller
631 areas. The more important a village headman, the less likely is his village to disappear entirely. The most important village headmen, therefore, have long histories of association with the chief. Thus while there is considerable change going on at the lowest levels of the social system, the social structure of the whole chiefdom is remarkably stable. In other words, the rate of change taking place within the structure varies directly with the level of organization within that structure. The names of the *nduna* of Kawinga, Liwonde and Malemia are the same as those of the *nduna* who accompanied these chiefs into Nyasaland in the middle of the nineteenth century. Relatively few of them have disappeared. And so it is with important village headmen. The links between them, fixed by their rank and status relative to each other in perpetual kinship and other ties, form the political structure of the chiefdoms. From chiefdom to chiefdom the same pattern of organization is concealed behind an apparent diversity of actual links.

178 But, as a result of their contact with other peoples and their
622 absorption into the economic and administrative framework of
643 the British Empire, new social relationships are developing

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

amongst the Yao. The religious sanctions behind tribal initiation ceremonies were weakened when many of the village headmen adopted Islam, and the rights of holding the Islamic equivalents fell to commoners who were leading Moslems. Thus for many village headmen the significance of the holding of initiation rights fell away. The White Administration has introduced new political personalities into the field, such as the court clerk, the court sergeant and other members of the chief's bureaucracy. These persons have been able to acquire peculiar positions of power in competition with the chief's traditional advisers.[1] Some wealthy individuals are able to wear better clothes, build better houses, and have more personal attendants, than the chiefs. For example, there is a carpenter in Kawinga's area living near an Indian store,[2] who is wheeled about in a garetta (ricksha) as the chiefs are, and who dresses far better than any of the chiefs.

But these changes have not yet affected the pattern of social relationships appreciably. Up to the present as new elements were introduced into Yao social structure they have been absorbed in terms of the traditional structure. The traditional chiefs, therefore, became the Principal Headmen when White Administration was imposed on them. Village headmen, no longer able to compete with each other in terms of followers and slaves, now began to vie with each other for 'books'. Important village headmen became the Moslem leaders, and the larger mosques were built at their villages. The chiefs, by virtue of their annuity from the Government, are able to maintain a higher standard of living than most of their subjects: they build burnt-brick houses, they wear finer clothes, they are wheeled about in garettas or, latterly, are pillion passengers on bicycles pedalled by retainers. By using their annuities as capital, they have been able to grow more tobacco than most of their subjects and so still maintain economic ascendancy over them.

So that until 1949, at least, in spite of the introduction of

[1] cf. my 'The Political Organization of the Yao of Southern Nyasaland'.

[2] He does not live in a village as most people do; he is an Nguru, and has none of his relatives near him, which is significant. His relationships with his clients are formal and transitory and he is not bound by traditional kinship ties. He therefore attempts to achieve prestige through conspicuous expenditure.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

178 new personalities into Yao society, the social structure remained
622 little altered. There were not enough Government officials, or
643 officials in the chief's bureaucracy, or rich individuals in Yao-land to be able to represent significant elements in the social structure. In the years 1946–49 Yao social structure was still organized in terms of ranked lineage segments at one level, ranked matrilineal groups at a second, and ranked villages at a third.

The men and boys now pass through the arch in order of seniority; each splashes 751
himself with the water in the trough, but neither speaks nor rinses the mouth. The 796
women come next, led by the head-wife of the chief; the latter rinses her mouth and, instructed by the doctor, repeats a prayer similar to that offered by her husband. The remainder of the women merely splash themselves, like the men, before passing through the arch. All then return to the village, where the *ppajila* is continued.

Finally the doctor takes the hammer-head from the trough and hands it to the chief, who refits the haft into it, and, a hoe having been placed on the ground, goes through the form of forging the latter by beating it with the hammer. He then scrapes the ground with the hoe as if clearing a place overgrown with grass; he does not dig with it as in hoeing up the ground for planting seed. After this rite the chief again bathes in medicated water similar to that in the trough, and the ceremony is complete.

Whereas the *ppajila* ceremony and its adjunct, the rite of the arch, are now [178]
but rarely performed, no Yao will omit the rite of purification after a death in his 751
family. This ceremony consists of two essential parts, both protective against 764
the *ndalu*, a disease characterised by dropsy and supposed to be contracted by 796
contact with a corpse, or by association, especially by sharing a meal, with those who 783
have been in such contact. The first of these parts is bathing in certain medicines, which protects the bather from *ndalu*, and the second consists of a sort of communion meal, shared by all friends and especially relatives with those who have been contaminated, and designed to protect those friends and relatives.

The decoction for bathing is made by soaking the roots of *lapulembati* and 751
lumlemela in water, together with the bark of *mkomaru*, one piece each from the 783
east and west aspects of the tree; the water assumes a reddish tint, and the whole 824
body is bathed. 765

The communion meal consists of porridge made from any kind of flour or of [262]
rice, and some *ngunda* beans. In the latter some scorched and powdered root of *mindanpelele* is mixed, with a little salt. All near relatives of the deceased must partake of this meal, as well as their wives and their near relatives; part is carefully put aside for the use of any relative unable to be present at the ceremony.

Latterly, since the spread of Islam among the WaYao, this rite has become [177]
confused with the distribution of food to the poor at the funeral of a Muslim, and [797]
the Arabic word *sadaqa* ("charity") is now generally used for it, to the exclusion of its wider, correct meaning.

It may be mentioned here that after the death of a child the father is denied 765
access to his wife for a period of about three weeks, and the first act must be one 784
of *coitus interruptus*.

MEREDITH SANDERSON.

11: Sanderson D-5 (ca. 1920) 1920 FT7 Yao FT7

The alternative term, *ewe*, common to nearly all Bantu languages, is usually reserved for "own father," but not always. 601

Latterly, though the relationship is really *ukwape*, the husbands of a man's "daughters" or "grand-daughters" are called *atati* in a complimentary sense, not of course in defining relationship.

The word *ukwape* is rapidly falling into desuetude for men, and is, nowadays, never used in speaking to a man of that relationship, though used freely as a mode of address to women.

Amao (or *ankilulu-wangu*, -*wao*, etc., "my, his mother") may be further defined as "great" or "little" in the same manner as *atati*.

The parents of any *atati* or *amao*, and those of one's wife are called *ambaje* ("grandparent"). Great-grandparents are specified as "father" or "mother of my grandfather (or mother)."

The founder of a family is called *Likulu*, especially in prayer—except for the augmentative prefix obviously the same word as *Nwapolo*," a parent," which includes all "fathers" and "mothers." [illegible]

It is curious in this connection that a name for little girls in general, if one does not know their real name, is *ukikulu*. All these words seem to be derived from *-kula* ("have," "possess"), and refer, probably, either to actual or potential possession of offspring.

Ankinampolo are distinguished as "male" or "female" according as they belong to the father's or mother's side—irrespective of their own sex.

Conclusions.—The Yao nomenclature of relationships, bearing as it does the evidence of former group marriages, is, like other classificatory systems, gradually changing in conformity with the development of the race, so that it can be used to express consanguinity; Rivers has, I believe, called attention to this process. 601 198 [illegible]

The Yao custom—now dying out—of lending one's wife to a visitor (usually a close friend) may be a remnant of ideas carried on from communal marriage, though such a privilege is never given to a relative. [illegible]

In the same way a man who has had no children (a great stigma) may request his friend to help him—he will never ask a relative—and all of the three parties will keep the secret of the true paternity of any children resulting. [illegible]

In many tribes the marriage of brother and sister, or a man with his sister's child, is permitted to compensate for the law by which a man's property goes to the son of a stranger, but nothing of the kind is allowed among the Yaos. Indeed, they view any incestuous union with particular horror, and such must be very rare. I have heard of a case of a man committing incest with the idea that he would thereby become endued with supernatural power, but all he gained was ostracism; in the old days he would have been burned. 588 535 [illegible]

11:Sanderson D-5 (ca. 1920) 1920 FT7 Yao FT7

4p8 It is becoming increasingly evident, however, that the law of succession is being avoided, not by extension of the number of marriageable relatives, but by laxity in the observance of the law itself. Nowadays the legal heir is never quite sure of his position, though, as a matter of fact, there is not now much competition for a position which, under European rule, is often exacting and yet unpaidable.

58 Moreover, owing to the abrogation of the drastic native laws regulating the sanctity of the marriage tie, marriages are becoming increasingly temporary in character. This is reflected in the system of relationship, as the relatives by marriage are becoming equally temporary.

1: Stanton D-5 (ca. 1912) 1922 FT7 Yao FT7

After the defeat of Kwetaja, Chikusi and his Angoni routed Kamtumanja, a brother of Malenya, who had also been making a nuisance of himself. Kamtumanja, who suffered from a large hydrocele, is supposed to have lost his balance on account of this impediment, and fallen into a stream where he had stopped to drink and to have been drowned. 175 167 648

The Angoni still burned for more warfare, and Malenya, fearing that with his work done, they might prove a nuisance to him, turned them on to the Amangoche Yao around Ilunziyu. Thither they set off on a raiding expedition and returned to their own country via Chiwindindo. This raid took place in 1884.

During the next few years, Kawinga, who had always held a grudge against Malenya for having got ahead of him to the best country, occupied the chief with raiding and warfare. In 1891, Wandaloma died, and was succeeded by Chimla, the son of his sister, Chingaro, and at the present time, he is the reigning Malenya.

It is of these Amachinga Yao under Malenya that the following notes are written. I have gone at some length into the history of these people in order to discuss criticism by those who, familiar with other sections of the Wayao, may not agree with all my statements.

Life History. Generally speaking, the life of the Yao native in the old days was full of zest spiced with the excitement of intertribal warfare. He cultivated his crops, kept a few goats and chickens, and relieved the monotony by hunting. Even domestic slavery was not a great hardship, nor did the Yao probably suffer from great slave-raiding to the same extent as many other tribes. As children, they are want to spend their days free from care, seldom reprimanded, and rarely or never physically chastised. During youth, the same easy lot is theirs, with the addition from time to time of a few small tasks; minor household duties for the girls, such as drawing water, sweeping the hut, and "minding" the baby, while the boys hoe or fetch and carry for their fathers in the village or in the bush. Left to their own devices, they play games, dig out rat/ nests, or shoot birds with bows and arrows. 161 ● 857

Now, as formerly, when they are about five years old, the girls usually go to live with their grandmother who may then have a number of children around her; or several girls of a somewhat more advanced age may sleep together in a hut dormitory. Boys of this age all live in a big hut called *ngombe ja chakwendo*, "the boys' dormitory." This is their quarters until one by one they leave to get married. The girl, similarly, remains in the girls' dormitory or with her grandmother until she is taken in marriage.

Puberty. The first interruption of this placid life of youth is the onset of puberty or the first initiation ceremonies.[1] Formerly, these ceremonies took place after puberty but of late years, as is pointed out elsewhere, they are performed much earlier. 631

Child betrothal. Betrothal in childhood or before birth is not uncommon. A woman learning that some friend of hers is pregnant will arrange that if a girl is born, her son will marry the friend's daughter, or a man taking a fancy to a little girl will select her as his 584

[1] Vide infra, p. 245. [2] Vide infra, p. 246.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

621 his mother was ill and had gone with Lupunje's younger brother to
626 the diviner to find out the cause of the illness. The diviner indicated
that Lupunje thought that Kalambo was not showing him the proper
753 respect. Lupunje knew that his sisters had lost their value in the
lineage since they had stopped bearing children, whereas Kalambo's
sisters were still reproducing. His malice had caused the woman's
illness. When Kalambo got home he asked his mother's brother to
blow water out of his mouth [1] and help him to prepare some medicine
for the sick woman. This Lupunje did and the woman recovered
immediately.

Shortly afterwards Kalambo remonstrated with his mother's brother
for causing the illness of his sister, but Lupunje said that he had no
control over it: the spirits had brought it on her. Kalambo knew
that he could do nothing and abandoned the idea of building his own
village. He knew that there was bound to be more illness if he
carried on with his plan.

182 Clearly the belief in the mystical powers of the ancestors or of
621 sorcery is a force which prevents sections from breaking away
626 from the village. A break follows only when opposition within
the village has reached sufficient pitch to force one of the sections
to take the risk of illness, rather than to continue living in the
village. Sometimes the dissident group comes back because
further deaths at their new village site convince them that their
action was wrong.[2]

Effects of the Headman's Personality

622 Whether a village maintains its unity or not, depends very
largely on the personality of the headman. This is why the
officiating headmen and others at the installation ceremonies are
so insistent that cases should be settled quickly. The main duty
of a headman is to maintain harmonious relationships within
his village and to see to the welfare of its members. All severe
[787] illnesses are immediately reported to him, and so are the results
of all divinations. He usually sends his representative to divina-
[764] tions concerning kinsmen not related to him matrilineally. He
is immediately notified of all deaths and he organizes the funeral
622 rites. Squabbles are brought to him for arbitration and even
692 where squabbles are settled by kinsmen in the village, usually the
headman is formally told of them. Frequently marriage diffi-

[1] An act which means malice. See Chap. VI, p. 139.
[2] See the case history in Chap. VI, p. 133.

6: Mitchell E-5 (1946-1947) 1949 FT7 Yao FT7

be noted that only 27—11 per cent. of the whole sample of 246 women—had never married and that 23, 85 per cent., of these (or 10 per cent. of the total) were under the age of 20 and therefore stood a good chance of yet marrying. Furthermore, 2 of the 4 women over 20 who had not married were known definitely to be incapable of marrying (one is insane and the other has violent epileptic fits).

There were 33 women who were divorcees or widows (13·5 per cent.), but it should be noted that 27 (or 11 per cent. of the 246 women) were over the age of 45 and therefore were past, or nearly past, the child-bearing period. Those in the younger age-groups stood good chances of remarrying. Table IV shows that though the divorce rate is high[1] remarriage is common. By the time a woman's child-bearing period has ended she has been married on the average 1·7 times. Few marriages are contracted after child-bearing ceases.

TABLE IV. *Marriages and Dissolutions of Marriage experienced by all Women over the Age of 15*

Present age	No. of women	No. of marriages contracted	No. of divorces experienced	No. widowed	No. still married	No. of marriages per woman	No. of divorces per woman	No. of marriages per woman ended by death of husband	No. of marriages per woman still existing
15-20	45	22	1	..	21	0·49	0·02	0·00	0·46
20-30	78	104	18	4	84	1·32	0·23	0·05	0·81
30-45	70	122	30	18	73	1·73	0·71	0·25	0·79
Over 45	51	88	29	34	25	1·70	0·57	0·65	0·48
Total	246	335	108	56	203	1·36	0·43	0·22	0·81

These statistics, showing the early age of marriage, the early commencement of child-bearing, the high incidence of marriage among women, and the high rate of remarriage during the child-bearing period, all point to the high valuation of reproduction reflected in Yao culture. This is consistent with their social structure, where the major corporate groups are kinship groups and reproduction is the principal method of recruitment to the group. Furthermore, because the standard of living is almost at subsistence level, children do not entail the economic losses they do in Western society. On the other hand, they are expected to support their aged parents when they themselves are economically independent. In other words, there are few factors militating against reproduction and many in favour of it.

We may expect the beliefs and customs surrounding child-birth to reflect the value of reproduction. For instance, the Yao distinguish clearly between women who have borne children and those who have not. When a girl becomes pregnant for the first time she undergoes a special ceremony (*kitão*) attended only by women who have borne children. This ceremony has many of the features of a *rite de passage* and appears to mark the passing of the woman to a new social status. Furthermore, women are ascribed status according to the number of children they have borne. The word *ammali* signifies a young woman who has not yet borne a child; *ammali*

[1] Between a third and a half of the marriages contracted by women had been dissolved by divorce by the time that the child-bearing period had ended.

1: Tew E-4 (no date) 1950 FT7 Yao FT7

expressed also in the speeches by the marriage sureties. The couple are exhorted to refer disputes to the sureties, and to consult the diviner in case of sickness.[1] After the rite these two sureties have special responsibilities towards the couple; grievances are referred to them, and they must be present when adultery cases are heard in court. If the marriage witness ceremony has not been performed, the relationship is not regarded as legal and no adultery compensation can be claimed by the husband. 585

Divorce used to be a private affair, which was merely signalized by one party giving to the other an arrow as a token of separation.[2] Nowadays all divorce cases go to court. The woman is usually asked to choose between her husband and the adulterer, and the compensation paid to the former, if she decides to leave him, is higher—amounting to about 10s. A man can be sent away from the village by his wife's kin, but if he has given no grounds for divorce he can claim compensation and will also take back any gifts made to his wife. A few small gifts to his mother-in-law are not reclaimed. Divorces are easily obtained and frequent. Grounds for the divorce of a man may include failure to pay hut tax, one of the specific duties of the husband. 586 [431]

The custom of making a marriage payment is recorded by Johnson[3] (on the east coast of Lake Nyasa) as a relatively new adoption. When given it is divided between the bride's father, mother, and mother's brother and brother.[4] 583 177

Slavery

Domestic slavery was an important institution in the Yao social system. Slaves were obtained by capture, purchase, or in compensation for injury.[5] A man would pay a debt by giving slaves (wives or members of his matrilineal kin group) to his creditors.[6] A man might voluntarily enslave himself to a man having charge of many women, as a means of obtaining a wife.[7] The children of a free man and a slave woman were not emancipated, as their father could not take them from the village of their mother's master, who had the right to sell them.[8] Slaves took part in the ordinary life of the village; women slaves ranked as junior wives of their masters and shared the usual work of women. Men might be supplied with guns for hunting or might accompany their masters to war, trade for them, spin, weave, sew, make baskets.[9] The institution of domestic slavery was an expression of a dominant motif in Yao culture—the association of status with a large number of dependents. Its abolition by the British was in itself a major blow to the prestige and authority of the chiefs. 567 [559]

Information about the social organization of the Yao in Portuguese East Africa is scanty, but it is in agreement with what is known of the Nyasaland Yao; Heckel, who knew the Yao in Lindi district, Tanganyika Territory, confirms the correctness of Stannus's account of the South Nyasa Yao. 184 602

The Yao came into Nyasaland in small parties of kinsmen. Their experience and their superior weapons soon enabled them to dominate the Nyanja among whom they settled, and today they dominate the population of the Southern Province. They are organized into loose groups of villages, under petty, independent chiefs. They seem 175 [621] [631]

That these several sections of the Wayao differ in many respects may be seen by comparing the Amangoche of *Africana*[1] with the Amachinga of this article. I am not sufficiently conversant with the Amangoche to make a definite statement on this point but I am inclined to believe that after longer residence and wider knowledge, Macdonald would have found that some of his statements needed revision. Those whom he considered the "Yao proper" but whom I prefer to speak of as the Amangoche seem to have a considerable mixture of Anyanja, since their language contains many Chinyanja words and many of their customs are practically those of the Anyanja. I am of the opinion that the Amachinga may be regarded as more typical of the Wayao, and except when ambiguity might arise, I shall speak of them as the Yao.

The original home of this Bantu speaking people is uncertain; in historic times all the sections of the Wayao were originally grouped in that part of Portuguese East Africa around the hill called Chao, whence they probably derived their name, *Wa Chao* or *Wa Yao*. About the middle of the nineteenth century, as the result of inroads by neighboring tribes of Alolo from the southeast, and raids by the Makwangala, a branch of the Angoni of Zulu origin, from the northwest, disruption of the Yao people occurred, and the divisions mentioned above, moved toward Nyasaland. The Masaninga branch settled for the most part along the eastern shore of Lake Nyasa but a sub-section known as Tambala Yao reached the west side of the lake. The Machinga made a settlement near Lake Chiuta under a number of old chiefs, including Malemya (Nalutumbo), Kawinga, Chenkula, Kalimbuka, and Mazin.

The descents of the Makwangwala again caused the Wayao to move on from Chiuta to Nanninga on the Mikoko stream. Here Malemya suffered another defeat at the hands of the Angoni; many of his people were driven off and taken to the neighboring Anguru country where they were held in captivity for some time. Finally they were restored by the enterprise of one of Malemya's old men, Kulungala, who went alone to the Angoni, saying that he wished to live with them and with his own brethren. One day, he asked the Angoni if they would like to see their captives dance, and when they assented, he called the Yao together, and clapping his hands to keep time, he began to sing one of their dance songs. Gradually he gathered all the Yao into the village open space, dancing and singing; then, keeping to the same air, he told them why he had come, using their own language which the Angoni did not understand. "Malemya, our chief, remains at the Mikoko stream. It is not far off. We must all join him again. Now dance for joy. If anyone does not return there, it is his own fault." Then, a few at a time, the dancers left the crowd and stole away into the bush and, as night came on, they all made off and reached Malemya's camp in safety.

Malemya's people were again attacked by the Angoni, and on this occasion they defeated their enemies. The Angoni retreated and skirting Zomba mountain, reached the Shiré

7: Hetherwick M-5 (ca. 1900) 1902 FT7 Yao FT7

Unkulunkula, which may therefore be rendered as "The old, old One," or "The great, great One." A like rendering may be given of the Yao form *mulungu*, the "Old One," or the "Great One." In this or a modified form *mungu* (Swahili) it appears in all the Eastern group of the Bantu tongues as the equivalent for "God" (see Father Torrend's *Comparative Grammar of South African Bantu Languages*). To trace it as Father Torrend does to any connection with Moloch, the god of the Phœnicians, is to attach undue weight to a chance coincidence of sounds.

As we have already seen, the word *mulungu* is applied to the human *lisoka* when regarded as an object of worship, or as an inhabitant of the spirit world. But it is also used to denote that spirit world in general, or more properly speaking, the *aggregate of the spirits of all the dead*. The plural form of the word is rarely heard, unless when the allusion is made to the souls in their individualities. In its native use and form the word does not imply personality, for it does not belong to the personal class of nouns. Etymologically it is classed with the leg, heart, arm, head, etc., of the human frame. Its form denotes rather a state or property inhering in something, as the life or health inheres in the body. Among the various tribes where the word is in use as we have described, the missionaries have adopted it as the term for "God." But the untaught Yao refuses to assign to it any idea of being or personality. It is to him more a quality or faculty of the human nature whose signification he has extended so as to embrace the whole spirit world. Once after I had endeavoured to impress an old Yao headman with the personality of the Godhead in the Christian sense of the term, using the term *Mulungu*, my listener began to talk of "Che Mulungu," "Mr. God," showing that originally to him the word conveyed no idea of the personality I was ascribing to it.

And yet the Yao approaches closely to the idea of personality and a personal being, when he speaks of what *mulungu* has done and is doing. It is *mulungu* who made the world, and man, and animals. Far in the interior of the continent, toward the north-west, beyond the plains and swamps of the Loangwa River and Lake Bangweolo, there lies, in Yao legend, an island in the midst of a lake called Kapiritimya. On that island there is to be seen a large flat rock marked by the footprints of men and animals of all kinds. When that rock was once a heap of moist clay, *mulungu* created all living things and sent them across the soft mass, where their footprints remained to be afterwards hardened into the imperishable rock. Such is the Yao legend of the creation of the world, and *mulungu* is always the Great Creator.

Mulungu is also regarded as the agent in anything mysterious. "It's *mulungu*," is the Yao exclamation on being shown anything that is beyond the range of his understanding. The rainbow is always "*mulungu*," although some Yaos have begun to use the Mang'anja term "uta wa Lesa," bow of Lesa.

Offerings are made to the spirit world or to *mulungu* as the great agency in the affairs of human life. Outside the village, or beside the headman's hut, may often be seen a rough shed. In this are placed the first-fruits of the new crop,

642 177 representative of the chief, acting as he was in terms of a system of values indigenous to the Yao. If during the same trip he informed the villagers that the village roads should be cleaned, to the people he would appear as a representative of the chief who is representative of the Administrator and is acting according to a value held by the Whites and embodied in a regulation governing the cleaning of village roads. Two sets of values intermingle in daily life and social personalities are seen first in this guise and then in that depending on the particular interactional situation. Thus the chief, when he is addressing villagers and village headmen, sees himself opposed to them and shows himself to the people as a representative of the White system of values and emphasizes his bonds with the District Commissioner and the Governor. Talking to the Agricultural Officer he sees himself opposed to the White system of values and opposes contour ridging, saying that unlike the traditional system of agriculture it encourages white ants in the gardens.

642 186 At the same time the White value system, symbolized to the Africans mainly by the Administration, is becoming an integrating force in their life. The otherness of the White system of values emphasizes the unity of their own. Formerly hostile, chiefs are now living at peace under the

[P.159 B] FT7 Yao FT7

642
186

Administration. Africans are becoming increasingly aware of their position in the British Empire and in the world in general. The trips of labour migrants to South Africa and Southern Rhodesia have emphasized this since Yao from formerly hostile groups, Nguru and Nyanja alike, were all classified as "Nyasa boys" and in the situation of being amongst vastly different tribes at these labour centres they have begun to see themselves as a united people. Also during the war there was a high recruitment rate in Nyasaland and since the 1st and 2nd KAR are recruited from Nyasaland, this heightened the feeling of belonging to a new political entity—Nyasaland. The new feeling of unity of Nyasaland people is felt most strongly by the younger people who have been out to work and who have been in the army. This feeling is also strong among the more educated who now read African newspapers from Southern Rhodesia and South Africa in which columns are set aside for "Nyasaland News". Symptomatic of this is the development of associations of a semi-political nature especially among the more educated people—the clerks and the teachers—organizations which cut right across the old tribal barriers, and which are serving to integrate the whole of the African population into a united political body.

648 nevertheless the type of behaviour which is normal
563 between Labour Recruiter and African is dictated by the pattern of behaviour of African to Administrator. The Yao find it extremely difficult to separate out their attitudes to these different types of social personalities and the main reason is that they tend to categorize all White people into a general class "Whites" of whom the most common representative to them is the Adiministrator.

647 It is, however, impossible to consider the Administrator without reference to the African
648 Civil Service. I am using this phrase to mean those Africans who are in constant and direct interaction with the Administrator. I include the clerks, interpreters, messengers, policemen, and other intermediaries between the Administrator himself and the people. Probably of major importance is the interpreter who speaks directly to the people on behalf of the Administrator. In Southern Nyasaland the official language is Nyanja and officials are expected to learn it for their official business. Some of the Yao men
[191] in the area under study can understand and speak Nyanja but some men cannot and certainly most women cannot do so. Therefore, the tendency is for the Administrators to make use of interpreters in dealings with the Yao and other peoples in the area. The Administrators do not interact directly with various social personalities but do so rather through either their own civil service or through the N.A.'s Bureaucracy who, being educated, are able to speak and understand the official language. The Administrators are in direct interaction with their own Civil Service and only in indirect interaction with the other social personalities in the political structure.

The African Civil Service stands for a set of White values and for this reason is placed in the "Whites Values" part of the diagram.[7] The African Civil servant represents the District Commissioner or Agricultural Officer to the tribesman. The Tax Clerk, while he is collecting taxes, is part of the system of the Administrator. The Agricultural Capitao (African official) represents the Agricultural Officer to the villager when he instructs him in the building of contour ridges.

7 [See p.152 — Analyst.]

3:Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

and uncles as well. I am inclined to believe that the words primarily refer to a person's maternal and paternal relatives whose children bear the relationship of wanko to the person. A strange point, however, crops up, namely, that the paternal aunts are called atati (atati wakupse) and their husbands atati again. 601

An elder brother is ahulu, his younger brother mpunkue, a sister nhumbu, nhumbu wanondi and nhumbu wakulunpse, younger and elder sister.

Disease. Apart from old age, the native recognises in all illness and death the hand of an enemy or the result of transgression of some custom: some one has made medicine against him, or he or some one else has broken a custom founded on superstition which is visited on his head. These ideas are so deeply rooted in the native mind that it is with difficulty any appropriate treatment will be received. They rely, rather, on some medicine-man to cure them by medicine more powerful than that made against them. Even an ordinary accident or an attack of pneumonia is accounted for in this way. 753 754 164

The names given in speaking of sicknesses are, of course, applied rather to symptoms, but in some cases where the symptom named is pathognomic of a disease, the word practically stands for the disease. The word used may imply the supposed cause or refer to a resemblance to some object, or again simply state the part affected; thus chitumbe (the belly) meaning stomach ache, mose (eyes), conjunctivitis, etc.

The following words most of which are found in the Reverend Dr. Hetherwick's *Yao Language*, give some idea of the Yao native's conception of disease. The sense which the above authority gives is not always quite the same as I would venture to give. I shall not enter into the question of the diseases as such but only in so far as they bear on customs, etc.

The word *chikuole* signifies any disease or illness; *chilepe* and *chipindupindu* refer to epidemic diseases; the former refers to a disease of fowls and dogs characterised by wheezing and hence is occasionally used for bronchitis in man. *Chipindupindu* refers to a series of deaths from a cause unknown to the natives. The word *chauole*, which Hetherwick gives as meaning a plague, rather means arrow poison, I think. 164 753 192

Chumbule: a liver disease of fowls.

Chipupe: a congenital deformity of any kind (*kupupse* = to be born with).

Chilumime: a patch of white hair on the scalp of congenital origin.

Chisisumi (a cousin): the word used for a birth-mark or freckle; hernial fistula is also included. Children examine each other to see how many "cousins" each has; anyone with none is made fun of.

Chindumbumali (*tumbumale* = a big lump): a hunchback.

Chimbule (*ku-umbule* = to split): a "splitting" headache, or more commonly, medicine by means of which the possessor can inflict pain or death.

Chinj'alang'ale: a localised pain in the head.

Chipungupungu: giddiness.

3: Stanmus D-5 (ca. 1912) 1922 FT7 Yao FT7

164
753
192

Chibuli: deaf and dumb (Chin); the word is used in slang to mean impotence.
Chiviudu: an old word meaning high fever.
Chilundulundu: "*wakupwa wawile chilundulundu,*" the woman died in confinement without giving birth (incipient). The sense of dumbness and constipation are secondary.
Kubhlhu: constipation.
Mahundupuli: colic; *Mapupu*, rumblings in the bowels, borborygmi.
Mandindili: "pins and needles."
Chiwuu: sore and swollen gums, pyorrhoea; has been translated scurvy.
Chipupuhulutu: hardened skin, like a corn on the hand.
Njumbu: without eye-lashes, as result of disease.
Ndundupuni, Lumpundini: indistinctness of vision (Hetherwick).
Lumso: watering of the nose; nasal catarrh.
Mamboko: the secretion at the corners of the eyes in the morning, also the purulent secretion of conjunctivitis (Hetherwick translates "watering of the eyes").
Nawile: nasal mucus.
Chimbundupulu: crusts from the nasal passages (Hetherwick translates merely "nasal mucus").
Lihumulu: cough.
Chimupupu: after-pains of labor.
Npulusi: hiccough.
Ng'ussung'ussu: nystagmus, from a verb meaning "to look from side to side sinisterly."
Iwupu: any skin eruption supposed to be due to eating various substances, chiefly meat.
Ku-hilimuka: to have a rash on the body of the nature of urticaria.
Npululu: the name of a condition in which the place where a man passes water becomes whitened; hence it refers to cystitis, lithuria, etc.
Chikwukwu (*Ikwukwu* = a snail): the white on the ground resembling a snail track left by a man with *Npululu*.
Ndusi or Milli: smallpox.
Ndungulu or Kazubulu: chicken pox; this term may also include other diseases with similar rash, i.e. modified smallpox and pemphigus.
Chiwulu (*ulwulu* = an elephant): elephantiasis.
Matuwa: leprosy.
Mapuwapuwa: yaws (*chimuhili*, given by Hetherwick as "rodent ulcer," is a Chinyanja word for yaws).
Chindulu: (Swahili) syphilis.
Chimuwu: (Swahili) gonorrhoea.
Lulubilulubi: whooping-cough.
Chilulu: measles.

3: Stanton D-5 (ca. 1912) 1922 FT7 Tao FT7

164
753
1920

M'wera: antlope.
Chindule (*ku-ndule* = to scrape out): diarrhoea, dysentery.
Chipunge (*ukunge* = warding): swelling at angles of jaws, mumps.
Lisendike: nasal or bronchial catarrh.
Mundu: insanity; mumpumpu, delirium of fever (Hetherwick translates as periodic madness).
M'ndu: malice.
Likhomise: goitre (Kikuliu: *pumu ukoma*).
Nduwumbu: leucoderma of hands and feet.
Chimupupulu: a pustule.
Chimudulutu: a boil.
Chilunga (*upunga* = the spotted guinea-fowl): ring-worm of face.
Limuma: any mark on the skin, e.g. birthmark, pigmented spot, ring-worm, scar.
Bumuma: a wart.
Nduudi: a burn of the skin.
Lipulumu: a keloid scar (Hetherwick gives "boil").
Lumpu: a rash after shaving.
Libuku: a blister.
Chipulumu: a wheal after a blow or an insect bite.
Chilipu: oedema of a limb.
Chipupu: whitlow.
Lipulu: an abscess; mumu, pus.
Lilindupu: an abscess; (*ku-undu*: to swell).
Limunpu: a sore or ulcer.
M'bumpumpu: a chronic ulcer.
Lisisubila (*ku-upula* = to come to life again): an ulcer which heals and then breaks out again.
Lilimbulipu: secondary enlarged glands in groin or elsewhere from a sore on the foot, etc.
Nduti: Any freely movable lump under the skin, e.g. sebaceous cyst, pimple, ganglion, etc.
Chilumi (*ku-luma* = to bite): abscess.
Upuru: itch, scabies.
Tundu ndumumu: thrush.
Lumpu: diarrhoea in infants with green stools.
Lulumu: passage of blood in urine; Urinary Bilharziasis.
Ng'ulu: ulcer or lumpus of scrotum.
Ching'ang'u: rabies in dogs.
Lisiklini: round-worm of man.

.3: Stanzus D-5 (ca. 1912) 1922 FT7 Yao FT7

164 *Mongongolosi:* round-worm of dogs or found in the ground.
Wakongwe wajumu: a barren woman (lit. dry).
753 *Chisungulu:* sterility in the male.
● 192 *Chipungulu or pyo:* an impotent man or *Mundu fwa ipyo:* a useless man!
Mpuli: impotent.
Mchau (*ku-chava* = to cut off): a "cut man"; a man soon after he has been castrated.
Mkungu: a eunuch after he has become fat.
Nambundiru (*nalimuimui* Chin.): the word is derived from *kubunda*, to ulcerate. Natives say that when disturbed, the insect of this name which is a locustid, *Rhapidopsis durandi*, makes water which falling on the skin of the passer-by causes ulceration. I have seen a variety of cases of extensive ulceration due to syphilis, etc., assigned to the effects of this insect; I have, however, shown that it does secrete a corroding fluid from pores at the sides of the body which dropped on to the skin will dissolve the superficial layers of the epidermis and should such abrasions become infected, ulceration may, of course, result.
Ulendu: tremor, similar to the movements of one of the wasps.
Manjenje: tremor of old age, *paralysis agitans.*

164 The preceding short list of words will give some idea of the richness of the language in
192 some directions and also its limitations. There now follows an account of diseases which are
753 based on superstition, generally connected with the idea of uncleanness or the transgression
68 of some rule of life. Whatever the symptoms, if there has been a transgression, the disease is labelled with the name of the disease supposed to follow the act. Similar diseases are to be remarked among the other tribes in the country; some of those relating to the Anyanja I have already mentioned,[1] and the following may be read as an amplification of the remarks previously made.

Chingwa (*Fungwa* Chin.) from *kungu*, to defecate: At the birth of a child, if the contents of the bowel (meconium) are passed before the body is born (as often happens in breech presentations), the child is said to be "born with disease." One of the women attending the confinement will always go out and inform the husband of what has happened, saying, "*Apali 'ohwema*," (it is born well) or "*Apali ni chilwala*," (it is born with disease). This only refers to the passage of meconium and not to any antenatal disease.

When this significant event has happened, the husband may not occupy the same sleeping mat as his wife and have intercourse with her until the child of its own accord crawls from the mother's sleeping mat to that of her husband on the other side of the hut; *Kupitiqa mwanake ku mapwa* (*Ku-pitiisa mwana ku mpwa*, Chin.) = "to go the child to the mat." Should the husband disregard this custom, he will sicken with *Chingwa*. The symptoms commonly ascribed to *Chingwa* are pain in the loins and in the hypogastrium.

[1] "Notes on some tribes of British Central Africa," op. cit.

3:Stanner D-5 (ca. 1912) 1922 FT7 Tao FT7

This has led to the word being translated as Bright's disease (Hetherwick). No symptoms referable to the pudenda are included under this disease. *Mawa* (Chin. *Kapunda*): hydrocele; said to be another sequela. A woman soiled by the movement of her infant after birth is not considered unclean and intercourse will have no ill result to the husband. Sometimes in the event of *Apuli ni chilunda*, recourse is had to the practice of intercourse between the woman and some other man. She is thus rendered "clean" and the man who is not her husband will not sicken. Such a man is called *Lihusa* (see Widowhood).

Lowoo: a disease similar to *Chiopwa*, which inflicts a man having coitus with his wife who has not been cleansed after abortion.

Kwisimula: a practice indulged in if a new-born child falls ill; the word refers to the "hardening" of pots when they are being made and the same idea is applied to the child. If the new-born child gets fever, the illness is ascribed to the *mawunda mpitiliwa* about the vulva of the mother. These are cut off by an old medicine-woman and the blood allowed to drop into a mortar; water and some leaves are added and pounded together, and the mother attired only in a cloth reaching to the loins, washes her breasts with the liquid while the baby is supported on one thigh; the child is then given the breast and the mother, turning her back on the mortar, pushes it over backwards with her buttocks.

Ya njala (from nsik; Chin., *dao nsikwa*): If a woman who, after the death of a child, has not been cleansed by medicine, adds salt to her husband's food, he eating it will sicken.

Tsempe (a Chinyanja word): If a man or a woman commits adultery and any member of the family falls ill, the natives say the illness is due to the unlawful act; the sinner is said "to have gone in front of the other"; *kwapunda* (*mpundwa*, Chin.), "he has gone in front of," from *ku-punda* and *ku-pundwa*, to go in front of, or *ku-mpita* (Chin.), to go slyly in front of. Hence the word *tsempe* which also is used loosely for *dao nsikwa*. If a child who according to custom has gone to stay with the grandmother, returns to the parents' house and the parents continue to have sexual intercourse, the child may sicken; it is said that the house is "hot" for the child and its disease may be called *tsempe*. Or if a child which has been weaned is again given the breast after the mother has resumed cohabitation with her husband, it may sicken with *tsempe*. And the husband is called *kwapunda*.

A child which is suckled after menstruation is reestablished, is not affected by any untoward symptoms.

In the event of a woman dying in childbirth, if it so happens the husband has committed adultery, he is held responsible for the death and her relatives claim very heavy compensation.

Ku-simunikwa, to be met with (*ku-kumunikwa*, Chin.): If the act of coitus causes the onset of menstruation and the husband cannot draw back in time to prevent himself being contaminated, he will sicken, and he is said "to have met with (it)" when returning to his illness. In this disease, the penis is said to withdraw into the bladder. Rest from the roof

161
192
753
688

of the hut, *ulwipidi*, and the red part of the flower of the banana, doubtless on account of its shape, are used as medicine for this disease.

Kwindumpwa or *Ndoko*: If a man dies and his relatives eat of the food-stuffs left by him, such as corn from his grain-store, before they have been cleansed by medicine, they will sicken with ndoko, the symptoms being anaemia and wasting. The word *kwindu ndoko* is also used for sickness due to partaking of food cooked by an unfaithful wife.

Chiputo is a word used by both Yao and Anyanja to denote a disease which a man contracts from adulterous intercourse. Scott[1] derives the word from *ku-puta*, to stick to; the woman is so influenced by medicine made by her husband that should any man have adulterous intercourse with her, the disease will "stick" to him, while it will not affect the woman herself nor her own husband. Both the disease and the medicine made to cause the disease are known as *Chiputo*. Secondarily, the word has come to be used for any disease which may be gained by sexual intercourse and is sometimes used as a general term for venereal disease.

Chiputo cha chipula (*chipula*, a knife): A man who is going away from home obtains medicine and doctors his knife with it. As he leaves his house to go on his journey, he pretends just to remember his knife and calls for it. His wife brings it to him and it is put into its sheath; he then goes out and sticks it in the grass of the roof of the house. The medicine is made from the tail of a dog, an animal in which coitus is prolonged and the two animals cannot separate. Should the wife commit adultery, it is supposed that just as the knife was unsheathed and doctored with dog medicine, so the adulterous pair will remain fixed in coitus and be found out. This may be called *chiputo cha kutega* (*kutega* = to set a trap).

The Anyanja make medicine with the same idea, *chiputo cha kuchera* (*ku-chera*, to set a trap, Chin.); medicine is put round the house and any man crossing the threshold and committing adultery with the wife will be trapped. In all cases, the man will become ill.

Chiputo cha mtuni, *mtuni*, blood (*mwami*, Chin.); disease caused by intercourse with a menstruating woman. Blood is passed in the urine.

Chiputo cha wuwu, *wuwu*, pus (*mafuqua*, Chin.): genitually venereal gonorrhoea.

Chiputo cha kinyji, *kinyji*, cotton (*pinja*, Chin.): the discharge from the urethra resembles a thread of cotton; it is supposed that this thread can be pulled out endlessly.

Chiputo cha nchuchu, *nchuchu*, the white-ants (*chiuza*, Chin.): so called when a man passes whitish-yellow debris in the urine. It is supposed that when he has finished passing water, white ants rush up the penis and enter the bladder, thus causing the pain which characterises this affection. The origin of the idea lies in the fact that if one sprinkles water or urinates on the ground near white-ant burrows, the ants will come to the surface of the ground in numbers and make a rustling sound.

[625]

[1] D. C. Scott, a syntactic dictionary of the Mang'anja language, sp. ch.

Other hypothetical diseases which are caused by disbelieves in custom are mentioned under various other headings. *Kwiyo*: a disease generally characterized by shortnessof the legs but in some cases by pains in the back, or loosely used for a variety of symptoms, is said to be caused by the entry into the body of a worm which lives in water-pools. This worm which I have had identified is a gordius worm and not known to be parasitic in man. *Lomi*: When a man kills another in battle, he will slit open the belly of his victim; otherwise he believes he will sicken with heat and his own belly will swell up like that of the corpse when putrefaction sets in. He is supposed also to hunger after more killing and blood. *Lihunge* is the name of a supposed disease which kills off one child after another in a family when they are about six months old. Congenital syphilis naturally suggests itself but I have never been able to verify this idea. *Lihunge ipe hutuin*: a supposed disease which causes the death of the first child when the second is born, the second when the third is born and so on, whatever the intervals between the births. Each child is said to push (*ku-tuin*) the previous one out of this world. Under these circumstances the disease is ascribed to something wrong with the mother or father and they are examined by a medicine-woman or medicine-man, and any sacrumbos or an external pile found will be cut away.

If a snake inflicts two bites, the man will prove fatal. If a crocodile emits a growling sound when sinking its victim, though he escapes he will certainly die.

Treatment of diseases. Of surgical treatment there is very little to be noted. Nothing in the way of operation is performed with the exception of circumcision (see *Legends*).

As abscess is allowed to burst, the smallest tumor is left untouched, but necessary digits which are not sore, attached only by a fine pedicle, are snipped off.

The natives cannot extract teeth. They are incapable of rendering any assistance in cases of difficult labor. Dislocations are not recognized as such, but fractures are treated by the application of wooden sticks placed at intervals round the circumference of the limb parallel to it and held in position by twisted pieces of bark string (Pl. XXII, fig. 3). The principle of the tourniquet appears to be unknown.

The only instruments used consist of a small knife for incision, a cupping-horn, and a primitive form of funnel for administering enemata (Pl. XXII, figs. 1, 2, 4). The knife has a triangular blade with a stem which is commonly twisted at one of the corners. The knife is used for wet-cupping, tattooing, and circumcision (Pl. XXII, fig. 2). The cupping-horn is a small horn of a cattle. The open is pierced and after application to the part, suction is made with the mouth and then the hole sealed by rubbing a piece of beeswax over it with the tongue. Six small incisions are made in the skin for the withdrawal of the blood. The cupping-horn is called *shoni* (*ishonibo*, Chin.). Cupping is used for headache and for pain in the chest and back. The enema funnel, *shipelpe* (*ishubiri*, Chin.) is made from the neck of a gourd to which is attached a hollow stem for introduction into the anus. Half a pint of an infusion of cowpeas is injected for constipation associated with pain.

In Stamms D-5 (ca. 1912) 1952 FT7 Tao FT7

539

40. *Gwere kwle ratchuta!*
Lying on the rock, lout!

This is a strong expression which in full would read, "It is nice and warm lying on a rock in the sun, but it is not so comfortable as being in bed in company with your wife; you can go on waiting but you won't get anything." This might even be said to a dog, watching on a dog will, every morsel of food lifted to its master's mouth.

41. *Kwapdile nwi ga ashiwi!*
To have hopes of water for maggots!

It is a custom before lying down to sleep on the floor mat, to take it up and pour boiling water on the earth floor to kill any blood-sucking maggots (Congo floor-maggot, *Ambomyiopsis*). If you see a pot cooking on the fire, you naturally think there is food being prepared but you may be disappointed; it may only be the pot for heating the water to kill the maggots. The saying is thus used to a man who has made an assignation and is disappointed but goes on waiting. [513] [761]

42. *Kahowa ugwi!*
To bite underneath-like!

The cockroach is described by natives as going up to what it will eat, remaining quiet for some moments, and then suddenly taking a bite. This is said of a man who comes up to you smiling and then hits you a hard blow. [825]

Among the Tao as among other tribes that I have previously mentioned,[1] signs of salutation to a superior are made by clapping the hands or putting the breast or buttock with one hand, at the same time crouching down. A woman will go off the path and kneel, looking away from a superior passing along the roadway. 576

A person going by the door of a hut where others are sitting, will say "*Kwainga hawa!* At the door here." Passing behind anyone, he will say "*Ka-ugu'wa!* At the back!" Meeting anyone on a path, a man will simply say, "*John, here,*" adding perhaps, "*Ka-shale!* all is well!" A *shief* or headman on returning to his village after a journey, is greeted by the women with trilling of the tongue (*Ka-lulula*). [301]

Man and wife do not greet each other in the morning. The wife rises first and draws water and places it in the hut for the husband's use but nothing may be said.

When a visitor is entertained and a chicken cooked for a repast, the "pope's nose" is always for the visitor. The right hand only is used in dipping into the common pot. A man of small importance, though replete, will go on making pretence of eating at a common meal by taking very small morsels so that his superior shall finish first, and then and go away before him.

I may here add the words used by the Tao for the sounds made by various animals; they are interesting to compare with those of other languages: [82]

3:Stanner D-5 (ca. 1912) 1922 F27 Yao F27

● 192

The dog.....*ma mwi* (as in bull).
The cat.....*ngwa!*
The cock.....*kokolikoo!*
The lion.....*ko ko ko!*
The duck.....*kwa kwa kwa!*
The cow.....*mwa!*
The sheep.....*kwi!* (as in kettle).
The goat.....*mbi!*
The dove.....*ma ma!*
The lion.....*ng'wanyi'ni!*

195 578 Among the Yao, abuse and obscene language are rare; expressions which appear in other languages all the world over are only used on great provocation and commonly with dire results. This, too, is opposed to the ways of neighboring tribes, the *Anyanja* and *Angoni*, who freely make use of such expressions as "*Ngini* pa *mulsi!*" and "*Ntanga* na *mulsi!*" "The pudenda of your mother! Clitoris of your mother!"

The following exclamations of abuse and expressions of obscenity will be seen to follow very closely upon those in other countries.

1. *Mwinishanu!* (to a girl or woman), *mbulule!* (to a boy or man) means you are a person who has not been to your *Unyago*, and therefore "you are without manners!"

2. *Mwana mkungwi!* an expression to a child meaning "you little wretch," "you nasty little thing!"

3. *Akhala kwi kpusi!* he eats with the back of his hand, he is uncircumcised, i.e. "he is a dirty person!"

4. A man with big ears is hailed "look at your ears like a lemur!" (*Likondo*, a lemur).

A Yao woman seldom or never swears at or uses bad language to a man nor the converse; the woman, however, is not behindhand in the art of bitter complaining and nagging.

[201] Pulling down the lower eyelid with the finger accompanying some exclamation has exactly the same significance as in European countries, "I am not as green as I look!"

Ku-ovapa is to make a sound like "pish" with the mouth, and is a great insult, for which a man will fight.

Screwing of the lips to one side as in the action to get rid of the sour skin of a fruit, *ku-mwa ng'wapa* is an expression of contemptuous disgust.

695 539 The similarity to European ways is again seen in swearing or taking oath. A Yao swears by the spirits of his ancestors or by a chief:

"*Chiri! cha Malungu!*"
"(By) the graves of Malungu!"

or he may indirectly name some ancestor:

"*Nyakwikila kpungu!*" or "*Nyakwikila kwinkwi!*"
"I swear by the spear!" "I swear by the lion!"

4:Stanford D-5 (ca. 1909) 1910 FT7 Tan FT7
Marsai FE4

wrestle thus: each man passes his right arm round his opponent's waist and grips his opponent's left wrist. When one has thrown the other, the victor spits on his hand, dips it in the dust and then smears his victim on the forehead.

The boys practise long jumping. Small boys make miniature bows and arrows, spears, etc., to play with; in their ways and toilet small children resemble European children exactly. Little girls play at dolls—they cut cucumbers into shape and dress them in calico cloth, carrying them on their backs and making pretence to suckle them.

The first words spoken by an infant are *ma* (*ma*-mother) and *ta* (*ata*-father); at two years names and tata are words used; a word soon learnt is *ndawa* "No! I don't want to."

The only setting I ever heard of occurred when my own Machila man was seized a village woman, in which a woman (a man dressed up) while pounding corn was seized and raped by another man. At the right moment her husband and others rushed in and collared the man, who was condemned to have his head cut off; the execution followed.

Dances.

The following is a list of dances; opposite each is the name of the tribe who dance it:—

1. *Chindindo*, Tan.
2. *Ndemsie*, Tan.
3. *Ulude*, Tan.
4. *Mdiwari*, Matenje.
5. *Kwaje*, Matenje.
6. *Tindandwe*, Matenje.
7. *Mwawe*, Matenje.
8. *Kwampwe*, Matenje.
9. *Mlende*, Matenje.
10. *Chilwi*.
11. *Ungwe*, Matenje.
12. *Ntule*, Matenje.
13. *Ndwe*, Tan.
14. *Njende*, Tan.
15. *Sukwa*, Tan.
16. *Mwaje*, Tan.
17. *Mlende*, Tan.
18. *Chilende*, Tan.
19. *Mlawa*, Tan.
20. *Mwapwi*.
21. *Sapi*.
22. *Chiwawiwiwi*.
23. *Mawa*, Matenje and Tan.
24. *Mwajwindo*, Tan.

1. *Chindindo.*—Danced at the *mdwie* (mourning ceremony) generally inside the house unless a very large number of people are present.

All sit round and clap while one after the other men and women get up and dance in a rocking motion from one foot to the other, a small drum held against the chest; in former times a large one lying on the ground used also to be used—now two or three, standing on legs, are employed. When danced in the dead man's house, the body lies at one end of the room with the *Ndembele* sitting by it. On one side are the walkers, and on the other the dancers, the dance being sometimes started immediately after death, sometimes the following morning and continued for three days.

This dance is also performed at almost any beer drinking.

ahuba, a woman who is pregnant for the first time; *kawaba*, a woman who has one or two children; *ajiwaba*, a woman who has three or four children, and lastly, *ahuba*, a woman who is past child-bearing age.

The information which I have been able to collect on abortifacients and contraceptives suggests that they are not used by married people merely to prevent their having more children, but that they are used by people who wish to avoid pregnancies which would be embarrassing, for example, by a woman whose husband is a labour migrant. To what extent the abortifacients and contraceptives are effective I cannot say; some, I know for certain, rely on a magical principle, for example, the medicated cord worn by a man during intercourse. On the other hand, the abortifacients taken orally may have some active ingredient.

A barren woman or an impotent man is regarded with some embarrassment and the marriage worries (*ainamgwanwe*) of a childless couple will go to considerable trouble and expense consulting diviners and healers in an attempt to make their wards productive. Childless couples are regarded as not fully adult and are treated in a patronizing way by those who have borne children. Since a man may marry other wives, barrenness in a woman is a cause of sorrow to her husband, but is not in itself a ground for divorce. Where the man is impotent, however, the woman may divorce him on this ground, though she usually takes a paramour and forces her husband to an action for damages which automatically leads to a divorce because it is the usual practice in these cases for the court to ask the woman if she wants to be divorced from her husband.

In contrast to the satisfaction shown at the birth of a child is the sense of sorrow evinced when a child is still-born or the woman miscarries. The Yao do not distinguish between still-births and abortions, both events being known by the word *kwanga*. This is a verb and refers to the process of abortion; there is no term for the dead foetus itself. I made no attempt to enumerate miscarriages and still-births because they are supposed to be due to breaches of sexual taboos on the part of the husband and wife, and interviewees were naturally reluctant to mention them. Miscarriages and still-births are greatly feared, and the woman is considered to be in a very dangerous condition until she and her husband have carried out a ritual purification. Should a man have intercourse with a woman who has miscarried and not yet been purified he will contract a disease called *kwaw* which is believed to be invariably fatal. Still-born children or aborted foetuses are buried in a hole dug with sharpened sticks in the bush by the women, whereas children who are born alive and die afterwards are buried in the graveyard in graves dug by men with hoes. The burial spots of still-born babies or aborted foetuses are marked with a stone or broken pottery, since it is believed that to step on them will induce an illness.

The concern of the immediate kin-groups is shown in the child-birth procedure. Birth normally takes place in a hut in the presence of the older female relatives of the woman and the female representatives of the man. The husband's representatives are necessary because the Yao, like many other Central African peoples, believe that an adulterous child will not be born to the woman unless she confesses (*kupasa*) the name of the genitor. If she persists in concealing the identity of the genitor, they

* *ahuba* = elephant, heavy, lazy. The terms *ahuba* and *ahuba* have both refer to the ivory beads traditionally worn by the women in the puberty initiation ceremony.

T: Hatharwick M-5 (ca. 1900) 1962 FT7 Tao FT7

with the dead. He approaches the shrine, opens the gate of the fence, takes a 769
pathful of beer and pours it into the pot at the head of the grave. Next he places the basket of porridge and the plate of meat on the mound beside it and retires. Kneeling down outside the gate facing the shrine and a few yards in front of the people he chants his prayer in a monotone, each petition commencing with "Chonde, chonde," "Please, please." All the while the people clap their hands in unison with him and sing the responses as they do in a native case in the chief's court.

When the offering has been made at the grave, the rest of the beer or other food is consumed by the worshippers. Grass are fired as a token of respect to the [535]
dead, and the rest of the day is spent in dancing.

Such shrines are to be seen in almost every Tao village where the inhabitants have been located for any length of time. They are regarded with awe—the little 778
boys as they pass whisper to each other in a warning tone, "mzimba." Should the 769
village be moved to any other district, the old shrine is not forgotten. Periodical visits are made to it with the usual offerings. In cases where the old home has been occupied by a people hostile to the old inhabitants, such visits are usually made during the night, and the people awake in the morning to find that the old chief's grave in their midst has been newly repaired, and a fresh offering of food placed at its head.

Sometimes such shrines are found on the summits of hills which once may have been a refuge from the enemy in times of war, but which now lie bare and deserted. Thither in their need the people make their way with their offering of food and beer, and their prayer for rain or suitable weather for the crops. Near Mwenyo such shrines are to be seen on the tops of Mount Sochi and Mount Mchiru. The former is the abode of the spirit of Kankhondo, and the latter of Mpohola, both old Mawri or Mang'anja chiefs who doubtless fled there seeking safety from the war of the invading Tao, and died leaving their records to be the mulungu or spirit of the mountain. Some years ago, during the fear of an Angoni invasion, the Tao of Mount Sochi fled to the hill-top for refuge, and there the old chief Kapani died. He was buried close to the grave of the old Kankhondo, and now, when the Tao on Sochi make an offering, it is to the spirit of Kapani that the homage is paid, and the shrine of Kankhondo lies neglected.

Only the graves of chiefs or headmen are thus treated as shrines of worship. 559
The burying place of slaves and the common people lies away in the thick bush, 769
where only the rank grass or the thicket of old trees marks the spot. No offerings 769
are ever taken there, for such as are buried there can have no influence in the 769
spirit world. The dead are buried, the broken pot or basket is left on the grave to 778
mark the spot, and none ever seek to go there save to lay another in the same neglected ground.

II. But the word mulungu is used by the Tao with a wider application. 776
Etymologically the word is connected with the root *kulungwa*, which in so many 197
of the other branches of the Bantu tongue appears as *kulu* or *kuru*, and signifies 193
"great" or "old." It is the same root which appears in the Kafir word for God,

7: Hetherwick M-5 (ca. 1900) 1902 FT7 Yao FT7

776, 777, 792 Unkulunkulu, which may therefore be rendered as "The old, old One," or "The great, great One." A like rendering may be given of the Yao form *mulungu*, the "Old One," or the "Great One." In this or a modified form *mungu* (*Swahili*) it appears in all the Eastern group of the Bantu tongues as the equivalent for "God" (see Father Torrend's *Comparative Grammar of South African Bantu Languages*). To trace it as Father Torrend does to any connection with Moloch, the god of the Phœnicians, is to attach undue weight to a chance coincidence of sounds.

[114]

796, 795, 776 As we have already seen, the word *mulungu* is applied to the human finds when regarded as an object of worship, or as an inhabitant of the spirit world. But it is also used to denote that spirit world in general, or more properly speaking, the *aggregate of the spirits of all the dead*. The plural form of the word is rarely heard, unless when the allusion is made to the souls in their individualities. In its native use and form the word does not imply personality, for it does not belong to the personal class of nouns. Etymologically it is classed with the leg, heart, arm, hand, etc., of the human frame. Its form denotes rather a state or property inhering in something, as the life or health inherent in the body. Among the various tribes where the word is in use as we have described, the missionaries have adopted it as the term for "God." But the untaught Yao refuses to assign to it any idea of being or personality. It is to him more a quality or family of the human nature whose signification he has extended so as to embrace the whole spirit world. Once after I had endeavoured to impress an old Yao headman with the personality of the Godhead in the Christian sense of the term, using the term *Mulungu*, my listener began to talk of "Che Mulungu," "Mr. God," showing that originally to him the word conveyed no idea of the personality I was ascribing to it.

776, 773 And yet the Yao approaches closely to the idea of personality and a personal being, when he speaks of what *mulungu* has done and is doing. It is *mulungu* who made the world, and man, and animals. For in the interior of the continent, toward the north-west, beyond the plains and swamps of the Lungwa River and Lake Bangweulu, there lies, in Yao legend, an island in the midst of a lake called Kapitimpa. On that island there is to be seen a large flat rock marked by the footprints of men and animals of all kinds. When that rock was once a heap of moist clay, *mulungu* created all living things and sent them across the salt water, where their footprints remained to be afterwards hardened into the impressible rock. Such is the Yao legend of the creation of the world, and *mulungu* is always *the Great Creator*.

776 *Mulungu* is also regarded as the agent in anything mysterious. "It's *mulungu*," is the Yao exclamation on being shown anything that is beyond the range of his understanding. The rainbow is always "*mulungu*," although some Yaos have begun to use the Mang'anja term "*utu wa Lesa*," bow of Lesa.

[117]

Offerings are made to the spirit world or to *mulungu* as the great agency in the affairs of human life. Outside the village, or beside the headman's hut, may often be seen a rough shed. In this are placed the first-fruits of the new crop,

Unkulunkulu, which may therefore be rendered as "The old, old One," or "The great, great One." A like rendering may be given of the Yao form *mulungu*, the "Old One," or the "Great One." In this or a modified form *mungu* (Swahili) it appears in all the Eastern group of the Bantu tongues as the equivalent for "God" (see Father Torrend's *Comparative Grammar of South African Bantu Languages*). To trace it as Father Torrend does to any connection with Moloch, the god of the Phœnicians, is to attach undue weight to a chance coincidence of sounds.

As we have already seen, the word *mulungu* is applied to the human *kinda* when regarded as an object of worship, or as an inhabitant of the spirit world. But it is also used to denote that spirit world in general, or more properly speaking, the *aggregate of the spirits of all the dead*. The plural form of the word is rarely heard, unless when the allusion is made to the souls in their individualities. In its native use and form the word does not imply personality, for it does not belong to the personal class of nouns. Etymologically it is classed with the leg, heart, arm, head, etc., of the human frame. Its form denotes rather a state or property inhering in something, as the life or health inhores in the body. Among the various tribes where the word is in use as we have described, the missionaries have adopted it as the term for "God." But the untaught Yao refuses to assign to it any idea of being or personality. It is to him more a quality or faculty of the human nature whose signification he has extended so as to embrace the whole spirit world. Once after I had endeavoured to impress an old Yao headman with the personality of the Godhead in the Christian sense of the term, using the term *Mulungu*, my listener began to talk of "Che Mulungu," "Mr. God," showing that originally to him the word conveyed no idea of the personality I was anything to it.

And yet the Yao approaches closely to the idea of personality and a personal being, when he speaks of what *mulungu* has done and is doing. It is *mulungu* who made the world, and men, and animals. Far in the interior of the continent, toward the north-west, beyond the plains and swamps of the Lungwa River and Lake Bangweulu, there lies, in Yao legend, an island in the midst of a lake called Kapitilungu. On that island there is to be seen a large flat rock marked by the footprints of men and animals of all kinds. When that rock was once a heap of moist clay, *mulungu* created all living things and sent them across the soft mass, where their footprints remained to be afterwards hardened into the impressible rock. Such is the Yao legend of the creation of the world, and *mulungu* is always the Great Creator.

Mulungu is also regarded as the agent in anything mysterious. "It's *mulungu*," is the Yao exclamation on being shown anything that is beyond the range of his understanding. The rainbow is always "*mulungu*," although some Yaos have begun to use the Mang'anja term "uta wa Lesa," bow of Lesa.

Offerings are made to the spirit world or to *mulungu* as the great agency in the affairs of human life. Outside the village, or beside the headman's hut, may often be seen a rough shed. In this are placed the first-fruits of the new crop,

1: Tew E-4 (no date) 1950 FT7 Yao FT7

162. relatively close settlement should be contrasted with conditions 60 years ago, when villages consisted of from 10 to 20 huts, with an average population of 100.[1] The size of villages now ranges from a few huts to 60 or more, with a total average population of about 40 per village, ranging from 15 to 200.

From a sample taken from three groups of hamlets in Liwonde district, it appears that the average gross reproduction rate over the last ten years has been about 2·9, while the net reproduction rate was about 2·2.[2]

Statistics are not available for the Yao population of Portuguese Nyasaland. Livingstone noted that at Mtarika's on the upper Ruvuma (not the town now on the Lujenda but an older one) there was an immense population. Mataka's town had about 1,000 houses, and there were many villages around.[3] The Yao fastnesses at Unangu and Mtonya were also thickly populated.[4] In the barren country south of the Ruvuma, between its confluence with the Lujenda and the beginning of the Makondi plateau, the country was almost uninhabited.[5]

In Tanganyika the Yao are distributed as follows:[6]

District	*Total population*	*Total children*
Tunduru	32,761	13,215
Masasi	13,009	5,048
Kilwa	6,560	1,616
Lindi	6,415	1,574
Mikindani	1,014	283
Songea	7,550	2,879
Dar es Salaam	1,869	270
Rufiji	1,013	189
Tabora	1,909	520
Other districts	2,377	800
	78,499	26,874

LINGUISTIC DATA

147. The Yao language is spoken over an area extending from near the east coast of Africa to the east shore of Lake Nyasa, and from the sources of the Ruvuma in the north to the Lujenda in the south.[7] There are also two small pockets of Yao who crossed the lake to the west side, who speak their own language.

Duke classifies it as one of the group of Bantu languages in the East Central Zone, which constitutes a bridge between the languages of the East and Central Zones. His

1: Tew E-4 (no date) 1950 FT7 Yao FT7

places it in the same group of languages as Makua, Nkonde, and Tumbuka, but not with Makonde. He counts Nginda as a dialect of Yao.[1] Guthrie places it in the Makonde group, but not in the Makua-Lomwe group.[2] 197

The Yao language shows very little dialectical variation, which is attributed to the age-long Yao love of travel. Such differences as occur are found chiefly in accent or idiom, not in grammatical structure. There are five different divisions corresponding to the different branches of the tribe: (*a*) *Amahale*, near the sources of the Ruvuma; (*b*) *Mwende*, near Mataka's, south of the Ruvuma; (*c*) *Masenjaga*, near the south end of Lake Nyasa; (*d*) *Mangoche*, near Blantyre; (*e*) *Machinga*, on Mounts Chikala and Zomba.[3]

PHYSICAL ENVIRONMENT

The Yao boundary on the west, where they mix with Nyanja peoples of the east lake shore, is a line of hills about 1,500 ft. above the lake level, extending south to Mangoche. Starting north-east from the fertile valley of the Mandimba, there is a fairly level plain, watered by other tributaries of the Lujenda, as far as Mataka's and Mtarika. On the east side of the Luchilingo river there is a fairly continuous line of mountain fastnesses and hills, and from the source of the Mainje to its confluence with the Ruvuma, there are lines of fortresses to the east and west, traversed by steep mountain tracks. From the Mainje source to the Ruvuma the country is cut by deep streams and crowned by mountains 2,000 to 3,000 ft. high.[4] On the south bank of the Ruvuma, below the confluence with the Lujenda, the country is a semi-desert, with barren stony soil, little water, and plentiful game. The Yao also inhabit the western edge of the Makondi plateau, where the valley of the Ruvuma widens into a great plain. Here the sandstone of the Makondi plateau is denuded and the soil is barren and stony. The Makondi bush gives way to thin open forest of mimosa and other trees.[5] Most of the Yao country in the east of Portuguese East Africa is tsetse infested, but in the interior, approaching the east shore of Lake Nyasa, it is capable of supporting fine herds.[6] 133 [131]

South Nyasa district is mountainous in the east; the plain in the west stretches into Dedza and Ncheu districts. Owing to scarcity of water in the dry season this plain is thinly populated. The soil of the plain is sandy, except on the shore of the lake and the river bank, where it is rich alluvial soil; in the hilly parts the soil is clayish. During the last few years the lake level has risen and on the lake shore and the banks of the Shire river water is plentiful throughout the year. Smaller rivers have enough water all the year round to supply villages. The average annual rainfall at Fort Johnston is 33 in. for the last six rainy seasons, but the general average is 28 in. The average mean temperature is 73° F. The climate in the plains and at Fort Johnston is hot and trying in the hot season, but cooler on the hills. The greater part of upper Shire district is below 2,000 ft. in altitude and hot and unhealthy. In the dry weather most rivers are 132

[1] 1925, p. 65.
[2] 1948, p. 62. Naturally most of the earlier informants support Doke's classification, since they are mainly the sources on which it was based (Hetherwick, op. cit., Meinhof, Sundermann, 1905, p. viii). Affinity with the language of the Gulf of Guinea has been claimed for Yao by Dr. Albert Drexel, of Innsbruck, quoted by Hoskel, 1922, p. 9.

1: Tew E-4 (no date) 1950 FT7 Yao FT7

Administration, but many cannot afford to do this. The people regard the taxes they pay to the Administration as a substitute for the chief's tribute. As the Native Authority the chief appears to be responsible for tax-collection, as the tax-clerk lives at the court.

The chief is responsible to the Administration, among other things, for latrine construction and for punishing the infringement of various regulations. His main duties are judicial, as judge of the Native Authority Court. The bureaucracy attached to the Native Authority includes a number of functionaries, e.g. Kawinga's, in 1947 one of the larger courts, had 1 court clerk, 1 assistant court clerk, 1 community worker, 1 forest guard, 1 agricultural demonstrator, 1 sanitary inspector, 9 court messengers, 2 caretakers, 4 gazette men, 1 market clerk, 1 market sweeper, 6 court assessors. These are paid by the Native Treasury. Court assessors help in the arbitration of cases. The key position at court is held by the court clerk, and usually he is not a Yao, but an Ngoni, who, because he is literate, is the medium of all written communications to and from the chief. The court sergeant is the correct channel of approach to the chief, and the court messengers represent the chief to the villages.

The territory of a Native Authority is divided into 'administrative villages', under officially recognized and paid headmen. Within these areas there are clusters of huts, which do not form officially recognized administrative units, but which are none the less villages under their own hereditary headmen. The administrative village headman is responsible for the payment of taxes in his area, and for the observance of various regulations. He is usually a man with some standing in the Yao social system: one who has the right to conduct a boys' initiation ceremony, or to wear the head-band signifying rank. His authority is derived partly from his status as a senior kinsman, partly from his status as a village headman. If the administrative village under him includes a number of hamlets unrelated to the administrative village headman, he will delegate his responsibilities in these hamlets to their own headmen. Consequently, since village headmen perform administrative duties, whether they are officially recognized or not, there is competition among them for the official posts. In order to bring pressure to bear on the chief to make him concede marks of rank, they may threaten to move out of his area, and so to deplete his following. In spite of this bargaining tool, the position of the village headman *vis-à-vis* the chief is said to be getting progressively weaker. Cases once tried by them are now being taken to the chief's court, and the latter is able to draw on the power of the Administration to establish his dominance over the headmen.

The chief in the modern sense stands as the representative of the people to the white Administration, and as the representative of the white Administration to the people. One reason for the lack of direct contact between the Administration and the people is the fact that Yao is not the official language of the district, and therefore Yao interpreters are necessary.

There are some occasions when the chief and his officials perform the functions proper to their office under the old social system. The white Administration is not concerned with their ritual functions, nor with initiation rites, nor does it take cognizance of witchcraft offences. Accusations of witchcraft are judged by the same personnel as accusations of theft or adultery, but they are not dealt with in the court house, nor recorded in the book.

1:Stanner D-5 (ca. 1912) 1922 ???? Yao ????

That these several sections of the Wayao differ in many respects may be seen by comparing the Amangoche of *Africana*[1] with the Amachinga of this article. I am not sufficiently conversant with the Amangoche to make a definite statement on this point but I am inclined to believe that after longer residence and wider knowledge, Macdonald would have found that some of his statements needed revision. Those whom he considered the "Yao proper" but whom I prefer to speak of as the Amangoche seem to have a considerable mixture of Anyanja, since their language contains many Chinyanja words and many of their customs are practically those of the Anyanja. I am of the opinion that the Amachinga may be regarded as more typical of the Wayao, and except where ambiguity might arise, I shall speak of them as the Yao.

The original home of this Bantu speaking people is uncertain; in historic times all the sections of the Wayao were originally grouped in that part of Portuguese East Africa around the hill called Chao, whence they probably derived their name, Wa Chao or Wa Yao. About the middle of the nineteenth century, as the result of inroads by neighboring tribes of Abale from the southeast, and raids by the Makwangala, a branch of the Angoni of Zulu origin, from the northwest, disruption of the Yao people occurred, and the divisions mentioned above, moved toward Nyassland. The Mazunga branch settled for the most part along the eastern shore of Lake Nyasa but a sub-section known as Tambala Yao reached the west side of the lake. The Machinga made a settlement near Lake Chiuta under a number of old chiefs, including Malowe, (Nakutumbe), Kawinga, Chembula, Kalambula, and Mazio.

The descents of the Makwangwala again caused the Wayao to move on from Chiuta to Ruvinga on the Mbaka stream. Here Malowe suffered another defeat at the hands of the Angoni; many of his people were driven off and taken to the neighboring Angoni country where they were held in captivity for some time. Finally they were rescued by the enterprise of one of Malowe's old men, Kalungula, who went alone to the Angoni, saying that he wished to live with them and with his own brethren. One day, he asked the Angoni if they would like to see their captives dance, and when they assented, he called the Yao together, and clapping his hands to keep time, he began to sing one of their dance songs. Gradually he gathered all the Yao into the village open space, dancing and singing; then, keeping to the same air, he told them why he had come, using their own language which the Angoni did not understand. "Malowe, our chief, remains at the Mbaka stream. It is not far off. We must all join him again. Now dance for joy. If anyone does not return there, it is his own fault." Then, a few at a time, the dancers left the crowd and stole away into the bush and, as night came on, they all made off and reached Malowe's camp in safety.

Malowe's people were again attacked by the Angoni, and on this occasion they defeated their enemies. The Angoni retreated and skirting Zomba mountain, reached the Shire

7: Hetherwick M-5 (ca. 1900) 1902 FT7 Tao FT7

with the dead. He approaches the shrine, opens the gate of the fence, takes a pot769
pot of beer and pours it into the pot at the head of the grave. Next he places
the basket of porridge and the plate of meat on the mound beside it and retires.
Kneeling down outside the gate facing the shrine and a few yards in front of the
people he chants his prayer in a monotone, each petition commencing with "Chonde,
chonde," "Please, please." All the while the people clap their hands in unison
with him and sing the response as they do in a native case in the chief's court.

When the offering has been made at the grave, the rest of the beer or other
food is consumed by the worshippers. Goats are food as a token of respect to the [635]
dead, and the rest of the day is spent in dancing.

Such shrines are to be seen in almost every Yao village where the inhabitants 778
have been located for any length of time. They are regarded with awe—the little 769
boys as they pass whisper to each other in a warning tone, "nanoko." Should the
village be moved to any other district, the old shrine is not forgotten. Periodical
visits are made to it with the usual offerings. In cases where the old home has
been occupied by a people hostile to the old inhabitants, such visits are usually
made during the night, and the people awake in the morning to find that the old
chief's grave in their midst has been newly repaired, and a fresh offering of food
placed at its head.

Sometimes such shrines are found on the summits of hills which once may
have been a refuge from the enemy in time of war, but which now lie bare and
deserted. Thither in their need the people make their way with their offering of
food and beer, and their prayer for rain or suitable weather for the crops. Near
Blantyre such shrines are to be seen on the tops of Mount Sochi and Mount
Michiru. The former is the abode of the spirit of Kankhomba, and the latter of
Mpelele, both old Maravi or Mang'anja chiefs who doubtless fled there seeking
safety from the war of the invading Yao, and died leaving their wonder to be the
nanyanga or spirit of the mountain. Some years ago, during the fear of an Angoni
invasion, the Yao of Mount Sochi fled to the hill-top for refuge, and there the
old chief Kapeni died. He was buried close to the grave of the old Kankhomba,
and now, when the Yao on Sochi make an offering, it is to the spirit of Kapeni
that the homage is paid, and the shrine of Kankhomba has neglected.

Only the graves of chiefs or headmen are thus treated as shrines of worship. 554
The burying place of slaves and the common people lies away in the thick bush, 769
where only the rank grass or the thicket of old trees marks the spot. No offerings 769
are ever taken there, for such as are buried there can have no influence in the 769
spirit world. The dead are buried, the broken pot or basket is left on the grave to 778
mark the spot, and none ever seek to go there more to lay another in the same
neglected ground.

II. But the word nanyanga is used by the Yao with a wider application. 776
Etymologically the word is connected with the root *kalanyana*, which in so many 197
of the other branches of the Bantu tongue appears as *kala* or *kara*, and signifies
"great" or "old." It is the same root which appears in the Kafir word for God, 192

7: Hetherwick M-5 (ca. 1900) 1902 FT7 Tao FT7

Uukulunkulu, which may therefore be rendered as "The old, old One," or "The great, great One." A like rendering may be given of the Yao form *mulungu*, the "Old One," or the "Great One." In this or a modified form *mungu* (Swahili) it appears in all the Eastern group of the Bantu tongues as the equivalent for "God" (see Father Torrend's *Comparative Grammar of South African Bantu Languages*). To trace it as Father Torrend does to any connection with Moloch, the god of the Phœnicians, is to attach undue weight to a chance coincidence of sounds.

As we have already seen, the word *mulungu* is applied to the human finds when regarded as an object of worship, or as an inhabitant of the spirit world. But it is also used to denote that spirit world in general, or more properly speaking, the *aggregate of the spirits of all the dead*. The plural form of the word is rarely heard, unless when the allusion is made to the souls in their individualities. In its native use and form the word does not imply personality, for it does not belong to the personal class of nouns. Etymologically it is classed with the leg, heart, arm, head, etc., of the human frame. Its form denotes rather a state or property inhering in something, as the life or health inherent in the body. Among the various tribes where the word is in use as we have described, the missionaries have adopted it as the term for "God." But the untaught Yao refuses to assign to it any idea of being or personality. It is to him more a quality or faculty of the human nature whose signification he has extended so as to embrace the whole spirit world. Once after I had endeavoured to impress an old Yao headman with the personality of the Godhead in the Christian sense of the term, using the term *Mulungu*, my listener began to talk of "Che Mulungu," "Mr. God," showing that originally to him the word conveyed no idea of the personality I was ascribing to it.

And yet the Yao approaches closely to the idea of personality and a personal being, when he speaks of what *mulungu* has done and is doing. It is *mulungu* who made the world, and men, and animals. Far in the interior of the continent, toward the north-west, beyond the plains and swamps of the Lungwa River and Lake Bangweulu, there lies, in Yao legend, an island in the midst of a lake called Kapitilungu. On that island there is to be seen a large flat rock marked by the footprints of men and animals of all kinds. Where that rock was once a lump of moist clay, *mulungu* created all living things and sent them across the soft mass, where their footprints remained to be afterwards hardened into the impressible rock. Such is the Yao legend of the creation of the world, and *mulungu* is always the Great Creator.

Mulungu is also regarded as the agent in anything mysterious. "It's *mulungu*," is the Yao exclamation on being shown anything that is beyond the range of his understanding. The rainbow is always "*mulungu*," although some Yaos have begun to use the Mang'anja term "uta wa Lesa," bow of Love.

Offerings are made to the spirit world or to *mulungu* as the great agency in the affairs of human life. Outside the village, or beside the headman's hut, may often be seen a rough shed. In this are placed the foot-drum of the new corp,

O.Lawson T-5 (ca. 1940)1943 FT7 Tao FT7
MARAVI, F.R.Y

[P. 180C]

and Tao tribes, who there, predominate. These peoples seem to have come from different parts of the continent. Their languages, despite a common Bantu descent and much recent borrowing, remain as distinct as possible and are obviously not modern dialects of one more primitive tongue; their original social structures must, however, have been similar enough to attract them to each other, for they have so intermarried and their customs so fused, that one can now scarcely distinguish their ways of life and village organization. Indeed, while homesteads of apparently pure Nyanja and Tao still predominate, every considerable district contains members of both tribes, with some people, at least, of mixed descent; moreover, and although one perceives a difference of character and manners, and trace it to the influence of Mohammedanism on the Tao, one may well be unconsciously exaggerating. This account of relationship terms, (with brief reference to underlying social structure), must be taken, therefore, to cover the fusion of two once-separate tribes, and Nyanja and Tao equivalents must—unless otherwise stated—be understood as identical in meaning. In fact, Nyanja often prefer Tao terms to their own.

How far can one isolate the Nyanja-Tao social structure in order to study it? Ngoni immigrants in this district are few, and their original patrilineal social system has largely succumbed to the customs of these earlier comers. The matrilineal system of the still more numerous and numerous Lomwe immigrants is, I believe, (though my evidence is fragmentary), exerting a considerable influence on the somewhat dissimilar but also matrilineal Nyanja and Tao.

medicine from the gourd by means of a stick; then placed at the forehead, point forwards, held for a second at each armpit, and finally rubbed over in the hands again. The cup was similarly manipulated, especially the edge, and rubbed in the hands, as were the horns on the *ebe* spoon. All this was done with great precision and evidently in definite order, each article being laid on the ground in turn, and the string of matting rolled up. Four pieces of reed of a size that would lie over the mouth of the gourd cup overlapping the edges about an inch were then selected from among others and set ready on the ground. The cattle were treated with medicine from the same gourd. The horn was placed in the gourd by the operator, point upwards and lying towards himself, so he held the gourd by its body in the palm of his left hand, the handle towards him. Shaking the rattle in the right hand, he constantly muttered to the *chisungo* " to tell him truly," " to answer his questions," and so on. By slight movements of his left arm which were well disguised but quite easily perceptible to the watcher, he could make the horn assume the erect position in the gourd and then fall backwards or forwards or to either side. The first position indicates " all is well," "nothing need be done"; the second means "there is trouble," "some one is talking at the village," " there is a case to be settled." These answer questions put to it by the owner who is being consulted about some case of illness, etc.

Another method of divining is with the horn in position as before mentioned and the four pieces of stick set across the mouth of the gourd crossing one another, the ends projecting at the sides. The operator is able to make the horn appear to knock off all the sticks without moving the gourd, or he can make any number of the sticks tumble into the gourd, and repeat the performance. If they fall off, it means a good day to go on a journey; if they fall in, the journey should be postponed.

The *chisungo ebe* spoon is held similarly in the left hand by the middle so that two wings are formed, each with the weight of a horn at the end. The center-of-horn is able by almost imperceptible movements to make the two wings open and fall away from each other or swing together, and together partly roll up. When they fall apart wide open, it is an indication that all will be well; when they close, death may be expected. The gourd and horn and this *chisungo ebe* spoon form a pair which are called female and male.

Chiyanda ebe ndinga: *ndinga* is a word relating to omens in regard to journeys. Thom Chonga told me that he remembers as a boy, when his father was going on a journey, he would take some pieces of root, moistens them in his mouth, and stick them on the wall of the hut. These pieces of root were daily watched by Thom's mother, as unaided they gradually took up a position lower and lower on the wall until they reached the ground. Then she knew that her husband had safely reached his destination.

Omens may be told in yet another way, *chisungo ebe kwandula* (*ku-wandula*, to speak). *Ndambo* is put in an empty house and the medicine man and his clients sit outside. The medicine man is asked some question which he puts to the *ndambo* which then answers like an oracle. I have never seen this done but my native informants tell me the voice that

3:Shanna D-5 (ca. 1912) 1922 FT7 Yao FT7

787
198

speaks is invariably used in shamanism and Chinyanja is the language always used. It is doubtless a case of what we should call ventriloquism. The custom is evidently of Mang'anja origin but in great favor with the Yao.

787
695

Divination also plays an important part in tracing thieves or stolen property or in picking out from a number of people anyone guilty of some crime. Several modes of procedure may be adopted. The *chimanga* called *ukondo* may be used as the *chimanga cha chipote* (*chipote*, a kind of basket). Medicine in the form of certain *ziwisi* is placed on the ground and covered by the inverted basket on which is placed the *ukondo*. Each person in turn is requested to lift the basket and the guilty one is at once revealed by his inability to budge the basket off the ground. This method may even be used to reveal a man guilty of incest.

787

Other methods of divination include a kind of trial by ordeal somewhat similar to a boiling water ordeal. *Kuondola* (from *ku-ondola*, to tramp round, referring to the peregrinations made in search of what is lost, or *nondowola*, the Chinyanja word from *ku-londa*, to follow on the footsteps of) is the name of the witch-doctor who searches for stolen property or traces the thief. The same man may be called *wakondola* in Chinyanja (from *ku-ondola*, to reveal) when he uses his instrument to detect in a crowd the person guilty of some crime. The *kondola* uses the horn of a kudu stuffed with appropriate medicine, the actual mix *ex ante* and methods adopted varying somewhat with different practitioners. The practice I believe to be a Mang'anja one and I think most of the operators were Anyanja men and not Yao, though the Yao, as with other customs, adopted the system fully. In my district, the *kondola* was usually armed with a rattle; when the horn indicated the guilty individual, he intimated the fact to the assembled crowd by throwing flour over him.

When a search is to be made for stolen property, the horn is put into the hands of four men, alternate men pressing down and pulling up on the long horn, while the medicine man stands by, operating his rattle and exhorting the horn to do its work of revelation. I know a man who has on several occasions assisted in holding the horn; he said it simply seemed to drag him on in a series of jerky movements, sometimes going very fast, at other times moving slowly, dragging the holders "along the footsteps of the thief with the stolen goods" in and out of the house, through the bush, and across streams, until suddenly the horn dropped from their hands to the ground, where on digging, the stolen goods were found buried. (Cf. table turning, planchette, etc.)

[114]

A good description of *kondola* under the headings *wakondola* and *nondowola* is given by Corbett,[1] who describes the Mang'anja operators. In this same article, he makes the mistake of describing as *wakondola*, the *kondola*. As I have stated above, the *kondola* is an order of medicine men who trap the man who is an incest while in the incest state, but the *wakondola* points him out while he appears as an ordinary man of the village.

[1] E. W. Corbett, 'Native customs in Nyasa,' (Man, London, 1913, vol. 13, p. 30-32).

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

vomited human flesh.[1] They said that they had a strong headman and that they could trust him; he was a good headman without witchcraft. If he had been a sorcerer they would have kept wedding him until the next morning.

About two hours after sunrise the people gathered and started dancing. At about this time Cimombo was brought out of the hut and put in the grass shed which had been built for the occasion. This was the climax of the ceremony.[2] He sat on a chair in the grass shed with one of his two wives on either side. Makoka then started a chant, exhorting the visitors to come to throw pennies at Cimombo's feet. Some of the people there made speeches about the type of behaviour they would expect from him. Then Nyambi arrived from the court village in a rickshaw. When the noise had subsided he told the people that if they disobeyed Cimombo it meant that they disobeyed the chief. He emphasized the importance of the rank of the new headman. After the speech he presented 12s. to Cimombo which was received on his behalf by Nciombo. Nyambi then left and the ceremony was over, but the people remained to dance and drink beer.

This description of the procedure following the 'coming out of the hut' is somewhat sketchy. The interaction of the headman and his villagers on this formal and ceremonial occasion is of great interest and importance. During the entire ceremony the headman adopts the pose which is appropriate for any Yao initiand. His hands are on his lap or on the arms of the chair and his head is bowed forward with eyes downcast. He neither speaks nor moves. His attendants, when necessary, wipe the sweat off his face or chase away the flies. The other occupants of the mat, who may be his wives, and sometimes his heir, adopt similar postures. In contrast to this, is the behaviour of the villagers who run about shouting wildly, the men discharging muzzle-loading guns, and women ululating in the typical Central African way.

Before the new headman comes out of the hut his mentors

[1] This is a test based on the witchfinds of the Yao, who believe that sorcerers kill relatives with magic and then share out the flesh of their victims with fellow sorcerers in ghoulish feasts.

[2] Called the 'coming out from the hut' (*kulupuka nyumba*). It is of course the first public appearance of the headman in his newly assumed status.

[illegible] The chief, having appointed a day on which the ceremonies shall begin, sends a messenger with a fowl to a medicine-man whom he asks to conduct the ceremonies. The medicine-man is called ol'mishida "he of the tails." He carries his medicines stuffed in the tail-skin of a gnu or zebra and we shall see that his tail or tails play a very important part. Having sent word back to the chief of his acceptance of the invitation, he goes his wife to prepare some fresh maize-oil with which he will consecrate his medicines, and sends out the boys of the village to collect firewood. A big bonfire is made and dancing goes on all that night in his village. Early next morning he returns to the door of his hut where his wife hands him his "tails." He then immediately departs for the village of the chief. His wife wails with her tongue, this being the sign of his departure, and dancing men, some friend (often his brother) who acts as his chief assistant, his wife, and others will go with him.

[illegible] He signals his approach to the chief's village by singing:

"Ee [illegible] [illegible] [illegible] [illegible]"
"I'm at the village! I don't be long!"

As he enters the village, all the women hail his arrival by trilling the tongue (lu-lulate). He goes straight to the open space in front of the chief's house where the chief awaits him. The chief immediately goes into his house and producing a cloth, gives it to the ol'mishida who then places his "tail" on the ground, (ashida, "things put down"); these are the signs of the compact. A house is given to the ol'mishida wherein he may rest and sleep.

That night, all the mothers of the boys who are to undergo their initiation, are called out (ing, round), ground flour for the morrow. Early the next morning, the ol'mishida visits the place where the pounding is going on and collects a little flour from each woman's basket into a small basket he himself carries.

The chief then gives him a cock and a hen, an ear and a hoe, with these he goes off accompanied by the fathers of the cock to the spot where Lopondo will be made. Arrived there, he first points out the spot where his own hut is to be erected. This is quickly built, followed by the shelters for the cock.

The cock and hen are then killed and cooked, also some porridge; the entire hut is cooked; the hoe is not cooked separately. When it is ready, the ol'mishida takes a piece of the hoe from the pot and some porridge from the other pot together in one hand and then throws them into a little hole where his "tail" has been resting. At this spot, Lopondo is made. The ol'mishida then partakes of both again and eats; after he has finished, the other men eat.

[illegible] After the building of the shelters is finished, fire-wood is collected. On the ends of the green shelters figures of animals in green may be strung up on posts, but they have no definite significance.

In the meantime in the village, the chief has had ekiyani (ceremonial flour) prepared. It is made from millet by his head wife, who must not be near a menstrual period.

48. *Gnawa hada ambaka!*
Lying on the rock, here!

This is a slang expression which in full would read, "It is nice and warm lying on a rock in the sun, but it is not so comfortable as being in bed in company with your wife; you may go on waiting but you won't get anything." This might even be said to a dog, wishing on a dog will, every second of food (*Wuk*) to the master's mouth.

49. *Kalapilla nwal ga ahiwa!*
To have hopes of water for nuggets!

It is a custom before lying down to sleep on the floor mat, to take it up and pour both [5.16] [5.19]
leg water on the earth floor to kill any blood-sucking nuggets (*Gungu* flea-nugget, *Andoscorogia*). If you see a pot cooking on the fire, you naturally think there is food being prepared but you may be disappointed; it may only be the pot for heating the water to kill the nuggets. The saying is thus used to a man who has made an assignation and is disappointed but goes on waiting.

50. *Kalawa ngwal*
To bite unbrunch-fruit!

The unbrunch is described by natives as going up to what it will eat, remaining quiet [5.20]
for some moments, and then suddenly taking a bite. This is said of a man who comes up to you smiling and then bits you a hard blow.

Among the Tao or among other tribes that I have positively mentioned, signs of 5.76
salutation to a superior are made by clapping the hands or putting the breast or buttock with one hand, at the same time crouching down. A woman will go off the path and bend, looking away from a superior passing along the roadway.

A person going by the door of a hut where others are sitting, will say "*Kwanaga hanu!* *Ai* the door here." Passing behind anyone, he will say "*Kwanga* *nwal* *Ai* the back!" Meeting anyone on a path, a man will simply say, "*Ishe, here,*" adding perhaps, "*Ka-shala!* all is well?" A child on business on returning to his village after a journey, is greeted [5.21]
by the women with trilling of the tongue (*Ka-lulula*).

Men and wife do not greet each other in the morning. The wife does feed and draws water and places it in the hut for the husband's use but nothing may be said.

When a visitor is entertained and a chicken cooked for a repast, the "pope's nose" is always for the visitor. The right hand only is used in dipping into the common pot. A man of small importance, though replete, will go on making pretence of eating at a common meal by taking very small morsels so that his superior shall finish first, and rise and go away before him.

I may here add the words used by the Tao for the sounds made by various animals. [5.22]
They are interesting to compare with those of other languages:

The deer ..... *[illegible]*
The fox ..... *[illegible]*

[illegible] Among the Tiv, clown and obscene language are rare; expressions which appear in other languages all the world over are only used on great provocation and commonly with dire results. This, too, is opposed to the ways of neighboring tribes, the Angwaja and Angami, who freely make use of such expressions as "*Ityiwi yo mulai*" and "*Ityanga wo mulai*" "The genitals of your mother! Cheeks of your mother!"

The following embarrassment of clown and expression of obscenity will be seen to follow very closely upon those in other countries.

1. *Mwimbelami!* (to a girl or woman), *mbulahi!* (to a boy or man) means you are a person who has not been to your Ungwan, and therefore "you are without manners!"

2. *Mwanu mbungami!* an expression to a child meaning "you little wretch," "you nasty little thing!"

3. *Ahuhlu ivai Ngwai!* he sees with the back of his head, he is undiscriminated, i.e. "he is a dirty person!"

4. A man with big ears is hailed "look at your ears like a hound!" (*Lihundu*, a hound).

5. Two women seldom or never engage in or even hear language to a man are the same; the woman, however, is not indebtedness in the art of bitter complaining and nagging.

[illegible] Pulling down the lower eyelid with the finger accompanying some exclamation has nearly the same significance as in European countries, "I am not as green as I look!"

Ka-ungu is to make a sound like "pish" with the mouth, and is a great insult, for which a man will fight.

Sneezing of the lips to one side or to the action to get rid of the sour skin of a fruit, *ka-nuu* (*i-ungu* is an expression of contemptuous disgust.

[illegible] The similarity to European ways is again seen in swearing or taking oath. A Tiv swears by the spirits of his ancestors or by a chief:

"*Chiri ahu Mdungu!*"
"*Dhi! the graves of Mdungu!*"

or he may indirectly name some ancestor:

"*Kyakwilla Ityangi!*" or "*Kyakwilla Ityadar!*"
"I swear by the spirit!" "I swear by the Dead!"

[illegible] on a stone. They explode with a noise like the sound of a gun. The boys send them off, one after the other, imitating fighting, or sometimes bang them down on some one's head. They go off, making the sound *ipiuw!*

Small boys or girls among themselves play a skipping game called *pepejile*. One sings:

[illegible] "*Pepejile pepejile, pepejile pepejile, pepejile pepejile, fumayere wamaji'je pe ndungo pe' wend*
"Bumy ummy ummy ummy ummy ummy. The one who has passed successfully the at the door at his mother's,

Fingerole, fumu, kendi!" etc.,
Ki kiso ship ness, tuiso!" etc.

They all skip together at the word "*ness*," "*tuiso*," and so on. No one knows how many times they are going to be called on to skip, and some one is sure to skip when no word is given and so is caught and made fun of, so the one who has misbehaved.

[illegible] *Likende* (*lee-kende*, to skip): simple skipping when pleased with anything is commonly indulged in, mostly by women and girls.

Little girls play at making little pots. This is called *pondoisinje*, (*lee-pondo-sinje*, to model a pot). They also play at pounding grain, called *ukindoki*, "learning to keep time," the word itself being an imitation of the sounds. Five or six pound in one mortar; in between strokes, they throw the wooden pestles up in the air, catching them again in time.

[illegible] "*Fumpelude kendi pe' ujo wenni je ukulupe!*"
"The one who spoils little mortar that that one which is knocking!"

This is the song of a game played by little girls. One sits in the middle with a stopper on her head, to represent a grain mortar, while the others form a ring round her holding hands. As they sing, the circle at one point swings to, and one of the girls passes in front of the one sitting down, her back to her all the time, the hands passing over her head. This they do one after the other very quickly and anyone who touches the girl in the middle, "who knocks down the mortar," takes the place of the girl in the middle.

[illegible] "*Kwenwenje kwenwenje ujokati ukal*"
"One wives, one wives, sitting all (*unsyllables*)!"

is the song of a game played by a lot of boys together or a lot of girls together; they do not join with one another. Two opposing groups are formed of equal numbers. Each is led by one of the older children and behind him in the rest of the group, each holding on to the skirt of the one in front. The followers of each leader represent his wives. The two parties then sing and manoeuvre for the leader to get at the tail of the other group and "*ulika*" a wife or two from his opponent. It becomes very exciting. As they go faster and faster, some of the tail may get swung off and captured by the other side before they can again join their own.

4:Dennett D-5 (ca. 1909) 1910 FT7 Yao FT7 Marsh FR4

case second might be administered; if adjudged guilty the accused would be burned on a pile of wood.

Evidence is given without taking any oath; a false witness is not punished.

Justice is summarily summary. At Mpondo's, after conviction of adultery with one of the chief's wives, a man's throat was cut on the spot. Drowning was the usual punishment with Mpondo.

Punishments for all offences practically consist payment.

Gestures, Salutations, etc.

The correct salutation among Mashinga Tao and Makanja on meeting is clapping the hands, the hands in front of and at right angles to the body parallel to each other, thumbs against the fingers. The clapping should be continued for ten minutes after having passed; after passing a chief it should be continued for half an hour.

Another form consists in slowly beating the breast with the right hand, the head slightly inclined forward. The lower in station makes salutation first to the higher, a man to a chief, a woman to a man; exception is made in the case of an old woman, who is saluted by the man. Scattered all over the country a raising of one or both arms is a common form of salutation, but is probably only a corruption of the military salute.

Slapping of the arms or thigh with the right hand is also seen, among old men usually. In imploring mercy from, or on the first occasion of meeting, the chief, a man lies prone on the ground and catching the foot of the chief, puts it on his neck—a sign of absolute submission. Women kneel at the approach of a man. Words and expressions of salutation are few—*Moyo* (=heart) being the only chief expression used. Now commonly one hears a word (sounding like *salut*) probably a corruption of *good morning*, and the Swahili greeting *Sabahri* with the double hand-shake of Mohammedans.

A man returned to his village after an absence some awhile, then his wife comes to him and kneeling greets him, *moyo*, her husband returning *moyo*.

Years ago, a man of any importance was received with firing of guns and shouting. A headman is received now with *Mwapulali*, the women wobbling their tongues in their mouths. *Ashwa* are put on the head as a sign of joy.

In the morning the husband and wife do not greet each other, but in the village friends "give each other good morning" (=*Moyo*). On waking in the morning, a woman cracks all her joints (=*Kulim chuka*). She then massages her husband and cracks the joints of his fingers.

One man wishing to see another goes to his house, and squatting outside the door cries "*Ishe!*" three times (=*chuma*), at the same time clapping his hands. If no answer be given he goes away, even though he knows the man is within, an answer meaning that the inmate does not wish to be seen. If invited to enter he does so, the man of the house rises and gives him salutation. He makes small

1: Tew E-4 (no date) 1950 F77 Tao F77

ciputo yearly in the great initiation festival for boys and girls. Consequently as they repeat each year the lessons of their own initiation, the ceremonies are the main vehicle of Tao culture.[1]

There are also two Muslim ceremonies:

(1) *Jando*, the boys' Muslim baptism, which takes about seven days, and is usually worked in with *lupande*;

(2) *Hondo*, the girls' Muslim baptism, which is the same as *jando*, but usually quite separate from *ciputo*. It is important that the wife of a Muslim should have had *hondo* so that she knows how to prepare the food properly at Ramadan.

Menstrual and Cross Taboos

Menstruation is held to be dangerous. A special mat is used by the woman during this time, and is rolled up and kept during the rest of the cycle. The hut is completely replastered after menstruation. Intercourse during menses leads to disease of the sun. Sexual contact is dangerous to persons at certain other periods: during initiation ceremonies, during mourning, and for Indian who have not been through the protective rite. The danger is thought to lie in *ndoka*, a dread disease characterized by swelling. This may be transmitted by salt in the food. Deaths are often attributed to 'salt'. Much of the significance of the mourning is that medicines are prepared which protect the mourners against the dangers attendant on sexual activity.

Burial Rites

News of a death must be sent to the chief by a messenger carrying a single foot. The chief gives a present of calico for wrapping the body, and a goat for the burial men. These are called *mudo*, neighbours unrelated to the dead, who volunteer for certain duties. They prepare the body for burial and carry it in procession to the graveyard outside the village. No uninitiated person is allowed to see the funeral. All who attend the burial are prohibited from sexual intercourse for one month. After this time the prohibition is lifted by a ceremony of beer drinking and feasting, and on the following day all fires in the village are extinguished, and then relit, and the mourners are shaved. A year later beer is brewed for a final ceremony.

For a period after her husband's death a widow is unclean, and has to be purified by ritual intercourse with a man who is paid. The widow is not allowed to remarry for two or three years. A widower leaves his wife's village, after receiving a parting gift. The widows of ordinary persons are not inherited. If a man has himself a 'name' (rank and social position), he has an heir, who inherits also the wives of his predecessor. But if the heir (the maternal nephew) has married a cross-cousin (mother's brother's daughter) he would not consider the wife's mother as his inherited wife.

Before the burial the dead man's hut used to be destroyed, together with his possessions. Immediately afterwards a consultation is held as to whether retaliatory action against sorcerers is called for. The *mudo*'s duties include not only the conducting of the burial, but also the subsequent inquiry and the conduct of the second ceremony, the beer drinking, at which they shave the mourners. A man who has

[2] But I have used illustrative material from other villages where it was more complete or less confusing. In Appendices, I set out genealogies, hut counts, and plans, of the two villages. In the text I use reference numbers in these genealogies, by generation and position in generations, to identify people.

It is necessary to select illustrations because the structural uniformities I wish to describe are often hidden by the idiosyncrasies of particular examples. The general principles of social structure, as I present them here, have been abstracted from my observations over a period of two years, not only in Cikuja and Ali Kasonka villages, but in many others in the Machinga area. I present my illustrations not with any belief that they prove my analysis, but only to help the reader see the principles I describe in the reality of Yao life.

The Field Work

[23] I spent the first two weeks of my stay in Nyasaland talking over my proposed field work with the Administrative officers of the Nyasaland Government. The Provincial Commissioner suggested that I should do a round trip of the Yao area with the District Commissioner at Zomba. After this tour, in consultation with Chief Kawinga and the District Commissioner, I decided that the best place for me to start would be in Chief Chiwindi's area. The District Commissioner then took me to Chiwindi who indicated a site in his court-village where I could pitch my tent.

[24] For the first week I held meetings with the chief and some of the older men of the vicinity and spent most of my time making notes on material culture, 'customs' and history. On the first page of my notes I find that there is a good description of Yao beliefs in sorcery, all described as if it were in the past: a full year was to pass before my informants were prepared to admit that these beliefs were still held. After a week or two of this [25] general activity I decided to try my first village census. The results were hardly encouraging. Often when villagers knew [26] I was coming they dipped away into the bush. Those who were left frequently refused emphatically to answer my questions. Many rumours arose to explain my presence. I heard, for example, that I had been sent by the Government to record the names of those to be taken away as soldiers for the next

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

war. I heard that I was an American spy, and also that I was a spy for the Portuguese, because Nyasaland, or at least the Yao area of it, was going to become part of Mozambique. I spent much of my enforced idleness during these early months copying down texts in Yao from my clerk and translating them into English.

Towards the end of 1946, when the rains had set in, I decided to move into a vacant house on a tobacco market about five miles from where I had first pitched my tent. I then started to make a census of the nearest village. Here the attitude of the people was markedly different and I established friendly and happy relationships with them. For some weeks I systematically made censuses of the surrounding villages, and got my first insight into the structural principles of Yao villages. I left this area to attend a conference of research officers of the Institute, and when I returned I pitched my tent in the village into which my personal servant had married. By this time I was speaking some of the language and had started to talk to people directly. I now began to establish a set of informants who would come to my tent in the afternoons and dictate texts to me in Yao on various topics of interest, which I immediately translated into English. The mornings I spent out in neighbouring villages. It was during this period that I gradually heard about the various ceremonies that were being performed and was able to attend them. My wife too was able to attend some of the women's ceremonies. Some months later I moved down to Kawinga's area and pitched my tent in one of the largest and most complex villages I could find and made a complete census of it. I chose this village so that it would be sufficiently close for me to attend Kawinga's court, which was the largest in the area. I left the field in September 1947, and in September 1948 returned to Chiwalo's village. I now engaged a new clerk who could speak no English and who came from the village in Chiwalo's area where I had originally settled. During my second trip I visited Jalasi, Kanali and Kalembo chieftdoms, all in different parts of the Yao country, and made village censuses in each.

The procedure I adopted in making village censuses was as follows. Usually I visited the headman a day or so in advance to explain my intention to him. Most of the villages I studied were fairly close to that in which I was camped so that the people

one of Malangu's sons died, after giving birth to quintuplets, some thirty years ago. Deformed children are buried alive. A large number of children is always hoped for and where polygamy is practised, some families are of considerable size, although the mortality among young children is very high. It is, of course, very difficult to state the child-bearing period among natives. It does not start as early as is commonly supposed, and I think the menopause is found within about the same limits as among Europeans.

Death. Natives of Wyandotland live to a good old age. That such is not the case I have found to be one of the many fallacious beliefs concerning native which should be relegated to the realm of exploded theories, as I have pointed out elsewhere.*

Death in old age is recognized as a natural event but apart from this, all sickness and death were formerly held are still to a large extent looked upon as the result of the machinations of some person, an idea which forms the outstanding feature in their belief in witchcraft, sorcery.*

Here I shall mention the ordinary customs in the case of death. During the last hours of a mortal illness, a man is tended by his wife or wives; the head wife she constantly supporting his head on her lap or against her breast. A woman is similarly tended by her mother, sisters, and friends. As unconsciousness sets in and the extremities become cold, they say, "He spirit has gone and only the heart remains alive."

The native does not like the idea of lingering on and a man on his death-bed will say to his sons, "Now watch me that I die quickly." He may take medicine to help him over that time or he may give his sons instructions as to what to do. Should a man linger unconscious for a long time, friends will ask his sons, "Did he give you any instructions?" If he has done so, the sons will then carry them out. This perhaps consists of burying themselves in necklaces left by their father, while they stand on the roof of his house. Sometimes, the natives say of a lingering man, "Ah, perhaps he has eaten of a tortoise's heart!" Knowing the phenomenon of the tortoise's heart and believing that by partaking of it, the same property can be conferred on the heart of a man.

When death is manifest, the body is covered with a cloth by a brother, a son, or some other person in attendance. The eyes are closed, the mouth shut, and at the present time, the body straightened out. This, however, is a recent practice copied from the Anyanja, Europeans, and Mohammedans.

News of the death must be sent to the chief, and a messenger goes to his village where the chief and his people sit in the village open space. He carries a knot in his hand. The presence of a single knot always denotes bad tidings. One of the chief's sons, seeing the stranger approach with the single knot, will jump up and take the knot. He is joined by the others and they go away to the cross-roads where they kill the knot, pluck it, cook it, and eat it. In the meantime, the messenger delivers his news to the chief who will produce from his house about eight yards of white calico; if the deceased has been a chief's supported

* Hugh S. Stanner, "The Burgess of Legues", (Lusaka, April 15, 1954, p. [illegible]). * This idea, p. [illegible].

person, he may also give a gift. The office is to wrap up the body of the dead, the gift is for the undertaker, *sulu*.[1]

Until eight or ten years ago, the Wayan buried their dead in a posture of complete flexion. The preparation of the body after death is carried out by friends from a neighboring village who volunteer for the service. They are known as *sulu*, (*ulug*, *sululu*). Marshmallé[2] thinks the word originally meant relatives; it has essentially the opposite meaning now. The corpse is washed in ordinary water and no embalment is made. The limbs, formerly, were then flexed on the body and at all the joints. The clenched hands were placed under the chin of the bent head or the hands were spread over the face of the flexed head, while the legs were tightly bent at the knees and brought up close against the abdomen. The corpse was recently bound in this position and adorned with a bile-cloth of bark. The body of a man bound stiff and extended was a source of great trouble. Women cups heated, and the body bathed until it was as relaxed as possible. An *ensile* knee would then be applied as was necessary to gain the required degree of flexion, the knees often being broken in the process.

In the case of a woman, her female friends put on her bark-cloth bile covering, but the washing and trussing up of the body were usually done by men unless there were some women particularly skilled in the operation.

The flexed body was then set up on the deceased's sleeping mat within the hut, and from time to time, as long as it remained exposed, it was washed, people coming from other villages to offer their services for this task. Watchers sat continually by the body, the wife and perhaps a brother on either side, while others slept in the hut to take their turn later. The rest of the mourners sat on the veranda about the door.

As soon as the male had finished their work, wailing began, started by the wife and carried on by all the women of the village and the women relatives from elsewhere. Wailing continued all day until about ten in the evening, and then started again between two and three in the morning. This went on for three or four days or was intermittent for a longer time, always commencing with the arrival of a party from another village. I have never heard of four being put on the heads by Tao mourners, as mentioned in *Africana*.[3]

News of a death was always sent to all the relatives, and burial might be delayed to allow for the arrival of those from a distance. Under such circumstances, the body was enclosed in a sealing of bark, the ends being closed by bamboo pegs. Exaggerated signs of grief were sometimes made by the mourners who beat their breasts with their hands while they bounded their heads against the ground or a wall, but the Tao did not indulge in the excesses of the *Sayanja* near Lake Chibya, who practiced a kind of flagellation, the mourners within the house sending any new-comers on the door and beating them with sticks. This treatment was not resented. Women alone did the wailing; a man indulging in such expression would be laughed at. The part in the old days when the native possessed firearms was

A-Drum, Central; Religion. **Sanderson.**

A Note on Ceremonial Prostitution among the Wa'Kwa, Nyasaland.

By Kendall Sanderson, *M.D.C.S., F.R.G.S.*

One of the efforts of European influence in Africa is the breaking up of tribal organization and discipline. The rights of the individual being no longer subordinated to the common good, customs formerly observed by the village community as a whole die out, while those affecting the individual are still practised.

This tendency is well seen in the ancient ceremonies of prostitution among the Wa'Kwa which are now rarely performed collectively, though the rules, however lightly "observed," still give to the doctor to obtain the necessary medicines for removing, for instance, the contamination caused by contact with a corpse.

These collective ceremonies have already been described by various writers in respect of both Uyendland and elsewhere,[1] but the Wa'Kwa have not, I think, been given in detail, and the following notes may not, therefore, be altogether valueless.

The *Fipyile* ceremony (*fipyile*, "to pounds") is common to most Bantu tribes. In its simplest form it used to be performed annually by the Wa'Kwa, at the beginning of the twelfth month, most of the months (*lunar*) being kept by means of a "calendar"[2]. The whole village is thoroughly "spring-cleaned," all rubbish

* In this, where the game is played on 10 holes' sight in the sandy, Arabic-speaking Kyor (pronounced), the song is Kyoroh runs:—

Kyoro, kyoro, quantity no margin.
Kyoro, jibbo, Kay mate
Kyoro, gate, where you mate.
Kyoro, jaro, I shall not be there any more.

Words indicated, pronounced, in the hollow hole.

1 Sir Harry Johnston, G.C., "The Bantu Kingdoms" pp. 444 (sic), 1-2-1-0, *Journal Royal, Anthropological Institute*, 1901.

2 Frazer, "Golden Bough" (1), 179, 180.

3 A "calendar" consists of a strong twig in the shape of the moon, or hanging from the gable, on which are threaded twelve pieces of rock, feathers or cowrieds. One of these is moved to the other end of the twig each time a new month is seen.

693 paid by the chief but still advise him, and retain
694 much of the prestige due to their rank, which is inherited. Others have been incorporated as court assessors though they may not actually take part in the duties. Some now combine both sets of duties and function both as councillors and court assessors. Some of the duties of both sets of officials, however, have been taken over by the court clerk and other court functionaries. Although the position of court assessor was part of the old tribal structure, modern court assessors see themselves as occupying a position in a structure largely of White fashioning. I once heard a court assessor when conducting an enquiry into a case of adultery, cut short the perfidity of a witness saying: "None of these long stories. We are conducting this case according to the customs of the Whites."

More illuminating still is the position that the court clerks occupy in the modern structure.
• [212] They are differentiated from the vast majority of the population because they are literate. All of them have been educated, usually in a mission school. A high proportion of them are Ngoni
[213] because more Ngoni are Christian (hence educated) than Yao (see p. 191). Because he can read and write, the chief court clerk is the medium through which the chief expresses himself in writing and the medium through which he gets written information from the Administration and others. The court clerk is therefore in a unique position of knowing all the business that comes into the chief's hand by letter. He, of course, must also write the replies so that he has a very good knowledge of what is going on in the territory. In addition, because of his education and knowledge of the ways of the White people the court clerk often makes a better councillor than the uneducated and naive traditional councillor does. Therefore in certain matters the court clerk, rather than the councillor, is the chief's most important adviser.

693 The various other officials have different
694 functions to perform, frequently of a semi-ceremonial nature. There are sanitary inspectors, well inspectors, etc. The court sergeant who is present at the court now performs many of the

G. Dragoman D-5 (GR. 1989)1919 FFT Tan FFT Matrix: 72-4

[illegible] square into a clean shallow basket or on to a plate. The relish or relish, consisting of vegetables such as beans or a kind of spinach, a little fish or chicken, is cooked in a separate pot, and round these dishes above to eat relish. Washing their left hands in water, they take some of the porridge and making a sausage shape of it, dip it in the relish and then cram it into their mouths.

[illegible] Salt was obtained either from natural deposits or from "salt earth" on a stream bank near Fort Johnston, or from the ashes of burnt longo reeds or sandalwe; by a method of percolation through porous pots.

[illegible] The native rather drinks between meals—water. After eating he may wash his mouth out and clean his teeth, using the frayed end of a piece of wood as a brush.

Alcohol.—With the exception of the people living on the lower river, who drink fermented palm juice/ beer is the common alcoholic beverage. Beer is made from maize (chimangat) or millet (mapira); the strip of the latter is very largely used for beer making; it makes the best beer and is certainly preferred by Angoni.

Grain is prepared by boiling flour with water; after an hour barm (chimbiri) is added fermentation sets in; and it may be drunk the next day; it is the sweet beer, strong or concentrated. On the second day it is again boiled and is allowed to cool; the third day more barm is added (chimbiri); the fourth day fresh grain is made, and the contents of the original pot, now called sponge, is added to it, making two pots of beer. It may be drunk the same day while hot or allowed to cool and taken on the second day.

Food staple.

[illegible]

1. Maize (chimangat), millet (mapira, mawere), rice (mpunga).
2. Cassava—sweet potato.
3. Beans and peas of many varieties.
4. Pumpkins, marrowhead, melons (dzungu, mikoko, chibwandi).
5. Many kinds of leaves growing wild—also pumpkin leaves, of which a kind of spinach is made.
6. Bananas (ndizi-pisi), sugar cane and plants are cooked.
7. Wild nuts, berries, honey.

[illegible]

8. Numbers of small animals are eaten by Chipeta, Angoni, etc. With the spread of Mohammedanism this is going out; rats, mice, bats, rock-rabbits, etc. Chipeta will eat dog, and I once saw one eat baboon. Frogs, shell-fish, snakes, crocodiles, snakes, vultures, eagles, are never eaten.
9. Fish (nsombo), fresh or dried, is much eaten, thirteen varieties being enumerated.
10. Chickens, ducks, wild birds that they may snare.

* Spirits said to be made by distilling from beer and banana and palm juice by means of a pot and a gun barrel.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

months November to March inclusive. Diagram 1 shows the distribution of the rainfall during the year. Very little rain falls during other months. The initial rains of the year are ushered in by convectional storms and very heavy downpours. This causes a heavy run-off, flooding of the rivers and lake shores, and much erosion of the parched land which by this time has become

DIAGRAM 1. RAINFALL IN LIWONDE AND FORT JOHNSTON DISTRICTS.
This diagram shows that almost the whole of the rainfall occurs between November and April.

very dusty. During December there is usually little rain for a short period of a week or two. After that the rains change their character and become more steady and drenching. They decrease in March and April, and thereafter, little rain falls.

The Yao concept of the seasons follows this feature of the climate. The year is divided into two seasons, called *caku*, the wet season, and *cau*, the dry season. The wet season is the one in which most agricultural activity is carried out. The gardens are hoed up and planted, weeded and tended, and the crops harvested, between the months of October and May. During

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

the dry season, in contrast to the busy wet season, there is much visiting and social activities are resumed. Dances and initiation ceremonies also are mostly held during the dry season. The only agricultural work done during this time is the clearing of the bush and the stacking of the brushwood ready for burning.

The temperatures are high. I have no records for the three stations in the area because recording has started only recently. It is hottest during the months just preceding the rains, i.e. September to December, and coldest during May to August. I have never heard of frosts in the area so it is unlikely that the temperature falls below freezing point. Hornby records the mean maximum temperature for Liwonde as 82·3° F. and the mean minimum temperature as 59·3° F. These are for Liwonde station which is in the Shire Valley. The temperature for the plains and the highlands is probably a few degrees less.

Vegetation

The natural vegetation in this area varies from thick rain forest along the permanent watercourses to open grassland in the marshy patches. In forestry reserves and other places where the vegetation has not been cut out, trees 20 to 30 feet high predominate with thin undergrowth. Along the Shire Valley much of the vegetation is untouched, but in the highlands and on the plain most of the unprotected forest has been cut out for garden lands. In the open spaces between trees the land is covered by elephant grass six to eight feet high.

Population

The density of the population in Nyasaland as a whole is high in comparison with that in the surrounding territories.[1] Within the Territory itself the densities in some districts are as high as anywhere in Africa.[2] The population as a whole is concentrated in the highland districts of Dedza and the Shire Highlands. The districts in which I worked are less densely populated than most of the districts in the Southern Province, but of average density

[1] Expressing densities as total population per square mile. Nyasaland, 55·5 (1945); Tanganyika, 17·0 (1946); Portuguese East Africa, 14·5 (1938); Southern Rhodesia, 11·5 (1946); Northern Rhodesia, 5·0 (1946).

[2] Chiradzulu district, 309·8; Cholo, 191·9; Zomba, 152·4. *Nyasaland Census*, 1945, Table 8.

Peas, cowpeas (*Pisum sativum*), are grown in abundance. There are two other varieties, colour (groundnuts), and chinkwaire.

Sweet potatoes: ubinato (*Ipomoea batata*), of which the natives are very fond; they distinguish a red and a white variety, ubinato spanjipie and ubinato spanjiwere.

The tuber-like root of a bush called ngombe is also eaten, likewise the young underground shoots of a palm tree. The leaves of the sweet potato and the leaves of many wild growing plants are collected by the women and cooked like spinach; the flowers of pumpkins are used in a similar way. Of fruits eaten, the bananas, lipombo, tuber-fruit plum. A very large number of species of *Ficus* are grown, including mukumbulu, mikinga, mukoli, mumi mungunga, kubuta a *Ficus* banana, kuipuo a wild banana, and mikunga, the plantain. The pawpaw is found all over the district. There are several varieties of pumpkins, lipungu, including mikunda, shindondoli, and a very large species called mimo ma nguwa, "the crocodile's head." Varieties of cucumbers include lingulu and kulimangulu.

A large number of wild fruits are eaten, among them figs, kulugu (*Ficus*), kaulu (*Cissus*), shiili and lisungu, the fruits of two species of *Landolphia*, mutunga or Kafir oranges (a species of *Strychnos*), shikunda, the fruits of *Hyphaene* (palms), mukumbwa (*Myrianthus*) a wild tree belonging to the mulberry family, and others, mikoma, mukungumbulu, mikundumulu, shingulungulu, shindugulgu, mulundu, lilumulu, etc. The seeds from the heads of kulumbwa (*Typha*) are roasted up and eaten.

All fish are eaten except the mpungu, which always causes urticaria.

The flesh of all the antelopes, of course, sheep and goats is eaten generally; only bushbuck is avoided by some people as it is said to cause a skin eruption. Elephant is shunned by many on account of its rough skin, also rhinoceros because of the ulcers which it often has on its body, and hippopotamus on account of the marks on its back which are thought to be akin to leprosy. People eating the flesh of these animals are supposed often to sicken with leprosy, the pachydermatous skin, the ulceration or anaesthetic depigmented patches of that disease being reproduced, so the case may be. Pig will not pig or wallow on account of the digging habits of these animals. It is thought they may sometimes grub up bodies from graves. These fish taboos may be due to Mohammedan influence. The lion, hyaena, and fox no one would touch, as they are supposed to be connected with sanni,[1] but the heart of the lion might be eaten to acquire courage. Few will touch leopard flesh, but Kazungu's descendants do so. All will eat of the flesh of the serval cat but very few of the common wild cat. The rock rabbit, nyangumire (mbira, Chin.), is refused by most. Yao as it is a "beast without shame," having no tail to hide what should be decently hidden. Very few will partake of the baboon, but monkey is acceptable to many. A few reject porcupine, supposing they will break out in spots, while the zebra may cause stripes, and some will touch the shrew. No one eats mujo, a mouse that is believed to die if it crosses a path. All kinds of rats are eaten, but the shrew-rat and mole-rat only by boys. Snakes

[1] This name, p. 266.

Both before and after the introduction of guns, the Ture used spears, firespits, and bows, ulungu. The spear is a five foot long throwing spear with metal head and wooden shaft. No shield was used. Bows and arrows are made from the wood of the bow or pinkingwale tree. The string is made of tendon. A double-bulbed bow called ulungu ne ulimu was sometimes used, but, I believe, originally came from the Asyungu. The arrows, reputedly, have a metal arrow-head, and were often poisoned with bombe. 221

Hunting. The same weapons are used in hunting: the gun, the spear, and the bow and arrow. Smaller bows and arrows made with bamboo or cane shaft are also employed for shooting birds; one of the arrows has a blunt wooden head and serves to stun the bird. 224 [illegible]

From the Asyungu, the Ture learned the use of a bamyoma for spearing the bimyoma cows. The bamyoma is a heavy spear-head of iron about eighteen inches long, attached to a rope and float. From the Asyungu, also, we learned the use of the falling block with spear for killing hippo. [illegible]

Elephants are caught in staked pits, and the larger antelopes are similarly trapped in pits with the stake sloping towards towards the bottom, so that as the animal falls lower and lower with exhaustion, it is eventually suffocated. 224

Small buck are driven by drge into nets set for long distances in the forest, and then speared or shot. Traps are also set for these smaller antelopes and for many other small animals, rodents, etc. Birds are shot or trapped. Bird-lime is also employed. It is prepared from the juices of a number of trees by pounding the vegetable matter in water; the sticky mass so made is applied to sticks or poles. The sticks are placed near drinking places so that the birds alighting to take water become entangled. The poles are affixed to trees so that they appear to be the topmost boughs; this the native does, recognizing the excessive habit of birds to sit on the very top of trees. The strength of the bird-lime is made according to the size of the bird he wishes to catch. [271] 225

Fishing. I am not sure how far the Ture is a national fisherman. Not long ago he used only a many-pronged spear to catch his fish. Since then, he has acquired from the Asyungu the knowledge of making fish-traps and nets, and of using the fish poison. When the Ture came to live and intermarry among the Asyungu, there was one practice of the latter which they would not adopt and which caused a good deal of ill-feeling. A Mang'anja man coming home after fishing always used to prepare the fish and, having some ready to cook, he cooked others for his wife, bringing her water at the same time to wash her hands. After eating her own fish, she cooked the rest for her husband. A Ture would never cook for his wife. 226 [278 568]

Traps. The following is a list of some of the traps I have found in use among the Ture. The sketches will serve to explain their mechanism better than a lengthy description. Some are very ingeniously made, and merit small similar traps made in other parts of the world. 224

1. *Lukungi lwa limonde*, a trap for the mane-rat (Pl. XIX, fig. 1).

2. *Lukungi lwa ndimali*, a trap for sharp-toothed gnawing animals, so called from

224 [illegible], a joint (of bamboo) which slides down the string sent to the noose so that the captured animal cannot bite or gnaw through the string (Pl. IV, fig. 5; Pl. XXX, fig. 8).

3. *Lukungi* has *mulende* or *shiteme*, a trap for water-rats (Pl. XX, fig. 7).

4. *Lukungi* has *ngunda*, a trap for the partridge (Pl. XX, fig. 8).

203 5. *Chijumbu* also *ijuni*, "the house for birds," also used to trap small animals (Pl. XX, fig. 9).

6. *Lukungi* has *bolowi*, a trap for the *mole* (of guinea fowl) (Pl. XX, fig. 4).

7. *Lukungi* has *shilimuna*, a trap for the *tread* (of the guineafowl); *ku-lumba*: to put the foot down, to tread. The string square is about 9 × 4 inches (Pl. XXI, fig. 6).

8. *Lisuma*, a trap made of split bamboo. A bird going to pick up the grain is caught by the head when the trap is released by the string which the trapper pulls (Pl. XXI, fig. 8).

9. *Luna* has *ijuni* or *ngunu*, a bird-trap made of netting on a hinged frame-work, operated by a string (Pl. XXI, fig. 4).

[24] 10. *Lilimu*, a falling stone trap for mice. Rats are said to pull off the trap with their teeth and are never caught (Pl. XXI, fig. 1).

10a. The same trap set for catching birds (Pl. XXI, fig. 2).

11. *Mulalaga*: *Ishile* = hanging bowl, a noose for small birds, set on trees (Pl. XX, fig. 1).

[26] 12. *Fwel* (*kiswa*) is a very simple *ensilwa* noose consisting of two grains of maize threaded on one end of a piece of string some six inches long, at the other end of which is attached a leaf folded up into the form of a cone. The leaf, sustained by the maize, swallows the two grains and the attached string, so that the cone is drawn over its head; it is then helpless and is easily picked up by the fowler, who has only to pull on the string to remove the leaf.

224 13. *Chipumumbu*, a hollow cylinder of wood with noose activated by a wooden spring, for catching rats (Pl. XXI, fig. 3).

14. *Chiyoto*, a similar trap made of bark, for mice.

15. *Lilimu*: a plaited bamboo cone into which a rat forces its head to get at the bait, but finds, when it tries to withdraw, that it is caught by sharpened pieces of bamboo projecting backwards into the cone (Pl. XX, fig. 6).

227 16. *Mlomyori*, a fish-trap of the same design, from the *Anyanja* (Pl. XX, fig. 5).

17. *Mnjoe*, a fish-trap on the lobster-pot principle, often set in gaps in a fence built across a stream, copied from the *Anyanja* trap called *nsoe* (Pl. XXI, fig. 7).

[17] 18. *Nfjisi*, also I think from the *Anyanja*, consists of a long basket-work, extinguisher-like arrangement which is clapped down over a swarm of small fish; the hand is introduced through an aperture in one side and the fish removed (Pl. XXI, fig. 5).

Trapping and catching of animals is pursued with great glee by small boys. They make many of the traps, particularly the two kinds of *ikhoro*, *ekipuda*, *ekipunda*, *ekimoro*, *ikamoro*, and *ugaro*. *Ikhoro* is set in rat runs and the rats are driven into them (Pl. XX, fig. 4). Digging out rats is a favorite amusement for the boys and brings meat to the pot. May is the best month for this sport. They are adepts at recognizing burrows which have rats inside. Digging is commenced at one entry to the rat-warren, the escape holes being closed with tufts of grass. As they get nearer the rat chambers, they smell the earth and so know when they are quite close to the rats. A bunch of grass is then put in this hole, lighted, and kept aglow by blowing on it. One of the rats will try to bolt and is knocked on the head. The head is then smashed to kill him effectually, and the skin of the tail of the first rat is always pulled off for luck, "so that they may catch many." They will try to guess how many there are going to be, "ten and ten and five and two!" Each rat when caught is hooked under some earth, so that the hawks will not swoop down and carry it off. When they have finished one warren, one of the party is appointed to carry all the rats. He ties a string round his waist, and the rats are slipped underneath it and so secured. They then go on to another; the carrier will bear the whole catch for the day and may, before they have finished, have several strings of rats round his body, one above the other.

Digging out crabs, *ba-kopa ugaba*, is another favorite amusement for children; (*ba-kopa* is to dig up anything like sand which makes a squelching sound). Crabs are never eaten with flour, but always with manioc, the grain beans, "crabs and brown-bread!"

Youths and girls fish with a rod, line, wire hook, and worm, *ba-kopaga ununbu*, to pull up fish. They also catch fish, using the fish poison, *ontoto*. Birds are killed with a bow and a blunt-pointed wooden arrow.

A small boy, seeing a girl or a younger boy with a rub of manioc and wanting it himself, will say, "Let me make a path to the sound!" He will then remove, say a couple of cows of manioc grains for himself, much to the interest of the owner; or "Let me make *ikonko*" (*ikonko* is a shovel hand on the scale), or "Let me make the scale's eyes!" when two ordinary grains are left, surrounded by a simple ring of other grains, as the girl's portion.

Children are taught a little saying about their fingers which reminds one of the "This little pig went to market" of one's infancy. Starting with the little finger, they say:

> "*Ikoko* *kanyinko* *kanyinko!*"
> "This little one (is) the one which cannot draw water!"

Pointing to the ring finger,

> "*Kwikokopo* *ugunyunda!*"
> "This little one's brother (is) the one that picks the nuts!"

To the middle finger,

> "*Ugunyunda* *ununda* *ununda!*"
> "(The brother of) the one that picks the nuts (is) the one who finishes nuts!"

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

613 members goes to an outsider and grumbles to him about the
757 family squabbles[1] and quarrels. The outsider then takes the
578 opportunity of using this squabble to introduce his sorcery into
626 the lineage. The Yao greatly fear backbiting because of their dread of sorcery and more dreads it more than a village headman, a warden of a sorority-group,[2] or a person in the position of having to keep a matrilineage or section together. These people are continually adjuring the women under them—for it is the women who are believed to be the main culprits—not to fight among themselves; and if they do, not to take their complaints to an outsider but to the senior member of the matrilineage. The significance of this in relation to lineage unity is plain enough.

613 Apart from sorcery, strained relationships between members of
578 a matrilineage are believed to be dangerous for other reasons.
643 Malice may adversely affect people who are in mystically danger-
224 ous states. The most common of these states is pregnancy. If a woman has a quarrel with a matrilineage member while she is pregnant she is likely to have a difficult labour. The Yao say 'the womb has heard these bad words'. Another situation where malice or quarrelling will cause difficulties is in hunting. The luck of the chase is capricious and malice may easily bring bad fortune to an otherwise good hunter. For example, a successful hunter once gave each of his two sisters a piece of venison. Each complained that the other had been given the larger piece and quarrelled vehemently about it for weeks. The hunter now found that no game fell into his traps. He went to a diviner who indicated the quarrel of the sisters as the cause of his failure and told the hunter to get them to 'blow water' (*hupenye*). He did this; good relationships were restored and his traps were filled once more.

613 These deleterious effects, like the curse, are connected in some
578 way with the ancestor spirits. This is sometimes expressed quite
761 clearly when a person is called upon to 'blow water'. A
755 mother who wishes to revoke a curse, a woman who wishes to recant her malice towards her matrilineal relative who is suffering in childbirth, or a man whose sister's son is ill supposedly because

[1] This is called *mimi*, which I have translated as 'backbiting'. This idea is extremely important, as we shall see later.

[2] i.e. those men who are responsible for their sisters and their descendants. See p. 145 ff.

56
778
769

leaves and shoots, at intervals emptying their bodies from side to side and shaking their heads. Massage then ordered all to go and bathe, men and women separately. As they returned from the stream, rain began to fall.

Intercession on behalf of the sick may be made, especially by anyone who is likely to be accused of causing the illness by witchcraft.[1] The man standing with arms outstretched, downcastle and a little in front of his body, the hands replete, takes some water in his mouth and discharges it in a stream on the ground, (probably as a sign of purification of his tongue), and then invoking "all the spirits above," asks that they will intercede to restore health to the sick man and bear witness to his own innocence of any wish to do the sick man injury. *Ka-pepe* is the word meaning to offer sacrifice and prayer.

755
769

Harvesting and hunting are occasions when sacrifices may be offered. It was formerly the custom for the chief to determine the day on which harvesting of millet should begin. On the day appointed, a big drum was beaten in the village and word passed round; then everyone would go down to his garden, gather a head of millet, and bring it back to the village where it was all handed over to the chief's headgirls. After drying and threshing, a little of the grain was laid at the grave of an old chief by one of the reigning chief's advisers, the remainder being again distributed to all the people gathered together in the village meeting-place, who ate it raw. After this ceremony, harvesting began.

769
241
782

In passing through a millet garden, if a child asks his mother to give him some to eat, she plucks a heads or two and reverently laying one at the foot of a *mawa* tree for the spirits or at the base of some other tree, if she cannot see a *mawa*, she gives the rest to the child.

When a hunting expedition makes its first killing, part of the flesh of the animal is laid at the base of a tree as a thank offering to the spirits and in anticipation of further favors to be vouchsafed. All such offerings are supposed by the natives to be partaken of by the spirits, though they are well aware that they do not actually diminish in quantity. There is an interesting point in this connection: any man who has acted as *ndala* (undertaker) to some well-known man may appropriate these offerings. In the case of the hunting offering, he will run round the tree, saying, "I am a hyaena, the spirits will not mind me," and will then take part of the flesh-offering and eat it.

782
224

In the same way, a *ndala* may drink from a grave hour-pot after three days, when the spirits are supposed to have taken what they want.

With the exception of the *mawa* tree above mentioned (*ndima*, Chin.), and possibly another called *mala-ngama* (Chin.), which is never used as firewood and which is supposed to be used by *mazuri*, I do not think there are any sacred trees properly so-called. Miss Werner supposes that many of the big trees (often a species of *Ficus*) in villages are sacred.[2] The truth is, I believe, simply that a village is made naturally round a big tree which conveniently offers its shade for the village meeting place. The spirits of deceased chiefs may

824
778

[1] This *supra*, p. 302.

[2] The natives of British Central Africa, op. cit., p. 66.

Both before and after the introduction of guns, the Yao used spears, lances, and bows, *ulungu*. The spear is a five foot long throwing spear with metal head and wooden shaft. No shield was used. Bows and arrows are made from the wood of the tree or pinkingwale tree. The string is made of tendon. A double-bulbed bow called *ulungu* an *ulumu* was sometimes used, but, I believe, originally came from the Anyanja. The arrows, *mpamba*, have a metal arrow-head, and were often poisoned with bonde.

Hunting. The same weapons are used in hunting: the gun, the spear, and the bow and arrow. Smaller bows and arrows made with bamboo or reed shaft are also employed for shooting birds; one of the arrows has a blunt wooden head and serves to stun the bird.

From the Anyanja, the Yao learned the use of a harpoon for spearing the hippopotamus. The harpoon is a heavy spear-head of iron about eighteen inches long, attached to a rope and float. From the Anyanja, also, was learned the use of the falling block with spear for killing hippo.

Elephants are caught in staked pits, and the larger antelopes are similarly trapped in pits with the sides sloping towards the bottom, so that as the animal falls lower and lower with exhaustion, it is eventually suffocated.

Small buck are driven by dogs into nets set for long distances in the forest, and then speared or shot. Traps are also set for these smaller antelopes and for many other small animals, rodents, etc. Birds are shot or trapped. Bird-lime is also employed. It is prepared from the juices of a number of trees by pounding the vegetable matter in water; the sticky mass so made is applied to sticks or poles. The sticks are placed near drinking places so that the birds alighting to take water become entangled. The poles are affixed to trees so that they appear to be the topmost boughs; this the native does, recognizing the common habit of birds to sit on the very top of trees. The strength of the bird-lime is made according to the size of the bird he wishes to catch.

Fishing. I am not sure how far the Yao is a natural fisherman. Not long ago he used only a many-pronged spear to catch his fish. Since then, he has acquired from the Anyanja the knowledge of making fish-traps and nets, and of using the fish poison. Where the Yao came to live and intermarry among the Anyanja, there was one practice of the latter which they would not adopt and which caused a good deal of ill-feeling. A Mang'anja man coming home after fishing always used to prepare the fish and, having some ready to cook, he cooked others for his wife, bringing her water at the same time to wash her hands. After eating her own fish, she cooked the rest for her husband. A Yao would never cook for his wife.

Traps. The following is a list of some of the traps I have found in use among the Yao. The sketches will serve to explain their construction better than a lengthy description. Some are very ingeniously made, and must recall similar traps made in other parts of the world.

1. *Lukwaji lwa limunda*, a trap for the mass-rat (Pl. XIX, fig. 1).

2. *Lukwaji lwa mbindi*, a trap for sharp-toothed gnawing animals, so called from

[illegible] animals, a joint (of bamboo) which slides down the string until in the noose so that the captured animal cannot bite or gnaw through the string (Pl. IV, fig. 2; Pl. XIII, fig. 3).

3. *Ladungli* has *nadumbi* or *ahiimu*, a trap for water-rats (Pl. XX, fig. 7).

4. *Ladungli* has *ngandi*, a trap for the partridge (Pl. XX, fig. 8).

[illegible] 5. *Chijumbu ahu ijuni*, "the house for birds," also used to trap small animals (Pl. XX, fig. 10).

6. *Ladungli* has *lahoni*, a trap for the nest (of guinea fowl) (Pl. XX, fig. 4).

7. *Ladungli* has *ahikumu*, a trap for the trend (of the guineafowl); *ha-ikumu* to put the foot down, to trend. The string square is about 8 × 4 inches (Pl. XXI, fig. 6).

8. *Limuru*, a trap made of split bamboo. A bird going to pick up the grain is caught by the head when the trap is released by the string which the trapper pulls (Pl. XXI, fig. 8).

9. *Lumu-lun ijuni* or *ngunu*, a bird-trap made of matting on a hinged frame-work, operated by a string (Pl. XXI, fig. 4).

[illegible] 10. *Lilimu*, a falling stone trap for mice. Rats are said to pull off the trap with their tails and are never caught (Pl. XXI, fig. 1).

11a. The noose trap set for catching birds (Pl. XXI, fig. 3).

11. *Mulidapu* (*lidde* = hanging loop), a noose for small birds, set on trees (Pl. XX, fig. 11).

[illegible] 12. *Fuel ilaiwu* (see a very simple snare) noose consisting of two grains of maize threaded on one end of a piece of string some six inches long, at the other end of which is attached a leaf folded up into the form of a noose. The fuel, entered by the maize, swallows the two grains and the attached string, so that the noose is drawn over the head; it is then helpless and is easily picked up by the thief, who has only to pull on the string to remove the leaf.

[illegible] 13. *Chipumumbu*, a hollow cylinder of wood with noose activated by a wooden spring, for catching rats (Pl. XXI, fig. 2).

14. *Chipuru*, a similar trap made of bark, for mice.

15. *Lilumu*: a plaited bamboo cone into which a rat forces its head to get at the bait, but finds, when it tries to withdraw, that it is caught by sharpened pieces of bamboo projecting backwards into the cone (Pl. XX, fig. 6).

[illegible] 16. *Mlungupui*, a fish-trap of the noose design, from the Anyanja (Pl. XX, fig. 3).

17. *Mulipu*, a fish-trap on the lobster-pot principle, often set in gaps in a fence built across a stream, copied from the Anyanja trap called *nunu* (Pl. XXI, fig. 7).

[illegible] 18. *Njini*, also I think from the Anyanja, consists of a long basket-work, antelope-like arrangement which is slipped down over a swarm of small fish; the head is introduced through an aperture in one side and the fish removed (Pl. XXI, fig. 5).

Trapping and sending of animals is pursued with great glee by small boys. They make many of the traps, particularly the two kinds of bliss, *ekpuin*, *ekpuuin*, *ekinam*, *ikanna*, and *upin*. *Ekbee* is set in rat runs and the rats are driven into them (Pl. XX, fig. 4). Digging out rats is a favorite amusement for the boys and brings meat to the pot. May is the best month for this sport. They are adepts at recognizing burrows which have rats inside. Digging is commenced at one entry to the rat warren, the escape holes being closed with tufts of grass. As they get nearer the rat chambers, they smell the earth and so know when they are quite close to the rats. A bunch of grass is then put in this hole, lighted, and kept alight by blowing on it. One of the rats will try to bolt and is knocked on the head. His head is then squashed to kill him effectually, and the skin of the tail of the first rat is always pulled off for luck, "so that they may catch many." They will try to guess how many there are going to be, "two and two and five and two!" Each rat when caught is buried under some earth, so that the hawks will not swoop down and carry it off. When they have finished one warren, one of the party is appointed to carry all the rats. He ties a string round his waist, and the rats are slipped underneath it and so secured. They then go on to another, the carrier will bear the whole catch for the day and may, before they have finished, have several strings of rats round his body, one above the other.

Digging out crabs, *ko-kopu ugulu*, is another favorite amusement for children; *Ko-kopu* is to dig up anything like coal which makes a sparkling sound). Crabs are never eaten with flour, but always with meats, the grain beaten, "crabs and brown bread!"

Youths and girls fish with a rod, line, wire hook, and worm, *ko-kopugu uwaku*, to pull up fish. They also catch fish, using the fish poison, *ntiuin*. Birds are killed with a bow and a blunt-pointed wooden arrow.

A small boy, seeing a girl or a younger boy with a *ntu* of maize and wearing it himself, will say, "Let me make a path to the east!" He will then remove, say a couple of rows of maize grains for himself, south to the interest of the corner, or "Let me make *Ibenko*" (*Ibenko* is a shrewd bird on the south), or "Let me make the south's equal" when two ordinary grains are left, surrounded by a simple ring of other grains, as the girl's portion.

Children are taught a little saying about their fingers which reminds one of the "This little pig went to market" of our's infancy. Starting with the little finger, they say:

> "*Ekuku* *kanpuinin* *kanpuinin*"
> "This little one (is) the one which sweeps down water!"

Pointing to the ring finger,

> "*Kankuiqaw* *ugangwuki*"
> "This little one's brother (is) the one that picks the nuts!"

To the middle finger,

> "*Ejangwuin* *uwuin* *uwuin*"
> "(The brother of) the one that picks the nuts (is) the one who finishes nuts!"

Marovi FR4

is beaten with branches, or leaves are thrown at him. Men join from all the villages. Next day they set out in line towards the nets they have set, the inaugurator of the hunt in the middle. Game is driven into the nets by the advancing line of men and their dogs and is speared. On the other side of the nets are men set as watchers, who would let down the net at the approach of any big antelope, who would otherwise break it. All the game killed is taken back to the boy clad in the leaves, who watches it in the background. At the end of the hunt (*saimba*) the inaugurator of the hunt chooses his portion after it has all been divided up, and gets a hind leg of every beast killed by the others. The net used is 200 to 400 yards long. Hunting is done in the early morning during the month of July. M 224

The Mañanja and Chipeta did not hunt elephant, but dug game pits. They used bows and arrows. The Yao, Machinga and Amangoche, possessing guns in the old days, used to make big hunting parties, staying away two and three months and killing elephant and other game. The hunter inaugurating the hunt had the first shot at an elephant, and all ivory was his till sold at the coast, when the followers got their proportion of calico brought back. The skins and horns were divided. The flesh was cut into strips and dried over wood fires. The chief has choice of the biggest tusk on the return of the party to the village. Yao elephant were shot in the vicinity of the village, the chief claimed the ground tusk, *i.e.*, the tusk on the side on which the elephant dropped. Before starting on such a hunt the *sin* would be cast to see that they would have good luck. All those taking part would have "medicine" rubbed into little incisions cut on arms, shoulders, and sometimes on body. *Mankwala* (medicine) was also tied on the guns; it consisted sometimes of a number of pieces of wood threaded on a string, or I have seen another made of sun-dried animals' blood and charcoal. Should the wife of anyone of the expedition commit adultery her husband might get killed. A man going to hunt will never have intercourse with his wife the night before, otherwise he would be unsuccessful. M 224 [411]

Bows and arrows are used, the bows being sometimes about 5 to 6 feet long. The "Mediterranean release" is employed, and the arrow rests against the left side of the bow. Three kinds of arrows are carried in the same quiver (*pofo*): *nyanikwa*, a blunt arrow for stunning birds; *nchato*, with a large iron blade; and *upolisa*, with a small poisoned head. M Y 411

The Mañanja use a long-handled, short-bladed spear, usually thrown at a short distance (a few yards), when it is grasped in the hand about the middle. From a further distance (thirty yards) it may be pitched by holding at the extreme end. Traps of various kinds, made of a bent sapling and noose, are commonly used. Dogs are used in hunting to drive, to run down small game and to keep the bigger animals at bay. The only arrow poison used is *chaula*, made from euphorbia juice and other things; it is used in warfare and elephant hunting. The flesh of animals killed with *chaula* is not considered safe to eat. Children from twelve years of age accompany their fathers hunting. M 411 M 224 M [278] [857]

II. The Political Structure
BEFORE THE WHITES CAME

173 (*kuhamula lukongolo*), i.e. to surrender to the chief
643 in the area. Also the chief sent out expeditions
167 to capture slaves or he purchased slaves with the cloth and beads he had exchanged for ivory at the East coast.

643 Within his territory certain privileges and rights were held by the chief and he had certain reli-
421 gious duties to perform in which the unity of the people in the territory was expressed. In general the chief had rights over any ivory either found or hunted in his territory. If a dead elephant were found the tusks belonged to the chief, though he usually rewarded the finder with cloth. If a man killed an elephant the tusk that lay on
[224] the ground belonged to the chief while the other belonged to the killer. The killer's tusk was in-
[439] cluded in the chief's caravan to the coast and its value paid in cloth to the killer when the caravan returned.

643 The chief was also entitled to an annual tribute
657 of food and beer from all villages in his area, but this was used to entertain visitors who came to the court-village.

643 The chief's religious duties lay mainly in propitiating the spirits of his ancestors on occasions
782 when the community at large, in contrast to the chief's own private affairs, was either threatened or directly affected. The most obvious occasion was immediately before the rains came when flour was poured on the tree shrine and the spirits of the ancestors asked for good rains. Later when the rains were over a similar sacrifice was made asking for a good harvest. Sacrifices to the ancestors were also made on two other public occasions. They were made when some calamity had occurred or was believed to be impending. A run of unsuccessful campaigns induced Cingwalugwalu, a son of the Yao chief Mponda near Fort Johnston, to ask his father's father's brother to make sacri-

1: Tew E-4 (no date) 1950 FT7 Yao FT7

132 completely exhausted or reduced to a mere trickle. The average annual rainfall over
[136] the last ten years is 29·75 in. The shore waters of Lake Pamolombe are well stocked
with fish. Both districts are well wooded, with a large variety of timber trees. In the
[137] dry sandy soil where the population is unable to live for lack of water, the prevalent
type is *tsanya*. A line of foothills from Zomba to Chikala are conserved as Forest
Reserves.[1]

MAIN FEATURES OF ECONOMY[2]

241 The Yao are chiefly agriculturists, and in the old days were also hunters. As they
live largely in tsetse-infested areas, they do not keep cattle, except for a few herds
[231] near Fort Johnston and Zomba, in Nyasaland, and on the east of Lake Nyasa,[3] in the
mountains of the Ruvuma valley around Mataka's.[4]

439 Abdullah describes a time when the Yao were economically self-sufficient, making
their own bark-cloth, weaving, burning herbs for salt, and working iron for the tools
they needed. Nevertheless, the tradition of coastward journeys for trading with the
Arabs was well developed before the Europeans came to the country. They used to
trade cattle and salt from the Manganja and Lomwe for tobacco and hoes, and in
[567] exchange for slaves they got from the Arabs gunpowder, guns, swords, beads, coloured
cloths, earthenware, and foodstuffs.[5] Slaving expeditions were among the most
important activities of the chiefs.[6] The old tradition of the absence of the men from
the village owing to these expeditions, is continued in modern times by soldiers and
labour migrants to Southern Rhodesia and the Union. These men send back remit-
tances to the area, but the main population is supported by agriculture. Cash is needed
for purchasing salt and cloth, for paying certain dues and fines formerly paid in kind—
adultery compensation, diviner's and initiation fees—as well as for tax and rent. Con-
sequently, while certain crops, such as tobacco and ground-nuts, are grown for cash,
any food crop is liable to be sold in one form or another in local markets or by the
roadside.

262 The food crops are maize, sorghum, finger millet, sweet potatoes, ground-nuts,
[241] legumes. Fish is an important article of diet. Eggs are believed to cause sterility and
are only eaten by those outside the child-propagating age; milk is disliked and never
consumed.[7] *Termite alates* (flying ants) are a much relished food when they come out
on nuptial flights. Rice is considered a superior food, and is eaten when possible on
ritual occasions.[8]

249 Tobacco is the main cash crop, with individual production under the supervision
439 of the Agricultural Department. The average cash earned per grower in 1943–4 was
£5. 3*s*. This is overwhelmingly an external trade. Ground-nuts, which are sold at
government-controlled markets to licensed buyers, bring in only a few shillings a year
226 to the average seller. Women obtain cash by selling beer. At the lake shore the fishing
439 industry is very important. Natives owning big nets are said to make between £20

and £30 per annum. It is profitable to carry fresh fish inland by bicycle even as far as Blantyre,[1] as the shore price to the retailer is 4*s.* a load, which later may fetch from 16*s.* to 24*s.*[2] Yao on the south-west lake shore grow an excellent quality rice.[3] Rice is also grown near Lake Chilwa, but is mainly sold in the market organized near the lake shore by the Agricultural Department.

Division of Labour

The man builds the house, hunts, fishes, makes the nets, baskets, grain-store, game-traps, and, in the old days, the bark-cloth. He cultivates the tobacco. He cuts down the trees and may help with the hoeing and harvesting. The woman hoes, muds the floor of the hut, sweeps, cooks, brings firewood, draws water, brews beer, makes the pots and pipes.[4]

Land Usage

There are two types of garden in the Yao areas south of Lake Nyasa: one the ordinary garden in which the staples grow, and second, gardens along the stream beds. These latter are especially valuable for providing out-of-season crops. In addition most householders have a few small plots for tobacco and ground-nuts.

The main garden is cultivated by the slash-and-burn method, common in Central Africa. The Yao, unlike the Bemba, garden occupies the whole area cleared. Burning is done just before the rainy season (October–November). The ash and soil are hoed into elongated mounds and grain is planted along the ridges. Gardens may be cultivated for more than five years. In the second and subsequent years of cultivation the stalks and weeds are piled up and burnt. There are signs of soil impoverishment. The gardens are cleared in August, and heaped to dry for burning. After the burning the seeds are planted in late November. By February and March green maize is available to supplement the diet, and by the end of April the crops are ready to be harvested. The maize is stored in wicker containers, while sorghum is stored in the huts on a stand. Cassava is planted in large mounds made by turning the turfs over, so that the roots are outside the mound and the vegetable matter inside. Legumes are planted in smaller gardens, or interplanted with the main crop. Ground-nuts are stored, after being shelled, in mud-plastered wicker containers, designed to be rat-proof. Tobacco is planted at the sides of the streams for hand-watering in the seedling stage, and then transplanted about January. The leaves are ready to be plucked about April and soon afterwards they are marketed. Sweet potatoes are planted in the rainy season, and are ready for eating in May. The stream gardens yield out-of-season crops—maize, beans, pumpkins, and also sugar-cane, which is used in the initiation ceremonies.

Craftsmanship

The Yao have few skills. All cultivation is by hoe; axes and knives are their only other technological equipment. The men make mats from reeds and palm leaf, and the women make pottery. The huts are strongly built from poles laced with bamboo and plastered with mud. The roof is thatched with grass. Under Arab influence the

622 hut of one of Meya's wives. Meya's sister wrote a letter to tell him
558 of this and he replied that he could do nothing until he returned.
837 In 1946, Meya returned to be demobilized. The third night after his
166 return he questioned his wives about their fidelity during his absence. They at first held out against him but before long he intimidated them into admitting that they had slept with the village headman. Meya now went to complain to Mapata, who was Cikumba's perpetual mother's brother, and he said that he would come to the village the next day.

When Mapata came he confronted Cikumba with the accusation. Cikumba denied it until Mapata called the women. When they confessed Cikumba was forced to admit his guilt. Mapata now decided to call in an arbitrator, Isa, an important but unrelated headman who lived close at hand. Isa said he would come the following day when the matter could be thrashed out. When Isa and Mapata came they asked the women about the affair in public. They admitted the charge and Cikumba did not deny it. Isa then remonstrated with him for being a bad man and said that he was ashamed to hear about it. Cikumba had to pay £6 10s. to the injured man, Meya, who, however, refused to take it. He argued that Cikumba ought to have behaved as a father to him. But Cikumba had not. He, Meya, could not remain living in the village because his wives would be as Cikumba's wives. Isa said that he could not object because Cikumba had caused the trouble and had broken the village himself. How could he complain? Meya took two-thirds of the huts in the village away with him.

The Headman as a Representative of a Corporate Group

622 The headman is not only responsible for keeping the peace
689 between the members of his village, but he is also supposed to control his members in their relationships with other villages. If members take corporate action against other villages, even if they do so without the consent of the headman, the chief will consider the village headman responsible. This was brought out clearly in the relationships between Cikoja, Mapata and Masimbo in Chiwalo's section.

622 Cikoja and Mapata are two of the more important headmen in
689 Chiwalo's section. Masimbo is a minor village headman who lives
423 in Mapata's village area. The quarrel arose over the question of fishing rights in a small pool lying between the two main villages.
226 This pool was excavated by Cikoja and his villagers in 1924 during

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

a severe drought, and he claimed the rights over it. One day in 1930, some boys from Mapata village came down to the pool with fish-poison. At about noon some boys from Cikoja's village arrived with their traps. When they saw the Mapata boys using fish-poison they told them to desist and tried to take away the fish. This led to a fight in which knives were drawn. One of Cikoja's boys ran back to tell him, and in anger he came down to the pool with some adults. The Mapata boys now ran back to Masimbo who immediately assembled some men and came to the assistance of the Mapata boys. The two groups joined battle immediately and there were casualties on both sides. Mapata heard about this and came running down to separate them. 622 689 423 226

The next morning they took the dispute to Chiwalo. He started by asking why Mapata had used fish-poison in someone else's pool without permission. Mapata replied that he did not know that his boys had gone down there. He said that Masimbo had told him about the conflict and that he had gone down to stop it. He was not aware of it before. Chiwalo now turned to Masimbo and said, 'Masimbo, you are in the wrong. You have caused the children to suffer. You went to make war because of your children. The people of Mapata, they are in the wrong because they did not report to the owner of the pool.' 622 689 423

When Cikoja was asked if he had anything to say he only replied that he was ashamed of what had happened because he was the first in the area, and until then they had been friends. The conflict had arisen because the children had done something which they did not know was wrong.

Chiwalo ordered Masimbo to pay 5*s.* and Mapata 6*s.* to Cikoja. He then told Cikoja that he should brew some beer and share it with the other two villages so that friendship might be restored and the children might go from village to village without fear. The chief's instructions were carried out and normal amicable relationships were re-established.

The way in which the villages acted as corporate groups is well illustrated by this incident. The responsibility of the village headmen for the activity of their members also emerges. The chief found Masimbo in the wrong for causing the fight, but he also fined Mapata because his boys had used fish-poison. The fines were paid by the village headmen, Masimbo and Mapata, to the village headman Cikoja, for they are the representatives of the corporate groups under them. 622 689

In no other field of village relationships is the corporate 621 423

3: Stanmus D-5 (ca. 1912) 1922 FT7 Yao FT7

Strophanthus is specially reserved for poisoning arrows and it is doubtful if it is ever given by mouth; *Kombe* is the name used in this country, but there are two species of strophanthus in Nyasaland, *Strophanthus kombe* and *Strophanthus courmonti*. The seeds and bark are used and, less commonly, the root. They are mixed with the roots of a shrub called *Nchaimba*, pounded together and boiled, and the liquid used to anoint the arrows. The use of poisoned arrows is a Manyanja custom adopted to some extent by the Yao. 137 278 [107]

A number of poisons are also employed in catching fish, *Ngunga* and *Mtatu* being the most common, also *Kamsimbile Ngochi* (*Nhudzi*, Chin.), and *Chingunga*. [22]

Witchcraft. In my article on the Anyanja,[1] reference is made to witchcraft and *mfiti*. Beside the Nyanja *mfiti* or the Yao *mazwi*, all tribes as far as I know in Nyasaland have firmly fixed among their beliefs, the conception of the supernatural human-flesh eater. It is a little difficult to define the term *mfiti* or *mazwi*, as it has come to have the somewhat generalised sense of one who practices witchcraft, but the original meaning is defined by Scott,[2] a person who has acquired the knowledge of occult medicine by which he can kill his fellow men; "what makes the power so dreaded is not that the *mfiti* exercises this power for reasons of spite but (as is supposed), to eat the body of his victim." It is at once interesting to note that the word *mfiti* does not belong, according to Scott, to the personal class of nouns but to the *pa-ex* class, which seems to imply that they believe a *mfiti* to be something outside the idea of a person. Among the Anyanja in Zomba district, however, the word belongs to the first class of nouns (the personal class) as also does *mazwi* in Chiyao. 754

The natives believe that any man in a village may be a *mfiti* or it might be more correct to say, is capable of changing into a *mfiti*. *Ufiti* is the state of being a *mfiti*; in Chiyao, *uzwi*.

As I have pointed out under *Diseases*, practically all illness and death are thought to be due to the machinations of some person or persons. The inciting motive which may cause a man to compass the death of another may be spite, revenge, etc., or the desires of *uzwi*. Until recent years, when the Government legislated to put down witchcraft, the charges of *uzwi* were everyday occurrences. Whether or not the prevalence of the idea of cannibalism has any substance in correspondingly frequent practice has never been and now probably never will be surely proved. Duff Macdonald believes it to be so.[3] It is true that native graves have been and are still rifled and that the graves of some Europeans have been so opened in the past, as I have learned from eyewitnesses. It seems probable that the graves were tampered with by natives with the object of removing the human remains, possibly to be eaten or to obtain portions of the body to use as charms. Mr. L. T. Moggridge,

3: Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

Both before and after the introduction of guns, the Yao used spears, *lipanga*, and bows, *ukanja*. The spear is a five foot long throwing spear with metal head and wooden shaft. No shield was used. Bows and arrows are made from the wood of the *tsas* or *pimbinyolo* tree. The string is made of tendon. A double-bellied bow called *ukanja wa mbama* was sometimes used, but, I believe, originally came from the Anyanja. The arrows, *mpamba*, have a metal arrow-head, and were often poisoned with *kombe*. 411

Hunting. The same weapons are used in hunting: the gun, the spear, and the bow and arrow. Smaller bows and arrows made with bamboo or reed shaft are also employed for shooting birds; one of the arrows has a blunt wooden head and serves to stun the bird. 224 411

From the Anyanja, the Yao learned the use of a harpoon for spearing the hippopotamus. The harpoon is a heavy spear-head of iron about eighteen inches long, attached to a rope and float. From the Anyanja, also, was learned the use of the falling-block with spear for killing hippo. [177]

Elephants are caught in staked pits, and the larger antelopes are similarly trapped in pits with the sides sloping inwards towards the bottom, so that as the animal falls lower and lower with exposition, it is eventually suffocated. 224

Small buck are driven by dogs into nets set for long distances in the forest, and then speared or shot. Traps are also set for these smaller antelope and for many other small animals, rodents, etc. Birds are shot or trapped. Bird-lime is also employed. It is prepared from the juices of a number of trees by pounding the vegetable matter in water; the sticky mass so made is applied to sticks or poles. The sticks are placed near drinking places so that the birds alighting to take water become entangled. The poles are affixed to trees so that they appear to be the topmost boughs; this the native does, recognising the common habit of birds to sit on the very top of trees. The strength of the bird-lime is made according to the size of the bird he wishes to catch. [231] 223

Fishing. I am not sure how far the Yao is a natural fisherman. Not long ago he used only a many-pronged spear to catch his fish. Since then, he has acquired from the Anyanja the knowledge of making fish-traps and nets, and of using the fish poison. When the Yao came to live and intermarry among the Anyanja, there was one practice of the latter which they would not adopt and which caused a good deal of ill-feeling. A Mang'anja man coming home after fishing always used to prepare the fish and, leaving some ready to cook, he cooked others for his wife, bringing her water at the same time to wash her hands. After eating her own fish, she cooked the rest for her husband. A Yao would never cook for his wife. 226 [578 563]

Traps. The following is a list of some of the traps I have found in use among the Yao. The sketches will serve to explain their mechanism better than a lengthy description. Some are very ingeniously made, and most recall similar traps made in other parts of the world. 224

1. *Lukonji lua kimusala*, a trap for the cane-rat (Pl. XIX, fig. 1).

2. *Lukonji lua ukindi*, a trap for sharp-toothed gnawing animals, so called from

3: Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

Trapping and catching of animals is pursued with great glee by small boys. They make many of the traps, particularly the two kinds of *liliwa*, *chipoto*, *chijumba*, *chitawa*, *liwuma*, and *ngau*. *Lilesa* is set in rat runs and the rats are driven into them (Pl. XX, fig. 6). Digging-out rats is a favorite amusement for the boys and brings meat to the pot. May is the best month for this sport. They are adepts at recognizing burrows which have rats inside. Digging is commenced at one entry to the rat-warren, the escape holes being closed with tufts of grass. As they get nearer the rat chambers, they smell the earth and so know when they are quite close to the rats. A bunch of grass is then put in this hole, lighted, and kept aglow by blowing on it. One of the rats will try to bolt and is knocked on the head. His head is then squashed to kill him effectually, and the skin of the tail of the first rat is always pulled off for luck, "so that they may catch many." They will try to guess how many there are going to be, "ten and ten and five and two!" Each rat when caught is buried under some earth, so that the hawks will not swoop down and carry it off. When they have finished one warren, one of the party is appointed to carry all the rats. He ties a string round his waist, and the rats are slipped underneath it and so secured. They then go on to another; the carrier will bear the whole catch for the day and may, before they have finished, have several strings of rats round his body, one above the other. 224 857

Digging-out crabs, *ku-kopa ngola*, is another favorite amusement for children; (*ku-kopa* is to dig up anything like mud which makes a squelching sound). Crabs are never eaten with flour, but always with *masete*, the grain husks, "crabs and brown-bread!" 226 857

Youths and girls fish with a rod, line, wire hook, and worm, *ku-loposya semba*, to pull up fish. They also catch fish, using the fish poison, *mtutu*. Birds are killed with a bow and a blunt-pointed wooden arrow. 223 411

A small boy, seeing a girl or a younger boy with a cob of maize and wanting it himself, will say, "Let me make a path to the coast!" He will then remove, say a couple of rows of maize grains for himself, much to the interest of the owner; or "Let me make *ilemba*" (*ilemba* is a shaved band on the scalp), or "Let me make the crab's eyes!" when two solitary grains are left, surrounded by a simple ring of other grains, as the girl's portion. 857

Children are taught a little saying about their fingers which reminds one of the "This little pig went to market" of one's infancy. Starting with the little finger, they say: 857 524 539

> "*Akaka kangateka kangateka!*"
> "This little one (is) the one which cannot draw water!"

Pointing to the ring finger,

> "*Kankulagwe njungundo!*"
> "This little one's brother (is) the one that picks the nose!"

To the middle finger,

> "*Njungundo nunala wondu!*"
> "(The brother of) the one that picks the nose (is) the one who finishes men!"

3: Stanzas D-5 (ca. 1912) 1922 FT7 Yao FT7

224 *mkindi*, a joint (of bamboo) which slides down the string next to the noose so that the captured animal cannot bite or gnaw through the string (Pl. IV, fig. 3; Pl. XIX, fig. 2).

3. *Lukonji lua malende* or *chiluwa*, a trap for water-rats (Pl. XX, fig. 7).

4. *Lukonji lua ngwale*, a trap for the partridge (Pl. XX, fig. 3).

223 5. *Chijumbe cha ijuni*, "the house for birds," also used to trap small animals (Pl. XX, fig. 2).

6. *Lukonji lua lukosi*, a trap for the neck (of guinea fowl) (Pl. XX, fig. 4).

7. *Lukonji lua chiliwuta*, a trap for the tread (of the guineafowl); *ku-liwuta:* to put the foot down, to tread. The string square is about 8 × 4 inches (Pl. XXI, fig. 8).

8. *Liwono*, a trap made of split bamboo. A bird going to pick up the grain is caught by the head when the trap is released by the string which the trapper pulls (Pl. XXI, fig. 3).

9. *Luwu lua ijuni* or *ngwu*, a bird-trap made of netting on a hinged frame-work, operated by a string (Pl. XXI, fig. 4).

[224] 10. *Liliwa*, a falling stone trap for mice. Rats are said to pull off the trap with their tails and are never caught (Pl. XXI, fig. 1).

10a. The same trap set for catching birds (Pl. XXI, fig. 2).

11. *Malelepa:* (*lelele* = hanging loose), a noose for small birds, set on trees (Pl. XX, fig. 1).

12. Fowl thieves use a very simple contrivance consisting of two grains of maize threaded
[674] on one end of a piece of string some six inches long, at the other end of which is attached a leaf folded up into the form of a cone. The fowl, enticed by the maize, swallows the two grains and the attached string, so that the cone is drawn over its head; it is then helpless and is easily picked up by the thief, who has only to pull on the string to remove the leaf.

224 13. *Chiguwembe*, a hollow cylinder of wood with noose activated by a wooden spring, for catching rats (Pl. XXI, fig. 5).

14. *Chipoto*, a similar trap made of bark, for mice.

15. *Lilesa:* a plaited bamboo cone into which a rat forces its head to get at the bait, but finds, when it tries to withdraw, that it is caught by sharpened pieces of bamboo projecting backwards into the cone (Pl. XX, fig. 6).

227 16. *Mkungwi*, a fish-trap of the same design, from the Anyanja (Pl. XX, fig. 5).

17. *Mwipu*, a fish-trap on the lobster-pot principle, often set in gaps in a fence built
[177] across a stream, copied from the Anyanja trap called *wowo* (Pl. XXI, fig. 7).

18. *Njisi*, also I think from the Anyanja, consists of a long basket-work, extinguisher-like arrangement which is clapped down over a swarm of small fish; the hand is introduced through an aperture in one side and the fish removed (Pl. XXI, fig. 6).

132 completely exhausted or reduced to a mere trickle. The average annual rainfall over the last ten years is 29·75 in. The shore waters of Lake Pamolombe are well stocked [136] with fish. Both districts are well wooded, with a large variety of timber trees. In the [137] dry sandy soil where the population is unable to live for lack of water, the prevalent type is *tsawya*. A line of foothills from Zomba to Chikala are conserved as Forest Reserves.[1]

MAIN FEATURES OF ECONOMY[2]

241 The Yao are chiefly agriculturists, and in the old days were also hunters. As they live largely in tsetse-infested areas, they do not keep cattle, except for a few herds [231] near Fort Johnston and Zomba, in Nyasaland, and on the east of Lake Nyasa,[3] in the mountains of the Ruvuma valley around Mataka's.[4]

439 Abdullah describes a time when the Yao were economically self-sufficient, making their own bark-cloth, weaving, burning herbs for salt, and working iron for the tools they needed. Nevertheless, the tradition of coastward journeys for trading with the Arabs was well developed before the Europeans came to the country. They used to trade cattle and salt from the Manganja and Lomwe for tobacco and hoes, and in [567] exchange for slaves they got from the Arabs gunpowder, guns, swords, beads, coloured cloths, earthenware, and foodstuffs.[5] Slaving expeditions were among the most important activities of the chiefs.[6] The old tradition of the absence of the men from the village owing to these expeditions, is continued in modern times by soldiers and labour migrants to Southern Rhodesia and the Union. These men send back remittances to the area, but the main population is supported by agriculture. Cash is needed for purchasing salt and cloth, for paying certain dues and fines formerly paid in kind—adultery compensation, diviner's and initiation fees—as well as for tax and rent. Consequently, while certain crops, such as tobacco and ground-nuts, are grown for cash, any food crop is liable to be sold in one form or another in local markets or by the roadside.

262 The food crops are maize, sorghum, finger millet, sweet potatoes, ground-nuts, [241] legumes. Fish is an important article of diet. Eggs are believed to cause sterility and are only eaten by those outside the child-propagating age; milk is disliked and never consumed.[7] *Termite alates* (flying ants) are a much relished food when they come out on nuptial flights. Rice is considered a superior food, and is eaten when possible on ritual occasions.[8]

249 Tobacco is the main cash crop, with individual production under the supervision 439 of the Agricultural Department. The average cash earned per grower in 1943–4 was £5. 3*s*. This is overwhelmingly an external trade. Ground-nuts, which are sold at government-controlled markets to licensed buyers, bring in only a few shillings a year 226 to the average seller. Women obtain cash by selling beer. At the lake shore the fishing 439 industry is very important. Natives owning big nets are said to make between £20

and the baskets and pots. A wooden dish *ndisi* may be seen occasionally, but of late years, this has been generally replaced by enamelled articles. 415 [177]

Around the entire hut, or simply enclosing a yard behind it, there is often a fence about five feet high. In the enclosure thus formed, many household duties are performed, such as the pounding and sifting of grain. The grain store *nyuwo* often stands in this yard with the pigeon-loft and possibly a hen-house or goat kraal; these are sometimes found in the open space at the front of the house. If a grain store is built within the hut itself, it is then known as *mbunga*. Near the pigeon-loft will be seen a pole with prongs supporting an old pot with water for the pigeons to drink. In a tree in the bush nearby, there may stand a beehive, consisting of a bark cylinder. Similar cylinders are sometimes used as pigeon-houses. 361 343 [231]

The large pots for brewing beer are usually set in the yard or on the back veranda, together with a basket of split bamboo for carrying fowls, *chitetete* (Yao and Chin.). 415

Gourds. Gourds are grown in the village for use as vessels of various kinds. Different shapes serve different purposes; names are given them according to use rather than shape, though these more or less coincide. Ladles for water or beer, *mazuulo* or *ngwo* (*nzuuro* or *chibo*, Chin.) are usually long-handled gourds (Pl. XIV, figs. 7, 8, 9). Drinking vessels for beer, etc. *chipunda* and a specially large one, *ntumba* are usually of the shape illustrated in Plate XIV, fig. 1; sometimes they are like fig. 5, but this shape is more commonly used for water. *Lipunka*, the type illustrated by fig. 2, is also used for drinking or for holding gruel. Oil flasks, *chinsi* (*insya*, Chin.), are usually of the double-bellied type (figs. 4 and 6). Salt bottles, *chitumbu* (*chipuru*, Chin.), are similar to oil flasks. Rattles, *nsuju*, used at dances etc., are also made from gourds, often from those with tuberosities (fig 3). Other uses for gourds include pipes, snuff-boxes, enema funnels, and resonators for musical instruments.

Pottery. The art of pot-making appears to have been known to the Yao for a very considerable period. There is no history relating to its introduction among them. The art is in the hands of the Yao women. As among all Nyasaland tribes, a particular kind of clay is used and no admixture with any binding substance is made. The pots are simply moulded by hand from base to brim and, without the aid of any wheel or other device, wonderful symmetry is attained. 323

After drying, the pots are fired by being set on their bases on the ground and a wood fire is made round and above them. They are then sprinkled with an infusion of the *nyungwe* or *ntumbi* tree, a head of millet being used for the purpose, after which the pots are set upon a fire and millet husks are thrown into them and allowed so to be incinerated. These customs, a kind of christening of the pots, "insure their turning out well."

No glaze of any kind is used, but they are sometimes coloured red by boiling with a pigment called *ngwera*, prepared from a red sediment found in sluggish streams. The preparation of *ngwera* is in the hands of men and women who make a trade of it, such as a man called

3: Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

Both before and after the introduction of guns, the Yao used spears, *lipunga*, and bows, *ulunja*. The spear is a five foot long throwing spear with metal head and wooden shaft. No shield was used. Bows and arrows are made from the wood of the *tsau* or *pimbinpinitree*. The string is made of tendon. A double-bellied bow called *ulunja wa mkawa* was sometimes used, but, I believe, originally came from the Anyanja. The arrows, *mpondo*, have a metal arrow-head, and were often poisoned with *kombe*. 411

Hunting. The same weapons are used in hunting: the gun, the spear, and the bow and arrow. Smaller bows and arrows made with bamboo or reed shaft are also employed for shooting birds; one of the arrows has a blunt wooden head and serves to stun the bird. 224 411

From the Anyanja, the Yao learned the use of a harpoon for spearing the hippopotamus. The harpoon is a heavy spear-head of iron about eighteen inches long, attached to a rope and float. From the Anyanja, also, was learned the use of the falling block with spear for killing hippo. [177]

Elephants are caught in staked pits, and the larger antelopes are similarly trapped in pits with the sides sloping inwards towards the bottom, so that as the animal falls lower and lower with exhaustion, it is eventually suffocated. 224

Small buck are driven by dogs into nets set for long distances in the forest, and then speared or shot. Traps are also set for these smaller antelope and for many other small animals, rodents, etc. Birds are shot or trapped. Bird-lime is also employed. It is prepared from the juices of a number of trees by pounding the vegetable matter in water; the sticky mass so made is applied to sticks or poles. The sticks are placed near drinking places so that the birds alighting to take water become entangled. The poles are affixed to trees so that they appear to be the topmost boughs; this the native does, recognising the common habit of birds to sit on the very top of trees. The strength of the bird-lime is made according to the size of the bird he wishes to catch. [231] 223

Fishing. I am not sure how far the Yao is a natural fisherman. Not long ago he used only a many-pronged spear to catch his fish. Since then, he has acquired from the Anyanja the knowledge of making fish-traps and nets, and of using the fish poison. When the Yao came to live and intermarry among the Anyanja, there was one practice of the latter which they would not adopt and which caused a good deal of ill-feeling. A Mang'anja man coming home after fishing always used to prepare the fish and, leaving some ready to cook, he cooked others for his wife, bringing her water at the same time to wash her hands. After eating her own fish, she cooked the rest for her husband. A Yao would never cook for his wife. 226 [578 568]

Traps. The following is a list of some of the traps I have found in use among the Yao. The sketches will serve to explain their mechanism better than a lengthy description. Some are very ingeniously made, and most recall similar traps made in other parts of the world. 224

1. *Lukonji lwa lituwale*, a trap for the cane-rat (Pl. XIX, fig. 1).
2. *Lukonji lwa mbindi*, a trap for sharp-toothed gnawing animals, so called from

3:Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

301 of bamboo fastened together at one end on the flat side by binding with string, the free ends being sharpened to form the teeth of the comb. If the fastened end is ornamented with beads sewed on in patterns, the comb is called *lisemale* (*lu-osemala*, to comb). *Lisemale lia*
[824] *shinpembete* from *lu-upembete*, to be sticky, is the name of a small comb worn purely for ornament. On either side of the base of this comb, pieces of wood variously shaped are glued with the sticky juice from the root of the *shinpembete* tree. In this way, a sort of inlay is produced. Pieces of tin cans are sometimes substituted for wood. Women occasionally wear in their hair the small *chiwende* knife used for tattooing and shaving.

302 The native takes readily to perfumes of European introduction, but previously he was
[177] not an entire stranger to the use of such essences. *Mboka*, the bulbous root of a kind of grass which grows near water, contains some aromatic principle which has a pleasant odor. The stem is bent around and fixed into the bulb; this is then covered with beads and slung around the neck. *Mlunguse*, the Mlanje cedar, is also used, as well as the fruit of a shrub called *chiungue*. These substances are scraped into the castor oil used for anointing, and give it a pleasant odor.

No pigments are used on the body. As a sign of great rejoicing, the head and face and perhaps the whole body are covered with ashes, but the natives do not even paint the face with flour on ceremonial occasions.

301 Bands of beadwork are worn around the head, either as a simple band or a band finished off with a bunch in one spot, or with a tassel. Finger rings are worn made of ivory, eland hoof and horn, lead, and iron wire. There is also a great variety of bracelets and anklets, a list of which is given below.

Chipumbe: made of plaited grass, worn chiefly by little girls and women who cannot afford more expensive bracelets. As many as half a dozen may be worn on the wrist.

Likungula (pl. *makungula*): single circles of solid brass, one half to three quarters of an inch in diameter, worn by women usually as anklets, one or two on each limb. They may still be seen on some of the old women, but as they cause much discomfort, they have gone out of fashion. A man used to be very proud to see his wife adorned with so much wealth and she was content to be so hobbled by her vanity. The hammering up and pulling open of the *likungula* circle in order to remove it cost a fowl.

Chilungu: a brass bracelet of small calibre; *ilungu* (pl.) signifies a spiral cylinder made from the same thick brass wire covering the entire forearm.

Likwinjili: like *chilungu* of thin brass or iron wire, worn on arms and ankles.

Ching'onde: a bracelet of fine brass wire wound round a circular core. All the brass comes from the coast.

Likoso: a large ivory bracelet worn by men and women.

[237] *Ulungu:* ("stiff tail hairs of an animal"), the bracelet made of the tail hairs of the elephant or the gnu.

Likoko: the bracelet made from elephant hoof.

3:Stanner D-5 (ca. 1912) 1922 FT7 Yao FT7

Women stick on a small spit a pretty green and white beetle, one of the *Cetoniidae*. The free end of the spit is then held between the teeth. At different positions on the stick, the humming of the impaled insect gives rise to different notes. The beetle is named *chingwangwanga* or *chimmmm* (*mangalire*, Chin.). The wing-covers of another beetle, *matchetoke*, a *Lamellicorn*, are used by women for the making of a musical instrument. The wing-covers of some twenty of these insects are threaded on a string arranged round the shoulders and feet of the player as she sits on the ground. The string on each side, as it passes from the shoulder to the foot of the same side, is plucked by the fingers of the opposite hand, different notes being obtained by different degrees of tension put on the string by pressure with the feet. The wing-covers give a buzzing quality to the notes which all natives like. 534 237

Mention should also be made of the horn, *lipenga*, commonly made of a long piece of reed or bamboo with a trumpet-shaped end, made out of a portion of a gourd. Antelope horns are also used. The horn is blown on journeys. [484]

Dancing. Dancing among the Yao, as among many other peoples, is the outcome of the pleasure experienced in rhythmical movements. The first accompaniment was probably the clapping of hands to mark time, followed by some exclamatory sounds more or less prolonged and occurring at regular intervals. Later, there was probably some refrain and, later still, drums were added to mark time, and songs formed an additional accompaniment. I believe that, here, dancing has always been an expression of pleasure and happiness and has been secondarily introduced at many ceremonies. In the majority of cases, such ceremonies were occasions of joy, the only exception being at funerals, but there I think their introduction was rather as a means of passing the time and avoiding silent brooding than as any real part of the rite. 535

The names given to various dances indicate their time or rhythm, and are, therefore, comparable to our own words, waltz, two-step, etc. There may be a number of airs for each time, and many sets of words to each air. The time may be given by clapping only, or by the addition of drums. Anyone acquainted with these dances, hearing drumming in the distance, can at once recognise the dance that is going on.

The drums which are used at dances (Pl. XXII), are made of a hollowed-out log of wood with a skin tambour stretched over the mouth of the drum and fixed by wooden pegs. On the tambour is smeared a layer of beeswax. The tambour is tightened by warming over a fire, so that the correct note is obtained; a fire is always kept burning close to the spot where drums are being played. 534 535

Likuti: a drum shaped somewhat like a native flour mortar, three to six feet high with the tambour one to two feet in diameter. The drum usually lies on the ground, the player sitting on the barrel of the drum, or he may have it suspended from him by a cord, the body of the drum dragging on the ground between his legs. It is played with both hands and gives a deep, resonant note, "*ki, ki, ki*" (Pl. XXII, figs. 12, 13). 534

1: Tew E-4 (no date) 1950 FT7 Yao FT7

132 completely exhausted or reduced to a mere trickle. The average annual rainfall over
the last ten years is 29·75 in. The shore waters of Lake Pamolombe are well stocked
[136] with fish. Both districts are well wooded, with a large variety of timber trees. In the
[137] dry sandy soil where the population is unable to live for lack of water, the prevalent
type is *tsanya*. A line of foothills from Zomba to Chikala are conserved as Forest
Reserves.[1]

MAIN FEATURES OF ECONOMY[2]

241 The Yao are chiefly agriculturists, and in the old days were also hunters. As they
live largely in tsetse-infested areas, they do not keep cattle, except for a few herds
[231] near Fort Johnston and Zomba, in Nyasaland, and on the east of Lake Nyasa,[3] in the
mountains of the Ruvuma valley around Mataka's.[4]

439 Abdullah describes a time when the Yao were economically self-sufficient, making
their own bark-cloth, weaving, burning herbs for salt, and working iron for the tools
they needed. Nevertheless, the tradition of coastward journeys for trading with the
Arabs was well developed before the Europeans came to the country. They used to
trade cattle and salt from the Manganja and Lomwe for tobacco and hoes, and in
[567] exchange for slaves they got from the Arabs gunpowder, guns, swords, beads, coloured
cloths, earthenware, and foodstuffs.[5] Slaving expeditions were among the most
important activities of the chiefs.[6] The old tradition of the absence of the men from
the village owing to these expeditions, is continued in modern times by soldiers and
labour migrants to Southern Rhodesia and the Union. These men send back remit-
tances to the area, but the main population is supported by agriculture. Cash is needed
for purchasing salt and cloth, for paying certain dues and fines formerly paid in kind—
adultery compensation, diviner's and initiation fees—as well as for tax and rent. Con-
sequently, while certain crops, such as tobacco and ground-nuts, are grown for cash,
any food crop is liable to be sold in one form or another in local markets or by the
roadside.

262 The food crops are maize, sorghum, finger millet, sweet potatoes, ground-nuts,
[241] legumes. Fish is an important article of diet. Eggs are believed to cause sterility and
are only eaten by those outside the child-propagating age; milk is disliked and never
consumed.[7] *Termite alates* (flying ants) are a much relished food when they come out
on nuptial flights. Rice is considered a superior food, and is eaten when possible on
ritual occasions.[8]

249 Tobacco is the main cash crop, with individual production under the supervision
437 of the Agricultural Department. The average cash earned per grower in 1943–4 was
£5. 3*s*. This is overwhelmingly an external trade. Ground-nuts, which are sold at
government-controlled markets to licensed buyers, bring in only a few shillings a year
226 to the average seller. Women obtain cash by selling beer. At the lake shore the fishing
439 industry is very important. Natives owning big nets are said to make between £20

and £30 per annum. It is profitable to carry fresh fish inland by bicycle even as far as Blantyre,[1] as the shore price to the retailer is 4*s.* a load, which later may fetch from 16*s.* to 24*s.*[2] Yao on the south-west lake shore grow an excellent quality rice.[3] Rice is also grown near Lake Chilwa, but is mainly sold in the market organized near the lake shore by the Agricultural Department.

Division of Labour

The man builds the house, hunts, fishes, makes the nets, baskets, grain-store, game-traps, and, in the old days, the bark-cloth. He cultivates the tobacco. He cuts down the trees and may help with the hoeing and harvesting. The woman hoes, muds the floor of the hut, sweeps, cooks, brings firewood, draws water, brews beer, makes the pots and pipes.[4]

Land Usage

There are two types of garden in the Yao areas south of Lake Nyasa: one the ordinary garden in which the staples grow, and second, gardens along the stream beds. These latter are especially valuable for providing out-of-season crops. In addition most householders have a few small plots for tobacco and ground-nuts.

The main garden is cultivated by the slash-and-burn method, common in Central Africa. The Yao, unlike the Bemba, garden occupies the whole area cleared. Burning is done just before the rainy season (October–November). The ash and soil are hoed into elongated mounds and grain is planted along the ridges. Gardens may be cultivated for more than five years. In the second and subsequent years of cultivation the stalks and weeds are piled up and burnt. There are signs of soil impoverishment. The gardens are cleared in August, and heaped to dry for burning. After the burning the seeds are planted in late November. By February and March green maize is available to supplement the diet, and by the end of April the crops are ready to be harvested. The maize is stored in wicker containers, while sorghum is stored in the huts on a stand. Cassava is planted in large mounds made by turning the turfs over, so that the roots are outside the mound and the vegetable matter inside. Legumes are planted in smaller gardens, or interplanted with the main crop. Ground-nuts are stored, after being shelled, in mud-plastered wicker containers, designed to be rat-proof. Tobacco is planted at the sides of the streams for hand-watering in the seedling stage, and then transplanted about January. The leaves are ready to be plucked about April and soon afterwards they are marketed. Sweet potatoes are planted in the rainy season, and are ready for eating in May. The stream gardens yield out-of-season crops—maize, beans, pumpkins, and also sugar-cane, which is used in the initiation ceremonies.

Craftsmanship

The Yao have few skills. All cultivation is by hoe; axes and knives are their only other technological equipment. The men make mats from reeds and palm leaf, and the women make pottery. The huts are strongly built from poles laced with bamboo and plastered with mud. The roof is thatched with grass. Under Arab influence the

832 *Mpasi* is a love potion. Men are often anxious that women should ask them for love (*ku-pala*). A man seeing a woman whom he fancies, takes up some of the dust where she has trodden and mixing this with medicine puts it in his hair. If he meet her again, though he takes no notice of her, she will come to him.

789 When crops are harvested, a layer of the cereal is laid at the bottom of the corn-store, 241 and *uwke*, which consists of medicines contained in the skull of or made from the body of [826] a still-born infant, is then put in and the store filled. In this way, he who has only a small garden may be sure that his grain will last a long time. Similar medicine is put in gardens with the first rains to insure heavy crops. A man on the approach of the planting season should never give away seed to anyone until his own seed is put in or it may bring bad luck to his crop. This is evidently a superstition arising from the fact that if he gives seed away, he may not have enough left to raise a crop sufficient to support his family. Some people are considered "lucky at planting pumpkins, other people when they plant, reap only watery pumpkins." A man, therefore, will often ask one of the lucky people to plant his pumpkins for him. My hospital boy always got the cook to plant his pumpkins.

789 A man wishing to become a person of importance, with a village of his own, takes a 824 medicine made from a certain tree and then builds his hut in a new place, hoping people will flock to him. The tree is known as *chukambili*. Another medicine, taken in the belief that people will flock to a man in consequence, is made from the bush called *sitola*. Cf. *litule* planted at the threshold to attract visitors.

789 Conjuring. There are other performances akin to magic in the eyes of the natives, 791 which I have never had the opportunity of witnessing but which would appear to be of the nature of juggling or possibly hypnotism; some resemble the tricks of jugglers; others are more like some of the performances in India. I naturally supposed that they had been learned from men at the coast (Zanzibar), but I am assured that they belong to the Yao themselves.

Kambenje, a Yao of Chiradzulu, well-known at dances and *Unyago*, after some preliminary dancing, stands still and is covered by a cloth; when the cloth is again removed, he is discovered with a number of squealing puppies held in his loin cloth, which he then hands round. He begins to dance again and the persons to whom the puppies have been given watch him and then find they are holding excrement, not puppies. Or mud-fish are handed round and the people find they are holding women's diapers.

Another trick often performed by Kambenje was the burial of a man in the ground, covered up completely with earth; at the sounding of the drums the buried man comes running in from the back of the watching crowd.

Kasonga, a Yao of Malemya's, priest, and medicine man, after an *Unyago* ceremony used to put on his red blanket and walk over the hot embers of an enormous fire in the village open space. He admitted that he smeared himself with medicine and an eyewitness told me that when he put his feet on the hot logs, it caused a sizzling sound.

3: Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

516 731 769

knees and elbows, at intervals swaying their bodies from side to side and clapping their hands. Kasonga then ordered all to go and bathe, men and women separately. As they returned from the stream, rain began to fall.

Intercession on behalf of the sick may be made, especially by anyone who is likely to be accused of causing the illness by witchcraft.[1] The man standing with arms outstretched, downwards and a little in front of his body, the hands supine, takes some water in his mouth and discharges it in a stream on the ground, (probably as a sign of purification of his tongue), and then invoking "all the spirits above," asks that they will intercede to restore health to the sick man and bear witness to his own innocence of any wish to do the sick man injury. *Ku-pepa* is the word meaning to offer sacrifice and prayer. 755 769

Harvesting and hunting are occasions when sacrifices may be offered. It was formerly the custom for the chief to determine the day on which harvesting of millet should begin. On the day appointed, a big drum was beaten in the village and word passed round; then everyone would go down to his garden, gather a head of millet, and bring it back to the village where it was all handed over to the chief's headwife. After drying and threshing, a little of the grain was laid at the grave of an old chief by one of the reigning chief's advisers, the remainder being again distributed to all the people gathered together in the village meeting-place, who ate it raw. After this ceremony, harvesting began. 769 241 782

In passing through a millet garden, if a child asks his mother to give him some to eat, she plucks a bunch or two and reverently laying one at the foot of a *maoro* tree for the spirits or at the base of some other tree, if she cannot see a *maoro*, she gives the rest to the child.

When a hunting expedition makes its first killing, part of the flesh of the animal is laid at the base of a tree as a thank offering to the spirits and in anticipation of further favors to be conferred. All such offerings are supposed by the natives to be partaken of by the spirits, though they are well aware that they do not actually diminish in quantity. There is an interesting point in this connection: any man who has acted as *sbilo* (undertaker) to some well-known man may appropriate these offerings. In the case of the hunting offering, he will run round the tree, saying, "I am a hyaena, the spirits will not mind me," and will then take part of the flesh-offering and eat it. 782 224

In the same way, a *sbilo* may drink from a grave beer-pot after three days, when the spirits are supposed to have taken what they want.

With the exception of the *maoro* tree above mentioned (*ndima*, Chin.), and possibly another called *nsilo-ngoma* (Chin.), which is never used as firewood and which is supposed to be used by *mawi*, I do not think there are any sacred trees properly so-called. Miss Werner supposes that many of the big trees (often a species of *Ficus*) in villages are sacred.[2] The truth is, I believe, simply that a village is made naturally round a big tree which conveniently offers its shade for the village meeting place. The spirits of deceased chiefs may 824 778

[1] Vide supra, p. 287.

[2] The natives of British Central Africa, op. cit., p. 62.

3:Stanmus D-5 (ca. 1912) 1922 FT7 Yao FT7

never leave any food outside at night, not even the chaff from the grain she has been pounding, lest these most miserable of beings be attracted by it.

Chitowe is a word common to several tribes and among them appears to have various shades of meaning. Among the Wayao, the *itowe* are "the little people" of the leprechaun order. They rob the gardens and cause rot among the pumpkins; their little footprints can be seen where they have passed hither and thither; fruits and vegetables that they touch will become bitter. To prevent these disasters, the Yao, at the time when their crops are ripening, place different kinds of vegetables at cross-roads, hoping thereby to satisfy the *itowe* and prevent them coming into the gardens. As far as I am aware, the *itowe* have nothing to do with famine and are in no way connected with *Mtanga*, to be mentioned below, as Macdonald believed.[1] The *chitowe* is variously said to be "like a man but rather like an animal." He has two legs but goes on all fours.

The Yao describe another legendary race of "little people" who used to live in this country and who may still be met with, — "who knows?" They were of a very small stature, grew long beards, were very touchy, quarrelsome, and fierce, and carried spears. When anybody met one, he was immediately asked: "*Mumbonele kwapi?*", "From how far did you see me?" and it was always well to pretend to have seen the little man coming a long way off and make him believe he was considered quite a big person; if you said "Hullo, I've only just spotted you!", he would immediately spear you. They are commonly supposed to dwell on the tops of high mountains and are iron workers. They are called the *Mumbonele kwapi*.

There is no relation as far as I know between these two classes of "little people," but I think these stories go to uphold the theory recently reiterated by Hastings Guilford in his Hunterian Lecture (1914) that folk-lore fables of hobgoblins, etc., have a basis in fact. He believes that dwarf races at one time were to be found, possibly over a very wide area of the globe. In this country, I think it may be that one sees the transition from historical facts to true fairy stories.

The Anyanja have the same legend about these "little people," the *mwandi omwaluti* ("where-did-you-see-me"); it is indeed not only wide-spread throughout this country, (the Ahenga and Ankonde in North Nyasa district speak of the *mwandionwandu* who ask the same question), but there is a very similar legend among the Akikuyu in British East Africa.[2]

The *chitowe* is doubtless the *chiruwi* of the Anyanja, mentioned in Scott's dictionary,[3] as Miss Werner[4] has supposed, for one finds that among the Anyanja at the southern end of the Protectorate, the *chitowe* is described as having only one side to his body so that he is invisible when viewed from the off side, thus resembling the *chiruwe* who has one half of his body made of wax.

3

1st voice. *Atindili mbatata nganga yalele eja wakalabwe,*
potatoes guinea fowl eeh! thank you you,
2d voice. *Atindili mbatata akundanda atiyana'wo mwanja.*
potatoes they are calling me Atiyana there is going away home;
Chorus. *Kwanda, akakulile!*
Remove the hoe from its handle!

The name of any person may be introduced into these songs, sometimes the name of a member of the village or of some person well known in the district. To introduce a name thus is *ku-lumba*. *Eja!* is an exclamation of thanks; when receiving anything, both hands are held out, and the words *eja, eja, eja!* or *nanga, nanga!* are uttered.

4

1st voice. *Makolowele 'galile sombe apalapala nganapanda nguamba.*
The millet have eaten locusts you place did not plant not.
2d voice. *'Galile sombe apalapala nganapanda mpunga, atati, nguamba!*
Have eaten locust you place did not plant rice, father, not!
2d voice. *Apalapala nganapanda mpunga, atati, nguamba!*
1st voice. *Apalapala nganapanda mpunga, atati, nguamba!*
Chorus. *Makolowele, galile sombe!*

Makolowele: after the first crop of millet has been taken in, the stalks are cut off near the ground and the roots allowed to remain in the soil. Next season, they again sprout and yield a second crop. This second year growth is *makolowele*. [241]

5

1st voice. *Mazimba m'chinguamba chilo chilo chilao chilo chilo!*
Lions in the palm-trees at night, etc.
2d voice. *Mazimba m'chinguamba, kwimba likwata Atiyana! Tinjiwa chilo chilo etc.*
Lions in the palm-trees to sing *likwata Atiyana!* I shall die tonight, tonight, etc.
Chorus. *Mazimba m'chinguamba!*

Likwata is the name of a dance, *Atiyana* is a woman's name. Cf. "Let us eat, drink, and be merry, for tomorrow we die."

6

1st voice. *Ndandes, ndande, ndandes!* Repeat.
Teasing, teasing, teasing!
2d voice. *Nakolaga chilanda tanda, nandanda'na, nguanda!*
If you have teasing teasing, me tease me, I am going away!
Chorus. *Ndandes!*

4: Stannus D-5 (ca. 1909) 1910 FT7 Yao FT7
Marovi FR4

Gaga, the residue after pounding maize, is eaten by the women. No oils are used in cooking, but of fat and suet any native is very fond. Meat may be dried and smoked if in large quantity: flesh, fish and fowl is commonly roasted on spits; small pieces of chicken may be made into a kind of stew with beans and eaten as the relish. When on a journey the fire is commonly made against a tree. The cooking vessels are cleaned before use, not after. The fried fish eaten is often partly decomposed, and meat which is very high, even with maggots, is cooked and eaten, maggots and all. M Y 262 [252] [251] [184] [264]

Taboo.—Bushbuck is not eaten by many natives, as they say it feeds near graveyards. Fowls are not eaten by some, as this diet causes them to vomit; a snake-catcher never eats vegetables, and at the same time puts medicine on his hands. Many abstain from the flesh of certain animals as certain skin diseases are said to be caused thereby; all such diseases bear the name *wokuscenga*. M Y [753]

A man who loses a relation by drowning takes an oath that he will never again eat fish, and never drink water from such lake, river, etc. Here the idea is of course simply to avoid eating part of the relation.

A Nyasa and Machinga will not eat the flesh of the hippopotamus, because on the body they say there are the marks of a string round the loins and of a mat on his back, adding that long ago he was a man. Animals of prey would never under any circumstances be eaten. Milk used never to be drunk by an adult, as it was said to cause a man to become as a child. A man would not dare to drink woman's milk as it was said he would surely die of dysentery. M [825] M [272]

Tobacco, etc.—The smoking of tobacco was a custom introduced from the coast. Chewing was general among Machinga and Yao men and women, while the Angoni and Mañanja snuffed. With the tobacco a little lime, made by burning shells, was taken in the mouth. Giddiness and sleepy sensations were experienced after chewing. The Nyasa and Awisa smoke a hubble-bubble, the water vessel being a large sausage-shaped gourd with a reed stem supporting a large bowl of *mbabwa* wood, sometimes very nicely carved (Plate XXVII, Figs. 5 and 7). The Amyanja smokes a pipe with the bowl made of clay and the stem of bamboo (Plate XXVII, Fig. 6); these are made by the women. Tobacco is grown in nearly every village, a large-leaved rather coarse variety; it is sun-dried and rolled up into hollow rings 6 inches in diameter and 3 inches broad. For snuff (*Podia womuna*) the sun-dried tobacco is further dried over a fire on a pan, when cold it is ground on a stone with a smaller stone by the women, and with it is mixed some ashes of the *ngoza* fig-tree. M Y 276 [177]

At Blantyre I obtained a water-pipe made of bamboo stem; this was the water reservoir; a stem of reed supports a little clay bowl. The mouth is placed over the upper end of the bamboo. Bhang (*cannabis indica*) is smoked in a pipe of this kind.

AGRICULTURE.

The people live by cultivating the soil. Both sexes help in hoeing and planting, the collecting of the crops being mostly done by women. The hoe is the M Y 241

4: Stannus D-5 (ca. 1909)1910 FT7 Yao FT7
Marayi FR4
Ngoni FR5

M Y 241 M Y [423] N [422] only implement used. Sowing is done after the first rains, about November; the harvest takes place in May to July. Gardens are at varying distances from the villages, depending partly on the soil becoming exhausted after years of cultivation. Boundaries are marked by leaving a line of uncultivated ground, sowing a line of a different crop, tying knots in the young crops at intervals, ditches, etc. In starting a new garden, woodland is often taken; the trees are cut down, leaving stumps 3 feet high; the undergrowth is cleared away and burnt, the ashes distributed over the land, which is then hoed, really very superficially; the earth is then made up into little heaps with a central hole in each, after the first rains four or five grains of the cereal (maize, millet) are dropped in each and covered with earth; as the young shoots grow the hole is more and more filled in.

FIG. 8.

With the cereal is planted the seed of peas, beans, pumpkins, the former on coming up then grow up the maize stalks. The seed is last year's product and not specially selected.

M Y [343] [417] M Y [251] Depredations among crops made by elephant, hippopotamus, large antelope (eland and kudu), pigs and baboons, vary in extent in different districts. Little grass huts are built, raised above the ground like a pile-dwelling, in which watchers are stationed. Fences, sometimes extending for miles, are built. The gardens of the chief are hoed by his slaves or the people of the village. Maize is collected in the cob, and after the outer coverings have been removed is stored; so is the *nkolwe*, millet in the head; beans and peas are stored in baskets. Medicine is put on the ground to ensure a good crop, and a piece of stick is sometimes hung up for good luck.

CATTLE, ETC.

N 231 [422] The keeping of cattle is practically restricted to certain tribes living in districts free from tsetse-fly (Angoni, Wankonde); among these people wealth is reckoned by cattle. The milk is little used; the flesh is eaten only when an animal dies. Marks of ownership are made by cutting the ears (Fig. 8). Cattle are kept in open kraals by Angoni, in a compartment of their houses by Wankonde; they are tended by the small boys as a rule. Goats and sheep are kept all over the country. Castration of cattle is a recognised practice (*kufula*).

N 281 Angoni make their shields from cattle skins; their spear handles are covered with goat hair (beard); hair anklets and armlets in dancing costume are made from goat hair. Skins are used as dress to a small extent.

HUNTING.

M 224 A man intimates to the community around that he is making a hunt by clothing a boy of about ten years in leaves, who precedes him and the men from his own village through adjacent villages; at each village the lad has to lie down and

3: Stanner D-5 (ca. 1912) 1922 FT7 Yao FT7

276 made by boiling down the solution obtained by straining a decoction of water and the ashes of banana leaves; it contains, of course, some of the inorganic salts from the banana leaves. Without this addition, snuff is said to lack its proper aroma. The Angoni do not warm their snuff, but add a magnesi made in a similar way from cow dung.

262 146 Food stuffs. According to the general supposition, the native lives on a very monotonous diet, with a great excess of carbohydrates to the exclusion of proteids and fats. While it is certainly true that he does not consider that he has been fed without his "whank" of flour (maize, millet, rice or cassava), still he feels that his meal is a poor one if it does not also include some secondary dish, such as beans, fish, or green vegetables cooked like spinach.

● 243 262 The grains chiefly grown and used by the Yao are maize, millet, and a certain amount of rice.

Millets (sorghum): *Mapembe*, a tall variety, eight feet high, which is harvested late; *Mapembe pa mnunji*, a hairy variety; *Liambalaba*, a short kind, five feet high, which matures early; *Mbulwe*, characterized by the fact that the ripe grains will fall when the plant is shaken, and by a rather bitter taste; *Nandanji*, a variety six feet high which ripens quickly; *Kapile*, a shorter variety with a bitter taste but, according to the natives, a pleasant smell. (It makes good beer.)

Eleusine: *Liwanje*, about four feet high with very small grains; *Chindumbo*, used for making a very strong beer; *Mvundi*, a variety eight feet high. Cyprus grasses: *Usanje;* [273] there are two varieties, *Kaumbata*, which curls up and is used for making strong beer, and another kind which is not curly.

Maize: A number of varieties of the species *Zea mays* are grown by the Yao: *Chiaowa*, a black-grained variety; *Nampalala*, red maize; *Liwanje*, the seeds of which are large, white, and dented; *Nanchinga*, with grains flattened on the free surface; *Kanjelanjala*, a dwarf maize about four feet high.

Rice (*Oryza sativa*): *Mpunga* (generic name *Likoti*), a large-grained variety; *Singuna*, with very long grains; *Linguindimba*, red rice; *Mbangala*, characterized by the strong, not unpleasant odor it gives out when being cooked.

244 262 Cassava: *Chinangwa* is grown everywhere, but the Yao do not prepare flour from it, preferring to eat it raw at odd times. There are several varieties; *Chinangwa cha chiwowa*, white cassava; *Chinangwa cha mbawi*, a brown variety; *Liwanga*, a bitter species (*Manihot utilissima*) which produces a very large root; *Chilwi* and *Kam"anya*, varieties of *Manihot aipi*, the former characterized by its long, tapering leaves, while the latter is a dwarf variety with a big root.

Beans: there are a number of species of beans grown: *Mbarwanda* (*Cajanus indicus*), *ngunda* (*Vigna catiang*), *mbawa* (*Phaseolus mungo*), *mbwanda*, (*Phaseolus sp.*), *nambahodo*, (*Phaseolus sp.*), *ngundamalisi*, and a ground bean *njama* (*Voandzia subterranea*).

276 made by boiling down the solution obtained by straining a decoction of water and the ashes of banana leaves; it contains, of course, some of the inorganic salts from the banana leaves. Without this addition, snuff is said to lack its proper aroma. The Angoni do not warm their snuff, but add a *mapuli* made in a similar way from cow dung.

262 146 Food stuffs. According to the general supposition, the native lives on a very monotonous diet, with a great excess of carbohydrates to the exclusion of proteids and fats. While it is certainly true that he does not consider that he has been fed without his "whack" of flour (maize, millet, rice or cassava), still he feels that his meal is a poor one if it does not also include some secondary dish, such as beans, fish, or green vegetables cooked like spinach.

263 262 The grains chiefly grown and used by the Yao are maize, millet, and a certain amount of rice.

Millets (sorghum): *Mapembe*, a tall variety, eight feet high, which is harvested late; *Mapembe pa mnunji*, a hairy variety; *Lisambalaba*, a short kind, five feet high, which matures early; *Mbabao*, characterized by the fact that the ripe grains will fall when the plant is shaken, and by a rather bitter taste; *Nundunji*, a variety six feet high which ripens quickly; *Kapila*, a shorter variety with a bitter taste but, according to the natives, a pleasant smell. (It makes good beer.)

Eleusine: *Lisunje*, about four feet high with very small grains; *Chindumbo*, used for making a very strong beer; *Mundi*, a variety eight feet high. Cyprus grasses: *Usunje*; there are two varieties, *Kumbata*, which curls up and is used for making strong beer, and another kind which is not curly. 273

Maizes: A number of varieties of the species *Zea mays* are grown by the Yao: *Chiowa*, a black-grained variety; *Nungulala*, red maize; *Lisunje*, the seeds of which are large, white, and dented; *Nanchinga*, with grains flattened on the free surface; *Kanjalanjala*, a dwarf maize about four feet high.

Rice (*Oryza sativa*): *Mpunga* (generic name *Lihati*), a large-grained variety; *Singuno*, with very long grains; *Linguindimba*, red rice; *Mbungulu*, characterized by the strong, not unpleasant odor it gives out when being cooked.

291 262 Cassava: *Chinangwa* is grown everywhere, but the Yao do not prepare flour from it, preferring to eat it raw at odd times. There are several varieties; *Chinangwa cha chiwowa*, white cassava; *Chinangwa cha mbawani*, a brown variety; *Lisunga*, a bitter species (*Manihot utilissima*) which produces a very large root; *Chilasi* and *Kaw"anga*, varieties of *Manihot aipi*, the former characterized by its long, tapering leaves, while the latter is a dwarf variety with a big root.

Beans: there are a number of species of beans grown: *Mbarawanda* (*Cajanus indicus*), *ngunda* (*Vigna catiang*), *mbawo* (*Phaseolus mungo*), *mbaunda*, (*Phaseolus* sp.), *nkambakada*, (*Phaseolus* sp.), *ngandamalui*, and a ground bean *njuma* (*Voandzeia subterranea*).

3:Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

Peas, *ensuwe* (*Pisum sativum*), are grown in abundance. There are two other varieties; *ensuwe* (groundnuts), and *chindwaiwa*. 244 262

Sweet potatoes: *ubutate* (*Ipomoea batas*), of which the natives are very fond; they distinguish a red and a white variety, *ubutate ngunjejeu* and *ubutate ngwiimwa*.

The tuber-like root of a bush called *ngumbu* is also eaten, likewise the young underground shoots of a palm tree. The leaves of the sweet potato and the leaves of many wild growing plants are collected by the women and cooked like spinach; the flowers of pumpkins are used in a similar way. Of fruits eaten, the banana, *lipombo*, takes first place. A very large number of species of *Rumnus* are grown, including *mukumbuku*, *mbinga*, *mbali*, *mwiri* (*mapuqa*, *kabuta* a dwarf banana, *kaipuu* a wild banana, and *mlanga*, the plantain. The paw-paw is found all over the district. There are several varieties of pumpkin, *lipungu*, including *mbondu*, *chindondoli*, and a very large species called *ntaw ua ngwena*, "the crocodile's head." Varieties of cucumbers include *liapuka* and *kahitungulu*. 262 222

A large number of wild fruits are eaten, among them figs, *lubuje* (*Ficus*), *kaubu* (*Uapaca*), *chiili* and *liungu*, the fruits of two species of *Landolphia*, *mainga* or Kaffir oranges (a species of *Strychnos*), *chilundu*, the fruits of *Hyphaene* (palms), *mukwakwa* (*Myrianthus*) a wild tree belonging to the mulberry family, and others, *ndowa*, *malangamdembu*, *ndondombo*, *chingulungulu*, *chindupulpu*, *mulumbu*, *likwendu*, etc. The seeds from the heads of bulrushes (*Typha*) are mashed up and eaten.

All fish are eaten except the *ngunga*, which always causes urticaria. 262

The flesh of all the antelopes, of oxen, sheep and goats is eaten greedily; only bushbuck is avoided by some people as it is said to cause a skin eruption. Elephant is shunned by many on account of its rough skin, also rhinoceros because of the ulcers which it often has on its body, and hippopotamus on account of the marks on its back which are thought to be akin to leprosy. People eating the flesh of these animals are supposed often to sicken with leprosy, the pachydermatous skin, the ulceration or anaesthetic depigmented patches of that disease being reproduced, as the case may be. Few will eat pig or warthog on account of the digging habits of these animals. It is thought they may sometimes grub up bodies from graves. These flesh taboos may be due to Mohammedan influence. The lion, hyaena, and fox no one would touch, as they are supposed to be connected with witch,[1] but the heart of the lion might be eaten to acquire courage. Few will touch leopard flesh, but Kawinga's descendants do so. All will eat of the flesh of the serval cat but very few of the common wild cat. The rock rabbit, *ngungunire* (*mbira*, Chin.), is refused by most Yao as it is a "beast without shame," having no tail to hide what should in decency be hid. Very few will partake of the baboon, but monkey is acceptable to many. A few reject porcupine, supposing they will break out in spots, while the zebra may cause stripes, and none will touch the skunk. No one eats *ewoje*, a mouse that is believed to die if it crosses a path. All kinds of rats are eaten, but the show-rat and cane-rat only by boys. Snakes 262 753 [77] 834

[1] Vide supra, p. 324.

1: Tew E-4 (no date) 1950 FT7 Yao FT7

completely exhausted or reduced to a mere trickle. The average annual rainfall over the last ten years is 29·75 in. The shore waters of Lake Pamalombe are well stocked with fish. Both districts are well wooded, with a large variety of timber trees. In the dry sandy soil where the population is unable to live for lack of water, the prevalent type is *tsanya*. A line of foothills from Zomba to Chikala are conserved as Forest Reserves.[1]

MAIN FEATURES OF ECONOMY[2]

The Yao are chiefly agriculturists, and in the old days were also hunters. As they live largely in tsetse-infested areas, they do not keep cattle, except for a few herds near Fort Johnston and Zomba, in Nyasaland, and on the east of Lake Nyasa,[3] in the mountains of the Ruvuma valley around Mataka's.[4]

Abdullah describes a time when the Yao were economically self-sufficient, making their own bark-cloth, weaving, burning herbs for salt, and working iron for the tools they needed. Nevertheless, the tradition of coastward journeys for trading with the Arabs was well developed before the Europeans came to the country. They used to trade cattle and salt from the Mangonja and Lomwe for tobacco and hoes, and in exchange for slaves they got from the Arabs gunpowder, guns, swords, beads, coloured cloths, earthenware, and foodstuffs.[5] Slaving expeditions were among the most important activities of the chiefs.[6] The old tradition of the absence of the men from the village owing to these expeditions, is continued in modern times by soldiers and labour migrants to Southern Rhodesia and the Union. These men send back remittances to the area, but the main population is supported by agriculture. Cash is needed for purchasing salt and cloth, for paying certain dues and fines formerly paid in kind—adultery compensation, diviner's and initiation fees—as well as for tax and rent. Consequently, while certain crops, such as tobacco and ground-nuts, are grown for cash, any food crop is liable to be sold in one form or another in local markets or by the roadside.

The food crops are maize, sorghum, finger millet, sweet potatoes, ground-nuts, legumes. Fish is an important article of diet. Eggs are believed to cause sterility and are only eaten by those outside the child-propagating age; milk is disliked and never consumed.[7] *Termite alates* (flying ants) are a much relished food when they come out on nuptial flights. Rice is considered a superior food, and is eaten when possible on ritual occasions.[8]

Tobacco is the main cash crop, with individual production under the supervision of the Agricultural Department. The average cash earned per grower in 1943–4 was £5. 3s. This is overwhelmingly an external trade. Ground-nuts, which are sold at government-controlled markets to licensed buyers, bring in only a few shillings a year to the average seller. Women obtain cash by selling beer. At the lake shore the fishing industry is very important. Natives owning big nets are said to make between £20

and £30 per annum. It is profitable to carry fresh fish inland by bicycle even as far as Blantyre,[1] as the shore price to the retailer is 4s. a load, which later may fetch from 16s. to 24s.[2] Yao on the south-west lake shore grow an excellent quality rice.[3] Rice is also grown near Lake Chilwa, but is mainly sold in the market organized near the lake shore by the Agricultural Department.

Division of Labour

The man builds the house, hunts, fishes, makes the nets, baskets, grain-store, game-traps, and, in the old days, the bark-cloth. He cultivates the tobacco. He cuts down the trees and may help with the hoeing and harvesting. The woman hoes, muds the floor of the hut, sweeps, cooks, brings firewood, draws water, brews beer, makes the pots and pipes.[4]

Land Usage

There are two types of garden in the Yao areas south of Lake Nyasa: one the ordinary garden in which the staples grow, and second, gardens along the stream beds. These latter are especially valuable for providing out-of-season crops. In addition most householders have a few small plots for tobacco and ground-nuts.

The main garden is cultivated by the slash-and-burn method, common in Central Africa. The Yao, unlike the Bemba, garden occupies the whole area cleared. Burning is done just before the rainy season (October–November). The ash and soil are hoed into elongated mounds and grain is planted along the ridges. Gardens may be cultivated for more than five years. In the second and subsequent years of cultivation the stalks and weeds are piled up and burnt. There are signs of soil impoverishment. The gardens are cleared in August, and heaped to dry for burning. After the burning the seeds are planted in late November. By February and March green maize is available to supplement the diet, and by the end of April the crops are ready to be harvested. The maize is stored in wicker containers, while sorghum is stored in the huts on a stand. Cassava is planted in large mounds made by turning the turfs over, so that the roots are outside the mound and the vegetable matter inside. Legumes are planted in smaller gardens, or interplanted with the main crop. Ground-nuts are stored, after being shelled, in mud-plastered wicker containers, designed to be rat-proof. Tobacco is planted at the sides of the streams for hand-watering in the seedling stage, and then transplanted about January. The leaves are ready to be plucked about April and soon afterwards they are marketed. Sweet potatoes are planted in the rainy season, and are ready for eating in May. The stream gardens yield out-of-season crops—maize, beans, pumpkins, and also sugar-cane, which is used in the initiation ceremonies.

Craftsmanship

The Yao have few skills. All cultivation is by hoe; axes and knives are their only other technological equipment. The men make mats from reeds and palm leaf, and the women make pottery. The huts are strongly built from poles laced with bamboo and plastered with mud. The roof is thatched with grass. Under Arab influence the

[4] Aylin, 1931, p. 19.

539 "*Lokoto lokoto kondo ko*"
"Picking up picking up a little basket full"

to which the listeners exclaim

"*Lokotoni*"
"Overfloweni"

At the completion of each sentence in the story, one of his listeners will exclaim, "Go!" When he has finished his story, he says,

"*Ajikoko kotoko kotokowanga yamiwe yakowere, unko ekipungi*!"
"Take off the fire, the little mouse lost it in stupid, by the hood it is very hard, the hair (is) in a hump!"

During the intervals of a long story, one of the listeners may break in and sing some little song, such as the song of the *nkondo* in the story of the greedy man, thus giving the story-teller a rest.

The house and household utensils. The Yao house does not differ greatly from the
342 Nyanja habitation which I have already described elsewhere.[1] The accompanying figure (Pl. XIV, fig. 12) gives the circular plan of a hut with a veranda partly open and partly enclosed to form a room. The central pole of the hut is indicated, the hearth (H), the position of the sleeping mats (M), and the place where the water pots are kept (P). The
352 bed may be a bamboo platform supported by forked sticks a foot above the ground (*mpumuli*), or a dais of mud, over which is spread the sleeping-mat, *upuse*. (Pl. XIV, fig. 14.) Seats, *ekilengo*, are made of logs of wood with conveniently placed branches acting as legs. I have seen a symmetrically carved log with shaped legs all in one piece, which suggested by its form and by the presence of a button on the midline of the under surface that it was made in the imitation of an animal. Plank seats with peg legs are now sometimes seen. Wooden pegs are driven into the wall and serve to hang odd articles upon.

[359] The hearth is simply a shallow depression in the mud floor, around which are placed three large stones to support the cooking pots. Sometimes a canopy is built over the hearth, consisting of four upright poles supporting a platform made of reeds and grass, upon which millet and other seed grains are often stored. From this platform *kipulo* (*ionyje*,
[251] Chin.), the gourd containing the supply of salt is often hung. The seed grain tied up in little bundles is suspended from the *kipulo* where it becomes very dry and smoked, without any ill effect to the next year's crop. (Pl. XIV, fig. 16.) Four pronged branches of trees are often stuck in the ground with a string tied around the prongs, and used as holders for gourds, salt bottles, etc.; this device is called *kipunda* (*phunda*, Chin.). (Pl. XIV, fig. 10.)
415 The smaller utensils include the porridge stirring stick *mtiko* (Yao and Chin.) (Pl. XIV, fig. 12), several wooden spoons *ukiwosi* (*ukipunda* or *namulowa*, Chin.), (Pl. XIV, figs. 11, 13), a number of gourds of various shapes and sizes used as ladles and drinking vessels,

[1] 'Notes on some tribes of British Central Africa,' op. cit., p. 320-322.

Marovi FR4

Gaga, the residue after pounding maize, is eaten by the women. No oils are used in cooking, but of fat and suet any native is very fond. Meat may be dried and smoked if in large quantity: flesh, fish and fowl is commonly roasted on spits; small pieces of chicken may be made into a kind of stew with beans and eaten as the relish. When on a journey the fire is commonly made against a tree. The cooking vessels are cleaned before use, not after. The fried fish eaten is often partly decomposed, and meat which is very high, even with maggots, is cooked and eaten, maggots and all.

Taboo.—Bushbuck is not eaten by many natives, as they say it feeds near graveyards. Fowls are not eaten by some, as this diet causes them to vomit; a snake-catcher never eats vegetables, and at the same time puts medicine on his hands. Many abstain from the flesh of certain animals as certain skin diseases are said to be caused thereby; all such diseases bear the name *wolwawaga*.

A man who loses a relation by drowning takes an oath that he will never again eat fish, and never drink water from such lake, river, etc. Here the idea is of course simply to avoid eating part of the relation.

A Nyanja and Machinga will not eat the flesh of the hippopotamus, because on the body they say there are the marks of a string round the loins and of a mat on his back, adding that long ago he was a man. Animals of prey would never under any circumstances be eaten. Milk used never to be drunk by an adult, as it was said to cause a man to become as a child. A man would not dare to drink woman's milk as it was said he would surely die of dysentery.

Tobacco, etc.—The smoking of tobacco was a custom introduced from the coast. Chewing was general among Machinga and Yao men and women, while the Angoni and Mananja snuffed. With the tobacco a little lime, made by burning shells, was taken in the mouth. Giddiness and sleepy sensations were experienced after chewing. The Nyasa and Awisa smoke a hubble-bubble, the water vessel being a large sausage-shaped gourd with a reed stem supporting a large bowl of mahogany wood, sometimes very nicely carved (Plate XXVII, Figs. 5 and 7). The Amyanja smokes a pipe with the bowl made of clay and the stem of bamboo (Plate XXVII, Fig. 6); these are made by the women. Tobacco is grown in nearly every village, a large-leaved rather coarse variety; it is sun-dried and rolled up into hollow rings 6 inches in diameter and 3 inches broad. For snuff (*Fodia womanae*) the sun-dried tobacco is further dried over a fire on a pan, when cold it is ground on a stone with a smaller stone by the women, and with it is mixed some ashes of the *upoo* fig-tree.

At Blantyre I obtained a water-pipe made of bamboo stem; this was the water reservoir; a stem of reed supports a little clay bowl. The mouth is placed over the upper end of the bamboo. Bhang (*cannabis indica*) is smoked in a pipe of this kind.

AGRICULTURE.

The people live by cultivating the soil. Both sexes help in hoing and planting, the collecting of the crops being mostly done by women. The hoe is the

4: Stannus D-5 (ca. 1909)1910 FT7 Yao FT7
Marayi FR4
NGONI FR5

M Y 241 only implement used. Sowing is done after the first rains, about November; the harvest takes place in May to July. Gardens are at varying distances from the villages, depending partly on the soil becoming exhausted M Y [923] after years of cultivation. Boundaries are marked by leaving a line of uncultivated ground, sowing a line of a different crop, N [922] tying knots in the young crops at intervals, ditches, etc. In starting a new garden, woodland is often taken; the trees are cut down, leaving stumps 3 feet high; the undergrowth is cleared away and burnt, the ashes distributed over the land, which is then hoed, really very superficially; the earth is then made up into little heaps with a central hole in each, after the first rains four or five grains of the cereal (maize, millet) are dropped in each and covered with earth; as the young shoots grow the hole is more and more filled in.

FIG. 8.

With the cereal is planted the seed of peas, beans, pumpkins, the former on coming up then grow up the maize stalks. The seed is last year's product and not specially selected.

M Y [343] Depredations among crops made by elephant, hippopotamus, large antelope (eland and kudu), pigs and baboons, vary in extent in different districts. Little [417] grass huts are built, raised above the ground like a pile-dwelling, in which watchers are stationed. Fences, sometimes extending for miles, are built. The gardens of the chief are hoed by his slaves or the people of the village. Maize is collected M [251] in the cob, and after the outer coverings have been removed is stored; so is the [illegible], millet in the head; beans and peas are stored in baskets. Medicine is put on the ground to ensure a good crop, and a piece of stick is sometimes hung up for good luck.

CATTLE, ETC.

N 231 The keeping of cattle is practically restricted to certain tribes living in districts free from tsetse-fly (Angoni, Wankonde); among these people wealth is [922] reckoned by cattle. The milk is little used; the flesh is eaten only when an animal dies. Marks of ownership are made by cutting the ears (Fig. 8). Cattle are kept in open kraals by Angoni, in a compartment of their houses by Wankonde; they are tended by the small boys as a rule. Goats and sheep are kept all over the country. Castration of cattle is a recognised practice (*bufula*).

N 281 Angoni make their shields from cattle skins; their spear handles are covered with goat hair (beard); hair anklets and armlets in dancing costume are made from goat hair. Skins are used as dress to a small extent.

HUNTING.

M 224 A man intimates to the community around that he is making a hunt by clothing a boy of about ten years in leaves, who precedes him and the men from his own village through adjacent villages; at each village the lad has to lie down and

against all evils — witchcraft, attack by lions, etc. The *akamusi* then set about building 881
shelters in which the *wali* will remain during their term of instruction. According to the number of the *wali* so the number of places where shelters are built may vary from one, two or three, to as many as eight. Each of these places is called *Ndapala*. They may be many [346]
miles apart and are so placed for the convenience of the mothers in various groups of villages who bring the food daily to the group of boys from those villages.

The boys when they originally left the village were wearing a large bark-cloth covering, with beads and calico, which latter articles have been taken by the *m'michila* and his assistants. At *Ndapala* they wear simply a loin-cloth of bark.

During their stay at *Ndapala*, the *wali* are given animal names by the *akamusi* who [553]
carry on the instruction of the boys until their return to *Lupanda*, the *m'michila* having gone back to his village immediately after the circumcision. The names given to the boys [551]
are commonly names of beasts of prey such as Alikula (*likula* = the jackal), Achisuwi (*chisuwi* = the leopard), etc.

Certain restrictions as to diet are laid upon the *wali* by the *m'michila*, e.g. no meat of 881
an animal killed by a beast of prey, no mudfish, *likambale*. He will not allow any villager 262
to visit *Ndapala* after seven P.M. and visitors may only be men who have been through the ceremony. An uncircumcised man is called *nabalale*, one who has not been to his *Unyago*.

Other restrictions as to foodstuffs may be made by the *akamusi*, generally in connection with the mythical origin of such food substances. A finger-shaped yam called *lipeta* is taboo, as it is said to have first sprung from the grave of a leper, the inference being obvious. After the *Unyago*, the boys have to undergo a special doctoring before they may partake of them. Bananas and rice are similarly refused them, the latter on account of a story to the effect that rice grew from the nostrils of a dead man, the idea doubtless having relation to the resemblance of rice grains to maggots. Fish is denied them by some masters of cere- [825]
monies, as it is said to have originated from the diaper of a woman which she threw away while bathing.

Each *m'michila* may have special observances of his own. One near Zomba caused all cassava to be roasted in a certain way. Rows of pieces of cassava were placed in split [252]
bamboo spits and so roasted before the fire in the manner of fish. If roasted in the ordinary way, the cassava would split and show the white floury material inside, signified by the verb *ku-lagala*. If this is eaten by the *wali*, it is said that the preputial wound would reopen.

The length of time spent at *Ndapala* varies from four weeks to as long as three or four 881
months. In the first place they must wait till the circumcision wounds of all are completely healed. Delay may be occasioned by complications having arisen in some cases. Again, permission to return may be withheld by the chief for some reason or other. Should one of the *wali* die at *Ndapala*, the body is buried out in the bush and nothing [766]
is said to the parents until after the ceremonies are over and all have returned to the village.

3:Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

286 have said, to this day, and also appearing as the proper dress in all ceremonies. Clothing nowadays, among the majority, consists of calico of various kinds brought in by traders and further referred to under *Dress*.

287 **Bark-cloth,** *lisondo* (*chisondo*, Chin.) is made by the men. A piece of bark about two feet by one is cut from the living tree; the outside portions are removed and the whole piece, after being well scraped, is soaked in water. When partly softened, it is removed and hammered out with a wooden mallet; the process is repeated till the piece of bark is soft enough to enable it to be wrung in the hands, thus further loosening the fibres. The soaking, hammering, wringing, and pulling are continued till a piece of cloth three by five feet is obtained. This is sun-dried and yields a soft, pliable, and warm material. Several pieces may be sewed together to make a large sheet. Bark-cloth is sometimes stained black by soaking it in a kind of thick mud found on the plains. The mallet consists of a piece of hard wood with serrations on its face, held in a split stick handle; it is called *mbomaro*. A log of wood with a flattened surface, called *mbongwa*, plays the part of the anvil, the man who is using the mallet usually sitting on one end of the log.

281 **Skins.** The Yao are unacquainted with the art of tanning. Skins are prepared only by drying, and then softened by hammering with stones. They are not employed as articles of clothing but the larger ones are used to sit upon, the skins of the leopard and the lion being reserved for chiefs. Others are used to make bags to carry flour, for powder pouches, and to cover guns. The blacksmith's bellows are made of goat's skin.

283 **String,** *lukonji* (*chingwe*, Chin.): Two kinds of string are made, one from flax, the other from the inner part of the bark of the baobab tree. Fishing nets are made from the former, game nets from the latter.

326 **Metals and metal working.** The only metal ever obtained from the ore by the Wayao was iron, and it is probable that they learned this from the Anguru and Anyanja. The industry is now nearly dead since the introduction of trade articles. A few blacksmiths still ply their trade, but their work is restricted to the manufacture of knives, spear-heads, and razors. Hoes are no longer made. The hoe blade supplied by traders is in the form of the old native-made article, which had in turn displaced the older hoeing-stick. The blacksmith deals with his mass of metal by hammering it with stones. He provides himself with bellows, a small iron hammer, and a rudimentary kind of tongs. He is called *wachipala*.

324 **Stone.** The only important uses for stones among the Yao are for supporting the cooking pots on the fire, for heating water in some medicinal preparations, and for grinding millet. For this last purpose, a large, flat stone, inclined at an angle, is set up in some convenient spot, often on the veranda, and the grain is ground by means of a smaller stone held in the hands.

412 **The flour pestle and mortar.** Maize flour is prepared by pounding the grain in a [252] big wooden mortar, by means of a wooden pestle, consisting of a pole some five feet long and four inches in diameter with round ends. The mortar consists of a tree trunk about

4: Stannus D-5 (ca. 1909) 1910 FT7 Yao FT7
Ngoni FR5
Maravi FR4

Women wear their cloth folded across the upper level of the breasts from right to left. Men and women often have two cloths, one over the loins, only the second fastening over the chest. M Y N 291

A menstruating woman also wears a small piece of calico corresponding to a diaper supported by string round the waist.[1] The same thing is worn after child-birth for six months. Angoni women always wear them. M Y N [841] [846]

The Angoni, Chipeta wear their cloth toga-fashion, carrying a fold of cloth on the left arm. An Angoni chief wears three such, blue, white and coloured, the first outside, the last next to the skin.

The material used is now practically everywhere European-made calico, formerly bark cloth only was used by Nyanja, though weaving had been accomplished by Angoni, where skins were and are used as articles of clothing. M Y N [246]

There is nothing to distinguish men of various grades, etc. Fashion at the present time is very capricious—some patterned cloth being much worn one month will have no sale a month later; this is true both of men and of women.

There is no class uniform, and no "costumes" are worn save in dancing (*q.v.*).

Men are now seen wearing a piece of calico twisted up on the head in turban form, a custom lately introduced from the coast—the only indigenous head-gear is the string skull-cap worn by Angoni widows. N [589]

Under the heading of dress must be included the bead aprons worn by Yao and Angoni. Among the former the use of this garment is restricted to the women, who in the house sometimes wear nothing else; among the Angoni the children often have them and no other clothing.

Sandals are sometimes made of skin and fastened on the feet with a thong when crossing thorny country.

Among Angoni the *mwado* only used to be worn; this is a small hard-cased fruit which was hollowed out and worn just covering the glans penis. N 291 824

FOOD, ETC.

The staple food throughout the country is either maize or rice, the latter only at various spots on the lake shore where it can be grown. Two fixed meals per diem are taken, at 9 or 10 a.m. and again at 6 p.m.; each consists of *nsima* porridge made from maize flour or rice flour or boiled rice with some *ndiwo* (relish) to which the salt is added. At odd times the native will eat anything that opportunity offers—a piece of cassava root, a boiled sweet potato, a roasted maize cob, etc. M Y 262 [264]

The *nsima* is made by stirring flour (*ufa*) into boiling water till a stiff paste is formed; this is kept cooking for five minutes and then scraped out with a wooden M Y 252

[1] Diaper = *mthete*: a woman keeps five or six; they are never put away in baskets but always hung up; a woman changes every time she bathes, using two or three per diem; they may be given to a female child to wear, but are then not worn again by a woman.

4: Stannus D-5 (ca. 1909)1910 FT7 Yao FT7
Maravi FR4

M Y 252 M Y 264 M Y 217 258 M Y 271 515 M Y 273

spoon into a clean shallow basket or on to a plate. The *ndiwo* or relish, consisting of vegetables such as beans or a kind of spinach, a little fish or chicken, is cooked in a separate pot, and round these those about to eat collect. Washing their left hands in water, they take some of the porridge and making a sausage shape of it, dip it in the *ndiwo* and then cram it into their mouths.

Salt was obtained either from natural deposits or from "salt earth" on a stream bank near Fort Johnston, or from the ashes of burnt *bango* reeds or *machedza*; by a method of percolation through porous pots.

The native rather drinks between meals—water. After eating he may wash his mouth out and clean his teeth, using the frayed end of a piece of wood as a brush.

Alcohol.—With the exception of the people living on the lower river, who drink fermented palm juice,[1] beer is the common alcoholic beverage. Beer is made from maize (*chimanga*) or millet (*mapira*); the crop of the latter is very largely used for beer making; it makes the best beer and is certainly preferred by Angoni.

Gruel is prepared by boiling flour with water; after an hour leaven (*chimala*) is added fermentation sets in; and it may be drunk the next day; it is the sweet beer, *mtibe* or *ontondera*. On the second day it is again boiled and is allowed to cool; the third day more leaven is added (*chikutiko*); the fourth day fresh gruel is made, and the contents of the original pot, now called *nganga*, is added to it, making two pots of beer. It may be drank the same day while hot or allowed to cool and taken on the second day.

Food-stuffs.

M Y 262

1. Maize (*chimanga*), millet (*mapira*, *mawaere*), rice (*mpunga*).
2. Cassava—sweet potato.
3. Beans and peas of many varieties.
4. Pumpkins, cucumbers, melons (*drungu*, *mkuka*, *chibwende*).
5. Many kinds of leaves growing wild—also pumpkin leaves, of which a kind of spinach is made.
6. Bananas (*paw-paw*), sugar cane and reeds are sucked.
7. White ants, locusts, honey.
8. Numbers of small animals are eaten by Chipeta, Angoni, etc. With the spread of Mohammedanism this is going out; rats, mice, hares, rock-rabbit, etc. Chipeta will eat dog, and I once saw one eat baboon. Frogs, shell-fish, snakes, crocodiles, crows, vultures, eagles, are never eaten.
9. Fish (*nsomba*), fresh or dried, is much eaten, thirteen varieties being enumerated.
10. Chickens, ducks, wild birds that they may snare.

M Y [177]

[1] Spirits used to be made by distilling from beer-and banana-and palm-juice by means of a pot and a gun barrel.

Food-stuffs.

M Y 262

1. Maize (*chimanga*), millet (*mapira*, *mawere*), rice (*mpunga*).
2. Cassava—sweet potato.
3. Beans and peas of many varieties.
4. Pumpkins, cucumbers, melons (*dzungu*, *mkuka*, *chibwende*).
5. Many kinds of leaves growing wild—also pumpkin leaves, of which a kind of spinach is made.
6. Bananas (*paw-paw*), sugar cane and reeds are sucked.
7. White ants, locusts, honey.
8. Numbers of small animals are eaten by Chipeta, Angoni, etc. With the spread of Mohammedanism this is going out; rats, mice, hares, rock-rabbit, etc. Chipeta will eat dog, and I once saw one eat baboon. Frogs, shell-fish, snakes, crocodiles, crows, vultures, eagles, are never eaten. M Y [177]
9. Fish (*nsomba*), fresh or dried, is much eaten, thirteen varieties being enumerated.
10. Chickens, ducks, wild birds that they may snare.

[1] Spirits used to be made by distilling from beer and banana-and palm-juice by means of a pot and a gun barrel.

1: Tew E-4 (no date) 1950 FT7 Yao FT7

132 completely exhausted or reduced to a mere trickle. The average annual rainfall over the last ten years is 29·75 in. The shore waters of Lake Pamolombe are well stocked [136] with fish. Both districts are well wooded, with a large variety of timber trees. In the [137] dry sandy soil where the population is unable to live for lack of water, the prevalent type is *tsunya*. A line of foothills from Zomba to Chikala are conserved as Forest Reserves.[1]

MAIN FEATURES OF ECONOMY[2]

241 The Yao are chiefly agriculturists, and in the old days were also hunters. As they live largely in tsetse-infested areas, they do not keep cattle, except for a few herds [231] near Fort Johnston and Zomba, in Nyasaland, and on the east of Lake Nyasa,[3] in the mountains of the Ruvuma valley around Mataka's.[4]

439 Abdullah describes a time when the Yao were economically self-sufficient, making their own bark-cloth, weaving, burning herbs for salt, and working iron for the tools they needed. Nevertheless, the tradition of coastward journeys for trading with the Arabs was well developed before the Europeans came to the country. They used to trade cattle and salt from the Manganja and Lomwe for tobacco and hoes, and in [567] exchange for slaves they got from the Arabs gunpowder, guns, swords, beads, coloured cloths, earthenware, and foodstuffs.[5] Slaving expeditions were among the most important activities of the chiefs.[6] The old tradition of the absence of the men from the village owing to these expeditions, is continued in modern times by soldiers and labour migrants to Southern Rhodesia and the Union. These men send back remittances to the area, but the main population is supported by agriculture. Cash is needed for purchasing salt and cloth, for paying certain dues and fines formerly paid in kind—adultery compensation, diviner's and initiation fees—as well as for tax and rent. Consequently, while certain crops, such as tobacco and ground-nuts, are grown for cash, any food crop is liable to be sold in one form or another in local markets or by the roadside.

262 The food crops are maize, sorghum, finger millet, sweet potatoes, ground-nuts, [241] legumes. Fish is an important article of diet. Eggs are believed to cause sterility and are only eaten by those outside the child-propagating age; milk is disliked and never consumed.[7] *Termite alates* (flying ants) are a much relished food when they come out on nuptial flights. Rice is considered a superior food, and is eaten when possible on ritual occasions.[8]

249 Tobacco is the main cash crop, with individual production under the supervision 439 of the Agricultural Department. The average cash earned per grower in 1943–4 was £5. 3*s*. This is overwhelmingly an external trade. Ground-nuts, which are sold at government-controlled markets to licensed buyers, bring in only a few shillings a year 226 to the average seller. Women obtain cash by selling beer. At the lake shore the fishing 439 industry is very important. Natives owning big nets are said to make between £20

against all evils — witchcraft, attack by lions, etc. The *ahawusi* then set about building 881
shelters in which the *wali* will remain during their term of instruction. According to the number of the *wali* so the number of places where shelters are built may vary from one, two or three, to as many as eight. Each of these places is called *Ndapala*. They may be many [346]
miles apart and are so placed for the convenience of the mothers in various groups of villages who bring the food daily to the group of boys from those villages.

The boys when they originally left the village were wearing a large bark-cloth covering, with beads and calico, which latter articles have been taken by the *m'michila* and his assistants. At *Ndapala* they wear simply a loin-cloth of bark.

During their stay at *Ndapala*, the *wali* are given animal names by the *ahawusi* who [553]
carry on the instruction of the boys until their return to *Lapanda*, the *m'michila* having gone back to his village immediately after the circumcision. The names given to the boys [551]
are commonly names of beasts of prey such as Alikale (*likale* = the jackal), Achinawi (*chinawi* = the leopard), etc.

Certain restrictions as to diet are laid upon the *wali* by the *m'michila*, e.g. no meat of 881
an animal killed by a beast of prey, no mudfish, *likumbale*. He will not allow any villager 262
to visit *Ndapala* after seven P.M. and visitors may only be men who have been through the ceremony. An uncircumcised man is called *mbalale*, one who has not been to his *Unyago*.

Other restrictions as to foodstuffs may be made by the *ahawusi*, generally in connection with the mythical origin of such food substances. A finger-shaped yam called *lipeta* is taboo, as it is said to have first sprung from the grave of a leper, the inference being obvious. After the *Unyago*, the boys have to undergo a special doctoring before they may partake of them. Bananas and rice are similarly refused them, the latter on account of a story to the effect that rice grew from the nostrils of a dead man, the idea doubtless having relation to the resemblance of rice grains to maggots. Fish is denied them by some masters of cere- [825]
monies, as it is said to have originated from the diaper of a woman which she threw away while bathing.

Each *m'michila* may have special observances of his own. One near Zomba caused all cassava to be roasted in a certain way. Rows of pieces of cassava were placed in split [252a]
bamboo spits and so roasted before the fire in the manner of fish. If roasted in the ordinary way, the cassava would split and show the white floury material inside, signified by the verb *ku-lapala*. If this is eaten by the *wali*, it is said that the preputial wound would reopen.

The length of time spent at *Ndapala* varies from four weeks to as long as three or four 881
months. In the first place they must wait till the circumcision wounds of all are completely healed. Delay may be occasioned by complications having arisen in some cases. Again, permission to return may be withheld by the chief for some reason or other. Should one of the *wali* die at *Ndapala*, the body is buried out in the bush and nothing [766]
is said to the parents until after the ceremonies are over and all have returned to the village.

3:Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

19. That portion of the gut of animals having folds of mucus membrane inside, may be eaten only by old people past the child-propagating age. If a young woman should eat it, she would have difficulty in labor. 771 784 DLA

20. It is believed that people who eat too freely of a little fish like whitebait called *matumba* get obstruction of the bowel by the wedging together of the bones. The treatment adopted is to pass up the rectum a smooth stick with a pad of rag at the end. This cannot be done by the person himself and so the aid of another has to be called in; only an intimacy, such as the relationship of brother-in-law gives, will warrant this service being asked.

21. The Yao believe that there is a little insect which lives in the ear, called *chinyene kipilumile*, which tells the person what is said to him, the wax in the ear being its environment. The pupil is called *mwanache jwa lisu*, the child of the eye. [826]

22. Among women, the uterus is called *nawuse* (*nuso* = eyes); it is supposed to be a little person who holds the foetus. When the child is born, *nawuse* cannot find it and starts looking about, the movements causing the afterpains.

23. A man making his first journey to the coast used to sprinkle himself with water from every stream he crossed to give him a safe journey. In the same way, women at the present day going between Zomba and Blantyre sprinkle their babies with water from each stream. [484]

24. An ant-like insect called *ndopetumbe* (*lumbotumbe*, Chin.) [*Anaphidris mephistis*] is lucky. On seeing it a native pats its belly and then rubs his own, wishing for plenty of food that day. If he is embarking on a journey or beginning some enterprise, he will wrap one of these insects in a fold of his loin cloth and take it with him for luck. [825]

25. When a native hears the *mwipe* bird call (its call is like the mew of a cat), if he wants something, he immediately says, "Oh *mwipe*, I want so-and-so. Be quiet and I will then be quiet, too!" If the bird ceases calling, he knows the wish will be granted. The female bird is said to be the more certain prophet.

26. The snake, *nabulubuti*, which lives in trees and is of a buff clay color with green markings, is said by natives to pierce the chest and tie a knot in itself on each side so that it can only be withdrawn by cutting off one knot. When the snake is thus withdrawn, its blood mixes with that of the man and he will die.

27. Najives have a habit of marking the spot where any event takes place by a stone by the side of the path, and every passer-by will add a stone for luck. In this way some large piles of stones have been made. [777]

28. A man resting on his way home from a long journey places a stone in the fork between the branches of a nearby tree, so that on his arrival he may find his wife has put by some food for him and has not used up the day's stock of flour.

29. A chameleon found digging in the path is said to presage the death of the finder's nearest relative. [789]

276 made by boiling down the solution obtained by straining a decoction of water and the ashes of banana leaves; it contains, of course, some of the hongwale salts from the banana leaves. Without this addition, snuff is said to lack its proper aroma. The Angoni do not warm their snuff, but add a snupdi made in a similar way from cow dung.

262 146 Food stuffs. According to the general supposition, the native lives on a very monotonous diet, with a great excess of carbohydrates to the exclusion of proteids and fats. While it is certainly true that he does not consider that he has been fed without his "nsali" of flour (maize, millet, rice or cassava), still he feels that his meal is a poor one if it does not also include some secondary dish, such as beans, fish, or green vegetables cooked like spinach.

243 262 The grains chiefly grown and used by the Yao are maize, millet, and a certain amount of rice.

Millets (sorghum): *Mapemba*, a tall variety, eight feet high, which is harvested late; *Mapemba ga nsunji*, a hairy variety; *Liambalaba*, a short kind, five feet high, which matures early; *Mbalao*, characterized by the fact that the ripe grains will fall when the plant is shaken, and by a rather bitter taste; *Nandenji*, a variety six feet high which ripens quickly; *Kapile*, a shorter variety with a bitter taste but, according to the natives, a pleasant smell. (It makes good beer.)

Elusine: *Liwanja*, about four feet high with very small grains; *Chindumbo*, used for making a very strong beer; *Mwendi*, a variety eight feet high. Cyperus grasses: *Usanja*; [273] there are two varieties, *Kanimbata*, which ripens up and is used for making strong beer, and another kind which is not early.

Maizes: A number of varieties of the species *Zea mays* are grown by the Yao: *Chinwan*, a black-grained variety; *Nampinda*, red maize; *Liwanja*, the seeds of which are large, white, and dented; *Nambinga*, with grains flattened on the free surface; *Kanjakanjala*, a dwarf maize about four feet high.

Rice (*Oryza sativa*): *Mpunga* (generic name *Likoti*), a large-grained variety; *Singawa*, with very long grains; *Linguvindimbo*, red rice; *Mbangala*, characterized by the strong, not unpleasant odor it gives out when being cooked.

244 262 Cassava: *Chimangwa* is grown everywhere, but the Yao do not prepare flour from it, preferring to eat it raw at odd times. There are several varieties; *Chingangwa cha chinwere*, white cassava; *Chimangwa cha nhwani*, a brown variety; *Liangu*, a bitter species (*Manihot utilissima*) which produces a very large root; *Chilasi* and *Kaw"ongo*, varieties of *Manihot aipi*, the former characterized by its long, tapering leaves, while the latter is a dwarf variety with a big root.

Beans: there are a number of species of beans grown: *Mbawanda* (*Cajanus indicus*), *ngunda* (*Vigna sinensis*), *ndunza* (*Phaseolus vulgaris*), *ndumba*, (*Phaseolus* sp.), *nandukuda*, (*Phaseolus* sp.), *ngandamuhi*, and a ground bean *njanza* (*Voandzeia subterranea*).

Peas, cowpeas (*Pisum sativum*), are grown in abundance. There are two other varieties: 244
mimo (groundnuts), and chindwaire. 262

Sweet potatoes: mbatata (*Ipomoea batas*), of which the natives are very fond; they distinguish a red and a white variety, mbatata nyanjojoo and mbatata nyamwera.

The tuber-like root of a bush called ngwendu is also eaten, likewise the young underground shoots of a palm tree. The leaves of the sweet potato and the leaves of many wild growing plants are collected by the women and cooked like spinach; the flowers of pumpkins are used in a similar way. Of fruits eaten, the banana, *lipondo*, takes first place. A very large number of species of *Ficus* are grown, including mwiwandudu, mbingo, mkoli, mwiri nyangaya, *lubutu* a dwarf banana, *lulywa* a wild banana, and mlungu, the plantain. The paw-paw is found all over the district. There are several varieties of pumpkin, lipungu, including mbonda, chindondoli, and a very large species called mtwa wa ngwena, "the crocodile's head." Varieties of cucumbers include *lingunda* and *lukitungulu*. 262 222

A large number of wild fruits are eaten, among them figs, *lubaja* (*Ficus*), *lindwa* (*Uapaca*), *chimili* and *lisungu*, the fruits of two species of *Landolphia*, mutungu or *Kaffir* oranges (a species of *Strychnos*), *chilundu*, the fruits of *Hyphaene* (palms), mukwakwa (*Myrianthus*) a wild tree belonging to the mulberry family, and others, mdimu, mukungumbwala, mkwakwa, chingulungulu, *chindungulu*, mukwala, likwanda, etc. The seeds from the heads of bulrushes (*Typha*) are roasted up and eaten.

All fish are eaten except the nyanga, which always causes urticaria.

The flesh of all the antelopes, of cows, sheep and goats is eaten greedily; only bushbuck is avoided by some people as it is said to cause a skin eruption. Elephant is shunned by many on account of its rough skin, also rhinoceros because of the ulcers which it often has on its body, and hippopotamus on account of the marks on its back which are thought to be skin to leprosy. People eating the flesh of these animals are supposed often to sicken with leprosy, the pachydermatous skin, the ulceration or anaesthetic depigmented patches of that disease being reproduced, as the case may be. Few will eat pig or warthog on account of the digging habits of these animals. It is thought they may sometimes grub up bodies from graves. These fish taboos may be due to Mohammedan influence. The lion, hyaena, and fox no one would touch, as they are supposed to be connected with sorcery;[1] but the heart of the lion might be eaten to acquire courage. Few will touch leopard flesh, but Kasungu's descendants do so. All will eat of the flesh of the serval cat but very few of the common wild cat. The rock rabbit, nyangwaiwa (mbira, Chin.), is refused by most. Yao say it is a "beast without shame," having no tail to hide what should in decency be hid. Very few will partake of the baboon, but monkey is acceptable to many. A few reject porcupine, supposing they will break out in spots, while the zebra may cause stripes, and none will touch the skunk. No one eats *ungulu*, a mouse that is believed to die if it crosses a path. All kinds of rats are eaten, but the shrew-rat and mice-rat only by boys. Snakes 262 753 [77] 262 [534]

[1] Vide supra, p. 336.

no one will touch. With the exception of carrion birds such as the crow and the hawk, most birds are considered fit to eat. The hornbill is not eaten, as it is supposed to carry part of a corpse on its nose.[1] Fowls form a regular article of diet, but some taboos in this connection are mentioned elsewhere.

Eggs are eaten only by children and old people; that is, by those outside the child propagating age. Milk is never consumed in any form. They say, "What a disgusting habit, to suck the juice of an animal while it is still alive!"

Pregnant women will not eat certain things lest the child be born with some deformity, such as the snout of a pig, or the white stripes of a zebra.

Art and decoration. Sculpture can hardly be said to be an art known to the Yao. The only piece of stone work I have ever seen was a granite boulder, on the surface of which cup-holes had been made for the game of *Bao* (Pl. IV, fig. 4).

Of late years, individuals here and there have begun carving wooden figures of men and animals. The Yao, of course, make no idols. It is uncertain exactly how long it is since any of these people started producing wooden figures. I should think that this art has sprung up within the past twelve or thirteen years, that is to say, since there has been a market for them among European residents. In the first place only natives and some of the commoner animals, the eland and leopard, were represented; since then, many animals and Europeans have been copied. The native is extraordinarily clever in reproducing characteristic features in dress, etc., so that a Portuguese is easily distinguished from an Englishman. The little models in ivory of animals and native household objects, made by the Swahili people on Lake Nyasa, have never been copied by the Yao. Neither do they make clay images of men and cattle as do the Zulu-descended Angoni and cattle-keeping Wankonde. No native would allow any wooden figure to remain in his house for fear of ill luck; the women especially would look askance at them, fearing some misfortune in their next pregnancy. Little wooden figures of birds, however, are sometimes seen affixed to the point of the hut roof.

The making of carved figures, then, is of recent introduction, or rather is a recent event in the evolution of the Yao, as they were not taught but self-inspired in the work.

The ability to make representations of objects by drawing appears in the same way to originate spontaneously here and there as a sport. Natives with a talent for drawing are found among all the tribes, and among the Yao, it is said, there have always been some who have been able to draw. Naturally enough, their reproductions are made on the walls of their houses, and their subjects are generally animals of the forest, sometimes men and houses, or some other object of particular interest[2] (Pl. VIII, fig. 1). I also give sketches of some other drawings I have noted (Pl. XVIII); the line figure of a man at Makanjila's

[1] Vide supra, p. [illegible].

Ngoni FR5
Marravi FR4

Women wear their cloth folded across the upper level of the breasts from right to left. Men and women often have two cloths, one over the loins, only the second fastening over the chest. M Y N 291

A menstruating woman also wears a small piece of calico corresponding to a diaper supported by string round the waist.[1] The same thing is worn after child-birth for six months. Angoni women always wear them. M Y N [244] [246]

The Angoni, Chipeta wear their cloth toga-fashion, carrying a fold of cloth on the left arm. An Angoni chief wears three such, blue, white and coloured, the first outside, the last next to the skin.

The material used is now practically everywhere European-made calico, formerly bark cloth only was used by Nyanja, though weaving had been accomplished by Angoni, where skins were and are used as articles of clothing. M Y N [286]

There is nothing to distinguish men of various grades, etc. Fashion at the present time is very capricious—some patterned cloth being much worn one month will have no sale a month later; this is true both of men and of women.

There is no class uniform, and no "costume" are worn save in dancing (q.v.).

Men are now seen wearing a piece of calico twisted up on the head in turban form, a custom lately introduced from the coast—the only indigenous head-gear is the string skull-cap worn by Angoni widows. N [289]

Under the heading of dress must be included the head aprons worn by Yao and Angoni. Among the former the use of this garment is restricted to the women, who in the house sometimes wear nothing else; among the Angoni the children often have them and no other clothing.

Sandals are sometimes made of skin and fastened on the feet with a thong when crossing thorny country.

Among Angoni the *mondo* only used to be worn; this is a small hard-cased fruit which was hollowed out and worn just covering the glans penis. N 291 [324]

FOOD, ETC.

The staple food throughout the country is either maize or rice, the latter only at various spots on the lake shore where it can be grown. Two final meals per diem are taken, at 9 or 10 a.m. and again at 6 p.m.; each consists of *nsima* porridge made from maize flour or rice flour or boiled rice with some *ndiwo* (relish) to which the salt is added. At odd times the native will eat anything that opportunity offers—a piece of cassava root, a boiled sweet potato, a roasted maize cob, etc. M Y 262 [268]

The *nsima* is made by stirring flour (*ufa*) into boiling water till a stiff paste is formed; this is kept cooking for five minutes and then scraped out with a wooden M Y 252

[1] Diaper or *mikoto*: a woman keeps five or six; they are never put away in baskets but always hung up; a woman changes every time she bathes, using two or three per diem; they may be given to a female child to wear, but are then not worn again by a woman.

4: Stanner D-5 (ca. 1909)1910 FT7 Yao FT7
Marawi FR4

M Y 252 spoon into a clean shallow basket or on to a plate. The *ndiwo* or relish, consisting of vegetables such as beans or a kind of spinach, a little fish or chicken, is cooked M Y 264 in a separate pot, and round these those about to eat collect. Washing their left hands in water, they take some of the porridge and making a sausage shape of it, dip it in the *ndiwo* and then cram it into their mouths.

M Y 217 Salt was obtained either from natural deposits or from "salt earth" on a stream 258 bank near Fort Johnston, or from the ashes of burnt *bango* reeds or *mankodze*; by a method of percolation through porous pots.

M Y 278 515 The native rather drinks between meals—water. After eating he may wash his mouth out and clean his teeth, using the frayed end of a piece of wood as a brush.

M Y 273 *Alcohol.*—With the exception of the people living on the lower river, who drink fermented palm juice,[1] beer is the common alcoholic beverage. Beer is made from maize (*chimanga*) or millet (*mapira*); the crop of the latter is very largely used for beer making; it makes the best beer and is certainly preferred by Angoni.

Grout is prepared by boiling flour with water; after an hour leaves (*chimoto*) is added fermentation sets in; and it may be drunk the next day; it is the sweet beer, *utile* or *ontendere*. On the second day it is again boiled and is allowed to cool; the third day more leaves is added (*chikotile*): the fourth day fresh grout is made, and the contents of the original pot, now called *upungu*, is added to it, making two pots of beer. It may be drunk the same day while hot or allowed to cool and taken on the second day.

Food-stuffs.

M Y 262

1. Maize (*chimanga*), millet (*mapira, mawere*), rice (*mpunga*).
2. Cassava—sweet potato.
3. Beans and peas of many varieties.
4. Pumpkins, cucumbers, melons (*dzungu, mkoko, chikwende*).
5. Many kinds of leaves growing wild—also pumpkin leaves, of which a kind of spinach is made.
6. Bananas (*pese-pese*), sugar cane and reeds are sucked.
7. White ants, locusts, honey.
8. Numbers of small animals are eaten by Chipeta, Angoni, etc. With the spread of Mohammedanism this is going out; rats, mice, hares, rock-rabbit, etc. Chipeta will eat dog, and I once saw one eat baboon. Frogs, shell-fish, snakes, crocodiles, otters, vultures, eagles, are never eaten.

M Y [177]

9. Fish (*nsomba*), fresh or dried, is much eaten, thirteen varieties being enumerated.
10. Chickens, ducks, wild birds that they may snare.

[1] Spirits used to be made by distilling from beer-and banana-and palm-juice by means of a pot and a gun barrel.

4:Stannus D-5 (ca. 1909) 1910 FT7 Yao FT7
Morovi FR4

Gupa, the residue after pounding maize, is eaten by the women. No oils are used in cooking, but of fat and suet any native is very fond. Meat may be dried and smoked if in large quantity: flesh, fish and fowl is commonly roasted on spits; small pieces of chicken may be made into a kind of stew with beans and eaten as the relish. When on a journey the fire is commonly made against a tree. The cooking vessels are cleaned before use, not after. The fried fish eaten is often partly decomposed, and meat which is very high, even with maggots, is cooked and eaten, maggots and all.

Taboo.—Bushbuck is not eaten by many natives, as they say it feeds near graveyards. Fowls are not eaten by some, as this diet causes them to vomit; a snake-catcher never eats vegetables, and at the same time puts medicine on his hands. Many abstain from the flesh of certain animals as certain skin diseases are said to be caused thereby; all such diseases bear the name *mdwewenge*.

A man who loses a relation by drowning takes an oath that he will never again eat fish, and never drink water from such lake, river, etc. Here the idea is of course simply to avoid eating part of the relation.

A Nyanja and Machinga will not eat the flesh of the hippopotamus, because on the body they say there are the marks of a string round the loins and of a mat on his back, adding that long ago he was a man. Animals of prey would never under any circumstances be eaten. Milk used never to be drunk by an adult, as it was said to cause a man to become as a child. A man would not dare to drink woman's milk as it was said he would surely die of dysentery.

Tobacco, etc.—The smoking of tobacco was a custom introduced from the coast. Chewing was general among Machinga and Yao men and women, while the Angoni and Mananja snuffed. With the tobacco a little lime, made by burning shells, was taken in the mouth. Giddiness and sleepy sensations were experienced after chewing. The Nyasa and Awisa smoke a hubble-bubble, the water vessel being a large sausage-shaped gourd with a reed stem supporting a large bowl of ebonite wood, sometimes very nicely carved (Plate XXVII, Figs. 5 and 7). The Amanja smoke a pipe with the bowl made of clay and the stem of bamboo (Plate XXVII, Fig. 6); these are made by the women. Tobacco is grown in nearly every village, a large-leaved rather coarse variety; it is sun-dried and rolled up into hollow rings 6 inches in diameter and 3 inches broad. For snuff (*Fodia* women) the sun-dried tobacco is further dried over a fire on a pan, when cold it is ground on a stone with a smaller stone by the women, and with it is mixed some ashes of the *nyasa* fig-tree.

At Blantyre I obtained a water-pipe made of bamboo stem; this was the water reservoir; a stem of reed supports a little clay bowl. The mouth is placed over the upper end of the bamboo. Bhang (*cannabis indica*) is smoked in a pipe of this kind.

AGRICULTURE.

The people live by cultivating the soil. Both sexes help in hoeing and planting, the collecting of the crops being mostly done by women. The hoe is the

10: Sanderson D-5 (ca. 1920)1922 FT7 Yao FT7

The men and boys now pass through the arch in order of seniority; each splashes himself with the water in the trough, but neither speaks nor rinses the mouth. The women come next, led by the head-wife of the chief; the latter rinses her mouth and, instructed by the doctor, repeats a prayer similar to that offered by her husband. The remainder of the women merely splash themselves, like the men, before passing through the arch. All then return to the village, where the *pyajile* is continued. 751 796

Finally the doctor takes the hammer-head from the trough and hands it to the chief, who adds the haft into it, and, a hoe having been placed on the ground, goes through the form of forging the latter by beating it with the hammer. He then scrapes the ground with the hoe as if clearing a place overgrown with grass; he does not dig with it as in hoeing up the ground for planting seed. After this rite the chief again bathes in medicated water similar to that in the trough, and the ceremony is complete.

Whereas the *pyajile* ceremony and its adjunct, the rite of the arch, are now but rarely performed, no Yao will omit the rite of purification after a death in his family. This ceremony consists of two essential parts, both protective against the *ndoko*, a disease characterized by dropsy and supposed to be contracted by contact with a corpse, or by association, especially by sharing a meal, with those who have been in such contact. The first of these parts is bathing in certain medicines, which protects the bather from *ndoko*, and the second consists of a sort of communion meal, shared by all friends and especially relatives with those who have been contaminated, and designed to protect those friends and relatives. [178] 751 764 796 783

The decoction for bathing is made by soaking the roots of *lapodendati* and *lambondo* in water, together with the bark of *ndomwe*, one piece each from the east and west aspects of the tree; the water assumes a reddish tint, and the whole body is bathed. 751 783 824 765 [262]

The communion meal consists of porridge made from any kind of flour or of rice, and some *ngwada* beans. In the latter some scorched and powdered root of *ntandangulele* is mixed, with a little salt. All near relatives of the deceased must partake of this meal, as well as their wives and their near relatives; part is carefully put aside for the use of any relative unable to be present at the ceremony.

Latterly, since the spread of Islam among the WaYao, this rite has become confused with the distribution of food to the poor at the funeral of a Muslim, and the Arabic word *sadaqa* ("charity") is now generally used for it, to the exclusion of its wider, correct meaning. [177] [177]

It may be mentioned here that after the death of a child the father is denied access to his wife for a period of about three weeks, and the first act must be one of entire *interaction*. 765 784

MERRIOTTH SANDERSON.

4: Stahnus D-5 (ca. 1909)1910 FT7 Yao FT7
Maravi FR4

M 832 this is then added to a brew of new beer and given to her husband to drink. He will then think of and love only herself. This is said to have caused the death of some husbands.

Mpasi: medicine made and drunk by a woman to make her beloved by a certain man.

M 837 844 [847] At confinement a woman has to answer whether she has ever committed adultery; if she denies an adultery she may die, if she owns up and gives the name of the man this can be remedied. Adultery on the part of the father or mother is said to be a cause of abortion.

M 837 A man going away from his village for several months and leaving his wife behind and wishing her to remain faithful puts a knife into its sheath and hangs it in the hut, telling his brother. It is then believed that should anyone commit adultery with his wife separation after the coitus is impossible till some third party comes and pulls the knife from its sheath, and in doing so becomes a witness of the adultery.

M 833 M [262] [825] [522] Eating of eggs is believed to cause impotence in children or adults. Much fat eaten is said to have the same effect. It is believed that if a hare run up against the leg of a man while going through the forest he will become impotent. It is for this reason that dung of the hare is put at the door of a man to make fun of him as impotent. This is a trick played by *Adzukulu*.

M Y 837 263 758 If a woman who has committed adultery puts salt into the food while cooking, of which her husband will partake, will thereby cause his death. At the present time among the Yao-Mañanja community a woman always calls one of the children to do it—this speaks for itself. A woman, after connection with her husband, putting salt in food, may cause illness among any children partaking of the food.

M 837 If a man accuse his wife of adultery and she denies it, he will procure medicine and place it under her pillow, then in the middle of the night she will wake her husband and tell him the name of her lover.

M 787 777 *Mpingu* = ill omen. A journey would always be stopped if on setting out one of the party die; or should they meet an ant-eater or black snake. It used to be considered a sign of bad luck if one of them knocked the toes against a stone; now if blood flows from the big toe they say it presages good luck.

Y 832 826 The Yao at the age of sixteen years climbs the *mtumba* tree, and finding a fruit which is soft makes a hole in the middle and inserts the penis. After this procedure the penis is said to enlarge as the fruit grows; when the size desired is reached the fruit is cut down.

M 827 The native says that every one has a small animal inside the ear, the sounds it makes causes the man to hear. If the animal escapes the man becomes deaf. The animal is said to be ½-inch long, and wax is said to be its excrement.

M 484 777 Where a man rests on a journey he often puts a stone in the fork of the nearest tree; on many journeys there are regular halting places, often at cross roads, and here every passer-by adds a stone for luck, making quite big heaps.

4: Stannus D-5 (ca. 1909)1910 FT7 Yao FT7
Maravi FR4

M Y 614 [579] Men of the same clan must help each other. Two men of different clans fighting will be joined each by men of his clan; such two men may be interfered with and stopped fighting by someone of the same clan, but not by others. A fight between men of different clans is a lasting thing, not so a quarrel in the clan.

Every clan has a (king) *Karonga* and a (prince) *Chilembwe*, who is his son. These grades are only found among the Nyanja peoples.

M Y 264 [554] The Karonga may break bones when eating—this is significant of his power to break anything; the Chilembwe may not do so, being without land. Neither may eat while walking. These two are always chiefs.

Clan names.—In Machila men's songs one hears a number of clan names repeated sometimes.

After sneezing people sometimes exclaim, "*Musana wa* . . .; *Mdzukulu wa* . . .; *Kubala kwa* . . ." (giving name of clan).

A man hearing another say this asks him, "Where do you come from?" He tells him, giving him names of his father and mother, etc.; if he does not know them he gives names of generations before.

The following are a few clan names:—

Achitalo, small rat.
Anamvula, rain.
Azimbiri, puff-adder.
Achikalembo.
Achikalina.
Achingamina, thunder.
Achimaunde, cloud.
Amwali-ngosi, hartebeeste.
Ambiwi, pig.
Ang'oni, birds.
Achiombe, fish.
Achinawombe.

MARRIAGE.

M 584 A man seeing a girl he would like to marry deputes his brother to go to the brother of the girl, who then calls the girl's maternal uncle, and he speaks to the mother on the subject. The mother consults the girl; if she refuse, nothing further is done. If she consents, the man calls his relations to come and be witness of his taking the girl as his wife; they meet in the *Bwala*. A house is assigned to the M 585 man in the village of the girl and there they go to live.

After six months the mother of the girl prepares beer. The uncles of the young couple, mothers, fathers, sisters, and brothers are invited. The girl's maternal uncle then speaks, addressing himself to the maternal uncle of the husband, saying, "We have called you here to drink beer and to see the house of your brother that you may return when you like. Should anything arise between these two newly married ones in the nature of a dispute, let them come to their respective uncles about the matter."

Then five pots of beer are drunk in the village, two are reserved for the witnesses to drink in the evening, and one for the two fathers and the headman.

4: Stannus D-5 (ca. 1909) 1910 FT7 Yao FT7
Ngoni FR5
Maravi FR4

Women wear their cloth folded across the upper level of the breasts from right to left. Men and women often have two cloths, one over the loins, only the second fastening over the chest. M Y N 291

A menstruating woman also wears a small piece of calico corresponding to a diaper supported by string round the waist.[1] The same thing is worn after child-birth for six months. Angoni women always wear them. M Y N [841] [846]

The Angoni, Chipeta wear their cloth toga-fashion, carrying a fold of cloth on the left arm. An Angoni chief wears three such, blue, white and coloured, the first outside, the last next to the skin.

The material used is now practically everywhere European-made calico, formerly bark cloth only was used by Nyanja, though weaving had been accomplished by Angoni, where skins were and are used as articles of clothing. M Y N [286]

There is nothing to distinguish men of various grades, etc. Fashion at the present time is very capricious—some patterned cloth being much worn one month will have no sale a month later; this is true both of men and of women.

There is no class uniform, and no "costumes" are worn save in dancing (*q.v.*).

Men are now seen wearing a piece of calico twisted up on the head in turban form, a custom lately introduced from the coast—the only indigenous head-gear is the string skull-cap worn by Angoni widows. N [589]

Under the heading of dress must be included the bead aprons worn by Yao and Angoni. Among the former the use of this garment is restricted to the women, who in the house sometimes wear nothing else; among the Angoni the children often have them and no other clothing.

Sandals are sometimes made of skin and fastened on the feet with a thong when crossing thorny country.

Among Angoni the *mundo* only used to be worn; this is a small hard-cased fruit which was hollowed out and worn just covering the glans penis. N 291 824

FOOD, ETC.

The staple food throughout the country is either maize or rice, the latter only at various spots on the lake shore where it can be grown. Two fixed meals per diem are taken, at 9 or 10 a.m. and again at 6 p.m.; each consists of *usima* porridge made from maize flour or rice flour or boiled rice with some *ndiwo* (relish) to which the salt is added. At odd times the native will eat anything that opportunity offers—a piece of cassava root, a boiled sweet potato, a roasted maize cob, etc. M Y 262 [264]

The *usima* is made by stirring flour (*ufa*) into boiling water till a stiff paste is formed; this is kept cooking for five minutes and then scraped out with a wooden M Y 252

[1] Diaper = *mthete*; a woman keeps five or six; they are never put away in baskets but always hung up; a woman changes every time she bathes, using two or three per diem; they may be given to a female child to wear, but are then not worn again by a woman.

4: Stannus D-5 (ca. 1909)1910 FT7 Yao FT7
Maravi FR4

M Y 252 M Y 264 spoon into a clean shallow basket or on to a plate. The *ndiwo* or relish, consisting of vegetables such as beans or a kind of spinach, a little fish or chicken, is cooked in a separate pot, and round these those about to eat collect. Washing their left hands in water, they take some of the porridge and making a sausage shape of it, dip it in the *ndiwo* and then cram it into their mouths.

M Y 217 258 Salt was obtained either from natural deposits or from "salt earth" on a stream bank near Fort Johnston, or from the ashes of burnt *bango* reeds or *machedza*; by a method of percolation through porous pots.

M Y 271 515 The native rather drinks between meals—water. After eating he may wash his mouth out and clean his teeth, using the frayed end of a piece of wood as a brush.

M Y 273 *Alcohol.*—With the exception of the people living on the lower river, who drink fermented palm juice,[1] beer is the common alcoholic beverage. Beer is made from maize (*chimanga*) or millet (*mapira*); the crop of the latter is very largely used for beer making; it makes the best beer and is certainly preferred by Angoni.

Gruel is prepared by boiling flour with water; after an hour leaven (*chimala*) is added fermentation sets in; and it may be drunk the next day; it is the sweet beer, *mtibe* or *ontondera*. On the second day it is again boiled and is allowed to cool; the third day more leaven is added (*chikutiko*); the fourth day fresh gruel is made, and the contents of the original pot, now called *nganga*, is added to it, making two pots of beer. It may be drank the same day while hot or allowed to cool and taken on the second day.

Food-stuffs.

M Y 262

1. Maize (*chimanga*), millet (*mapira, mawaera*), rice (*mpunga*).
2. Cassava—sweet potato.
3. Beans and peas of many varieties.
4. Pumpkins, cucumbers, melons (*drungu, mkulu, chibwende*).
5. Many kinds of leaves growing wild—also pumpkin leaves, of which a kind of spinach is made.
6. Bananas (*paw-paw*), sugar cane and reeds are sucked.
7. White ants, locusts, honey.
8. M Y [177] Numbers of small animals are eaten by Chipeta, Angoni, etc. With the spread of Mohammedanism this is going out; rats, mice, hares, rock-rabbit, etc. Chipeta will eat dog, and I once saw one eat baboon. Frogs, shell-fish, snakes, crocodiles, crows, vultures, eagles, are never eaten.
9. Fish (*nsomba*), fresh or dried, is much eaten, thirteen varieties being enumerated.
10. Chickens, ducks, wild birds that they may snare.

[1] Spirits used to be made by distilling from beer and banana and palm-juice by means of a pot and a gun barrel.

4: Stannus D-5 (ca. 1909) 1910 FT7 Yao FT7
Marovi FR4

Gaga, the residue after pounding maize, is eaten by the women. No oils are used in cooking, but of fat and suet any native is very fond. Meat may be dried and smoked if in large quantity: flesh, fish and fowl is commonly roasted on spits; small pieces of chicken may be made into a kind of stew with beans and eaten as the relish. When on a journey the fire is commonly made against a tree. The cooking vessels are cleaned before use, not after. The fried fish eaten is often partly decomposed, and meat which is very high, even with maggots, is cooked and eaten, maggots and all. M Y 262 [252] [251] [484] [244]

Tabo.—Bushbuck is not eaten by many natives, as they say it feeds near graveyards. Fowls are not eaten by some, as this diet causes them to vomit; a snake-catcher never eats vegetables, and at the same time puts medicine on his hands. Many abstain from the flesh of certain animals as certain skin diseases are said to be caused thereby; all such diseases bear the name *wokuwenga*. M Y [753]

A man who loses a relation by drowning takes an oath that he will never again eat fish, and never drink water from such lake, river, etc. Here the idea is of course simply to avoid eating part of the relation.

A Nyanja and Machinga will not eat the flesh of the hippopotamus, because on the body they say there are the marks of a string round the loins and of a mat on his back, adding that long ago he was a man. Animals of prey would never under any circumstances be eaten. Milk used never to be drunk by an adult, as it was said to cause a man to become as a child. A man would not dare to drink woman's milk as it was said he would surely die of dysentery. M [825] M [272]

Tobacco, etc.—The smoking of tobacco was a custom introduced from the coast. Chewing was general among Machinga and Yao men and women, while the Angoni and Mañanja snuffed. With the tobacco a little lime, made by burning shells, was taken in the mouth. Giddiness and sleepy sensations were experienced after chewing. The Nyasa and Awisa smoke a hubble-bubble, the water vessel being a large sausage-shaped gourd with a reed stem supporting a large bowl of *mbabwa* wood, sometimes very nicely carved (Plate XXVII, Figs. 5 and 7). The Amyanja smokes a pipe with the bowl made of clay and the stem of bamboo (Plate XXVII, *Fig.* 6); these are made by the women. Tobacco is grown in nearly every village, a large-leaved rather coarse variety; it is sun-dried and rolled up into hollow rings 6 inches in diameter and 3 inches broad. For snuff (*Fodia wonnan*) the sun-dried tobacco is further dried over a fire on a pan, when cold it is ground on a stone with a smaller stone by the women, and with it is mixed some ashes of the *ngwa* fig-tree. M Y 276 [177]

At Blantyre I obtained a water-pipe made of bamboo stem; this was the water reservoir; a stem of reed supports a little clay bowl. The mouth is placed over the upper end of the bamboo. Bhang (*cannabis indica*) is smoked in a pipe of this kind.

AGRICULTURE.

The people live by cultivating the soil. Both sexes help in hoeing and planting, the collecting of the crops being mostly done by women. The hoe is the M Y 241

1: Tew . E-4 (no date) 1950 FT7 Yao FT7

775 Kangomba, used to persuade Nyanja to help in the sacrificial rite. When Kapeni in
782 turn fled to Mount Soche from the Ngoni, and died there, the Yao addressed their offerings to him, not to Kangomba.[1] The word *Muhungu* has sometimes been interpreted to mean Supreme Being, God, Creator, but among the Yao it seems not to have
[776] a personal connotation. It was used to describe the agent in any mysterious event,[2] or the place where the ancestor spirits (*masoka*) were supposed to dwell. Daily life was
[769] full of acts of respect towards the ancestors, who were regarded as jealous of the living, and requiring constant propitiation.[3]

Sorcery

754 Accusations of witchcraft and measures for dealing with it play a dominant role in Yao social life. With certain exceptions nearly all diseases and deaths are thought to be caused by sorcery. The exceptional causes are: the hand of God, old age, the transgression of certain taboos, and battle wounds. If sorcery is suspected the relatives of the sick or dead man consult the diviner to identify the offender.

Yao (in common with the Maravi and many peoples of Central Africa) believe that sorcerers have a craving for human flesh, which they satisfy by killing with magic the
[835] victims of their malice and hatred. They acquire their magical powers by an apprenticeship, which might include incestuous relations with mother, sister, or mother-in-law, or sleeping on the grave of the mother for one night. The sorcerer then learns the medicines and finally demonstrates his power by killing a young relative by magic;
[266] he waits till the victim is buried, and then magically exhumes him for the secret feast with his fellow sorcerers. Each sorcerer who shares the flesh owes a debt to the one who secured the victim.

[755] Charms are used as preventive measures against sorcery. When a diviner has
754 diagnosed the cause of death as sorcery, retaliatory measures are taken. The headmen
683 of the village could either call in the witchfinder to identify the offender or he could call in the diviner to take action against all the sorcerers in the village. After the
[695] diviner, *Mabisalila*, had revealed the guilty ones, they were challenged to take the poison ordeal to prove their innocence. If they died, the proof and the punishment were simultaneously accomplished. If they survived, the diviner was held to have been at fault and they were acquitted. The witch doctor was supposed to entice sorcerers to the graveside, and slay them with magic more powerful than their own.

[695] The diviner's findings are to-day checked by the poison ordeal administered to a chicken. A sorcerer detected in this way might be asked to provide medicine for the man whose sickness he had caused, or after a death he might be compelled to pay compensation. If the accused is a village headman, he will not be summoned before a chief, but his brother will take the villagers away from the sphere of his influence, or he may be chased away from the district. Accusations of sorcery follow certain regular lines. Nearly all accusations fall on relatives. Diviners are consulted by matrilineal relatives of the sick or dead person, and the man most usually accused is the brother of the accuser, or the husband of his sister. Witchcraft is therefore a manner of expressing the hostilities latent in these relations, which are, in the Yao social system, full of tension.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

622 neglect neither his sorority-group nor the husbands in his village,[1] that his sorority-group and his village were his garden and he must take care of the young plants in it. The husbands were the watchmen who look after the women in the village. A headman dare not take sides or be unfair, nor must he talk behind people's backs. He must take care to settle differences amicably by discussion at meetings. They advised him not to pay too much attention to his wives who may have quarrelled with his sisters and tell him that they have been insulting him. When he hears a report like that he may be unfair to his sisters and people will say that he has broken his village through listening to nonsense. This sort of instruction went on through the night.

On Friday when the beer was brewed, Mlamba and Mbalwe, both headmen and perpetual sons of Nyambi, came to the village [344] and told the men to build a small grass shed for the successor to sit in. This the men did, and the women were told to plaster it and clean the huts out for the strangers who would be coming to the ceremony. On Saturday morning before cockcrow, Makoka and Ncimba got up and told the women to cook a big pot of porridge because they were taking Cimombo to bathe and when they returned they would want to find porridge ready. [415] Makoka took some medicine called *mkulumo* in a bark container (*likungwa*) into the toilet enclosure. He put the medicine into [751] two jars of water and told Cimombo to wash himself in it daily as he was an important headman, and it would strengthen his 622 body.[2] After Cimombo had washed he went back into the hut where a mat was spread on the floor and on it were a dish of 266 porridge and three dishes of relish. Makoka and Ncimbo told him to take a little porridge, dip it into one of the relishes—whichever he chose—and eat it. Cimombo did so. They did not tell him that one of the dishes contained human flesh.[3] When he tried the dish of human flesh he vomited and all the villagers cried with joy, saying that he was a good chief because he had

[1] *Mbumba jao ni akamwini wao*—the meaning and significance of this in the village context is explained on p. 183.

[2] This is a euphemism for protective medicine against sorcery.

[3] The immediate question is: Where did the human flesh come from? No informant could tell me and I am inclined to believe that one of the dishes is 'ritually' made into human flesh for this ceremony. This special ceremony was always spoken about as if it were secret, especially from White people.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

vomited human flesh.[1] They said that they had a strong head- 622
man and that they could trust him; he was a good headman 266
without witchcraft. If he had been a sorcerer they would have kept scolding him until the next morning.

About two hours after sunrise the people gathered and started 622
dancing. At about this time Cimombo was brought out of the 527
hut and put in the grass shed which had been built for the occasion. This was the climax of the ceremony.[2] He sat on a chair in the grass shed with one of his two wives on either side. Makoka [533]
then started a chant, exhorting the visitors to come to throw pennies at Cimombo's feet. Some of the people there made [537]
speeches about the type of behaviour they would expect from him. Then Nyambi arrived from the court village in a ricksha. [493]
When the noise had subsided he told the people that if they disobeyed Cimombo it meant that they disobeyed the chief. He emphasized the importance of the rank of the new headman. After the speech he presented 12*s.* to Cimombo which was received on his behalf by Ncimbo. Nyambi then left and the ceremony was over, but the people remained to dance and drink beer.

This description of the procedure following the 'coming out 622
of the hut' is somewhat sketchy. The interaction of the head- 516
man and his villagers on this formal and ceremonial occasion is of great interest and importance. During the entire ceremony the headman adopts the pose which is appropriate for any Yao initiand. His hands are on his lap or on the arms of the chair and his head is bowed forward with eyes downcast. He neither speaks nor moves. His attendants, when necessary, wipe the sweat off his face or chase away the flies. The other occupants of the mat, who may be his wives, and sometimes his heir, adopt similar postures. In contrast to this, is the behaviour of the [201]
villagers who run about shouting wildly, the men discharging muzzle-loading guns, and women ululating in the typical Central African way.

Before the new headman comes out of the hut his mentors 622

[1] This is a test based on the witchlore of the Yao, who believe that sorcerers [754]
kill relatives with magic and then share out the flesh of their victims with fellow sorcerers in ghoulish feasts.

[2] Called the 'coming out from the hut' (*kukupeka nyumba*). It is of course the first public appearance of the headman in his newly assumed status.

3: Stanner D-5 (ca. 1912) 1922 FT7 Yao FT7

175 167 148 River at Mpimbi where they intended to settle. Here, an old chief, knowing that their presence would cause trouble, persuaded them by tales of many cattle far away on the other side of the river, to cross over, and there they remained.

Kawinga and Malemya, then, to avoid further raids from the north went down to the Upper Shiré River near Lake Pamalombe, Kawinga going to Mvera, while Malemya stayed on the east side of the river among the Anyanja, claiming friendship with them because they bore many of the same clan names. Later, Malemya moved up to the highlands about fifteen miles north of what is now Zomba, and Kawinga went to Chikala. Malemya was friendly with the Anyanja chief, Chenyusi, who was of his clan, and was therefore able to buy from him for a red blanket all the country from the Likwenu stream to the Namadzi River, a district thirty to forty miles long. There his people settled. [131]

Kawinga was once again attacked by the Makwangwala from the north, but beat them back, after which they returned to the country whence they came — German East Africa near Lake Nyasa. The Angoni chief was killed in this battle, and the story goes that two Yao captives were told off to carry the eviscerated body back to the Angoni country for burial. As they were not provided with food for the journey, the two men began to eat the corpse. After several days, this was discovered; one of the men was killed but the other escaped to tell the tale. These were barbarous days, and the Yao relate that after raiding a village, the Angoni would leave a pot cooking on the fire with the body of a child in it, well covered with beans, so that when they had gone away with their booty and the villagers who had taken refuge in the forest returned hungry, they would start eating the beans and then come upon the body of the child, and having eaten of the juices of a human body, they would have committed a terrible sin. [726] [262]

The immigration of the Amachinga into the country around Mangoche mountain caused the Amangoche Yao settled there to move. They passed into the Blantyre and Mlanje districts, and invaded the country of the Anyanja. The chief, Malemya, known as Nalutumbo died about 1880, and was succeeded by his nephew, a sister's son, according to the Yao custom. This nephew, Wandalama, then took the name of Malemya.

In consequence of this succession, there was considerable bad feeling between Wandalama and the other aspirant to the chieftainry, his cousin, Kumtaja. The latter moved down to the plain below Zomba mountain to the south, where he gathered about him a band of friends and malcontents. Malemya decided to attack him and with this purpose, sent two messengers, Nkopili and Mapundela, asking Chikusi and his Angoni to come and do the job for him. Led by Nyamuka, Njerumali, and Kabayi, the Angoni came from the Shiré River opposite Blantyre, via Matope. They attacked and routed Kumtaja who, owing to the thick country, managed to fall back with most of his people toward Lake Chilwa. Here he was received by his cousin, Chimombo, a son of Nalutumbo, and father of my interpreter, Chonga, who ruled among the Anyasa. Afterwards, he moved to Mpimbi on the Shiré where he built a stockaded village.

* Died July 16, 1918.

3:Stannus D-5 (ca. 1912) 1922 FT7 Tao FT7

754 Resident Magistrate at Blantyre, told me of a case where the grave of a well-known European hunter was opened and his trigger finger removed, the reason being obvious. The same thing is said to have occurred in regard to the heart of a brave man. In the former case the finger was probably worn as a charm; in the latter, the heart partly eaten and partly made into medicine. I have found human fingers and skulls among the outfits of witch-doctors. Such practices seem akin to those of cannibalistic societies found in other parts of Africa.

754 266 [575] 266 The natives insist that *wasawi* are banded together in some sort of society. There are numerous discrepancies in the evidence brought forward about *wasawi*, but such would necessarily arise and they do not, therefore, disprove the general belief in the actuality of *wasawi*. Be that as it may, it seems probable that though there may be little or no cannibalism at the present day, the beliefs about *wasawi* have arisen in consequence of common cannibalistic practices in the past. There are individual cases of cannibalism well known and one has only to call to mind that of Kamtukule of Malemya's village. This man more or less openly killed and ate a number of people. On one occasion after a fight, he was seen looking over the dead bodies of the slain foes and in answer to an enquiry, he denied that he wanted any spoils but said he was just marking the bodies, "that would be his share." Later on, his own son, who tells the story, brought an Angoni man into the village who wished to settle under Malemya. It was evening, so he was introduced into his father's (Kamtukule's) house where Kamtukule gave him food and later a mat on which to sleep, the son meanwhile having gone to a beer drinking. In the morning, he returned to take his Angoni friend to the chief, but his father said he had gone away. Entering the hut, however, the son came upon the Angoni's snuff-box, and said to his father, "No Angoni would go away and leave his snuff-box." But the father said, "Well, he has gone." The lad being suspicious again went into the hut and found the place where the Angoni had been sleeping drenched with blood. Going out again, he noticed blood dripping through the bottom of Kamtukule's grain-store and looking inside, he found the body.

This man Kamtukule was a great friend of the reigning Malemya's headwife, Kang'ando; after the death of Malemya and after his wives had passed to the present Malemya, circumstances arose in the village which cast suspicion on Kamtukule and the woman. One of two brothers was ill and, it appeared afterwards, that the woman had said to Kamtukule, "Won't you finish him off?" It is supposed that Kamtukule thought she meant the brother who was not sick; for it so happened that both died the same night. It was supposed they were killed in order that Kamtukule and the woman, his friend, might eat them. Malemya had the woman turned out of the village. She now lives near Zomba and has once come under my care. The man, who was also turned out, took up his abode near a highway where he is reported to have killed several Angoni porters whom he said he preferred, because "being travellers far away from their homes, no one would bother about them."

The father of one of my servants helped to clear out the remains of a body from his grain store on one occasion and shortly afterwards, it is supposed that his own sons who had said they could not allow it to go on any longer, employed some one to kill him, as he was found, one day, with his head smashed in. These are, I believe, a number of similar cases known. 266

A person is supposed to gain the powers of wanzi by procuring medicine from some one willing to sell his secrets at a price, and by performing certain rites usually connected with his method of bathing. It is said that "such and such a one takes his bath on the top of an ant hill" or "on the roof of his house by moonlight." The usual initiation into wanzi is a long business, the individual being successively initiated into all the various practices of ukoma, the supernatural. Medicines are made from a still-born child, from various plants, from the hyaena, etc., and used for preparing the individual in the new science. He is introduced to the hyaena, the fox, etc. It is also asserted that a man may acquire supernatural powers by having sexual intercourse with a near relative, a sister or mother. I have had pointed out to me an old man who is said to have wished thus to acquire power but the woman refused and he has been a laughing-stock ever since. 754 575 [835]

On one occasion, a man related to me the pathetic life story of his attempt to find his favorite sister who, like himself, had been taken away to the coast as a slave. In desperation he has adopted the above procedure to try to gain supernatural powers to help him but without result. It would therefore seem to be a method not particularly associated with wanzi.

The wanzi is supposed to bring about the death of his victim not by administering poison or other such direct means, but by the more subtle mode of making medicine "against" him. When the victim has succumbed and is in due course buried, the wanzi arrives at the grave to secure that for which he has been working. To the wanzi is attributed the power of making himself invisible, and of taking the form of an animal; owing to the carrion-eating habits of the hyaena, this animal form is most commonly taken. Other animal forms which are associated with the wanzi are the leopard, the fox, and the owl, all night-going animals. The Yao say, "The cry of the fox (jackal) is heard at night because he associates with wanzi doings." 754 [825]

Arrived at the grave after sunset, the wanzi blows his horn, the horn of a small antelope, to call his brethren; a fire with a blue flame is made by the grave and around it they dance, or the grave may be illuminated by blue flame without a visible fire. The wanzi calls upon the deceased to rise from the grave, addressing him by the name he bore before he was initiated, i.e. his child-name. Obeying the summons, the dead man rises to the surface of the ground, though how he comes out is not quite clear — "the hole may be ever so small." The risen dead is then killed again by magic medicine and his body divided to be eaten by the congregation of wanzi. It is said that the skull is made into a gourd, the eyes are used as beads, and the ribs formed into a girdle. [266]

spoon into a clean shallow basket or on to a plate. The relish or relish, consisting of vegetables such as beans or a kind of spinach, a little fish or chicken, is cooked in a separate pot, and round them those about to eat collect. Washing their left hands in water, they take some of the porridge and making a scoop shape of it, dip it in the relish and then cram it into their mouths.

Salt was obtained either from natural deposits or from "salt earth" on a stream bank near Fort Johnston, or from the ashes of burnt *bango* reeds or mankolobe; by a method of percolation through porous pots.

The native rather drinks between meals—water. After eating he may wash his mouth out and clean his teeth, using the frayed end of a piece of wood as a brush.

Alcohol.—With the exception of the people living on the lower river, who drink fermented palm juice,[1] beer is the common alcoholic beverage. Beer is made from maize (*chimangu*) or millet (*mapira*); the crop of the latter is very largely used for beer making; it makes the best beer and is certainly preferred by Angoni.

Grout is prepared by boiling flour with water; after an hour leaves (*chimtole*) is added fermentation sets in; and it may be drunk the next day; it is the sweet beer, *mtole* or *catandwa*. On the second day it is again boiled and is allowed to cool; the third day more leaves is added (*chimtole*); the fourth day fresh grout is made, and the contents of the original pot, now called *ngwangu*, is added to it, making two pots of beer. It may be drunk the same day while hot or allowed to cool and taken on the second day.

Food-stuffs.

1. Maize (*chimangu*), millet (*mapira*, *mawere*), rice (*mpunga*).
2. Cassava—sweet potato.
3. Beans and peas of many varieties.
4. Pumpkins, cucumbers, melons (*dzungu*, *mkoko*, *chikwandi*).
5. Many kinds of leaves growing wild—also pumpkin leaves, of which a kind of spinach is made.
6. Bananas (*pese-pese*), sugar cane and reeds are cooked.
7. White ants, locusts, honey.
8. Numbers of small animals are eaten by Chipeta, Angoni, etc. With the spread of Mohammedanism this is going out; rats, mice, hares, rock-rabbit, etc. Chipeta will eat dog, and I once saw one eat baboon. Frogs, shell-fish, snakes, crocodiles, otters, vultures, eagles, are never eaten.
9. Fish (*nsombo*), fresh or dried, is much eaten, thirteen varieties being enumerated.
10. Chickens, ducks, wild birds that they may snare.

[1] Spirits used to be made by distilling from beer and banana and palm-juice by means of a pot and a gun barrel.

3:Stanzas D-S (ca. 1912) 1922 FT7 Tao FT7

881 During the period of seclusion at *N'dapulo*, rigorous discipline is maintained among the boys, the day commencing with bathing in a stream whither the *ualí* are driven before sunrise, a favorite form of punishment being to make the boy sit for hours in the cold water. Other disciplinary measures take the form of frequent beatings. At one *Uapape* I know of, there was a kind of mutiny among the boys. The *ohamuí* from a nearby *Uapape* were called in and the boys received very severe "hidings" for their trouble.

For the entire time, the *ualí* are occupied in receiving instruction given by their *ohamuí*, on the discipline of manhood; they are taught native customs as applied to their relations with their fellows, an exacting code of etiquette to be observed to their elders, and the observances of married life. They learn to become proficient in the arts associated with their sex — the making of baskets, mats, traps, etc., the method of agriculture, drumming and dancing. They stay up late into the night listening to the stories of their tribal history.

Until such time as the circumcision wound is healed, each boy must cook his own food, after which food is brought ready cooked by his mother.

Posted in the bush a little way from the encampment are some of the boy's guardians, *ohamuí* or *olombee* (sing. *olombe*) who act as pickets to ward off innocent or intentional intruders. They are armed with sticks, etc., and give pretty severe treatment to any inquisitive persons they catch. A visitor to *N'dapulo* may be required by them to give visible evidence of not being *olombe*. The mothers who come with food call from a distance, "*Alomee olombe!*" Answer is made, "*Atatchile tulpe!*" "Put down for us that we may eat."

881 When the chief decides that the time has come for the return from *N'dapulo*, he sends
273 for the *m'mitchile*. Arrived in the village with medicine which he has collected, he is given millet by the mother of the leader from which the malt for beer making is to be prepared, also a cock and a hen and a pot. Into the pot he puts a tail feather from the cock and one from the hen, together with his medicine; then the millet, and water is poured on, after which he goes to *N'dapulo* and shaves the heads of all the *ualí* beginning with the leader and then returns to his own village. When the millet has sprouted, the woman takes it out to dry on a mat, and the two feathers and the packet of medicine are laid on the mat by its side. From this time, all the mothers are busy preparing malted grain for brewing beer, and, when it is ready, the *m'mitchile* is again called to the village. He orders the women to prepare for brewing, to bring firewood, their brewing pots, and stones to support them on the fire. These are all set round in a circle in the presence of the chief and headmen. Across the stones the *m'mitchile* lays his "tails" and on the firewood he sprinkles some medicine; the "tails" are then removed and the pots set on the fire. Commencing with the pots belonging to the mother of the leader, he acts similarly all round. The following day, he again visits the scene of the brewing. Putting his "tails" on the ground, he dips from each pot in turn and pretending to drink the sweetener from the dipper, he empties it into other pots carried by his assistants. From his own pots, he then empties

3:Stanner D-5 (ca. 1912) 1922 FT7 Tao-FT7

some swamber into a big gourd. These his assistants will carry away, together with a hoe, to *Lapunda*, whither the o'mishila now goes to remain while brewing goes on for four days. 881

During their stay at *Lapunda*, the o'mishila and his assistants live on flour and chickens begged from the mothers of the well. On the first day nothing is done; on the second day they begin making the *Inpupo* or figures in relief of animals, etc., to be described later; *Nawumpowi* is made this day. On the third day the other figures are made and on the fourth day *ching'wulung'wula*. Into the ground where *ching'wulung'wula* is made, some of the strong beer, known as *ngungu*, which is added to the flour and water mixture on the fourth day as signified by *bo-kalpula*, is poured by the o'mishila. 273

When the work at *Lapunda* is finished, the o'mishila carrying his "tail" leads his assistants wearing their feather headdresses back to the chief's village singing:

"*Kingulula* *ukusu* *kunga* *ukulupula* *ku* *usui*, *wulungu* *ukusuwi* [533
"I must go and see beer perhaps they have mind at the village, sometimes ah dear! 534]
Ukilumula *ukusupiwi* *ngulpu* *usuu* *ukupumula* *uulu*!"
The going out of a day or two ago if I had not taken tobacco I would have died of hunger!"

Arriving at the village where the brewing is going on, the o'mishila takes a cup and putting his "tails" on the ground, he dips into the pot of beer belonging to the leader's mother, pours some on his "tail," and then drinks some. Then he puts more into a gourd, together with some medicine, and going up to the chief who sits in his verandah overlooking the brewing place, he hands, and first drinking a little himself, he presents the drinking gourd of beer to the chief who drinks and then returns the cup to the o'mishila who finishes it. Picking up his "tail," he then goes straight back to *Lapunda* while his assistants with some men nominated by the chief go round showing pots of beer in turn. The assistants shows by striking a pot with a medicine-tail. These pots of beer are then put aside to cool, while moderate drinking begins in the chief's house. This takes place in the morning of the day on which the well will return from *Ndapula* to *Lapunda*, and in the afternoon, the people from the villages will go out to *Lapunda* to take part in the return. The return is made about sunset.

The well at *Ndapula* are put into their shelters and the doorways barricaded. At sunset or just after, the place is set on fire and the well have to change their way through the back of the shelters. They then form in line, wearing a slip of bark cloth round their loins and over this, a kind of kilt called *mayajuwin* if made of frilled-out bark-cloth, or *mayuwa* if made of palm leaves. Accompanied by the elements, they proceed towards *Lapunda*, each carrying a stick of smouldering wood and an unlit torch of bark-cloth. 881 [343]

The burning of the huts at *Ndapula* has been the sign to the o'mishila that the well have left; he puts round his waist a bark cloth belt, shambu, and a calico sash round his chest with the ends hanging down behind and on his head he wears the large headdress made of the feathers of *ukungu*, the widow-bird. In each hand he carries the tail of gnu or zebra, held right end up, with the hollow end filled with "medicine." Thus arrayed, he goes out 881 533 534

While the wali thus march solemnly along shaking their wands, the assistants begin singing:

"Ee wanga ambiri"
"To the gate they have shot!"

to which the wali reply:

"Ennwa kwakupiri"
"There is no place where to pass!"

The n'nimbile remains at *Lepanda* till everyone else has left; he then sets fire to the shelters and leaving without looking back, runs to overtake the procession and then leads it on towards the village still at a slow pace, while all around is a yelling crowd of delighted mothers and other relatives and the assistants and drummers, all singing and shouting.

When the outskirts of the village are reached, the n'nimbile halts and waits for the chief to come out and give them permission to enter. The chief brings coins which unrolled on the ground measure the length of the procession of wali. Headed now by their leader, the wali walk over this coins, while the assistants roll it up behind them for the n'nimbile, as it is part of his payment. Flour may be brought him at the same time, carried by the chief's wives.

At an Unyago I witnessed at Kwimawa's, the halt was called on the bank of a stream at the edge of the village where a bamboo arch had been erected. The arrival of Chief Malenya at this point with coins and flour was the sign for a demonstration by his young men who ran forward as if in battle, firing off blank rounds from old Tower muskets and executing a kind of war dance.

After the coins has been handed over, the chief returns to his kraal and the procession continues into the village, across the village open space to the fence round the chief's house. There, the wali enter by a gateway and disperse over the courtyard where they find their sleeping-mats laid out ready for them by their mothers. The n'nimbile lays his "tail" on the leader's mat to bring good luck thereafter. With Mimmbile, there is no further part for the wali, but in some cases they are called upon by the chief to give an exhibition of their dancing and drumming. The wali sleep that night in the kraal and disperse the following day.

In the morning, the n'nimbile takes his "tail" and a stirring stick made from a millet stalk with the roots on it, and strikes the ground at points in a row in front of the chief's house. Here the pots of beer which have been prepared are placed in rows, those chosen by the chief and those chosen by the n'nimbile, and drinking commences. The n'nimbile, before he joins in, takes the wali to an ash-heap in the village and there sprinkles them with medicine from a grain-mortar after which they go with their shawari behind a house and change into new clothes. They then go and salute the chief by clapping their hands and depart to their villages, duly initiated and somewhat subdued by what they have been through. Their new names as "nam," may be given them by the shawari either at *Lepanda* or after the return to the village.

3: Stanner D-5 (ca. 1912) 1922 F77 Tao F77

There has never been any shortage of land and therefore the plotting out of gardens was a matter which caused little trouble. A man wishing to make a new garden the next season simply marked the site in the bush by snaring some trees or hoeing around some patches of grass and tying the grass ends into a knot. If anyone else came along and hoed this plot, the man who had marked it out still claimed it and need not pay for the hoeing done. Whenever a man was doubtful about a piece of land, he would ask advice of the headman of the village. 423

When an abandoned garden had become overgrown, anyone wishing to take it up applied to the headman who sent him to ask the original owners whether they wished to take it up again. The newcomer could take possession only with their permission. 361

Often if a village were moved, during the first season the people simply put up shelters in their gardens. Later, the site of the village was chosen and around it a medicine man sprinkled medicine to insure happiness and prosperity. The tree from which this medicine was made became sacred to the village and might not be used for firewood, or was subject to any other taboo the medicine man might care to make. He might also say, "In this village there shall be no pounding of grain at night," etc. 423 [789] [778]

If a village were to be built near a spot previously inhabited, medicine and offerings were made to the departed spirits of the former occupants to put them at rest and "open" the place to the newcomers. The beer-pot from the grave of some former chief or headman, who was supposed to have directed the destinies of the old village, was brought to the new location and beer placed in it to insure his continued guidance. [761]

In the case of a village into which a number of men had married, the spouses of the wives went to the spouses of the husbands and asked permission to move the village.* Later, beer was brewed in the new village and the spouses invited to come and drink and "put foot in the new village." [203]

Relationship. Family relationship among native presents certain difficulties to the European accustomed to equivalent relationship of males and females on both sides of the family. In the diagram below (Fig. 1) the relationship of the two children (C 8) will be traced. The mother and father (B 10 and 9) are the subjects and some but are addressed as sister and stati. The maternal uncles older and younger than the mother (B 11 and 12) are called abambwa and their wives (B 13 and 14) abangwa. The maternal aunts are addressed as sister, mother, anyone older than the mother being distinguished as sister wakubangwa, "the bigger" (B 15), a younger aunt as sister wanandi, "the lesser" (B 17); their respective husbands are addressed stati, stati wakubangwa (B 16), and stati wanandi (B 18). On the father's side the uncles are called stati wakubangwa (B 1) and stati wanandi (B 2), respectively, for those older and younger than the father, and their wives sister wakubangwa (B 3) and sister wanandi (B 4). The paternal aunts are called stati wakubangwa (female uncles) (B 5 and 7), their husbands (B 6 and 8) stati. 595 601

* Vide supra, p. 280.

3:Suanne D-5 (on. 1912) 1922 F77 Yao F77

276 made by boiling down the solution obtained by steeping a decoction of water and the ashes of banana leaves; it contains, of course, some of the inorganic salts from the banana leaves. Without this addition, snuff is said to lack its proper aroma. The Angoni do not warm their snuff, but add a vaspoil made in a similar way from cow dung.

262 146 Food stuffs. According to the general supposition, the native lives on a very monotonous diet, with a great excess of carbohydrates to the exclusion of proteids and fats. While it is certainly true that he does not consider that he has been fed without his "chisuki" of flour (maize, millet, rice or cassava), still he feels that his meal is a poor one if it does not also include some secondary dish, such as beans, fish, or green vegetables cooked like spinach.

283 The grains chiefly grown and used by the Yao are maize, millet, and a certain amount of rice.

262 Millets (sorghum): *Mapondo*, a tall variety, eight feet high, which is harvested late; *Mapondo ga wanaji*, a hairy variety; *Lisambalala*, a short kind, five feet high, which matures early; *M'balani*, characterized by the fact that the ripe grains will fall when the plant is shaken, and by a rather bitter taste; *Nandanji*, a variety six feet high which ripens quickly; *Kapile*, a shorter variety with a bitter taste but, according to the natives, a pleasant smell. (It makes good beer.)

Elevsine: *Lisanje*, about four feet high with very small grains; *Chindumbe*, used for making a very strong beer; *Mwendi*, a variety eight feet high. Cyprus grasses: *Usanje*; there are two varieties, *Kasambata*, which ripens up and is used for making strong beer, and another kind which is not early.

[273] Maizes: A number of varieties of the species *Zea mays* are grown by the Yao: *Chiuwa*, a black-grained variety; *Nanpalala*, red maize; *Lisanje*, the seeds of which are large, white, and dented; *Nambinga*, with grains fastened on the free surface; *Kanjalanjala*, a dwarf maize about four feet high.

Rice (*Oryza sativa*): *Mpunga* (generic name *Lihali*), a large-grained variety; *Singano*, with very long grains; *Linpanindimba*, red rice; *M'bungala*, characterized by the strong, not unpleasant odor it gives out when being cooked.

264 262 Cassava: *Chimangwa* is grown everywhere, but the Yao do not prepare flour from it, preferring to eat it raw at odd times. There are several varieties; *Chingangwa cha chiuwa*, white cassava; *Chimangwa cha wikuwi*, a brown variety; *Lisanga*, a bitter species (*Manihot utilissima*) which produces a very large root; *Chilusi* and *Kaw'anga*, varieties of *Manihot aipi*, the former characterized by its long, tapering leaves, while the latter is a dwarf variety with a big root.

Beans: There are a number of species of beans grown: *M'barawanda* (*Cajanus indicus*), *ngwanda* (*Vigna catiang*), *mbawa* (*Phaseolus mungo*), *mbawanda*, (*Phaseolus sp.*), *nimalalanda*, (*Phaseolus sp.*), *ngwalawalai*, and a ground bean *ngawa* (*Voandzeia subterranea*).

spoon into a clean shallow basket or on to a plate. The *ndiwe* or relish, consisting of vegetables such as beans or a kind of spinach, a little fish or chicken, is cooked in a separate pot, and round these those about to eat collect. Washing their left hands in water, they take some of the porridge and making a sausage shape of it, dip it in the *ndiwe* and then cram it into their mouths.

Salt was obtained either from natural deposits or from "salt earth" on a stream bank near Fort Johnston, or from the ashes of burnt *bango* reeds or *machedza*; by a method of percolation through porous pots.

The native rather drinks between meals—water. After eating he may wash his mouth out and clean his teeth, using the frayed end of a piece of wood as a brush.

Alcohol.—With the exception of the people living on the lower river, who drink fermented palm juice,[1] beer is the common alcoholic beverage. Beer is made from maize (*chimanga*) or millet (*mapira*); the crop of the latter is very largely used for beer making; it makes the best beer and is certainly preferred by Angoni.

Gruel is prepared by boiling flour with water; after an hour leaven (*chimala*) is added fermentation sets in; and it may be drunk the next day; it is the sweet beer, *utibe* or *ontondera*. On the second day it is again boiled and is allowed to cool; the third day more leaven is added (*chikutiko*); the fourth day fresh gruel is made, and the contents of the original pot, now called *ngunga*, is added to it, making two pots of beer. It may be drank the same day while hot or allowed to cool and taken on the second day.

Food-stuffs.

M Y 262

1. Maize (*chimanga*), millet (*mapira*, *mawere*), rice (*mpunga*).
2. Cassava—sweet potato.
3. Beans and peas of many varieties.
4. Pumpkins, cucumbers, melons (*dzungu*, *mkulu*, *chibwende*).
5. Many kinds of leaves growing wild—also pumpkin leaves, of which a kind of spinach is made.
6. Bananas (*paw-paw*), sugar cane and reeds are sucked.
7. White ants, locusts, honey.

M Y [177]

8. Numbers of small animals are eaten by Chipeta, Angoni, etc. With the spread of Mohammedanism this is going out; rats, mice, hares, rock-rabbit, etc. Chipeta will eat dog, and I once saw one eat baboon. Frogs, shell-fish, snakes, crocodiles, crows, vultures, eagles, are never eaten.
9. Fish (*nsumbu*), fresh or dried, is much eaten, thirteen varieties being enumerated.
10. Chickens, ducks, wild birds that they may snare.

[1] Spirits used to be made by distilling from beer and banana and palm-juice by means of a pot and a gun barrel.

3: Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

two feet high and fifteen inches in diameter, hollowed out from above for about two-thirds of its length. Many are made with a kind of base or stand, and some have roughly carved bosses on the outside; these are called "the breasts," doubtless emblematical of women, a large part of whose life is spent in preparing flour (Pl. XV, fig. 15). 412 [532]

The fire-stick. *Ma'chese* are becoming more widespread year by year and soon the knowledge of how to make fire with a fire drill will be lost. The method employed among the Yao is as follows: a flat surface is cut on a piece of partly rotted wood. In the middle of this a small depression is made, and on one side of the piece of wood a groove is cut leading from the flat cut surface. The piece of wood is held firmly on the ground by one person with a piece of old scorched cloth or some charred sticks at the base of the groove. A second person, by rolling a stick of hard wood rapidly between his hands with the point directed against the depression on the flat surface in which a little sand has been placed, drills a hole into it. The heat developed is sufficient to cause the powdered rotten wood to start smouldering. This is then turned out on the cloth, which is gently waved in the air till it catches fire (Pl. XV, fig. 16). 372 [177]

Boats. With the exception of a small coracle-like vessel, *likwiqwa*, made of rough bark and used for crossing streams, the Yao have no boats. The dug-out canoes which they use at the present day are made for them by the Anyanja. In addition to the bark boat, they use a kind of raft made from the pith tree, *bungwa*. 501 [439]

Tobacco. The use of tobacco in some form is universal among the tribes of Nyasaland and the Yao are no exception. The method of use varies among the different peoples; smoking, chewing, and snuffing are all practiced, but while the Anyanja is essentially a pipe-smoker, the Yao takes snuff, although I think only lately he has also taken up smoking and chewing. A short time ago, a Yao who chewed would have been laughed at. The Anyanja do not chew but take snuff to a certain extent; the Angoni who do not smoke or chew are inveterate snuff-takers; the Atumbuka, Atonga, Asenga, and Ankonde are pipe-smokers and in lesser degree snuff-takers. 276

Tobacco is called *sesa* (*fodia*. Chin.). It is prepared by sun-curing the leaf, which is then rolled up into a twist and allowed to dry further. The common tobacco pipe consists of a clay bowl, often ornamented, and a reed stem; it was formerly called *ckilanga*, but is now known as *kalio* (Pl. XV, fig. 11). For hemp, *chamba*, the Yao use a water pipe called *ndundu* (*ngundu*, Chin.); this consists of a bamboo water container from which projects a reed stem surmounted by a clay bowl (Pl. XV, fig. 13). The word *ndundu* is also used for a tobacco pipe.

When tobacco is chewed, a little lime paste *ensubula* made from snail shells is put in the mouth "to bring out the flavor," a small clay jar *boiwe* used to carry the *ensubula*.

Both the Wayao and the Anyanja prepare snuff by grinding the broken-up tobacco leaves with a stone in a potsherd; the powder is then turned out into another sherd and warmed over a fire. A few drops of a preparation called *mapuli* is added for flavor. *Mapuli* is

3:Stanmus D-5 (ca. 1912) 1922 FT7 Yao FT7

276 made by boiling down the solution obtained by straining a decoction of water and the ashes of banana leaves; it contains, of course, some of the inorganic salts from the banana leaves. Without this addition, snuff is said to lack its proper aroma. The Angoni do not warm their snuff, but add a mapadi made in a similar way from cow dung.

262 146 **Food stuffs.** According to the general supposition, the native lives on a very monotonous diet, with a great excess of carbohydrates to the exclusion of proteids and fats. While it is certainly true that he does not consider that he has been fed without his "whack" of flour (maize, millet, rice or cassava), still he feels that his meal is a poor one if it does not also include some secondary dish, such as beans, fish, or green vegetables cooked like spinach.

243 262 The grains chiefly grown and used by the Yao are maize, millet, and a certain amount of rice.

Millets (sorghum): *Mapemba*, a tall variety, eight feet high, which is harvested late; *Mapemba ga nnunji*, a hairy variety; *Lisembelaka*, a short kind, five feet high, which matures early; *Mbelau*, characterized by the fact that the ripe grains will fall when the plant is shaken, and by a rather bitter taste; *Nandonji*, a variety six feet high which ripens quickly; *Kapile*, a shorter variety with a bitter taste but, according to the natives, a pleasant smell. (It makes good beer.)

Eleusine: *Liwanje*, about four feet high with very small grains; *Chindumba*, used for making a very strong beer; *Mwundi*, a variety eight feet high. Cyprus grasses: *Usunje;* there are two varieties, *Kaumbata*, which curls up and is used for making strong beer, and another kind which is not curly. [273]

Maizes: A number of varieties of the species *Zea mays* are grown by the Yao: *Chiaowa*, a black-grained variety; *Nangalala*, red maize; *Liwanje*, the seeds of which are large, white, and dented; *Nsachinya*, with grains flattened on the free surface; *Kanjalanjala*, a dwarf maize about four feet high.

Rice (*Oryza sativa*): *Mpunga* (generic name *Lihoti*), a large-grained variety; *Singano*, with very long grains; *Lingwindimba*, red rice; *Mbungala*, characterized by the strong, not unpleasant odor it gives out when being cooked.

244 262 Cassava: *Chinangwa* is grown everywhere, but the Yao do not prepare flour from it, preferring to eat it raw at odd times. There are several varieties; *Chinangwa cha chiwera*, white cassava; *Chinangwa cha mbwani*, a brown variety; *Liwapa*, a bitter species (*Manihot utilissima*) which produces a very large root; *Chilasi* and *Kam"anga*, varieties of *Manihot aipi*, the former characterized by its long, tapering leaves, while the latter is a dwarf variety with a big root.

Beans: there are a number of species of beans grown: *Mbevemende* (*Cajanus indicus*), *ngunde* (*Vigna sativa*), *mbwesa* (*Phaseolus mungo*), *mbwanda*, (*Phaseolus sp.*), *ntambakada*, (*Phaseolus sp.*), *ngondomalusi*, and a ground bean *njama* (*Voandzia subterranea*).

Gupa, the residue after pounding maize, is eaten by the women. No oils are used in cooking, but of fat and suet any native is very fond. Meat may be dried and smoked if in large quantity: flesh, fish and fowl is commonly roasted on spits; small pieces of chicken may be made into a kind of stew with beans and eaten as the relish. When on a journey the fire is commonly made against a tree. The cooking vessels are cleaned before use, not after. The fried fish eaten is often partly decomposed, and meat which is very high, even with maggots, is cooked and eaten, maggots and all. M Y 262 [252] [251] [184] [264]

Taboo.—Bushbuck is not eaten by many natives, as they say it feeds near graveyards. Fowls are not eaten by some, as this diet causes them to vomit; a snake-catcher never eats vegetables, and at the same time puts medicine on his hands. Many abstain from the flesh of certain animals as certain skin diseases are said to be caused thereby; all such diseases bear the name *wokwenga*. M Y [753]

A man who loses a relation by drowning takes an oath that he will never again eat fish, and never drink water from such lake, river, etc. Here the idea is of course simply to avoid eating part of the relation.

A Nyanja and Machinga will not eat the flesh of the hippopotamus, because on the body they say there are the marks of a string round the loins and of a mat on his back, adding that long ago he was a man. Animals of prey would never under any circumstances be eaten. Milk used never to be drunk by an adult, as it was said to cause a man to become as a child. A man would not dare to drink woman's milk as it was said he would surely die of dysentery. M [825] M [272]

Tobacco, etc.—The smoking of tobacco was a custom introduced from the coast. Chewing was general among Machinga and Yao men and women, while the Angoni and Mañanja snuffed. With the tobacco a little lime, made by burning shells, was taken in the mouth. Giddiness and sleepy sensations were experienced after chewing. The Nyasa and Awisa smoke a hubble-bubble, the water vessel being a large sausage-shaped gourd with a reed stem supporting a large bowl of mbalwa wood, sometimes very nicely carved (Plate XXVII, Figs. 5 and 7). The Amyanja smokes a pipe with the bowl made of clay and the stem of bamboo (Plate XXVII, Fig. 6); these are made by the women. Tobacco is grown in nearly every village, a large-leaved rather coarse variety; it is sun-dried and rolled up into hollow rings 6 inches in diameter and 3 inches broad. For snuff (*Fodia* [illegible]) the sun-dried tobacco is further dried over a fire on a pan, when cold it is ground on a stone with a smaller stone by the women, and with it is mixed some ashes of the upas fig-tree. M Y 276 [177]

At Blantyre I obtained a water-pipe made of bamboo stem; this was the water reservoir; a stem of reed supports a little clay bowl. The mouth is placed over the upper end of the bamboo. Bhang (*cannabis indica*) is smoked in a pipe of this kind.

AGRICULTURE.

The people live by cultivating the soil. Both sexes help in hoeing and planting, the collecting of the crops being mostly done by women. The hoe is the M Y 241

and the feature of it was the introduction of life-size representations of animals made of bamboo and grass with men inside.

I once saw these at a *namwali* ceremony among the Awisa (*q.v.*).

12. *Nkula.*—Woman only present; danced on the occasion of a girl's first menstruation.

13. *Litiwo.*—Women only, on the occasion of the quickening with first child.

Y 535

14. *Njeula.*—Men and women, a quick shuffling step while standing in a circle.

15. *Sukuza.*—The body shaking (shoulders) dance of boys, they walk round in a ring, some fifty of them, the drums in the middle; when the bass drum breaks into a quicker time they all start shaking shoulders and bodies with intervals for two or three steps.

16. *Nanja.*—Danced in a circle, men and women alternately.

17. *Nkonde.*—A big dance with *sanji* rattles.

18. *Chibonde.*—Dancing boys dance.

19. *Mberuza.*—(1907) men and women; each carries a bango reed filled with pebbles—no drums.

20. *Manganji.*—A coast dance; palm leaf bags filled with pebbles are tied on the legs.

21. *Sanja.*—A *pas-de-deux*, each man with a rattle and head-dress; for a few moments they wander round each other picking up the time and tune, and then jump into a very fast step dancing and jumping into the air shaking the rattles.

22. *Chimwiniwini.*—A *pas-seul* by a man carrying a viol and bow with anklets of small sticks.

Y M 535

23. *Masuwo.*—Danced no longer. At Mponda's village a big crowd used to dance with skins round the loins and wooden anklets: in their hands they carried live snakes which had been rendered harmless by putting medicine over their holes before digging them out. Four drums as in *chindimba* were used. The women all fled away.

SOME TRIBES OF BRITISH CENTRAL AFRICA.

[P, 334(B)]

3:Stanmus D-5 (ca. 1912) 1922 FT7 Yao FT7

Again, charm medicine may be contained in various articles which are also generally worn round the neck. The teeth and claws of the beasts of prey are so employed, generally arranged in pairs bound together so as to form a crescent and suspended from a string. The teeth of crocodiles, lions, leopards, and the claws of the same beasts and of some large birds of prey are thus employed. The teeth etc., are in themselves charms against injury, probably against what one might call homologous injury. The idea of stuffing them with medicine is probably a secondary consideration, a process of fortification of the charm so that its use comes to have a more powerful influence. It is interesting to see of late years that the native, recognising the decorative value of these crescent-shaped amulets, has begun to copy them in lead and ivory. A series of these of graduated size is worn as a necklace by women. 751 757 825

When a medicine-man is consulted, part payment is made in advance, "payment to go and dig medicine (roots)." The rest of the payment is made when the cure is effected. Should a patient not be satisfied with his treatment and wish to consult some other medicine-man, he pays to the first a quarter of the fee he would have paid if his cure had been effected; this is called "paying him to get his medicine away." Unless this is done, should he recover later, he will be liable to claims for full fees from all of the medicine-men he has consulted; each will say his own medicine has gone on acting and has effected the cure. A medicine-man may take a case he is treating into his own house. 756

In prescribing medicine, very particular instructions are given with an embargo on certain things which may or may not have some use and significance. A medicine-man in 1901 at Malenya's, who inoculated every one in the forehead with bullet proof medicine, said that no one must step across a *mwini* (pestle for pounding grain), and no one must eat the leaves of the sweet potato.

A medicine-man always partakes of part of the decoction he is giving to a patient to show that it is harmless; I think these preparations are mostly inactive. I should hate to sample all the castor oil I have prescribed, though many natives have had suspicions about me when I have not done so.

Poisons. Though there are a large number of species in this country, both vegetable and animal, from which poison might be extracted, those that have gained any reputation among natives and have come under my observation are but few in number. *Mwai* (*Mwabai* Chin.) "the ordeal poison," is the bark of *Erythrophleum guineense*. The natives distinguish two varieties of *mwai*, the two trees differing slightly in leaf, flower and bark; *mwai* is the *Erythrophleum guineense*, the second variety known as *mpanjila* is doubtless an allied species. *Mwai* is the poison employed in the poison ordeal.[1] It is administered in a poisonous dose as a decoction of the bark, recovery or otherwise depending on whether or not the poison is voided by vomiting. Natives give as the symptoms headache, giddiness, disturbances of vision, vomiting and purging, with slowing of heart beat. *Mpan-* 137 278 [695]

[1] Vide Index, p. [illegible].

3:Stanton D-5 (ca. 1912) 1922 FT7 Yao FT7

[137] ●278 aqila is a more deadly poison and is not used in the poison ordeal but is administered with intent to murder; it is usually given mixed with beer or in porridge. Death is said to be assured in a few hours. *Lipembele:* the Yao name of beetles belonging to the genus *Mylabris*, found in large numbers in June and July in the native gardens where they do much [136] damage to the bean crops. The name is, I think, more especially applied to a species with [278] yellow bands, those with red markings being said to be harmless. These beetles are prepared for poisoning food by frying and then grinding into a powder. In this form, they are administered with intent to murder or they may be taken for suicidal purposes, five or six beetles being used. These beetles contain cantharidin in a greater proportion than cantharis itself. The symptoms described by the natives as occurring after exhibition are constipation followed by high fever, and death eight hours later. This same beetle is known to other tribes and is the *nsunse* of the Anyanja.

The bile of the crocodile, *nyenge* (*nduku*, Chin.); *nyenge* and *nduku* also are used, meaning the gall-bladder. Crocodile gall has the reputation of being a powerful poison over nearly the length and breadth of Africa. It is known, I think, to all the tribes in Nyasaland. In this district, they qualify their beliefs by saying that the bile of crocodiles from Lake Chilwa and Chiuta which do not eat men is not poisonous. The poison is also said not to be used on the Lower Shiré River where, and where only, crocodiles are eaten as food by the natives. Among the Yao, the gall-bladder is removed with the contained gall, dried, and then ground in a little mortar or on a stone. The dose of the powder is said to be as much as would cover a sixpence. Symptoms are said to be great pain in the stomach, swelling and discoloration of the tongue, and loss of speech. Public destruction of [171] the gall-bladder of any crocodile which has been killed is said to be the custom on the West Coast of Africa, and the same is true of some tribes in Nyasaland as at Kotakota, but so far as I am aware, this is not done among the Yao.

The gall of other animals is similarly used, but among the Yao I am not quite certain of the species. *Lipiri*, the puff-adder, certainly is utilized, and I think other snakes, such as *Nahuhuhuti*, a grey, ash coloured snake, *Lisupi*, a water-snake six feet long, and *Soupe*, the crowing-snake. Certain lizards are also employed, such as *Lilwahwala*, and frogs, both *Chiulo* and the running frog, *Chinsenene*. Scorpions too have found a place among poisonous preparations, so it is said, and likewise, the bile of some mammals. Bamboo fibre, animal hair, the bones of fish, and ground glass, I have also heard mentioned as being administered with the desire to produce a fatal enteritis.

Pupal cases made of twigs and the contained pupa (species of the family of *Psychidae*) called *chimunga* or *chimu nyeri* (fr[illegible] "to eat" and *nyeri*, "fire-wood") are said when eaten by cattle to cause dea[illegible] I cannot vouch for the truth of this nor can I say whether they are ever given to man.

[137] 278 A wild yam, *mbwa* (*mulapa*, Chin.) is poisonous if not well boiled and the water thrown away, but is not used as a poison so far as I know. The same is true of *nyenge*, a kind of cassava.

3: Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

Strophanthus is specially reserved for poisoning arrows and it is doubtful if it is ever given by mouth; *Kombe* is the name used in this country, but there are two species of strophanthus in Nyasaland, *Strophanthus hombe* and *Strophanthus courmonti*. The seeds and bark are used and, less commonly, the root. They are mixed with the roots of a shrub called *Ntsanimba*, pounded together and boiled, and the liquid used to anoint the arrows. The use of poisoned arrows is a Manyanja custom adopted to some extent by the Yao.

A number of poisons are also employed in catching fish, *Nyanga* and *Mtulu* being the most common, also *Kamsimbila Nguchi* (*Nkudzi*, Chin.), and *Chingunga*.

Witchcraft. In my article on the Anyanja,[1] reference is made to witchcraft and *wfiti*. Beside the Nyanja *wfiti* or the Yao *mawi*, all tribes as far as I know in Nyasaland have firmly fixed among their beliefs, the conception of the supernatural human-flesh eater. It is a little difficult to define the term *wfiti* or *mawi*, as it has come to have the somewhat generalized sense of one who practices witchcraft, but the original meaning is defined by Scott,[2] a person who has acquired the knowledge of occult medicine by which he can kill his fellow man; "what makes the power so dreaded is not that the *wfiti* exercises this power for reasons of spite but (as is supposed), to eat the body of his victim." It is at once interesting to note that the word *wfiti* does not belong, according to Scott, to the personal class of nouns but to the *pa-ma* class, which seems to imply that they believe a *wfiti* to be something outside the idea of a person. Among the Anyanja in Zomba district, however, the word belongs to the first class of nouns (the personal class) as also does *mawi* in Chiyao.

The natives believe that any man in a village may be a *wfiti* or it might be more correct to say, is capable of changing into a *wfiti*. *Ufiti* is the state of being a *wfiti*; in Chiyao, *mawi*.

As I have pointed out under *Diseases*, practically all illness and death are thought to be due to the machinations of some person or persons. The inciting motive which may cause a man to compass the death of another may be spite, revenge, etc., or the desire of *mawi*. Until recent years, when the Government legislated to put down witchcraft, the charges of *mawi* were everyday occurrences. Whether or not the prevalence of the idea of cannibalism has any substance in correspondingly frequent practice has never been and now probably never will be surely proved. Duff Macdonald believes it to be so.[3] It is true that native graves have been and are still rifled and that the graves of some Europeans have been so opened in the past, as I have learned from eyewitnesses. It seems probable that the graves were tampered with by natives with the object of removing the human remains, possibly to be eaten or to obtain portions of the body to use as charms. Mr. L. T. Moggridge,

286 have said, to this day, and also appearing as the proper dress in all ceremonies. Clothing nowadays, among the majority, consists of calico of various kinds brought in by traders and further coloured to under *Dress*.

287 **Bark-cloth, Ikenede** (*ikinende*, Chin.) is made by the men. A piece of bark about two feet by one is cut from the living tree; the outside portions are removed and the whole piece, after being well scraped, is soaked in water. When partly softened, it is removed and hammered out with a wooden mallet; the process is repeated till the piece of bark is soft enough to enable it to be wrung in the hands, thus further lengthening the fibres. The soaking, hammering, wringing, and pulling are continued till a piece of cloth three by five feet is obtained. This is sun-dried and yields a soft, pliable, and warm material. Several pieces may be sewed together to make a large sheet. Bark-cloth is sometimes stained black by soaking it in a kind of thick mud found on the plains. The mallet consists of a piece of hard wood with serrations on its face, held in a split stick handle; it is called *ndumere*. A log of wood with a flattened surface, called *ndumpere*, plays the part of the anvil, the man who is using the mallet usually sitting on one end of the log.

281 **Skins.** The Tao are unacquainted with the art of tanning. Skins are prepared only by drying, and then softened by hammering with stones. They are not employed as articles of clothing but the larger ones are used to sit upon, the skins of the leopard and the lion being reserved for chiefs. Others are used to make bags to carry flour, for powder pouches, and to cover guns. The blacksmith's bellows are made of goat's skin.

283 **String,** *Ishenji* (*ishinjen*, Chin.): Two kinds of string are made, one from flax, the other from the inner part of the bark of the baobab tree. Fishing nets are made from the former, game nets from the latter.

326 **Metals and metal working.** The only metal ever obtained from the ore by the Wayao was iron, and it is probable that they learned this from the *Angoni* and *Anyanja*. The industry is now nearly dead since the introduction of trade articles. A few blacksmiths still ply their trade, but their work is restricted to the manufacture of knives, spear-heads, and razors. Hoes are no longer made. The hoe blade supplied by traders is in the form of the old native-made article, which had in turn displaced the older hoeing-stick. The blacksmith deals with his mass of metal by hammering it with stones. He provides himself with bellows, a small iron hammer, and a rudimentary kind of tongs. He is called *mwikipale*.

324 **Stone.** The only important uses for stones among the Tao are for supporting the cooking pots on the fire, for heating water in some medicinal preparations, and for grinding millet. For this last purpose, a large, flat stone, inclined at an angle, is set up in some convenient spot, often on the veranda, and the grain is ground by means of a smaller stone held in the hands.

412 **The flour pestle and mortar.** Maize flour is prepared by pounding the grain in a
[262] big wooden mortar, by means of a wooden pestle, consisting of a pole some five feet long and four inches in diameter with round ends. The mortar consists of a tree trunk about

M 283 [334] String is used to make their fishing nets, necklaces, and other handwork. For bow strings tendo achillies is used, also strips of skin, strings. On their musical instruments ordinary string or gum is used to form the strings.

M 432 Needles made of sharpened bamboo were formerly used, the blunt end being shaved into a pulp and then incorporated with shaved end of the string.

M 285 Netting is done in the ordinary way with a simple shuttle.

Leather.

M 7 281 The skins of their domestic animals—cattle, sheep, goats—and of antelopes and leopards are prized. No fish skins are used. Skins are removed from the animals by a median ventral incision and other incisions along the inner side of the legs. The Yao leaves the hair on the skin, some Chipeta remove it. The only treatment a skin gets is scraping and drying in the sun, then rubbing with stones and beating till worked soft. This is done by the men. I have only seen seen an ornamented skin, that of a sitatunga from Lake Bangweulu, North-east Rhodesia. Skins are but comparatively little used, occasionally to sit upon. In German territory every chief sits on a leopard skin. M [422] They are used of course to cover drums, make bags for carrying a supply of grain, and to make bellows for the metalworker. The skins of small animals are used as purses and tobacco pouches. N/ [281] Among the Angoni and Chipeta they are used as bib-cloths, also to support the baby on its mother's back, and of course to make shields.

Dyeing.

M 336 There is practically none. The root of a certain tree is cooked with gummy to give them a black colour, to be used in making mats with patterns; this gummy has been learned, I think, from the west.

At Liwonde, the root of the red wood tree is boiled in water and the decoction used for staining, and, I think, strengthening their fishing nets. Dyes are not used for any part of the body.

Painting.

M 332 332 Recently decoration of the outsides of their houses has come into fashion, a red earth and lime being used to depict men, cattle, antelopes, steamers and bicycles. Other merely geometrical designs are made, I think by Mohammedan coast people.

Stone-work.

M 329 No stone implements are used, except stones for grinding maize, some small pans and mortar. There is a lump of stone at Fort Anderson on which holes have been made for playing the stone game.

In Stanford D-5 (on. 1912) 1922 F77 Yao F77

286 have sold, to this day, and also appearing as the proper dress in all ceremonies. Clothing nowadays, among the majority, consists of calico of various kinds bought in by traders and further coloured to under *Dress*.

287 Bark-cloth, Ikomale (*ikimwale*, Chin.) is made by the men. A piece of bark about two feet by one is cut from the living tree; the outside portions are removed and the whole piece, after being well scraped, is soaked in water. When partly softened, it is removed and hammered out with a wooden mallet; the process is repeated till the piece of bark is soft enough to enable it to be wrung in the hands, thus further loosening the fibres. The soaking, hammering, wringing, and pulling are continued till a piece of cloth three by five feet is obtained. This is sun-dried and yields a soft, pliable, and warm material. Several pieces may be sewed together to make a large sheet. Bark-cloth is sometimes stained black by soaking it in a kind of thick mud found on the plains. The mallet consists of a piece of hard wood with serrations on its face, held in a split stick handle; it is called *mkomero*. A log of wood with a flattened surface, called *mkompwe*, plays the part of the anvil, the man who is using the mallet usually sitting on one end of the log.

281 Skins. The Yao are unacquainted with the art of tanning. Skins are prepared only by drying, and then softened by hammering with stones. They are not employed as articles of clothing but the larger ones are used to sit upon, the skins of the leopard and the lion being reserved for chiefs. Others are used to make bags to carry flour, for powder pouches, and to cover guns. The blacksmith's bellows are made of goat's skin.

283 String, *Ichiwji* (*ishiwjo*, Chin.): Two kinds of string are made, one from flax, the other from the inner part of the bark of the baobab tree. Fishing nets are made from the former, game nets from the latter.

326 Metals and metal working. The only metal ever obtained from the ore by the Wayao was iron, and it is probable that they learned this from the Angoni and Anyanja. The industry is now nearly dead since the introduction of trade articles. A few blacksmiths still ply their trade, but their work is restricted to the manufacture of knives, spear-heads, and razors. Hoes are no longer made. The hoe blade supplied by traders is in the form of the old native-made article, which had in turn displaced the older hooing-stick. The blacksmith deals with his mass of metal by hammering it with stones. He provides himself with bellows, a small iron hammer, and a rudimentary kind of tongs. He is called *wachipale*.

324 Stone. The only important uses for stones among the Yao are for supporting the cooking pots on the fire, for heating water in some medicinal preparations, and for grinding millet. For this last purpose, a large, flat stone, inclined at an angle, is set up in some convenient spot, often on the verandah, and the grain is ground by means of a smaller stone held in the hands.

412 The flour pestle and mortar. Maize flour is prepared by pounding the grain in a
[252] big wooden mortar, by means of a wooden pestle, consisting of a pole some five feet long and four inches in diameter with round ends. The mortar consists of a tree trunk about

1: Tew E-4 (no date) 1950 FT7 Yao FT7

and £30 per annum. It is profitable to carry fresh fish inland by bicycle even as far as Blantyre,[1] as the shore price to the retailer is 4s. a load, which later may fetch from 16s. to 24s.[2] Yao on the south-west lake shore grow an excellent quality rice.[3] Rice is also grown near Lake Chilwa, but is mainly sold in the market organized near the lake shore by the Agricultural Department.

Division of Labour

The men build the house, hoes, fishes, make the nets, baskets, grain-store, game-traps, and, in the old days, the bark-cloth. He cultivates the tobacco. He cuts down the trees and may help with the hoeing and harvesting. The woman hoes, sends the floor of the hut, sweeps, cooks, brings firewood, draws water, brews beer, makes the pots and pipes.[4]

Land Usage

There are two types of garden in the Yao areas south of Lake Nyasa: one the ordinary garden in which the staples grow, and second, gardens along the stream beds. These latter are especially valuable for providing out-of-season crops. In addition most householders have a few small plots for tobacco and ground-nuts.

The main garden is cultivated by the slash-and-burn method, common in Central Africa. The Yao, unlike the Bemba, garden occupies the whole area cleared. Burning is done just before the rainy season (October–November). The ash and soil are hoed into elongated mounds and grain is planted along the ridges. Gardens may be cultivated for more than five years. In the second and subsequent years of cultivation the stalks and weeds are piled up and burnt. There are signs of soil impoverishment. The gardens are cleared in August, and heaped to dry for burning. After the burning the seeds are planted in late November. By February and March green maize is available to supplement the diet, and by the end of April the crops are ready to be harvested. The maize is stored in wicker containers, while sorghum is stored in the huts on a stand. Cassava is planted in large mounds made by turning the turfs over, so that the roots are outside the mound and the vegetable matter inside. Legumes are planted in smaller gardens, or interplanted with the main crop. Ground-nuts are stored, after being shelled, in mud-plastered wicker containers, designed to be rat-proof. Tobacco is planted at the sides of the streams for hand-watering in the seedling stage, and then transplanted about January. The leaves are ready to be plucked about April and soon afterwards they are marketed. Sweet potatoes are planted in the rainy season, and are ready for eating in May. The stream gardens yield out-of-season crops—maize, beans, pumpkins, and also sugar-cane, which is used in the initiation ceremonies.

Craftsmanship

The Yao have few skills. All cultivation is by hoe; axes and knives are their only other technological equipment. The men make mats from reeds and palm leaf, and the women make pottery. The huts are strongly built from poles laced with bamboo and plastered with mud. The roof is thatched with grass. Under Arab influence the

3: Shannon D-5 (on. 1912) 1932 FT7 Yao FT7

323 Kpai near Sambo. Sometimes pots are also rubbed all over the outside or in patterns with oxuqu, a natural graphite.

323 574 Patterns of a simple character, often of the herring bone order, are commonly graved about the neck of the pots with the aid of a stick of bamboo. There is considerable variety in the size and shape of the pots made. As with gourds, the pot takes its name from the use to which it is put and not from the shape or size. All pots have rounded bottoms; some have a flattened base or standard.

The following varieties of pots may be mentioned:

323 415 1. *Lidendo*, large pots for beer-making. These are usually roughly made and seldom have any decoration on them; they stand about two feet high and are wide-mouthed (Pl. XV, figs. 1, 4).

2. *Lendo* (*ulendo*, Chin.): water-pots. These are usually well moulded and well finished pots, full bellied with broad base and a certain amount of neck. They are practically always decorated and often coloured. They are about twelve inches high and twelve inches across the broadest diameter (Pl. XV, figs. 8, 9, 10).

3. *Chindapo* (*ulindo*, Chin.): cooking pots used for cooking the flour porridge, *upuli*. These are wide, open-mouthed pots six to ten inches high, with bully and more or less straight sides (Pl. XV, figs. 5, 6, 7). This name also applies to the cooking vessel for medicinal concoctions.

4. *Chijungu* (*upulin*, Chin.): smaller pots of the same type as 3, used for cooking beans, fish, green stuff, and the edible *ukuqu* (*ukiwu*, Chin.) (Pl. XV, fig. 3).

5. *Mbide* (*ulumi*, Chin.): the bath water pot. The smallest pot used for heating water to bathe the husband after sexual intercourse bears the same name. It is found among both the *Anyanja* and the *Wayao* (Pl. XV, fig. 2).

6. *Mbide* (Yao and Chin.): the plain, a shallow, wide-open vessel.

Baskets. The basket work of the Yao is all of one type and is done by the men. All baskets are made of plaited strips of bamboo, the free edges of the strips being bound between thicker pieces of the same wood forming the rim, the binding being done with the stem of a creeper. They are made in various shapes and sizes. Some are rendered waterproof and used as beer mugs. The following types of basket are in use:

285 1. *Chinde* (*lidawa*, Chin.): a circular, open basket, shallow and wide, six to ten inches in diameter; it is used as a food dish or to winnow flour, etc. *Chitungu* (*usungwa*, Chin.), a rather larger one of the same shape, often decorated with beads is used to carry flour, while a still larger basket called *ukyuta* is commonly used by the women for winnowing out the chaff from the partly pounded maize (Pl. XVI, figs. 11, 12).

285 415 2. *Lukindo* and *ukindo* (in Chin., both are called *usungu*): deep baskets usually about as deep as they are broad; the bottom is approximately square, but the rim is circular. *Chikindo* is about six inches high and six inches in diameter; *lukindo* is about a foot in all dimensions. These large baskets are used for carrying any food-stuffs in bulk, e.g. grain and pumpkins (Pl. XVI, fig. 16).

3:Stanton D-5 (on. 1912) 1922 FT7 Yao FT7

3. *Mtengwi*: this large double basket one half of which fits over the other like a cover, is now very common among the Yao; it was copied from the Swahili *lipumude*. The body is made in the same way as the other baskets, but each half has a bound rim of wood which is always set prettily into patterns (Pl. XVI, fig. 12, and Pl. XVII). 285 415 [P7]

4. *Chimundi*: the beer vessel, a small hemispherical basket rendered waterproof by smearing with a sticky substance prepared from the pounded stem of the *mpwa* tree or from the root of the *mpwa* plant mixed with charcoal (Pl. XVI, fig. 13).

5. *Limungulo* (*lungu*, Chin.): the beer strainer made in the shape of *chitungu*, but the strips of bamboo forming the warp and the weft are of different thicknesses, so that spaces are left for the fluid to run through (Pl. XVI, fig. 14).

Mats. In years gone by the Yao made a rough kind of plaited matting of split reeds called *chipumdu*; it is not seen today. Another type of mat seldom used today is the *kitiko* (*ziko*, Chin.), made of a number of reeds of equal length bound together by several rows of interlacing string (Pl. XVI, fig. 7). Reeds are also used to make the *mpwa* (*mpuwa*, Chin.) (Pl. XVI, fig. 10). When dry they are split and fastened out with the smooth surfaces all on one side. A number of reeds so fastened lying side by side are then sewed together with native string, and form a clean, smooth mat for sitting or sleeping. 285

Mats made of plaited strips of sun-dried palm leaf are now in common use, the art of making them, I believe, having been introduced from the coast. Large mats of this kind called *kondi* are used in the chief's courtyard (Pl. XVI, fig. 8). Smaller ones called *mkeka*, or by the old people *mkwapa*, made from the leaf of the wild date palm, are used for sleeping (Pl. XVI, fig. 6). Since the advent of the Europeans, mat making has become an important industry, and *kondi* and *mkeka* are to be found in every European house.

A still finer kind of mat, circular in plan and stained in patterns, has lately been introduced by the Swahili. Red and black dyes are generally used; the red is either *mpwa*,[1] or a stain called *mkomolo* prepared from the bark of a tree called *mwako*; the black dye is made from the root of a vine, *lilumpa* (*ziduwa*, Chin.), the ink bean. [346]

The matting made of these strips of palm leaf is in the form of a ribbon from three to six inches wide, according to the fineness of the strips. The ribbon of matting is sewed into the form of a cylinder by plaiting the edges of the ribbon together in a large spiral. This cylinder of matting is then cut down one side and laid flat, and the cut edges finished off with a plaited mat border (Pl. XVI, fig. 6). It will be seen that, owing to the way they are made, these mats are never quite rectangular. The ribbon of matting used for the circular mats is narrower still and sewed round and round in a flat spiral fashion.

Cloth. The Yao in years gone by made a woven cloth, but the art has long since died out, and I have never seen a piece of native-made cloth. I imagine, inasmuch as bark-cloth is still worn by the poorer people, that the native-made woven cloth was only worn by the few, probably the chiefs. The other cloth was undoubtedly bark-cloth, worn, as I 286

3. *M'mapsi*: this large double basket one half of which fits over the other like a cover, is now very common among the Yao; it was copied from the Swahili *Kjumunda*. The body is made in the same way as the other baskets, but each half has a broad rim of wood which is always cut profusely into patterns (Pl. XVI, fig. 13, and Pl. XVII). 285 415 [177]

4. *Chimundi*: the beer mug, a small hemispherical basket rendered waterproof by smearing with a sticky substance prepared from the pounded stem of the *mpoto* tree or from the root of the *mpoto* plant mixed with charcoal (Pl. XVI, fig. 12).

5. *Limpulo* (*lupu*, Chin.): the beer strainer made in the shape of *chilungu*, but the strips of bamboo forming the warp and the weft are of different thicknesses, so that spaces are left for the fluid to run through (Pl. XVI, fig. 14).

Mats. In years gone by the Yao made a rough kind of plaited matting of split reeds called *chipumbu*; it is not seen today. Another type of mat seldom used today is the *lichika* (*ghika*, Chin.), made of a number of reeds of equal length bound together by several rows of interlacing string (Pl. XVI, fig. 7). Reeds are also used to make the *mpoto* (*mpoto*, Chin.) (Pl. XVI, fig. 10). When dry they are split and fastened out with the smooth surfaces all on one side. A number of reeds so flattened lying side by side are then sewed together with native string, and form a clean, smooth mat for sitting or sleeping. 285

Mats made of plaited strips of sun-dried palm leaf are now in common use, the art of making them, I believe, having been introduced from the coast. Large mats of this kind called *lisudi* are used in the chief's courtyard (Pl. XVI, fig. 8). Smaller ones called *mdoka*, or by the old people *mdempu*, made from the leaf of the wild date palm, are used for sleeping (Pl. XVI, fig. 6). Since the advent of the Europeans, mat making has become an important industry, and *lisudi* and *mdoka* are to be found in every European house.

A still finer kind of mat, circular in plan and stained in patterns, has lately been introduced by the Swahili. Red and black dyes are generally used; the red is either *mpoto*,[1] or a stain called *mdumbi* prepared from the bark of a tree called *mundu*; the black dye is made from the root of a vine, *Mkumpu* (*ghikuu*, Chin.), the Irish bean. [346]

The matting made of these strips of palm leaf is in the form of a ribbon from three to six inches wide, according to the fineness of the strips. The ribbon of matting is sewed into the form of a cylinder by plaiting the edges of the ribbon together in a large spiral. This cylinder of matting is then cut down one side and laid flat, and the cut edges finished off with a plaited mat border (Pl. XVI, fig. 5). It will be seen that, owing to the way they are made, these mats are never quite rectangular. The ribbon of matting used for the circular mats is narrower still and sewed round and round in a flat spiral fashion.

Cloth. The Yao in years gone by made a woven cloth, but the art has long since died out, and I have never seen a piece of native-made cloth. I imagine, inasmuch as bark-cloth is still worn by the poorer people, that the native-made woven cloth was only worn by the few, probably the chiefs. The older cloth was undoubtedly bark-cloth, worn, as I 286

[1] Vide supra, p. 341.

3:Stanner D-5 (ca. 1912) 1922 FT7 Yao FT7

286 have said, to this day, and also appearing as the proper dress in all ceremonies. Clothing nowadays, among the majority, consists of calico of various kinds brought in by traders and further referred to under *Dress*.

287 Bark-cloth, *kisunde* (*chisunde*, Chin.) is made by the men. A piece of bark about two feet by one is cut from the living tree; the outside portions are removed and the whole piece, after being well scraped, is soaked in water. When partly softened, it is removed and hammered out with a wooden mallet; the process is repeated till the piece of bark is soft enough to enable it to be wrung in the hands, thus further loosening the fibres. The soaking, hammering, wringing, and pulling are continued till a piece of cloth three by five feet is obtained. This is sun-dried and yields a soft, pliable, and warm material. Several pieces may be sewed together to make a large sheet. Bark-cloth is sometimes stained black by soaking it in a kind of thick mud found on the plains. The mallet consists of a piece of hard wood with serrations on its face, held in a split stick handle; it is called *ndemere*. A log of wood with a fluted surface, called *ndemepere*, plays the part of the anvil, the man who is using the mallet usually sitting on one end of the log.

281 Skins. The Yao are unacquainted with the art of tanning. Skins are prepared only by drying, and then softened by hammering with stones. They are not employed as articles of clothing but the larger ones are used to sit upon, the skins of the leopard and the lion being reserved for chiefs. Others are used to make bags to carry flour, for powder pouches, and to cover guns. The blacksmith's bellows are made of goat's skin.

283 String, *ndewji* (*chinyao*, Chin.): Two kinds of string are made, one from flax, the other from the inner part of the bark of the baobab tree. Fishing nets are made from the former, game nets from the latter.

326 Metals and metal working. The only metal ever obtained from the ore by the Wayao was iron, and it is probable that they learned this from the Angoni and Anyanja. The industry is now nearly dead since the introduction of trade articles. A few blacksmiths still ply their trade, but their work is restricted to the manufacture of knives, spear-heads, and razors. Hoes are no longer made. The hoe blade supplied by traders is in the form of the old native-made article, which had in turn displaced the older hoeing-stick. The blacksmith deals with his *mana of metal by hammering it with stones. He provides himself* with bellows, a small iron hammer, and a rudimentary kind of tongs. He is called *mwalipale*.

324 Stone. The only important uses for stones among the Yao are for supporting the cooking pots on the fire, for heating water in some medicinal preparations, and for grinding millet. For this last purpose, a large, flat stone, inclined at an angle, is set up in some convenient spot, often on the veranda, and the grain is ground by means of a smaller stone held in the hands.

412 The flour pestle and mortar. Maize flour is prepared by pounding the grain in a
[262] big wooden mortar, by means of a wooden pestle, consisting of a pole some five feet long and four inches in diameter with round ends. The mortar consists of a tree trunk about

4: Stannus D-5 (ca. 1909) 1910 FT7 Yao FT7
Ngoni FR5
Maravi FR4

Women wear their cloth folded across the upper level of the breasts from right to left. Men and women often have two cloths, one over the loins, only the second fastening over the chest. M Y N 291

A menstruating woman also wears a small piece of calico corresponding to a diaper supported by string round the waist.[1] The same thing is worn after child-birth for six months. Angoni women always wear them. M Y N [241] [246]

The Angoni, Chipeta wear their cloth toga-fashion, carrying a fold of cloth on the left arm. An Angoni chief wears three such, blue, white and coloured, the first outside, the last next to the skin.

The material used is now practically everywhere European-made calico, formerly bark cloth only was used by Nyanja, though weaving had been accomplished by Angoni, where skins were and are used as articles of clothing. M Y N [246]

There is nothing to distinguish men of various grades, etc. Fashion at the present time is very capricious—some patterned cloth being much worn one month will have no sale a month later; this is true both of men and of women.

There is no class uniform, and no "costumes" are worn save in dancing (q.v.).

Men are now seen wearing a piece of calico twisted up on the head in turban form, a custom lately introduced from the coast—the only indigenous head-gear is the string skull-cap worn by Angoni widows. N [589]

Under the heading of dress must be included the bead apron worn by Yao and Angoni. Among the former the use of this garment is restricted to the women, who in the home sometimes wear nothing else; among the Angoni the children often have them and no other clothing.

Sandals are sometimes made of skin and fastened on the feet with a thong when crossing thorny country.

Among Angoni the *mondo* only used to be worn; this is a small hard-cased fruit which was hollowed out and worn just covering the glans penis. N 291 [24]

Food, etc.

The staple food throughout the country is either maize or rice, the latter *only at various spots on the lake shore* where it can be grown. Two fixed meals per diem are taken, at 9 or 10 a.m. and again at 6 p.m.; each consists of *ndiwo* porridge made from maize flour or rice flour or boiled rice with some *ndiwo* (relish) to which the salt is added. At odd times the native will eat anything that opportunity offers—a piece of *mawere* nut, a boiled sweet potato, a roasted maize cob, etc. M Y 262 [264]

The *ndiwo* is made by stirring flour (*ufa*) into boiling water till a stiff paste is formed; this is kept cooking for five minutes and then scraped out with a wooden M Y 252

[1] Diaper or *nchiri*; a woman keeps five or six; they are never put away in baskets but always hung up; a woman changes every time she bathes, using two or three per diem; they may be given to a female child to wear, but she then not worn again by a woman.

3:Stanna D-5 (ca. 1912) 1922 FT7 Yao FT7

286 have said, to this day, and also appearing as the proper dress in all ceremonies. Clothing nowadays, among the majority, consists of calico of various kinds brought in by traders and further reduced to under *Dress*.

287 Bark-cloth, *kisunde* (*chisunde*, Chin.) is made by the men. A piece of bark about two feet by one is cut from the Bring tree; the outside portions are removed and the whole piece, after being well soaped, is soaked in water. When partly softened, it is removed and hammered out with a wooden mallet; the process is repeated till the piece of bark is soft enough to enable it to be wrung in the hands, thus further loosening the fibres. The soaking, hammering, wringing, and pulling are continued till a piece of cloth three by five feet is obtained. This is sun-dried and yields a soft, pliable, and warm material. Several pieces may be sewed together to make a large sheet. Bark-cloth is sometimes stained black by soaking it in a kind of thick mud found on the plains. The mallet consists of a piece of hard wood with serrations on its face, held in a split stick handle; it is called *nhomero*. A log of wood with a flattened surface, called *nhengwe*, plays the part of the anvil, the man who is using the mallet usually sitting on one end of the log.

281 Skins. The Yao are unacquainted with the art of tanning. Skins are prepared only by drying, and then softened by hammering with stones. They are not employed as articles of clothing but the larger ones are used to sit upon, the skins of the leopard and the lion being reserved for chiefs. Others are used to make bags to carry flour, for powder pouches, and to cover guns. The blacksmith's bellows are made of goat's skin.

283 String, *lukwji* (*chinguo*, Chin.): Two kinds of string are made, one from flax, the other from the inner part of the bark of the baobab tree. Fishing nets are made from the former, game nets from the latter.

326 Metals and metal working. The only metal ever obtained from the ore by the Wayao was iron, and it is probable that they learned this from the Angoni and Anyanja. The industry is now nearly dead since the introduction of trade articles. A few blacksmiths still ply their trade, but their work is restricted to the manufacture of knives, spear-heads, and razors. Hoes are no longer made. The hoe blade supplied by traders is in the form of the old native-made article, which had in turn displaced the older hoeing-stick. The blacksmith deals with his mass of metal by hammering it with stones. He provides himself with bellows, a small iron hammer, and a rudimentary kind of tongs. He is called *wankipulo*.

324 Stone. The only important uses for stones among the Yao are for supporting the cooking pots on the fire, for heating water in some medicinal preparations, and for grinding millet. For this last purpose, a large, flat stone, inclined at an angle, is set up in some convenient spot, often on the veranda, and the grain is ground by means of a smaller stone held in the hands.

412 The flour pestle and mortar. Maize flour is prepared by pounding the grain in a
[251] big wooden mortar, by means of a wooden pestle, consisting of a pole some five feet long and four inches in diameter with round ends. The mortar consists of a tree trunk about

1: Tew E-4 (no date) 1950 FT7 Yao FT7

342 Yao make square houses.[1] Panelled doors and glass windows, deck-chairs and palm
177 furniture are becoming more and more popular. The men wear long Moslem robes
[29] and the women are clothed in cotton. In the rural areas there are usually a few crafts-
men who still ply their trades as carpenters and blacksmiths, though the latter no
326 longer smelt, but use scrap-iron.

Labour Migration

162 Statistics are not available for the Yao of Portuguese East Africa or Tanganyika
464 Territory. Yao constitute 34 per cent. of the total population of South Nyasa district,
15 per cent. of upper Shire, 11 per cent. of Blantyre and Zomba.[2] The proportion of
labour migrants in these districts was in 1937 as follows:[3]

District	Adult males fit to work	Percentage of emigrants	Number producing economic crops	Number of subsistence producers	Emigrants not heard of since 1930
South Nyasa	14,230	27·1	2,012 (12%)	12,205 (56%)	873
Upper Shire	14,873	13·9	2,333 (16%)	16,809 (87%)	933
Blantyre	25,230	13·6	3,788 (15%)	10,165 (40%)	988
Zomba	16,879	10·4	7,700 (29%)	6,040 (22%)	333

[134] South Nyasa district, which is undertile waterless bush with a long history of famine and food shortage, has the highest proportion of labour migrants. Upper Shire, though not fertile, is more prosperous, benefiting from the tobacco- and cotton-growing industries, and from the dried-fish trade.[4]

SOCIAL ORGANIZATION AND POLITICAL STRUCTURE

Kinship and Local Grouping

611 Among the Yao succession is matrilineal and marriage mainly matrilocal. Accord-
[591] ing to some informants succession formerly passed down the line of brothers, as with
the Bemba, but it now passes direct to the eldest sister's eldest son, or to descendants
of other sisters in order of seniority.[5] Chiefly succession follows the same rule, but the
most senior may be set aside for a more suitable candidate.[6]

611 Clan names, *lukoyo*, are inherited matrilineally, and formerly designated exogamous
614 units,[7] but the marriage prohibition has now ceased to operate. Holders of the same
clan name are unable to trace descent from a common ancestress, and for commoners
clan names seem to have quite lost their significance; they are, however, carefully
remembered in the chiefly lines and in other lines of hereditary rank, such as village
headmen.

614 Within the general kinship grouping of the clan, a smaller group is recognized,
613

[Facing p. 136]

that she is tattooed more profusely on the buttocks and legs. The student of beads was formerly made like waponds with a bark-cloth core, called *ntondo* or *ntuli* (to-wrap, to slip off), referring to the *ntuli* being slipped off over the legs. The fashion now is to wear single strings of beads; each string is of one color but all the strings are different and perhaps number a dozen or more.

Lipondo: a bead belt three-inches wide, worn by Tao women near Lake Nyasa. A bead apron, *Ingiwe*, is also worn by them but not near Ilondo (Pl. VI, fig. 2).

A woman removes her beads when she is "unclean," that is: (a) during the menstrual period, (b) during the period of mourning for a near relative when saliva is forbidden, (c) before the birth of a child and afterwards until such time as she may resume intercourse with her husband.

A large variety of beads has long been used by the Tao. There are some rarely seen now which were much prized in years gone by, while others are of quite recent introduction. There is no evidence that they themselves made beads and there are few which are probably not of European manufacture.

Clothing. The Tao used bark-cloth before the introduction of woven materials. The older people may still be seen in it and it is used in most of the ceremonies. At one time, they also used to weave a cloth called *Ikwamondo* from a native cotton plant. This has been given up since the introduction of imported materials.

For the method of wearing cloth, see Pl. II, fig. 2. The very poorest people wear only a strip of cotton round the pudendum, held in position by a string round the waist hanging long behind and in front; this is called *ndutu*. Tao women, when menstruating, wear under this a little piece of cloth called *Ukwabi*. It is only worn at this time and not always as in certain other tribes.

Warfare. Fighting has naturally played a large part in the life of the Tao as among other African tribes, but at no time were these people a trained fighting race. Warfare was of a desultory character consisting mostly of raids by one healed *chief* upon another. A party of men belonging to a *chief* or *mnyiko* with another, meeting some of his followers would challenge them, "*Ahombe*, who are you for?" The name of the *rival chief* in answer was the sign for battle to begin. A false answer would never be given to gain an advantage. When about to throw a spear, the thrower calls to his adversary.

The Tao have possessed guns for a long time. Going out to fight, the Tao used to hang from one foot to the other, and spin their guns around in their hands. They made their own stocks for the rifles. They also used to make a small, cast-iron cannon about three feet long, called *kombola*, "a little man." It was carried in the arms and was touched off by a torch. Drums called *ungoi* were taken into battle. There is an old war drum at Mukanya's village, taken in 1898 by the old Mukanya from a Mang'anja *chief* called Mkakumbo who lived near Lake Chiuta. Since then, this drum has always gone into battle with Mukanya. Around it his men would dance and anyone who had killed a man in battle would run up to it and spit upon it in admiration.

Marori FR4
Ngoni FR5
Sonba FR5

M 501 Necklaces, most commonly for children, are made of a number of little square pieces of hippo ivory strung together, ornamented with geometrical designs.

M 789 Medicine is often carried in a little pocket suspended round the neck, or also charms of various kinds. The medicine may be some powdered charred roots or little twigs, leaves, etc., of some tree; these are sometimes now wrapped up in a piece of paper on which is written some extract from the Koran (among Mohammedan Yao); this is then sewn in a little piece of calico and adorned with beads and suspended round the neck with a string.

Y [789] Charms take various forms. Small pieces of wood or, to guard against attack by lion, teeth are worn. Armlets of the same kind are worn against sickness, and others are worn by Angoni, made of beads to which knives are attached. Bracelets of ivory, plaited grass and elephant tail hairs are also worn.

M 501 Metal and wirework bracelets are commonly worn by Angoni, also twisted wire finger rings and rings of lead and ivory. Heavy brass ankle rings and spiral brass leg and arm rings 6 inches and 8 inches wide are worn by some of the women (Ainoge).

M 501 Bracelets cut from the nail of the elephant's foot are worn by Awanda hunters, and little finger rings cut from the nails of the ant-eater are worn as medicine against fever by hunters.

Belts made of twisted copper wire are worn round the waists by Wankonde.

M 502 The use of pigments applied to the body is very limited. I have seen stripes of them, white and red, on the faces of young women, boys and dancers, generally after some ceremony. The significance I do not know. Pigments are now obtained from Indian traders, and I do not know how old the custom is. There is no beautification of face, body, nails, and eyes by pigments. The only application made to the skin is castor oil ground-nut oils to keep it soft—no scents are used.

M [498] Clothing.

M ● Y N Among tribes of Kyamkond the amount of clothing worn varies very considerably from nothing to European garments.

● 291 [555] Of the large majority, however, including Mahenje people, Yao and Angoni, one may speak generally.

The young children commonly run about naked, or have a strip of cloth covering the pudenda, supported by a string round the waist.

M Y N [552] Among the adult population the amount of clothing depends largely on the affluence of the individual, and those who cannot afford much have little clothing. A man wears a strip of calico supported in front and behind by a string round the waist, a woman a piece of calico 18 inches wide reaching from the middle of the thighs to the ankles.

Of the more prosperous, the men wear calico from a little below the knee to the waist, carefully wrapped round the body, and kept in position by some kind of belt; sometimes it is folded across the upper part of the chest or sometimes crossed over in front and two ends tied behind the neck.

Women wear their cloth folded across the upper level of the breasts from right to left. Men and women often have two cloths, one over the loins, only the second fastening over the chest.

A menstruating woman also wears a small piece of calico corresponding to a diaper supported by string round the waist.* The same thing is worn after childbirth for six months. Angoni women always wear them.

The Angoni, Chipeta wear their cloth tape-fashion, carrying a fold of cloth on the left arm. *Ex Angoni* chief wears three cloth, blue, white and coloured, the first outside, the last next to the skin.

The material used is now practically everywhere European-made calico, formerly bark cloth only was used by Nyanja, though weaving had been accomplished by Angoni, where skins were and are used as articles of clothing.

There is nothing to distinguish men of various grades, etc. Fashion at the present time is very capricious—some patterned cloth being much worn one month will have no sale a month later; this is true both of men and of women.

There is no class uniform, and no "costumes" are worn save in dancing (q.v.).

Men are now seen wearing a piece of calico twisted up on the head in turban form, a custom lately introduced from the coast—the only indigenous head-gear is the string skull-cap worn by Angoni widows.

Under the heading of dress must be included the head aprons worn by Tao and Angoni. Among the former the use of this garment is restricted to the women, who in the home sometimes wear nothing else; among the Angoni the children often have them and no other clothing.

Sandals are sometimes made of skin and fastened on the foot with a thong when crossing thorny country.

Among Angoni the wonde only used to be worn; this is a small hard-shelled fruit which was hollowed out and worn just covering the glans penis.

Food, etc.

The staple food throughout the country is either maize or rice, the latter only at various spots on the lake shore where it can be grown. Two food meals per diem are taken, at 9 or 10 a.m. and again at 6 p.m.; each consists of nsima porridge made from maize flour or rice flour or boiled rice with some relish (ndiwo) to which the salt is added. At odd times the native will eat anything that opportunity offers—a piece of manioc root, a boiled sweet potato, a roasted maize cob, etc.

The nsima is made by stirring flour (ufa) into boiling water till a stiff paste is formed; this is kept cooking for five minutes and then scraped out with a wooden

* Diaper or nelson; a woman keeps five or six; they are never put away in baskets but always hung up; a woman changes every time she bathes, using two or three per diem; they may be given to a female child to wear, but are then not worn again by a woman.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

in the ritual of the chieftainry more than Newcomers do; provide the chief's councillors; pay rain-levies and in other ways express their closer tie with him. But there is no rigid class structure based on tradition. All villages are liable to break up. If for any reason the village's internal cohesion begins to weaken, its members scatter and it disappears as a political entity. Invader as well as Newcomer villages may thus disintegrate. The smaller sections of an invader village which now set up villages of their own have to compete with the larger and more united villages of Newcomer origin. Another facet of the political process, therefore, is the continual competition of village headmen who are trying to maintain the unity of the villages under them, and to increase their following, so that their status against the chief and the other village headmen may be enhanced. 622 559

Marks of Rank

In the vernacular it is the *name* of the village which is said to be important.[1] This name is usually taken from the founder of the village and is assumed by a new village headman when he succeeds to the position; when a new village is founded the headman gives it his name to distinguish it from the parent village. But the importance that is ascribed to a name is clearly the importance of the corporate group which it represents. The headman is an incumbent of a social status, the prestige of which is drawn from the corporate group which he represents in his public dealings. 103 622 559

The prestige of village headmen is shown particularly in the degree of deference accorded to them by other village headmen. The headman with the highest prestige is of course the chief: the original leader of the Invaders. Below him may be ranked the rest of the village headmen in a relatively fixed pyramidal hierarchy, determined by a number of factors which I shall outline later. 559 622 645

The dress of important headmen is often an indicator of prestige but this criterion is not infallible nowadays when labour migrants, craftsmen and tobacco growers can afford to buy better clothes than many headmen. But it is usually a fairly safe guess that when a man carries a long stick and is dressed in long flowing 292 559 622

[1] *Lina lya hulengwe*—lit. "the name is great".

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

622 robes (a gown not unlike a woman's dressing-gown), wears a
559 bright-coloured turban, and has one or two men walking behind
292 him, he is a rather important village headman. One particular item of clothing in the Kawinga, Liwonde and Nyambi areas, is the scarlet headband which some village headmen may wear. I shall discuss this later in the context of the competition of village headmen for rank.

Another external characteristic of rank, which seems to have
622 disappeared with the changing economic structure of Nyasaland,
559 was the carrying of knives (*nsinjo*) by important village headmen.
411 Previously, status was indicated by the type and size of knife carried in public. The chief usually carried the largest and most ornate. The knife taken from Kawinga on his surrender in Portuguese East Africa was about 18 inches long and had a decorated ivory handle. Smaller knives of similar pattern belonged to his headmen.[1] Nowadays, many young commoners carry knives two or even three feet long, made from the broken blades of motor-car springs.

The right of important village headmen to build fences[2] at
622 the back of their huts is also a mark of prestige which seems to
559 have lost in significance. About 50 years ago only important
351 headmen had the right to erect a fence at the back of their huts.
[56] This fence, made of tall grass about six feet high, enclosed the grain stores and other food supplies of the household and formed a private compound in which the headman's wife and slaves carried on their daily tasks.[3] It seems likely that private compounds and slavery were positively associated, so that only the important village headmen who had many slaves found it necessary to build fences. All chiefs and most important headmen to-day still erect these fences. Those who hold initiation
[34] rights are obliged to build them because, when the initiands return from the seclusion phase of the initiation ceremony, they are supposed to spend one night in the headman's private compound before going back to their villages. But nowadays, minor village headmen and commoners also frequently build these

[1] See fn. 4, Chap. II, p. 38.

[2] *Lamato*, pl. *malamato*. The enclosed space or 'compound' is *chakondi*. Typical fence compounds are depicted on Plate IX (*a*) and (*b*), facing p. 208.

[3] MacDonald suggests that the common term *bungwe* for woman is derived from the adverb *bungwe*—on the other side (of the fence).

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

Administrative headmen than either Christian or Pagan. The chiefs, of course, are all Moslem. 162

Lastly, the same trend is seen among those headmen who are of the same tribe as the chief, against those who are of other tribes (Table XIV). Here, however, the difference is so small 621 622

TABLE XIV

PROPORTION OF ADMINISTRATIVE HEADMEN AMONG ALL VILLAGE HEADMEN OF THE SAME TRIBE AS, OR DIFFERENT TRIBES FROM, THE CHIEF IN CHIKWEO, NGOWE, CHAMBA AND MPOSA AREAS

Type of Headman	Same Tribe	Different Tribe	Total
Administrative	85	65	150
Non-Administrative	76	73	149
Total	161	138	299
% Administrative Headmen .	52·8	47·1	50·2

$n = 1$; $\chi^2 = 0.95$; $p = 0.3412$.

that it may easily have arisen by chance. These factors, however, do not operate independently. There are more co-tribesmen, co-religionists and relatives of the chief among the Invaders than among the other categories. In other words, the factors are all intercorrelated and it is possible to consider any particular factor as the independent variable. From the point of view of the people themselves, to be an Invader is to have one of the best claims on the chief to become an Administrative headman.

THE SIGNIFICANCE OF THE SCARLET HEADBAND

Government recognition therefore provides the means whereby headmen are ranked in two major categories. But Administrative village headmen themselves are ranked by a number of prestige-indicating characteristics. The most important of these are the right to wear a plain scarlet headband and the right to hold boys' and girls' initiation ceremonies. 623 557 252

Of these two additional marks of rank the more important is the right to wear the scarlet headband. This headband is wrapped round the head, turban fashion. Most village headmen wear a headband of some sort, either of white or coloured cloth,

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

GN
554
Z92

while most commoners do not. In Kawinga-Liwonde area, village headmen of high rank are entitled to wear a plain scarlet headband (*ndengeli*). One informant suggested to me that the plain scarlet stands for blood, i.e. it indicates one of the most important elements in rank to-day—warrior ancestry. I do not know that this opinion is well supported. Among the 424 village headmen I enquired about, 24 or 5·7 per cent were entitled to this mark of honour. Of these, three were Aboriginal Nyanja headmen, 17 were Invaders, and only four were Newcomers. Of the four Newcomers, one had the right to hold it before he had come to the area from Portuguese East Africa and that was before the White conquest; one living in Chamba's area had brought it from Liwonde's area where he had been given the right to wear it; and the other two were in Chikweo's area and were given the right by the present Chikweo. The three Aborigines who wear the scarlet headbands are Kutumbu in Kawinga's area, and Mbeta and Mbande in Mpona's area. All three are settled around the shores of Lake Shirwa and they are said to have been the original Nyanja chiefs in this area when the Yao invaded. These chiefs also have boys' and girls' initiation rights. The rank they held in their own tribal communities is recognized by the Yao, who in any case ascribe superior status to the first-comers into an area. With the Nyanja chiefs the position became ambiguous. They had superior rank in that they were in occupation of the land before the Yao moved in. At the same time when they subjugated themselves to the Yao they accepted servility. Nowadays, the Nyanja are well integrated into the political life of the area and carry on their existence along the lake shores, still going to their traditional chief for the settlement of most of the cases not involving heavy compensation.

All Invader chieftains have scarlet headbands. Some of their direct relatives such as Sowa, their clan relatives such as Nunuma and Mapondo, or their patrilateral relatives such as Cibwana Liwonde, the son of the first Liwonde, also have them. After these the next important group who are entitled to wear them are the *ndunas*. Examples are Kangombo, Masinde and Ciodumba in Kawinga's area and Makata in Ngokwe area. The *ndunas* are village headmen, usually unrelated to the chief, but who have been long associated with him, and who are his

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

councillors. Long ago they held a most important position within the chiefdom. They were the loyal headmen and intimates of the chief, who could therefore be entrusted with the government of outer areas. They were posted to various parts of the chiefdom; kept the chief advised of war and attacks; maintained the peace among the village headmen in their areas; and collected the ivory to which the chief was entitled and sent it to him. Nowadays, the *ndonas* find themselves in competition with other officials who have arisen from the White Administrative system. The chief also finds advisers and councillors in his court clerks and his court sergeants, but the *ndonas* still have much prestige and advise and assist the chief in his administration of the area. Earlier, I mentioned that a senior headman was allowed to have a mat to himself, and only his own friends and people of his rank could occupy it with him. The only people in the chiefdom who could share the chief's mat, were the *ndonas*, and they called him *ungonga* (my friend). Because the *ndonas* were not related to the chief they were in the peculiar position of being able to settle quarrels between the chief and his family: they were the arbitrators in arguments between the chief and his 'younger brothers' (junior male matrilineal relatives), or the chief and his wives. By Yao custom, rank is inherited by a village headman's successor, so that the relationship between the chief and his *ndonas* is perpetuated through successive incumbents. In Kawinga's area, for example, the *ndonas* to-day have the same name and the same relationship and relative position with regard to the chief as the *ndonas* who invaded the country nearly 100 years ago. This traditional ranking of village headmen emerges as soon as the Government alters its policy. Recently, when the idea of group headmen was reintroduced, the chief nominated the *ndonas* to become group headmen—a position not unlike that they held before the White conquest.

There is considerable difference between the size of Administrative villages under those headmen who have the right to wear the scarlet headband and those who have not. Table XV shows this clearly. The mean number of tax-payers under the former headmen is 80, while under the latter it is only 38. Among the village headmen with the right to wear the scarlet headband 62·5 per cent had villages of more than 60 tax-payers, while among other headmen only 23·0 per cent of the villages were in

this category.[1] The village headmen who are entitled to wear the scarlet headband are mainly invaders and people of high rank. Their villages are large because of their rank as well as vice versa.

I have never heard of a village headman's wearing a scarlet headband without the chief's permission, and I am not sure what sanctions the chief would apply to prevent it. I have heard men say that village headmen who are not entitled to wear it do so if they live far away, but take it off when they come near the chief's court. However, this was only in casual conversation and I did not have an opportunity to check it. From the point of view of the people the right is so bound up with traditional status that it is almost inconceivable that the custom should be flouted. As we have seen, among the Newcomers only two have been given the right within the last 30 years.

Yet the significance of the scarlet headband differs considerably from area to area. In Malonia and in Jalasi area the custom seems either to have fallen away or never to have existed. In Jalasi area Islam may have some effect. In Malonia area the majority are Christians and most headmen have taken to

[1] Diff. of per cent = 3·75; S.E. of diff. = 0·77; C.R. = 3·83; $p = 0·0001$.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

European-type clothing. In Nyambi area, shooting on Kawinga-Liwonde area in the north, there are 11 Administrative village headmen out of 37 who are entitled to the scarlet headband (21 per cent). For the Kawinga-Liwonde area the percentage is 37. An informant explained why a large proportion of headmen in Nyambi area had the right to wear the headband: 'The old Nyambi and the present one do not care. If a man has many hats, and if he says that his uncle had a scarlet headband, then he is given one too.' Even within the Kawinga-Liwonde area there is some variation in the number of headmen who are entitled to the scarlet headband. The following table sets this out.

Chieftaincy	Total Admin. Headmen	% Scarlet Headbands
Kawinga	160	37
Liwonde	114	48
Mpeta	30	100
Chikowo	48	84
Ngokwe	21	142
Chimbu	60	69

Mpeta area near Lake Chirwa shows such a high proportion because of the Nyanja ex-chiefs who are entitled to the scarlet headband. Chikowo and Ngokwe on the other hand are the Mpondo chiefs and seem to have taken the same attitude as Nyambi and his predecessors. In contrast to the statement about Nyambi, one Administrative headman in Mpeta's area said: 'The chief's scarlet band is good enough for us all. If each had one it would be too gaudy!'

The Struggle for Initiation Rights

Village headmen are generally outside competition for the right to wear the scarlet headband. These rights have been established largely by ancient custom and are almost confined to the founders or to those who have had them before they came into the area. The competition for initiation rights, however, goes on steadily. H. L. Duff had noticed this as early as 1906.[1] Newcomers may approach the chief and agitate for the rights,

[1] See p. 81.

2: Mitchell K-5 (1946-1949) 1956 FT7 Yao FT7

622. The right to hold initiation ceremonies may be held con-
554 currently with the right to wear a scarlet headband. For
881 purposes of analysis thus far, I have treated the holding of
292. initiation ceremonies separately. By common consensus, the wearing of this headband is an indicator of much greater rank than the holding of initiation ceremonies. The highest ranking headmen, like the chiefs, usually have the right to wear the scarlet headband together with the rights to both initiation ceremonies. In order to show how rank varies among the main categories of village headmen I have devised a numerical

TABLE XXIII

MEANS OF RANK AMONG ADMINISTRATIVE VILLAGE HEADMEN

Type of Headman	With Headband				Without Headband				Total
	Both	Boys only	Girls only	No rights	Both	Boys only	Girls only	No rights	
Aborigines:									
Direct rel.	—	—	—	—	—	—	—	3	3
Clan rel.	1	—	—	—	—	—	—	1	2
No rel. .	9	—	—	—	—	1	1	13	27
Total .	1	—	—	—	—	1	1	16	32
Immigrants:									
Direct rel.	8	1	—	—	1	2	1	26	47
Clan rel.	4	—	—	—	8	2	1	23	44

Grand total	19	2	1	2	31	17	42	298	414

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

system of ranking. I have assumed that the rarer the mark of rank the higher the rank it indicates. Table XXIII sets out the incidence of marks of rank among the 414 Administrative village headmen for whom I have recorded the data. In all, there were 24 headmen with scarlet headbands, 69 with boys' initiation ceremonies and 95 with girls' initiation ceremonies. I have given the holding of a scarlet headband the value of the reciprocal of the proportion of village headmen who hold that right, i.e. 414/24 = 17·3.

The value of holding a boys' initiation ceremony by the same procedure is: 414/69 = 6·0.

The value of holding a girls' initiation ceremony is: 414/95 = 4·4.

DIAGRAM 2. PARADIGM OF THE POLITICAL STRUCTURE.

622 The value of holding the various combinations of rights then
SSV are these:
EE
282

Senior headman and both initiation ceremonies	= 277
Senior headman and boys' initiation ceremony	= 253
Senior headman and girls' initiation ceremony	= 217
Senior headman alone	= 173
Both initiation ceremonies	= 104
Boys' initiation ceremony only	= 80
Girls' initiation ceremony only	= 44

We may now alter the rank of headmen within any particular category by estimating the percentage score from a possible. For example, the score of the rank among Aboriginal headmen would be:

1 × 277 = 277
1 × 80 = 80
1 × 44 = 44
277 (expressed as a percentage of 11 × 277 = 161)

622 Using this method I have set out in Table XXIV the rank
SSV scores for headmen in the categories in Table XXIII. Table XXIV shows that on the whole ranking among the lowder

PLATE V

Village headman, Nyongo, at his installation ceremony. He is not entitled to wear a scarlet headband but wears a coloured one instead. On his right are his sons, on his left his wives, adopting the posture correct for an inferior—head lowered, eyes downcast, hands in the lap. A villager is dropping a penny into the cloth at the headman's feet while the headman's representative collects the pennies.

(July 1947)

[facing p. 114]

I: Dwamow D-5 (ca. 1912) 1932 FT7 Tan FT7

some sweetbow into a big gourd. These his assistants will carry away, together with a hoe, to *Lepondo*, whither the *w'mitbila* now goes to remain while brewing goes on for four days. 881 273

During their stay at *Lepondo*, the *w'mitbila* and his assistants live on flour and chickens begged from the mothers of the unit. On the first day nothing is done; on the second day they begin making the *Jepuge* or figures in relief of animals, etc., to be described later; *Kwenepend* is made this day. On the third day the other figures are made and on the fourth day *ching'ombong'ombo*. Into the ground where *ching'ombong'ombo* is made, some of the strong beer, known as *ngenge*, which is added to the flour and water mixture on the fourth day as signified by *ba-kalpula*, is poured by the *w'mitbila*.

When the work at *Lepondo* is finished, the *w'mitbila* carrying his "tail" leads his assistants wearing their leather headdresses back to the chief's village singing:

"*Dingolele* *ahene* *kenge* *ahalpile* *ba* *ewet*, *dilinge* *ahenend* [533
"I went go and see beer perhaps they have mixed at the village, sometimes oh dear! 534]
Ohilende *ahenejiwi* *ngelje* *ewe* *ningwende* *mbe*"
The going out of a day or two ago. If I had not taken tobacco I would have died of hunger!"

Arriving at the village where the brewing is going on, the *w'mitbila* takes a cup and putting his "tails" on the ground, he dips into the pot of beer belonging to the leader's mother, pours some on his "tail," and then drinks some. Then he puts more into a gourd, together with some medicine, and going up to the chief who sits in his verandah overlooking the brewing place, he kneels, and first drinking a little himself, he presents the drinking gourd of beer to the chief who drinks and then returns the cup to the *w'mitbila* who finishes it. Picking up his "tail," he then goes straight back to *Lepondo* while his assistants with some men nominated by the chief go round showing pots of beer in turn. The assistants choose by striking a pot with a medicine-tail. These pots of beer are then put aside to cool, while moderate drinking begins in the chief's house. This takes place in the morning of the day on which the unit will return from *Nilapalo* to *Lepondo*, and in the afternoon, the people from the villages will go out to *Lepondo* to take part in the return. The return is made about sunset.

The unit at *Nilapalo* are put into their shelters and the doorways barricaded. At sunset or just after, the place is set on fire and the unit have to change their way through the back of the shelters. They then form in line, wearing a slip of bark cloth round their loins and over this, a kind of kilt called *mapijanwe* if made of frilled-out bark-cloth, or *mojenge* if made of palm leaves. Accompanied by the element, they proceed towards *Lepondo*, each carrying a stick of smouldering wood and an unlit bowls of bark-cloth. 881 [342]

The burning of the hole at *Nilapalo* has been the sign to the *w'mitbila* that the unit have left; he puts round his waist a bark cloth belt, *chombo*, and a cotton sash round his chest with the ends hanging down behind and on his head he wears the *Kenge* headdress made of the feathers of *ahenge*, the widow-bird. In each hand he carries the tail of gnu or zebra, held right end up, with the hollow end filled with "medicine." Thus arrayed, he goes out 881 533 534

3:Stanner D-5 (ca. 1912) 1922 FT7 Yao FT7

The *wali* then remain for about a month under the care of their guardians, during which time they receive most valuable instruction as to their behaviour to others, especially to their elders and to members of the opposite sex. Their faults are brought home to them and many little pieces of advice given. They are taught the household duties which will be their lot thenceforth and they are forewarned of approaching puberty and what it means to them. [88]

During this period their child-names are not used and until their new names are assigned to them, they are called after birds and animals, generally some of the smaller animals, e.g. *Anyingalwe* (*mpingalwe* = the shrew rat), *Alitawale* (*limwale* = a big species of rat), *Analyelye* (*nyelyelye* = the shrew). I have been unable to ascertain whether these have any totemistic significance. [551]

The girls are usually given a fright to impress on them the danger of lions; one night an imitation of a lion approaching their enclosure is made when all is dark; then all of a sudden one of the *chewani* around with big thorns instead of claws will spring upon one of the girls, generally picking out the worst behaved.

When the term of instruction is completed, they again adjourn to *Chiputa* for two days where *Unyago* is danced on the first night by women, on the second night by men. The first day is spent by a party of men and women in the bush, preparing figures of animals and their dress for the dance. The women wear a small garment of bark-cloth called *nandagwiele*, a word which literally means "buttocks of a frog" but which is used with the meaning of trousers and refers in this case to the fact that the bark-cloth is sewn round the upper part of each thigh into a garment like a pair of knickerbockers. Round the abdomen and chest are worn bands made of short pieces of small, decorticated millet stalks; similar bands are worn on the legs and arms, two on each thigh, two on the leg, one at the wrist, below the elbow, and one round the upper arm. In the dark these give the body the appearance of being painted in alternate bands of black and white. They also wear a headdress of the same material. [292] [301]

On the first evening of the return to *Chiputa*, this party of women appears after dark; they dance in a row, advancing and retiring in step, swinging their arms and moving their bodies to ejaculations of *Bi-di! Bi-di!* Other women dress up as men, wearing long beards made of *likanga*, a kind of fibre plant.

The second night, the representations of animals made of grass and bamboo framework supported by men appear, the elephant, the rhinoceros, and various antelopes being the commoner figures, also the zebra made of painted bark cloth. These animal figures are similar to the *singwe* or *singwe* of the *Anyanja* and to those of the *Awisa*,[1] but the *nyakhwa* is unknown among the Yao. [171]

During all these presentations at *Chiputa*, the *wali* seated on mats are the chief spectators and are duly frightened by the performances of the last two days.

[1] Stanner, 'Notes on some tribes of British Central Africa,' op. cit., p. 288.

to the rear of girls, singing, "*Amandwala ukandwi*" *mihlola*, "*Magandwi*" (he-goats, to girls). Leaving the pole at the girls' feet, they retreat, after which the girls take it up and advance to the boys in the same way. 535 857

Ohlolo is danced rather like *ukomanda*. A group of men dances go round in a circle, and within this circle may be a line of women dancing to the same time but with rather different steps than the men. This I have seen danced by a trained band of dancers, but *ohlolo* pals in. A man may lead a woman into the middle and embrace her. There is a tendency among these trained dancers to freshen the old time stately embrace for something which is not so unobjectionable. 536

Lidzipi is a new dance, but one that is well-liked. The drums are as in *ukomanda*. Men, women, and young people dance in a circle followed by entry into the middle, and *he-goatis*.

Mlomulo is danced by men on one side and women on the other side of a circle, to drums *ukomo*, *mlinda* and *mangulo*. Any of them may dance out into the middle after going round in a circle.

Lipupu is an old dance for the elder men and women. Like *ukomanda*, the steps are slower and are characterized by side-to-side movements.

Mlolongo: drums, *libati*, *shingwenje*, and a wooden drum called *mlilibo*, because it is so played as to give the sound "*mlilibo!*" It is danced by men in a crowd. While the feet do little, shuffling steps, the buttocks are jerked out backwards and forwards.

Chawlomali: a dance of recent introduction resembles *ulidi*.[1]

There are three dances which are danced by special dancers.

M'ongiwe: the name on the *ulumbo* of the *Amayaiza*,[2] generally danced by four men who wear a kind of kilt made of strips of palm-leaf, and rattles, *mamen*, on their legs. They may also wear the *lingwe*, a headdress made of the tail-feathers, *wepu*, of the *shingwe* bird: it is like a broad hat-band without a crown, the feathers projecting radially. The *ulumbo*, a piece of a shell which comes from the Zululand coast is also often worn (Pl. III, fig. 3). The drums which give the time are *shimizingo*, played very rapidly indeed. The steps are incredibly fast, with greater excursions than in the other dances, and usually end up with a jump into the air and a pose with gesticulating. A circle is formed round them by the young people who, in the interval, walk round singing and clapping. The dancers may call out any girl for the embrace. [292]

Mwanje: danced by two or three pairs of men who wear the palm-leaf kilt, *mamen*, and a broad, bark-cloth belt called *ulumbo*. When the drums start, these dancers walk round the circle of onlookers, and get the song going, and the clapping to time; then with a signal to the drummers, they start dancing alternately an extremely rapid dance with rattles in the hands, *mwanje*, and a kind of dance-do-wrong, *ulumbo*. The drums employed are *mlinda*, *mlipulipu*, and *shimizingo*. The rapid dancing is too exhausting to last more than a few minutes. This is always danced at *Lupondo*. [292]

stream, sprinkles the boy on the chest with the water. Then the positions are reversed and the women receives the "tail" on her chest, after which they plunge into the water and bathe, each pouring water over the other. The women rubs the boy's back and he in turn slyly rubs the back of his women guardian. Clothes are not removed. Everyone bathes so.

While this is going on, the o'ximiddo and his assistants build a kind of fence across the return road; as the people start back, he sings:

"Ehde-ewapo ehewaso ewapapo ewahwahe-ewaehe"
"Then my they are buying I myself they give me the spirits!"

that is "everyone has got to buy from me the gifts I myself have from the spirits." As each woman comes up carrying her mouth, the mother runs out and makes a payment to the o'ximiddo so that her son may be allowed to pass. The boys are carried back to the shelters where they rest. The mother of the leader cooks food into which the o'ximiddo puts medicine; he then gives some to each mouth to eat, after which they partake of the food prepared by their mothers, while the o'ximiddo goes to the village for the beer drinking, returning in the afternoon. In the interval the dancing goes down shields, etc.

Old shielding in separate bundles on the ground has previously been prepared for anointing the mouth. The o'ximiddo takes each bundle and passes it across the palm of his hand on which he has smeared medicine, each bundle being set down on the ground again. Taking a stick, he smears it with medicine from his "tail," and he dips it into each bundle. He then smears with his "tail" to detect any women who may have had any sexual intercourse instead of remaining continent during the stay at Ndapada. He dips his "tail" into each bottle of oil to turn and bottle it up for the oil to run off. If the oil runs off in a stream, the mother or she stands behind her bottle of oil is welcomed as a good mother; if the oil runs off drop by drop, "ehdi," the woman is laughed to scorn. Her bottle is changed for that of another woman, or her oil is thrown away and some from another bottle is put in its place so that no harm shall result to the boy.

The elements then take the boys into the bush near by. The mapajoetse dress is removed, the body anointed with the oil, and fresh bark-cloth dyed black is put on. Little bows and arrows are made of small branches and grass and with these the well shoot as they again enter Lapanda, putting the bows down on sing'ombong'ombo to the trilling of all the women present.

Immediately after this, the return is made to the village, just after sunset, the women having been busy gathering up all their belongings, while the boys were being anointed.

Some of the assistants lead the procession, the rest following in single file, all round [illegible] and walking very slowly, dressed in the new bark-cloth round the loins, with many ropes of beads round the neck and body, a headband of bark, and down the back a string of beads to which is attached a tassel. Each carries in his hand a wand about five feet long, sponge, with a pointers bound in the shaft and two rattles, women, affixed at the upper end.

[195] All these peoples have in common the following points of social organization: matrilineal clans, matrilocal marriage, residence in small villages under independent chiefs or headmen. They have elaborate initiation schools with circumcision for boys, and initiation without an operation for girls. It is mainly by variations in the initiation rites that their cultures can be distinguished from one another. They also distinguish themselves by linguistic variations and by cicatrizations. This is the region of the *pelele*, or lip-ring, although Yao do not wear it.

[196]

THE YAO

TRIBAL AND SUB-TRIBAL GROUPINGS AND DEMOGRAPHY

NOMENCLATURE

[19] The name of the tribe is spelt and pronounced in a variety of different ways: Yao, Ayo, Yeiao, Hiao, Wahiao, Wahaiao, Wahyao, Ayowa, Myao, Achawo, Wajao, Adjao, Mujoa, Majaoua, Achawa, Adjoa, Mudaoo. Sometimes they are referred to by the name of one of the sections of the tribe or of one of the leaders: e.g. Amachinga, Amangoche, Mamaninga (also spelt Amamaninga and Amamaninga), Chiwala, Katulo, Kalanje, Mdenda.[1]

ORIGINS

[18] [31] [69] The Yao claim a hill called Yao, near Mumbo, between the Rivers Lujenda and Luchilingo, as the original centre from which they dispersed. The main body of Yao is in Portuguese East Africa, and there are large settlements in Tanganyika and Nyasaland.

(a) *Portuguese East Africa.* The two main divisions of Yao in Portuguese East Africa are around Mumbo and around Mtarika, on the Lujenda river.[2] Immediately south of the lower Ruvuma and at its mouth there are two smaller groups. The Yao occupy most of the territory between the Mainje, Luchilingo, and Ruvuma rivers in their upper courses.[3]

(b) *Tanganyika.* Yao entered Tanganyika Territory at two separate periods. In the 1890's they immigrated into Masasi, Chiwata, Newala, Tunduru districts and around Mikindani and Kyungo.[4] The other two groups are more recent comers: one (about 3,000), were taken as war-captives by the Ngoni in Songea district; the other (about 45,000), in the upper Lukuledi valley in Lindi district. They came in from Portuguese East Africa about 1912.[5]

(c) *Nyasaland.* There are four main groups of Yao:

(i) The largest group lives in the Southern Province, in upper Shire, and south Nyasa districts.

(ii) The second is near Blantyre, Chiradzulu, Zomba.

(iii) A small group is settled in a belt on the west coast of Lake Nyasa at Dunira Bay.[6]

performed these services used to enter a special relationship of privileged familiarity with the village of the dead. This has died out in Nyasaland, but accounts of Unei[1] among the Yao at Masasi and Songea suggest that something of the kind is still practised.

Chiefs and headmen are not buried outside the village, as are other persons. They used to be buried before their own huts, but now in the centre of the village. Shrines were raised over their graves, at which offerings of beer and flour were made. If the village was moved the pot of beer sunk into the ground at the chief's grave was also removed and reinstated at the new site. A dead slave was buried by his fellow slaves; normal rights of sepulture were denied to suicides and to persons who had died in taking the poison ordeal (that is, convicted witches).[2]

OTHER DISTINCTIVE CULTURAL FEATURES

The Yao have a tribal mark of two short cuts on each side of the face between the eye and the ear.[3] Their women did not wear the *pelele*, lip-ring, although their neighbours the Makua and Makonde did;[4] the fashion seems to have spread to south Nyasa in the 18th's, as many travellers commented on it, without distinguishing whether the wearers were Yao, Nyanja, or Lomwe.[5] The women used to pierce the left *ala* nasi and insert a metal or bead stud, *cipini*.[6]

MAKUA-LOMWE

TRIBAL AND SUB-TRIBAL GROUPINGS AND DEMOGRAPHY

Nomenclature

The *Ma-* in *Makua* is not a prefix, but part of the name. Variant spellings are *Mokua*, *Makua*, *Makoua*. They are sometimes referred to by the name of one subdivision, the Medo Makua, and called *Amatu ne Mata*.[7]

The *Lomwe* (also spelt *Lomwi*) are called *Alolo* by the Yao, and are also frequently called *Angoro* (*Ngoro*) which is an old name for the people of the region.[8] Any of the Makua-Lomwe peoples who have migrated into south Nyasaland are collectively termed *Ngoro* in official reports; Ngoro is a hill in the region of Portuguese East Africa, whence they came, but they should not be confused with the Ngoro of Tanganyika.[9] Another name for them is *Acilomo*.[10] *Alolo* is incorrectly applied to all the Lomwe; it has a stricter application to the Cuabo from Quilimane.

PLATE I

CHIEF KAWINGA THE SIXTH

He wears the traditional necklace of lions' claws which are medicated to protect him from the bullets of his enemies.

[facing p. iii]

[illegible], sprinkles the boy on the chest with the water. Then the positions are reversed and the women sandwiches the " tail " on her chest, after which they plunge into the water and bathe, each pouring water over the other. The women rubs the boy's back and he in turn duly rubs the back of his women guardian. Clothes are not removed. Everyone bathes on.

While this is going on, the o'mitsiko and his assistants build a kind of fence across the return road, on the people must back, he sings:

"[illegible] [illegible] [illegible] [illegible]"
"Pim my they are buying I myself they give me the spirits!"

That is " everyone has got to buy from me the gifts I myself have from the spirits." As each woman nears my carrying her wand, the mother rises out and makes a payment to the o'mitsiko so that her son may be allowed to pass. The boys are carried back to the shelters where they rest. The mother of the leader makes food into which the o'mitsiko puts medicine; he then gives some to each wand to eat, after which they partake of the food prepared by their mothers, while the o'mitsiko goes to the village for the beer-drinking, returning in the afternoon. In the interval the dancing now dances shambs, etc.

Oil standing in separate basins on the ground has previously been prepared for anointing the rank. The o'mitsiko takes each basin and passes it across the palm of his hand on which he has smeared medicine, each basin being set down on the ground again. Taking a stick, he smears it with medicine from his " tail," and he dips it into each basin. He then moves with his "tail" to detect any women who may have had any sexual intercourse instead of remaining continent during the stay at Ndagala. He dips his " tail " into each basin of oil in turn and holds it up for the oil to run off. If the oil runs off in a stream, the mother or the stands behind her basin of oil is welcomed as a good mother; if the oil runs off drop by drop, " adah," the woman is laughed to scorn. Her basin is changed for that of another woman or her oil is thrown away and some from another basin is put in the place so that no harm shall result to the boy.

The elements then take the boys into the bush near by. The magajeria dress is removed, the body anointed with the oil, and fresh bark-cloth is dyed black is put on. Little bows and arrows are made of small branches and grass and with these the well shoot as they again enter Lugundu, putting the bows down on sling'looking'sticks to the trilling of all the women present.

Immediately after this, the return is made to the village, just after sunset, the women having long-long gathering up all their belongings, while the boys were being anointed.

Some of the assistants lead the procession, the rank following in single file, all naked and walking very slowly, dressed in the new bark-cloth round the loins, with many ropes of beads round the neck and body, a headband of bark, and down the back a string of beads to which is attached a tassel. Each carries in his hand a wand about five feet long, sponge, with a pattern burned in the shaft and two rattles, women, affixed at the upper end.

The well-born women for about a month under the care of their guardians, during which time they receive most valuable instruction as to their behaviour to others, especially to their elders and to members of the opposite sex. Their faults are brought home to them and many little pieces of advice given. They are taught the household duties which will be their lot thenceforth and they are instructed of approaching puberty and what it means to them. [58]

During this period their child-names are not used and until their new names are assigned to them, they are called after birds and animals, generally some of the smaller animals, e.g. Ancylogaster (ngangalee = the shore eel), Ailurosis (Omonde = a big species of eel), Amelyelyn (ngalyelye = the shore). I have been unable to ascertain whether these have any intimate significance. [55]

The girls are usually given a night to improve on them the danger of lions; one night an imitation of a lion approaching their enclosure is made when all is dark; then all of a sudden one of the element armed with big thorns instead of claws will spring upon one of the girls, generally picking out the worst behaved.

When the term of instruction is completed, they again adjourn to Chiputo for two days where Ungaga is danced on the first night by women, on the second night by men. The first day is spent by a party of men and women in the bush, preparing figures of animals and their dress for the dance. The women wear a small garment of bark-cloth called omulogatele, a word which literally means "instinctive of a frog" but which is used with the meaning of trousers and refers in this case to the fact that the bark-cloth is sewn round the upper part of each thigh into a garment like a pair of knickerbockers. Round the abdomen and chest are worn bands made of short pieces of small, decorticated millet stalks; similar bands are worn on the legs and arms, two on each thigh, two on the leg, one at the wrist, below the elbow, and one round the upper arm. In the dark these give the body the appearance of being painted in alternate bands of black and white. They also wear a headdress of the same material. [292] [30]

On the first evening of the return to Chiputo, this party of women appears after dark; they dance in a row, advancing and retiring in step, swinging their arms and moving their bodies to ordinations of *Ba-ki! Ba-ki!* Other women dress up as men, wearing long beards made of Kisuga, a kind of fibre plant.

The second night, the representations of animals made of grass and bamboo framework supported by men appear, the elephant, the rhinoceros, and various antelopes being the common figures, also the zebra made of painted bark cloth. These animal figures are similar to the shapes or shapes of the Anjwaja and to those of the Avian,[1] but the zebra is unknown among the Tao. [171]

During all these ceremonies at Chiputo, the well seated on mats are the chief spectators and are duly frightened by the performances of the last two days.

[1] Beaver, 'Notes on some tribes of British Central Africa,' op. cit., p. 386.

The hair of the axilla is always removed in men and women, usually by shaving but 302
sometimes in the case of women it is dealt with as in the case of the pubic hair. A man
with underarm axillae would be laughed at and referred to as "a man carrying a fowl in
his armpit." The axillary hairs are called *mandanga* or *mangangar* (*ngangar*, the armpit).

The pubic hair, *mandanga*, is removed by both men and women; in men by shaving, in
women sometimes by shaving, but probably by plucking out after the application of a
medicine called *mamandanga* (*ba-mam*, to pluck a fowl), which renders the operation [§29]
easy. It is prepared from the juice which exudes from the bruised bark of the *mam-mandanga*
tree. There is a woman at Malanyu's who has never grown any axillary or pubic hair;
she is called "the *ngam* elephant"; a *ngam* elephant has no tusks. It may be noted
in passing that the woman has borne children.

A few men have the hair round the anus shaved. Such a service can only be asked of [§30]
a man's closest intimate, such as a brother-in-law.

I have dealt with tattooing among the Tao in an article, as yet unpublished, on tattooing
among the natives of Hyandano.

The teeth among the Tao proper are never mutilated in any way, though the Amam- 304
gudu go in for small file marks at the cutting edge of the incisors.

The old Tao women, of whom none may still be seen, used to pierce the upper lip and 305
wear a circular disc of wood often two inches in diameter in the hole; this is called *kapidu* 306
(Pl. VII, fig. 4). The disc was often made of lead and sometimes of ivory. The lead might
be hollowed out on the upper surface; it was then called *kapidu ka ulidi*. The disc caused
a considerable projection of the upper lip which was much admired. A man, on the other [§32]
hand, with protruding lips would be nicknamed "the warthog," *nanangulu*, and con-
sidered ill-bred.

This *kapidu* fashion has gone out and of later years the *shipini* or disc worn in the
left ala of the nose has become more and more fashionable (Pl. II, fig. 2). Originally the
shipini consisted of a small disc of lead not larger than a three-penny piece, which lay on
the outer surface of the ala, held in place by a stem, *kubinji*, which pierced the ala and
passed into the nostril. Now the fashion is to wear a very large disc, often an inch in diame-
ter, which itself occupies a hole in the substance of the ala of the nose; it may be flat-
topped and called *shipini sha ulanga* ("mushroom"), or the upper surface may often be
concave, in which case it is called *shipini sha ulidi* (*lidi*, a grain mortar). These discs
are made of lead and are sometimes called *kibini*, a recent word and doubtless a corruption
of "lead." Others are made of ivory, which may bear some geometric pattern on the exposed
surface. A *shipini* used to cost a fowl.

Among Tao men and women, the lobule of the ear is often pierced but nothing is worn
in the hole except possibly a stalk of grass.

Combs for use and for ornament are worn in the hair by both men and women. The 307
ordinary comb without decoration is called *Kiwandapa*; it is made of a number of pieces

of bamboo fastened together at one end on the flat side by binding with string, the free ends being sharpened to form the teeth of the comb. If the fastened end is ornamented with beads sewed on in patterns, the comb is called *lisemale* (*lu-semale*, to comb). *Lisemale* is distinguishable from *lusyandwa*, to be sticky, in the name of a small comb worn purely for ornament. On either side of the base of this comb, pieces of wood variously shaped are glued with the sticky juice from the root of the *shingandwa* tree. In this way, a sort of inlay is produced. Pieces of tin now are sometimes substituted for wood. Women occasionally wear in their hair the small *shimale* knife used for trimming and shaving.

The native tobacco readily to purchase of European introduction, but previously he was not an native stranger to the use of tools nonsense. *Wisha*, the bulbous root of a kind of grass which grows near water, contains some aromatic principle which has a pleasant odor. The stem is bent around and fixed into the bulb; this is then covered with beads and slung around the neck. *Mlungwa*, the *Mlanje* cedar, is also used, as well as the fruit of a shrub called *shimapa*. These substances are scraped into the snuff used for sneezing, and give it a pleasant odor.

No pigments are used on the body. As a sign of great rejoicing, the head and face and perhaps the whole body are covered with ashes, but the natives do not even paint the face with flour on ceremonial occasions.

Bands of beadwork are worn around the head, either as a simple band or a band finished off with a beads in one spot, or with a tassel. Finger rings are worn made of ivory, shell leaf and horn, lead, and iron wire. There is also a great variety of bracelets and anklets, a list of which is given below.

Chipondo: made of plaited grass, worn chiefly by little girls and women who cannot afford more expensive bracelets. As many as half a dozen may be worn on the wrist.

Lilengwala (pl. *malengwala*): single circles of solid brass, one half to three quarters of an inch in diameter, worn by women usually as anklets, one or two on each limb. They may still be seen on some of the old women, but as they cause much discomfort, they have gone out of fashion. A man used to be very proud to see his wife adorned with so much wealth and she was content to be so hobbled by her vanity. The hammering up and pulling open of the *lilengwala* circle in order to remove it cost a fowl.

Chilwanje: a brass bracelet of small calibre; *chanje* (pl.) signifies a spiral cylinder made from the same thick brass wire covering the entire forearm.

Lilwanjili: like *chilwanje* of thin brass or iron wire, worn on arms and ankles.

Ching'ande: a bracelet of fine brass wire wound round a circular core. All the brass comes from the coast.

Lilaso: a large ivory bracelet worn by men and women.

Chanje: ("stiff tail hairs of an animal"), the bracelet made of the tail hairs of the elephant or the gnu.

Lidoko: the bracelet made from elephant hair.

Chiyelipo (*ku-yilipo*, to roll round), a bracelet made of beads wound on a bark-cloth cord.

Chiyao: the same, but the beads never a double row so that the bracelet is wider.

Kanko: a similar hollow cylinder of beadwork which lies flat as a bracelet.

Necklaces are much prized by the women. All the children, too, if possible, are provided with some kind of necklace, even though it be only a piece of string. They are generally made of beads; charms and their ornamental inclusions are also worn as necklaces. Some names refer to the pattern of the beadwork, others refer to the length or fashion of the necklace.

Chiyao is a necklace which hangs down in front to the level of the breasts; it does not go under the arms, as Hetherwick states.* It consists of three, four, or five strings of beads in rows, arranged in a pattern.

Anyanyi: hangs down as far as the necklace. The word *Anyanyi* means "chase-tail."

Chinyanga is made of a single string of beads, but hangs as low as *chiyao*. *Chiyao* is of more than one string and various coloured beads enter into its composition, often in fancy patterns.

Chipete: consists of a single string of beads of one color that tightly round the neck without tassel or beads.

Chikwanda is worn like *chinyanga*, but beads of more than one color are used.

Chinyanga resembles *chikwanda*, only more strings of beads are used.

Mapanda: a solid cord of bark cloth covered with beads of one color, either dark blue or white, worn round the neck crossing on the chest and under the armpits; the cords are as thick as the finger. These are worn especially by girls after *Chipete*.

Chiwandu: a cord of beads as in *mapanda*, but worn round the neck only. The necklace consists of perhaps six strings of beads, the first of which is worn close to the neck, while each succeeding string hangs lower and more loosely.

Chipati or *chikulipo*: made of three plaited strands of beads, generally white.

Kikolikio: a necklace with a tassel, usually consisting of two large red beads.

Mlale ("a striped snake"): made of four strings of beads, each row being of one color.

Mkiba nakwase ("the rat's tail"): like *mlale* consisting of two, three or four strings of beads.

Chowa cha mwako (*mwako*, "bag"): a hollow cylinder of bead work usually of blue and white, worn as a necklace. *Chowa* is the Chiyao word for beads; in Chinyanja, it means wealth.

Limondo is a word referring to the pattern of the beadwork, so called from the resemblance to the eyes of the *mono-ezi*; in *limondo*, white beads are arranged in rosettes round a series of larger black beads in a band.

Most women and many children wear beads round the waist. They are supposed to be very attractive to men. The prostitute wears more than anyone else, for the same reason

* Op. cit., p. 111.

[illegible] that she is tattooed more profusely on the buttocks and legs. The choice of beads was formerly made like ungumbi with a bark-cloth cord, called mbombo or mbele (to-wrap, to slip off), referring to the mbele being slipped off over the legs. The ladies now in to wear single strings of beads, each string is of one color but all the strings are different and perhaps number a dozen or more.

Lipumbu: a bead belt three-inches wide, worn by Tao women near Lake Nyasa. A bead apron, *lingiro*, is also worn by them but not near Ruvuma (Pl. VI, fig. 3).

[241] A woman removes her beads when she is "unclean," that is: (a) during the menstrual period, (b) during the period of mourning for a near relative when colour is forbidden, (c) before the birth of a child and afterwards until such time as she may resume intercourse with her husband.

A large variety of beads has long been used by the Tao. There are some rarely seen [242] now which were much prized in years gone by, while others are of quite recent introduction. There is no evidence that they themselves made beads and there are few which are probably not of European manufacture.

Clothing. The Tao used bark-cloth before the introduction of woven materials. The older people may still be seen in it and it is used in most of the ceremonies. At one time, they also used to weave a cloth called *lilomomba* from a native cotton plant. This has been given up since the introduction of imported materials.

For the method of wearing cloth, see Pl. II, fig. 3. The very poorest people wear only a strip of cotton round the pudenda, held in position by a string round the waist hanging long behind and in front; this is called *mbombo*. Tao women, when menstruating, wear under this a little piece of cloth called *lilomba*; it is only worn at this time and not always as in certain other tribes.

[243] Warfare. Fighting has naturally played a large part in the life of the Tao as among other African tribes, but at no time were these people a trained fighting race. Warfare was of a desultory character resembling mostly of raids by one headed chief upon another. A party of men belonging to a chief at enmity with another, meeting some of his followers would challenge them, "*Ahombo*, who are you for?" The name of the rival chief in answer was the sign for battle to begin. A false answer would never be given to gain an advantage. When about to throw a spear, the thrower calls to his adversary.

[244] The Tao have possessed guns for a long time. Going out to fight, the Tao used to hop from one foot to the other, and spin their guns around in their hands. They made their own stocks for the rifles. They also used to make a small, cast-iron cannon about three feet long, called *kombola*, "a little man." It was carried in the arms and was touched off by a torch. Drums called *ungoje* were taken into battle. There is an old war drum at Malenya's village, taken in 1906 by the old Malenya from a Mang'ungu chief called Mkokombo who lived near Lake Chirwa. Since then, this drum has always gone into battle with Malenya. Around it his men would dance and anyone who had killed a man in battle would run up to it and spit upon it in admiration.

ndundu, a woman who is pregnant for the first time;[1] *kawindwe*, a woman who has one or two children; *ujiwindwe*, a woman who has three or four children, and lastly, *ndulwe*, a woman who is past child-bearing age. 554 584

The information which I have been able to collect on abortifacients and contraceptives suggests that they are not used by married people merely to prevent their having more children, but that they are used by people who wish to avoid pregnancies which would be embarrassing, for example, by a woman whose husband is a labour migrant. To what extent the abortifacients and contraceptives are efficacious I cannot say; some, I know for certain, rely on a magical principle, for example, the medicated cord worn by a man during intercourse. On the other hand, the abortifacients taken orally may have some active ingredient. 842

A barren woman or an impotent man is regarded with some embarrassment and the marriage sureties (*ariamangatwe*) of a childless couple will go to considerable trouble and expense consulting diviners and leeches in an attempt to make their wards productive. Childless couples are regarded as not fully adult and are treated [885] [559] in a patronizing way by those who have borne children. Since a man may marry other wives, barrenness in a woman is a cause of sorrow to her husband, but is not [586] in itself a ground for divorce. Where the man is impotent, however, the woman may divorce him on this ground, though she usually takes a paramour and forces [837] her husband to an action for damages which automatically leads to a divorce because [694] it is the usual practice in these cases for the court to ask the woman if she wants to be divorced from her husband.

In contrast to the satisfaction shown at the birth of a child is the sense of awe 845 evinced when a child is still-born or the woman miscarries. The Yao do not distinguish between still-births and abortions, both events being known by the word *kwatunga*. This is a verb and refers to the process of abortion; there is no term for the dead foetus itself. I made no attempt to enumerate miscarriages and still-births because they are supposed to be due to breaches of sexual taboos on the part of the husband and wife, and interviewees were naturally reluctant to mention them. Miscarriages and still-births are greatly feared, and the woman is considered to be in [783] a very dangerous condition until she and her husband have carried out a ritual purification. Should a man have intercourse with a woman who has miscarried and [753] not yet been purified he will contract a disease called *kwao* which is believed to be invariably fatal. Still-born children or aborted foetuses are buried in a hole dug with [766] sharpened sticks in the bush by the women, whereas children who are born alive and die afterwards are buried in the graveyard in graves dug by men with hoes. The burial spots of still-born babies or aborted foetuses are marked with a stone or broken pottery, since it is believed that to step on them will induce an illness.

The concern of the interested kin-groups is shown in the child-birth procedure. 844 Birth normally takes place in a hut in the presence of the older female relatives of the woman and the female representatives of the man. The husband's representatives are necessary because the Yao, like many other Central African peoples, believe that an adulterine child will not be born to the woman unless she confesses (*kapaza*) the name of the genitor. If she persists in concealing the identity of the genitor, they

[1] *ndundu* = elephant, hence ivory. The terms *ndulu* and *ndundu* have both refer to the ivory bands traditionally worn by the woman in the pregnancy initiation ceremony. [192] [361]

843 ***Pregnancy and childbirth.*** An event of the first importance in the Yao world is the first conception or rather the "quickening" with the first child, *Lítiso*; this is described
842 below, together with the other ceremonies of the *Unyago*.[1] After the ceremony of *Lítiso*, the period of waiting until the birth of the child passes without further event. A point of medical interest is that native women suffer in many cases from "morning sickness" during pregnancy. That they may have perverted appetites is also recognized, grain husks
[171] and crabs being among the things most commonly desired. As the Anyanja,[2] the Yao believe that the child develops from the semen of the male, although the growth of the child is in some way connected with the mother.

844 When labor commences, the woman retires to the bush a few hundred yards away from her house, attended by some friend, seldom a midwife, and never by her own people, though the mother and the mother-in-law will probably be near the spot. If labor is not completed by evening, they return to the house and the birth may take place actually within its walls.
[171] The attitude assumed in labor is the same as that adopted by the Anyanja,[3] the patient semi-reclining in the arms of another woman who sits behind, grasping her belly. The vulva is smeared with a decoction made from the bark of the *mpoa* tree as a lubricant, but no other help is given. *Kumhuli* is the name given to the place of confinement; *m'huli* means the house where the woman remains for a period after the confinement. The Yao recognize the protruding bag of amniotic fluid and call it the "oil-gourd". "*Chiasai chikasiche?* (The oil-gourd, has it broken?)." They wait until the placenta is delivered before dividing the cord. This is done with the sharp edge of the outer covering of a maize stalk or sugar cane; a knife is never used. The section is made near the placenta or half-way between it and the child, after tying the proximal end with a bark string.

The woman who receives the child at birth is the *ambusanga*, friend or godmother. If the infant is born in the bush, she carries it back to the house whither they go as soon as labor is completed. The mother herself, unless she is very ill, goes out shortly afterwards and buries the placenta in the ash-heap, using a stick to dig the hole, never a hoe.

846 After the birth, the mother and child must remain in the house until the umbilical cord separates, during which time the husband does not enter, though he may come to the door to look in at the child.

The day on which exit from the house is made, the floor is entirely replastered with mud.
[852 The baby's head is shaved and a cross is made upon it with *ngama*, a kind of red pigment.
553 The husband may then receive the child and in the case of a first-born, it is he who gives it
302] its name; other children may be named by the *ambusanga*, the mother, or the aunt.

When the mother leaves the house to appear in public, the *nakunga* who put her *lítiso* on,[4] removes it.

So long as the infant remains in the house, care must be taken as to persons allowed to handle it. A woman who has recently had a menstrual period or coitus with her husband,

[1] Vide infra, p. 274. [2] Stannus, op. cit., p. 310. [3] Ibid. [4] Vide infra, p. 274.

3: Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

then listens to an account of the circumstances attending the illness and death. The point at issue is whether there is any evidence pointing to death from unnatural causes which requires consulting a diviner. The chief practically always agrees with the relatives, and it is said that he will never press them to go to the *wochisanjo* unnecessarily. The case may end with this conference, or here may begin the long series of events described under *usewi*.[1] 768 622

During the month subsequent to the funeral, certain taboos have to be observed. The widow may not bathe, and with the exception of the *awile*, all who attended must refrain from sexual intercourse. At the expiration of this period, beer is brewed in the village, and all the friends and relatives are again summoned. This beer-drinking is called "the beer of rottenness," or "the beer of resignation." In addition to the beer, food is provided, and everyone helps himself without ceremony. *Chindimbo* is sung and danced and at the present day, bands of trained dancers attend, including *ching'wenjeng' wenje*.[2] A pot of beer is sunk into the ground, marking the site of the dead man's house. The night of *matapata*[3] sees husbands and wives reunited, and the widow may go through ceremonial intercourse with a man appointed for the purpose called *litunu* or *mbilo*. Sometimes the widow refuses *litunu*, and is given medicine instead to cleanse her; her body is then no longer "hot" and likely to bring disease to those about her. A widow does not marry again for two or three years. A young man who loses his wife has no longer any standing in her village after *matapata*. He is usually given a present, with the suggestion that he go elsewhere. After the death of an infant, the mother is considered unclean. She sleeps on a mat apart from her husband till after the ceremony of shaving, and then undergoes a ceremonial coitus with her husband — in which case he is called *litunu* — after which, ordinary cohabitation is resumed. If she has been a widow, or if the child was born "with disease,"[4] another man acts as *litunu*. 765 768 [833] 587 768

The morning following *matapata*, all the fires in the village are extinguished. A fresh blaze is then kindled with the fire-drill, *lumangu*, either in the chief's house or in some spot nearby, and from there, fire is carried to all the houses. The ashes of the old fires, the stones supporting the cooking pots, and the porridge sticks are taken to the cross-roads, and there destroyed. Everyone then shaves all his own hair, head, axillae, and pubis. The custom of the second shaving by the *awile*, described in *Africana*,[5] is, I think, an adaptation from the Anyanja. A year later, beer is again brewed, and all the relatives summoned to the village to partake of it. There is dancing, but no ceremony. 769 [372] [302]

The Yao bury their dead in regular graveyards in wooded country, the thicker the forest the better, often two or three miles away from a group of villages. Different villages bury their dead in different parts of the burial ground; relatives are usually buried near one another. Graves are never revisited, and no one would enter a graveyard except at the time of a funeral, and then only after obtaining permission from the chief. Such spots are 764 769

881
533
539

"*Tingamile* *mwanenge* *ku* *Lupanda,* *pinga ujo'ya* *kundanda* *mangunguni*"
"I will go and bring my child to *Lupanda,* when I am going home I feel nervous!"

and running round he seizes hold of one of the *wali* and makes him sit down at *Lupanda,* continuing this until he has placed them all in a circle round *Lupanda.* He then sings a song about the little basket which the chief sent him containing the remains of the *mbepusi* flour:

"*Kando* *ungwa* *ahwilinga,* *ungala* *mbwamanda,* *anana!*"
"Little basket the owner asks for it back, give me beans, mother!"

His wife who has been waiting in his hut nearby brings him the basket. Holding it in his hands, he prays to the spirits of his ancestors and all the previous medicine-men to whom his medicine-tails have belonged, invoking their aid that the ceremonies may go well.

Still holding the basket he begins to dance, singing:

"*Apatule* *mbepusi* *jisu!*"
"Let them (us) smear flour their (Let us baptize them!)"

and dipping his right elbow into the basket he smears each *wanali* on the forehead with the *mbepusi* flour. He then goes into his hut and fetches a bundle of powdered roots (which no woman may touch), medicine called *mitibule,* that is, a medicine used for its aphrodisiac properties. Holding the medicine between the palms of his uplifted hands, he starts singing:

"*Kubwinunga* *kuchipopole,* *kwilinga* *mkwa!*"
"I cannot find out how to untie this, we tied (with) my brother-in-law!"

He is immediately surrounded by his assistants and the drummers, who dance round him, all holding their hands about his own, after which he unfastens the bundle of medicine and puts a little on the tongue of each *wanali,* beginning with the leader. He then takes some sweet-beer made by the chief's wife and pouring it into his old medicine-gourd, he mixes in some *mitibule* and gives some to each *wanali* to drink after which he sings:

"*Amunda,*[1] *amunda* *mwanje* *wa* *imunga,* *chakulpa* *mundanda*
"You have drunk a mixture of water and maize flour, of eating eggs
achilacha *panapano,* *Amunda,* *amunda* *ndundile* *mukwau;*
you stop now, you have drunk (but) I have passed water (in it);
wati(ji) *kalumuka!*"
you thought to be clever!"

[300] Next he goes into his hut with the small basket containing the *mbepusi* and paints his assistant with the flour, a semicircle round the forehead, a line down the middle of the face, a band across the chest, a line down each arm with rings round the arms and forearms, and a line down the middle of the back. They go out again into the ring and while the *m'michile* sings:

[1] This may be a reference to *amunda,* the mortified sap.

3: Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

(fig. 14), and an antelope from Mpona's in Zomba district (fig. 11), also two birds at Pikani's which I should think represent a fowl and a crow (figs. 12, 13). It is interesting to compare these attempts which show a natural feeling for shape, with others, the work of an Angoni youth in touch with a European mission station, who depicts the missionary, his donkey, his dog, and a chair but with little or no sense of form. Note the dots above the animals' backs which represent their feet seen from the other side (Pl. XVIII, figs. 15–18). 532

The models of animals and other objects made in relief on the ground at *Lupenda*, and of animals in grass and bamboo at *Chiputu*, are referred to under *Initiation Ceremonies*.

Decoration is limited to the making of patterns of geometric design on many household articles. The graving of pots is mentioned under *Pottery:* gourd vessels sometimes have lines and triangles cut on the surface; ivory knife handles may have concentric circles graven on them, the same being true of ivory nose-rings and necklaces. Spear handles and walking sticks, snuff-boxes, pipes, the head-rest and the necks of musical instruments too, are commonly engraved with designs. The wooden rim of the *mtengwi* basket is always so treated. A series of these designs from baskets is reproduced (Pl. XVII). Occasionally geometric patterns are painted on the walls of huts. The best example I have seen is shown in the photograph which represents a Mohammedan mosque in South Nyasa district. This, I think, gives the key to the origin of these geometric patterns, namely, Swahili influence among the Yao (Pl. IV, fig. 1). 531

Personal ornamentation. The skin color admired most among the Yao is a rich brown and is likened to the color of the milliped, *kjengulo*. A very black skin is not liked and a man is said to be "as black as a crow." Very light colored skins are equally distasteful to some and considered to resemble the color of a roasted crab. The hair should be jet black. Young men anoint their heads with a decoction of *namalenga* pods in boiling oil to make the hair black and lustrous. When the hair is turning white, a substance made of the charred roots of a plant called *chisinje* is put on to make it black. 832 826 302

Natives recognize that some among them have red hairs on their heads or in their beards, and such a man is called *nahuena*, *nahuena* being the name of a caterpillar which lives on the *nituma* tree and is covered with long red hairs. 832 826

The old men used to wear wigs, *chisindi*, made of knotted string blackened and oiled to look like hair; the women wore one called *chiluma*. These were used to disguise greyness or baldness.

The women sometimes let the hair grow long and then thread beads on wisps of it. This fashion is called *chitunga*. The large red bead, *chitalaka*, is now used for the purpose. This fashion was adopted by the old women and those in charge of the *Chiputu* ceremony. Strings of beads threaded on the hair falling down round the head are called *hlomhola* or *nahomhola* (plur.). Women sometimes thread beads on the crest of hair called *achacha*. Ordinarily the hair is periodically shaved or sometimes cut with a knife, but the process is painful and therefore unpopular.

3: Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

302 Shaving is a rite practised in mourning.[1] Some old men and women, especially medicine men, make a practise of never cutting the hair and never washing it (Pl. VII, fig. 3). One occasionally sees lunatics with very long hair in the villages.

[158]

The Yao do not follow the Angoni practise of tying up into tags the hair which has been allowed to grow long with palm leaf string, but they sometimes tie up a single wisp and make it up with medicine; this is called *lutembi* or *njombi* (plur.).

The scalp may be shaved in various fashions. Among men, it is quite common to trim the hair on the forehead, *ku-ajikila;* they must not, however, trim the hair behind (Pl. XVIII, fig. 2). Women, on the contrary, trim both in front and back; a man doing so would be laughed at. A woman for the ceremony of *Lítiwo* shaves the front hair a little higher still, but she must be careful not to do so at other times, otherwise she would make herself a laughing stock (Pl. XVIII, fig. 10). The hair is sometimes shaved on either side of the midline in front, in imitation of temporal baldness; both baldness and this method of shaving are called *mazuzuwe* (Pl. XVIII, fig. 4). Or again, among old Yao men the crown is shaved; this and natural baldness are called *lulasi* (Pl. XVIII, fig. 5). It is a fashion much affected by old men and great annoyance is caused them by any young upstart who does the same. Other methods include for men *mpila*, "a rat's path," an antero-posterior median line shaved (Pl. XVIII, fig. 9); *ingolongondinje*, two shaved lines made from back to front on either side of the head (Pl. XVIII, fig. 3); for men and women, *kpundulawila*, "the garden is (dead) overgrown", one lateral half of the head shaved (Pl. XVIII, fig. 7); for men, *sukuchu* a crest of hair left along the mid-line, both sides of the head being shaved (Pl. XVIII, fig. 8); *mwezi* (*chilemba cha mwezi*), "the moon," a crescent shaped area shaved on one or both sides of the head (Pl. XVIII, fig. 6).

The eyebrows and eyelashes are always left to grow normally among the Yao.

The Yao man used to take great pride in his beard; it was the object of a good deal of washing and combing. It grew to considerable length and was not cut or trimmed, but the hair growing down low over the throat was shaved, as was also the hair immediately below the mouth on the under lip and the moustache, as it was thought to get in the way when drinking. The whiskers were allowed to grow like the beard.

[832] [435]

Hair on the chin or upper lip of a woman is rarely seen and on account of its rarity is much prized. Such hairs have a monetary value for making medicines, a single hair being sold for eight yards of calico or two shillings. Body hair is considered to be a sign of strength; on the chest, it is known as *chanpulama* (*ku-chanpulama*, to be strong). Body hair including hair on the back is by no means as rare as has been supposed. Sir H. H. Johnston says that he has never seen it,[2] a statement which shows lack of observation. The hair on the forearms and thighs is called *chenje* or *chembende;* Hetherwick translates this word,[3] I think wrongly, as hair on the body. Body hair is never removed in any way. A man named Katumbisi ("the little vulture") of Ulumba had a very large amount of body hair; he was likened to a baboon and was a source of much interest to the children who saw him.

[114]

[1] Vide supra, p. 364. [2] British Central Africa, op. cit., p. 398. [3] Op. cit., p. 111.

3: Stannus D-5 (ca. 1912) 1922 FT? Yao FT?

The hair of the axilla is always removed in men and women, usually by shaving but sometimes in the case of women it is dealt with as in the case of the pubic hair. A man with unshaven axillae would be laughed at and referred to as "a man carrying a fowl in his armpit." The axillary hairs are called *mandenga pa mungwapa* (*ngwapa*, the armpit). 302

The pubic hair, *mandenga*, is removed by both men and women; in men by shaving, in women sometimes by shaving, but preferably by plucking out after the application of a medicine called *mesemandenga* (*ku-esse*, to pluck a fowl), which renders the operation easy. It is prepared from the juice which exudes from the bruised bark of the *meso-mandenga* tree. There is a woman at Malemya's who has never grown any axillary or pubic hair; she is called "the rogue elephant"; a rogue elephant has no tusks. It may be noted in passing that the woman has borne children. [824]

A few men have the hair round the anus shaved. Such a service can only be asked of a man's closest intimate, such as a brother-in-law. [607]

I have dealt with tattooing among the Yao in an article, as yet unpublished, on tattooing among the natives of Nyasaland.

The teeth among the Yao proper are never mutilated in any way, though the Amangoche go in for small file marks at the cutting edges of the incisors. 304

The old Yao women, of whom some may still be seen, used to pierce the upper lip and wear a circular disc of wood often two inches in diameter in the hole; this is called *lupelele* (Pl. VII, fig. 4). The disc was often made of lead and sometimes of ivory. The lead might be hollowed out on the upper surface; it was then called *lupelele lua utuli*. The disc caused a considerable projection of the upper lip which was much admired. A man, on the other hand, with protruding lips would be nicknamed "the warthog," *namangindu*, and considered ill favored. 304 301 [832]

This *lupelele* fashion has gone out and of later years the *chipini* or disc worn in the left ala of the nose has become more and more fashionable (Pl. II, fig. 2). Originally the *chipini* consisted of a small disc of lead not larger than a three-penny piece, which lay on the outer surface of the ala, held in place by a stem, *luchinji*, which pierced the ala and passed into the nostril. Now the fashion is to wear a very large disc, often an inch in diameter, which itself occupies a hole in the substance of the ala of the nose; it may be flat-topped and called *chipini cha utenga* ("mushroom"), or the upper surface may often be concave, in which case it is called *chipini cha utuli* (*lituli*, a grain mortar). These disks are made of lead and are sometimes called *lidini*, a recent word and doubtless a corruption of "lead." Others are made of ivory, which may bear some geometric pattern on the exposed surface. A *chipini* used to cost a fowl.

Among Yao men and women, the lobule of the ear is often pierced but nothing is worn in the hole except possibly a stalk of grass.

Combs for use and for ornament are worn in the hair by both men and women. The ordinary comb without decoration is called *likuembeya;* it is made of a number of pieces 301

3: Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

301 of bamboo fastened together at one end on the flat side by binding with string, the free ends being sharpened to form the teeth of the comb. If the fastened end is ornamented with beads sewed on in patterns, the comb is called *lisamulo* (*ku-samula*, to comb). *Lisamulo lis*
[824] *chingumbata* from *ku-ngumbata*, to be sticky, is the name of a small comb worn purely for ornament. On either side of the base of this comb, pieces of wood variously shaped are glued with the sticky juice from the root of the *chingumbata* tree. In this way, a sort of inlay is produced. Pieces of tin cans are sometimes substituted for wood. Women occasionally wear in their hair the small *chisando* knife used for tattooing and shaving.

302 The native takes readily to perfumes of European introduction, but previously he was
[177] not an entire stranger to the use of such essences. *Mboka*, the bulbous root of a kind of grass which grows near water, contains some aromatic principle which has a pleasant odor. The stem is bent around and fixed into the bulb; this is then covered with beads and slung around the neck. *Mkungusa*, the Mlanje cedar, is also used, as well as the fruit of a shrub called *chiungusa*. These substances are scraped into the castor oil used for anointing, and give it a pleasant odor.

No pigments are used on the body. As a sign of great rejoicing, the head and face and perhaps the whole body are covered with ashes, but the natives do not even paint the face with flour on ceremonial occasions.

301 Bands of beadwork are worn around the head, either as a simple band or a band finished off with a bunch in one spot, or with a tassel. Finger rings are worn made of ivory, eland hoof and horn, lead, and iron wire. There is also a great variety of bracelets and anklets, a list of which is given below.

Chigumbe: made of plaited grass, worn chiefly by little girls and women who cannot afford more expensive bracelets. As many as half a dozen may be worn on the wrist.

Likangala (pl. *makangala*): single circles of solid brass, one half to three quarters of an inch in diameter, worn by women usually as anklets, one or two on each limb. They may still be seen on some of the old women, but as they cause much discomfort, they have gone out of fashion. A man used to be very proud to see his wife adorned with so much wealth and she was content to be so hobbled by her vanity. The hammering up and pulling open of the *likangala* circle in order to remove it cost a fowl.

Chikungu: a brass bracelet of small calibre; *ikungu* (pl.) signifies a spiral cylinder made from the same thick brass wire covering the entire forearm.

Likwinjili: like *chikungu* of thin brass or iron wire, worn on arms and ankles.

Ching'anda: a bracelet of fine brass wire wound round a circular core. All the brass comes from the coast.

Likosa: a large ivory bracelet worn by men and women.

[237] *Ukanga:* ("stiff tail hairs of an animal"), the bracelet made of the tail hairs of the elephant or the gnu.

Lisheka: the bracelet made from elephant hoof.

return to the *lupanda*, where the initiates are welcomed by their friends. An essential part of the ceremony which takes place at this stage is the exhibition of animal shapes made by the *m'micira*, with mounds of earth outlined in flour. These animal shapes differ from lodge to lodge. On the last night before the return to the village the initiates undergo a ceremonial bathing, each boy being carried to the stream by a woman, who thereafter is addressed as 'elder sister'. Finally, with new names, and freshly oiled and decorated, they march to the chief's village to be redeemed by him from the *m'micira* with gifts of cloth. After initiation it is a deadly insult to call a boy by his child-name. All who pass through initiation together consider themselves bound by mutual obligations of hospitality.[1]

Girls' initiation takes place in three stages. First, there is *ciputu*, the general initiation before puberty, which corresponds to the boys' *lupanda*. It takes place at the same time of year, and though it lasts for less than a week, its conclusion is celebrated at *lupanda* jointly with the conclusion of the boys' initiation. A hut is built in the bush, like the long dormitory of the boys, and four days are spent in dancing and singing. Each girl (aged about eight years) is accompanied by a sponsor, a woman friend who continues to be her mentor during subsequent rites, and who assists in giving the girl instruction in her womanly duties. At the end the girls are bathed and anointed, dressed in new clothes, and each is carried to *lupanda* by her sponsor. Here they prove their skill in dancing and receive gifts from their friends. Ritual defloration follows the *ciputu* initiation.[2] Among Mohammedans, clitoridectomy used to be performed by a woman operator, but, it is said, was discontinued in about 1903 on account of the heavy mortality.[3]

After this first general celebration, first pregnancy and first birth are the occasions of separate rites for each girl. According to some informants there were once two ceremonies connected with pregnancy. One, for the young married men whose wives had not yet conceived, used to take place at the same time as *ciputu*; each man was attended by a woman sponsor not his wife, given good advice, and put through various tests of manhood. Mitchell does not confirm the present existence of this ceremony, but in the old days if a man was betrothed or married to a child going through her *ciputu* he had to accompany her.

The *litiwo* ceremony takes place when a young married woman quickens with child for the first time.[4] The woman, with her sponsor and the married women of the neighbourhood, went out in procession for a ceremony of singing and dancing and instruction to the young couple, followed by a feast. Nowadays no men are allowed to attend *litiwo*. A child born of a woman who had not undergone this rite used to be buried alive; nowadays her *ayene mbumba* is charged by the chief.

Finally, six days after the first child is born, its naming ceremony forms a last initiation rite for its mother. The husband is formally led into her hut by her sponsor and the married women of the neighbourhood, and the child is taken out for the first time to the accompaniment of feasting and dancing.

Most Yao men and women act as sponsors of initiates at least once, and all parti-

764 performed these services used to enter a special relationship of privileged familiarity with
767 the village of the dead. This has died out in Nyasaland, but accounts of *Utasi*[1] among the Yao at Masasi and Songea suggest that something of the kind is still practised.

766 Chiefs and headmen are not buried outside the village, as are other persons. They used to be buried before their own huts, but now in the centre of the village. Shrines were raised over their graves, at which offerings of beer and flour were made. If the village was moved the pot of beer sunk into the ground at the chief's grave was also removed and reinstated at the new site. A dead slave was buried by his fellow slaves; normal rights of sepulture were denied to suicides and to persons who had died in taking the poison ordeal (that is, convicted sorcerers).[2]

OTHER DISTINCTIVE CULTURAL FEATURES

301 The Yao have a tribal mark of two short cuts on each side of the face between the
304 eye and the ear.[3] Their women did not wear the *pelele*, lip-ring, although their neighbours the Makua and Makonde did;[4] the fashion seems to have spread to south Nyasa
[171] in the 1880's, as many travellers commented on it, without distinguishing whether the wearers were Yao, Nyanja, or Lomwe.[5] The women used to pierce the left *ala nasi* and insert a metal or lead stud, *cipini*.[6]

MAKUA-LOMWE

TRIBAL AND SUB-TRIBAL GROUPINGS AND DEMOGRAPHY

000 NOMENCLATURE

The *Ma-* in *Makua* is not a prefix, but part of the name. Variant spellings are *Makua*, *Makoa*, *Makoane*. They are sometimes referred to by the name of one subdivision, the Medo Makua, and called *Ameto* or *Meto*.[7]

The *Lomwe* (also spelt *Lomwe*) are called *Alolo* by the Yao, and are also frequently called *Anguru* (*Nguru*) which is an old name for the people of the region.[8] Any of the Makua-Lomwe peoples who have migrated into south Nyasaland are collectively termed *Nguru* in official reports; Nguru is a hill in the region of Portuguese East Africa, whence they come, but they should not be confused with the Nguru of Tanganyika.[9] Another name for them is *Acilowe*.[10] *Alolo* is incorrectly applied to all the Lomwe; it has a stricter application to the Cuabo from Quilimano.

881 in turn. After drinking, they sit down while the n'mikilo gives instructions that here they sleep tonight. He takes his basket and starts to run back to *Lupanda*, singing:

[533 539] "*Ee* *tunjile* *pilelaje* *ukumbuje* *hukupiire* *ku Mundi!*"
"Where we went to masters to *Mundi!*"

Then going to the back of his hut, he enters and takes a piece of bark left there bent up into a dish containing medicine which has been put in by an assistant. This assistant holds in his hand the neck of one of the fowls which was killed at *Lupanda*. The n'mikilo washes his face and chest with medicine to cleanse his eyes and then leans forward to the assistant and bites a piece off the neck of the fowl which the assistant holds out, and eats it. This is *ku-lumiva*, "to taste a small piece," often the liver, before starting to eat the flesh; this is generally done by the most important person. The n'mikilo has been followed by his assistants who do as he has done. They all follow him next round the cooking place for the boys at *Lupanda*, each standing for a moment on the stones which have supported the cooking pots, while the women sit looking on sadly. He begins to dance and the women join in, singing *likwata*. He then calls the parents of the wali and leads them to where the boys are. There assembled, he tells them they must not bathe, and that tomorrow morning early, porridge is to be sent to the wali which must be prepared by a woman who has had connection with her husband and who has not washed her hands; this is supposed to make the boys strong. Early in the morning, the husband, who likewise has not washed his hands, carries the food to the wali and personally gives portions to each boy to eat.

881 When they have partaken of the food, the circumcision is performed by the n'mikilo
●304 who has returned the same morning early. The wali one by one, commencing with the leader, go forward a little to the place where the n'mikilo awaits them. Each wali is accompanied by his *nkumwai* who commonly says, "Come along and you shall eat of the honey made by the bumblebee." Such honey is very sweet and called *mawa*. This refers in sarcastic terms to the pain the boy is about to undergo. The boy squats down, leaning back on his *nkumwai* who supports him, while the medicine-man, having warned the lad not to cry out, performs the circumcision with a small knife called *chiwanda*. It is a triangular knife with one cutting edge and a handle produced from the opposite corner. Properly
[412] the Yao method is, I believe, only to nick the free margin of the prepuce just to the right of the middle line near the frenum, but complete circumcision is now commonly practised, possibly as the result of Swahili influence. In this case, the prepuce is seized and held by the fingers, and division made by a circular incision without using a clamp or forked stick.
[752] A dressing of charcoal and oil may be applied or medicine is chewed in the mouth and the saliva spat on the wound and the boy sent on to rest under some convenient tree.

When all the wali have been circumcised, they are gathered together in one place and
881 the n'mikilo dividing them into groups, puts on the neck of the leader of each group a
[751] necklace made of plaited bark from the *mpondo* tree; these necklaces contain medicine against all evils - WITCHCRAFT [illegible] LIONS, etc.

The hair of the axilla is always removed in men and women, usually by shaving but sometimes in the case of women it is dealt with as in the case of the pubic hair. A man with unshaven axillae would be laughed at and referred to as "a man carrying a fowl in his armpit." The axillary hairs are called *mandanga pa mungungu* (*mpungu*, the armpit). 302

The pubic hair, *mandanga*, is removed by both men and women; in men by shaving, in women sometimes by shaving, but preferably by plucking out after the application of a medicine called *mnamandanga* (*ku-mana*, to pluck a fowl), which renders the operation easy. It is prepared from the juice which exudes from the bruised bark of the *mana-mandanga* tree. There is a woman at Malangya's who has never grown any axillary or pubic hair; she is called "the rogue elephant"; a rogue elephant has no tusks. It may be noted in passing that the woman has borne children. [124]

A few men have the hair round the anus shaved. Such a service can only be asked of a man's closest intimate, such as a brother-in-law. [607]

I have dealt with tattooing among the Yao in an article, as yet unpublished, on tattooing among the natives of Nyasaland.

The teeth among the Yao proper are never mutilated in any way, though the Amangoche go in for small file marks at the cutting edges of the incisors. 304

The old Yao women, of whom some may still be seen, used to pierce the upper lip and wear a circular disc of wood often two inches in diameter in the hole; this is called *hapidde* (Pl. VII, fig. 4). The disc was often made of lead and sometimes of ivory. The lead might be hollowed out on the upper surface; it was then called *hapidde ha utali*. The disc caused a considerable projection of the upper lip which was much admired. A man, on the other hand, with protruding lips would be nicknamed "the warthog," *nunungindu*, and considered ill favoured. 304 301 [832]

This *hapidde* fashion has gone out and of later years the *chipini* or disc worn in the left ala of the nose has become more and more fashionable (Pl. II, fig. 2). Originally the *chipini* consisted of a small disc of lead not larger than a threepenny piece, which lay on the outer surface of the ala, held in place by a stem, *hukinji*, which pierced the ala and passed into the nostril. Now the fashion is to wear a very large disc, often an inch in diameter, which itself occupies a hole in the substance of the ala of the nose; it may be flat-topped and called *chipini cha utunga* ("mushroom"), or the upper surface may often be concave, in which case it is called *chipini cha utali* (*litali*, a grain mortar). These discs are made of lead and are sometimes called *kilini*, a recent word and doubtless a corruption of "lead." Others are made of ivory, which may bear some geometric pattern on the exposed surface. A *chipini* used to cost a fowl.

Among Yao men and women, the lobule of the ear is often pierced but nothing is worn in the hole except possibly a stalk of grass.

Combs for use and for ornament are worn in the hair by both men and women. The ordinary comb without decoration is called *likwandapa*; it is made of a number of pieces 301

CIRCUMCISION AND INITIATION CEREMONIES.

Y 304 M [304]

Circumcision was not practised among Anyanja. Among Amangoche, Machinga and Yao, the practice was known as *Isyago wa Isyanda.*

Ku-umbala Isyanda:—the prepuce was drawn forward and a nick made on the right side of the median line near the frenum. An application mixed with oil was applied. At the present time the Mohammedan practice is common *Ku-umbala jando*:—the prepuce is drawn forward through a split piece of bamboo and cut off with a sharp knife.

Circumcision is performed on boys usually at the age of nine to twelve years by a medicine man called *Nganga*, an honourable calling, in a hut at the Isyago camp. Both patient and operator stand, unless the former is young, when he sits. The ceremony is witnessed only by the boy's friend. Among Mohammedans clitoridectomy used to be performed by a woman operator (*nahanga*), but, it is said, was discontinued, on account of the heavy mortality, about seven years ago. At the time of the operation a woman was given medicine to make her vomit all unlawful things she might have eaten.

Y 304 981

Initiation ceremonies (including circumcision) take place at irregular intervals. The chief or headman settles the date at which the Isyago shall be held, generally once a year in July, when there is no work and little else to do. Boys who are considered ready will then take part. The elder brother or a friend of a boy settles whether he is ready for circumcision. The mother then takes a present to the chief. The boys, their friends and the medicine man then depart for the bush, sometimes a couple of miles away from the village. The number may vary from three or four to as many as thirty or forty. In the bush grass huts (= *manse*) are erected for their shelter. Food is brought by the mothers and deposited a little way from the camp, and the friends who have accompanied the boys fetch and carry and act as sentinels to prevent approach of any "outsiders." Six months used to be spent in the bush, now four to eight weeks only, and all the circumcision wounds must be healed by the time of the candidates' return. If a boy die, the mother is not informed, she is allowed to bring food each day; at the end when the return is made rejoicing she is told by one of the men.

Y [867]

The exit from the village is accompanied by the friends dancing *Tawji* or *Mawu*, the boys in old calico (formerly always in bark cloth) walk and sit down on arrival at the place appointed. The circumcision is performed the following day; during the time which follows instruction is given them on their duties in after life as men, in good behaviour in their married life, re coitus, eating of food, superstitions regarding salt, etc. When this is all over a message is sent to the village, and the youths, walking quietly dressed in new cloths, are met half-way by the women and girls, who dance and sing; after the return to the village there is drinking and dancing, the newly initiated refraining for one day. At the present time the youth probably has some "friend" of the opposite sex with whom he sleeps; until he has had coitus he may not eat food into which salt has been put. His

M 587 765 [833] marry, his new wife would die. A widow after her period of mourning of two or three months, if sought in marriage, sends her suitor to her sister, who arranges for some other man to have coitus with the widow, after which she is ready to marry the suitor. Without this her second husband would die should she have committed adultery.

M 767 622 After the funeral of a chief the headmen of the district call the chief *Mdimbulu*, who buried the late chief, and hand him a red blanket and tell him to cover the man who is going to be chief. This he does, at the same time hitting him hard on the head. This action is received with shouting from the women, who put ashes on their heads. He then sits surrounded by his brothers and sisters at one end of the open space, the headmen at the other, the leader of whom gives a sermon.

M 766 At Chipoli on the south-west arm of the Lake the corpse is wrapped in a mat and weighted, and then sunk in the lake. The same practice is followed occasionally at Monkey Bay; it is done with the idea of avoiding interference by *Mpháti*.

Lepers and persons dying of small-pox are not bewailed; the former are thrown in the bush for *Mpháti* to eat, as it is thought the disease is spread if they be buried. A man accused of *Mpháti* and dying of *mwavi* used to be burnt on a pile of wood.

N 622 766 [*Note on Angoni.*—In the case of a chief the body was kept ten days to be sure of death; it was arranged in a sitting posture covered with cloth, the eyes open, a stream was dammed up with stones and then a pyre made below the dam and the body burnt, the waters were then let free to wash away the ashes. The new chief stood from morning to afternoon on one foot wrapped in the smoke of the pyre.]

M 195 769 In speaking of the dead the expression, "the late so and so" (*= mzimwazi . . .*), is used. A man will not refer to children that have died in the presence of his wife, as she will cry either from grief or because it is the custom so to do. Some burial grounds are not approached.

ARTIFICIAL DEFORMATIONS.

M 304 [856] At birth pressure is applied to the head of the child to reduce any deformity which may be present—no deformation is attempted. Various practices of piercing nose, lips, and ears have been and are in vogue.

M [178] Piercing of the upper lip and subsequent wearing of a thin stick, sometimes a bone (*ntowa*), until the aperture was large enough to admit a much bigger ivory or wooden lip-ring, solid or otherwise (*pelele*), was practised among the Nyanja women, but it is going out and is now seen only in the old women. Occasionally the lower lip was pierced in the same way. At the present time among the Mashinga, Yao, and many Nyasa women, the left *ala nasi* is pierced in the same way when a girl is eight years old. When adult a metal or ivory solid ring is worn (*chipini*). A woman piercing the right *ala nasi* would be laughed at and called a fool.

Y ●[304]

4:Stannus D-5 (ca. 1909) 1910 F17 Yao F17
Mbrori FR4

The piercing in the case of men is sometimes the cut of a small circular hole originally copied from the coast Swahili whose tribal mark it was, and who did it to prevent enlargement of the scrotum.[1] A small perforation of the lobule is commonly seen among the Chipeta-Angoni. These perforations are now, however, seen indiscriminately among various tribes in the country. The former I have seen in a Nyasa—it is also general among the troupes of professional dancing-boys, who wear a cord or a small stick through the ear, usually the right ear. The stick I have seen among Asenga, Nyasa, Machinga, and Ashewa. No definite earrings are worn. The habit of wearing three or four discs in the margin of the ear is only seen among coast women (Zanzibar) who have come to live in the country (Fig. 5).

FIG. 4.

FIG. 5.

Dental mutilation was, and is to some extent, still of tribal significance, though mostly performed for appearance (Fig. 4). Actual extraction is but very seldom seen now.

A prominent breast is admired among the natives, and to secure this a cord is tied round the chest by girls, at the upper margin of the gland, with the idea of making it project. I am inclined to think it has the opposite effect. No attempts are made to elongate the breasts, they become very pendulous without any artificial aid.

Amputation of fingers and ears, castration, etc., have in the past only been practised as punishment.

Young girls by constant pulling on the *labia minora* and enclosed clitoris try to cause elongation, as such is said to be admired.

Elsewhere I have referred to the penis of natives, which I consider to be characteristic in its hardness. This is said to be caused by the "young man" purposely injuring the organ by beating it so that it never returns to normal softness when not erected.

Cicatrization.—Cicatrization is practised by both sexes of all the tribes. In former times the designs had a certain significance, such as to indicate the tribe, to signify that the wearer had been initiated, to commemorate certain events, and so

[1] This is interesting, inasmuch as the ears are pierced in England, commonly with the belief that it prevents bad eyesight.

and £30 per annum. It is profitable to carry fresh fish inland by bicycle even as far as Blantyre,[1] as the shore price to the retailer is 4s. a load, which later may fetch from 16s. to 24s.[2] Yao on the south-west lake shore grow an excellent quality rice.[3] Rice is also grown near Lake Chilwa, but is mainly sold in the market organized near the lake shore by the Agricultural Department.

Division of Labour

The man builds the house, hunts, fishes, makes the nets, baskets, grain-store, game-traps, and, in the old days, the bark-cloth. He cultivates the tobacco. He cuts down the trees and may help with the hoeing and harvesting. The woman hoes, muds the floor of the hut, sweeps, cooks, brings firewood, draws water, brews beer, makes the pots and pipes.[4]

Land Usage

There are two types of garden in the Yao areas south of Lake Nyasa: one the ordinary garden in which the staples grow, and second, gardens along the stream beds. These latter are especially valuable for providing out-of-season crops. In addition most householders have a few small plots for tobacco and ground-nuts.

The main garden is cultivated by the slash-and-burn method, common in Central Africa. The Yao, unlike the Bemba, garden occupies the whole area cleared. Burning is done just before the rainy season (October–November). The ash and soil are hoed into elongated mounds and grain is planted along the ridges. Gardens may be cultivated for more than five years. In the second and subsequent years of cultivation the stalks and weeds are piled up and burnt. There are signs of soil impoverishment. The gardens are cleared in August, and heaped to dry for burning. After the burning the seeds are planted in late November. By February and March green maize is available to supplement the diet, and by the end of April the crops are ready to be harvested. The maize is stored in wicker containers, while sorghum is stored in the huts on a stand. Cassava is planted in large mounds made by turning the turfs over, so that the roots are outside the mound and the vegetable matter inside. Legumes are planted in smaller gardens, or interplanted with the main crop. Ground-nuts are stored, after being shelled, in mud-plastered wicker containers, designed to be rat-proof. Tobacco is planted at the sides of the streams for hand-watering in the seedling stage, and then transplanted about January. The leaves are ready to be plucked about April and soon afterwards they are marketed. Sweet potatoes are planted in the rainy season, and are ready for eating in May. The stream gardens yield out-of-season crops—maize, beans, pumpkins, and also sugar-cane, which is used in the initiation ceremonies.

Craftsmanship

The Yao have few skills. All cultivation is by hoe; axes and knives are their only other technological equipment. The men make mats from reeds and palm leaf, and the women make pottery. The huts are strongly built from poles laced with bamboo and plastered with mud. The roof is thatched with grass. Under Arab influence the

[10a]

MAP I. AFRICA.
The shaded portion shows roughly where the Yao live.

human habitation. Large areas around Lake Shirwa are in fact marshlands in the wet season, and stretches of poor sandy and slightly saline soil during the dry season.

Generally speaking the distribution of surface water throughout 133
this area is variable. The highlands are on the whole well 312
supplied with streams which rise in the mountains and flow

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

133 312 swiftly throughout the year. In the plains many small rivers flow quite strongly during the rainy season but dry up shortly afterwards and by July or August the water shortage becomes acute for many villages. In the rainy season plenty of shallow pools supply the wants of the people ; as these dry up the women must go farther and farther afield to find water. To the east of the watershed of the plain the distance they may have to go is still within the bounds of possibility, but on the valley lip this is no longer so,[1] and large areas of the escarpment, especially to the south towards the Shire Highlands, are unpopulated. The Administration has been sinking wells in an attempt to increase the amount of land available for human habitation. It reports that soon after wells had been sunk villages moved there and started gardens :[2] this indicates the pressure of the population on
134 the land. Within the area where most of my study was made, i.e. from the northern fringe of the Shire Highlands, agriculturalists describe the soil as ' variable '. The Agricultural Officer at Zomba, writing of this area, said :

> In the valley of the Shire the soils may be described as rich sandy alluvium. Around the hills the soil is chiefly red with a high percentage of clay and a small percentage of sand. Much of the soil in the ridge of highland stretching from the Chikala hills in the south to the hills near Mount Mangoche in the north is sandy and poor, with pockets of good rich soil here and there. The soil improves as the land slopes down each side of the ridge to the west to the Shire Valley, and to the east to the shores of Lake Shirwa and Lake Chiuta.[3]

Climate

132 The climate is the tropical monsoon type. The average annual rainfall over the years 1944–6 at the three stations, Jalasi, Nyambi and Mlomba, i.e. placed at even intervals throughout the area of study, was 41·89 inches.[4] The rainfall is slightly heavier in the higher areas. This rain falls almost entirely during the

adjusts itself to the changes in its composition. At this point I wish only to indicate how the differentiation among the various segments of a matrilineage is reflected in the way the members site their huts in a village.

The Segmentary Process

The segmentary tendencies within the lineage are countered by unifying forces, but the cleavages between the lineage sections show up at the slightest provocation. Once the cleavage starts it widens rapidly and charges of sorcery become more and more frequent between the two sections until eventually one moves out to found a new village. A cleavage of this type has been developing in Cikoja village for the last eight years. When I left the field in 1949, talk of migration was in the air but it had not yet happened. I summarize the major events which led to the present situation.

The cleavage first manifested itself in 1942 when Bt. Mbwana (F2) [1] fought with her mother's younger 'sister' Ayesi (E8). These two were pounding at the same place in the village and Bt. Mbwana took Ayesi's flat sifting basket. She retained it for about four days without telling Ayesi that she had it. One day Ayesi saw it at the pounding point and asked Bt. Mbwana where she got it. They had a few words about it and Bt. Mbwana returned it and thought no more of it. She was pregnant at the time and was confined about a month later. It was her fifth child but she had a greatly prolonged labour. After labour had been going on for some hours, Cilimba (F1), her eldest brother, thought that there must be something wrong and sent his two younger brothers, Kausi (F3) and Gwili (F4) to a diviner. The diviner indicated that the cause of the difficult birth was that her 'younger mother' Ayesi was bearing her malice,[2] and advised that Ayesi should blow water from her mouth and declare that she bore no malice. Kausi and Gwili returned and went to Bt. Amisa (E4) who was Ayesi's elder sister and told her what the diviner had said. Bt. Amisa did as she was advised and fetched Ayesi to the door of the hut in which Bt. Mbwana was lying, and made her confess. The child was born immediately. After a week Cilimba and Kausi brought a complaint to the village headman Cikoja (E7). They accused Ayesi of trying to kill their sister. Cikoja sent a message to

[1] The reference numbers refer to the genealogy in Appendix D.

[2] Difficult labour is usually assumed to be due to adultery, but it may also be due to sorcery or malice. See p. 138, and Chap. VII, p. 185.

and the baskets and pots. A wooden dish *sabisi* may be seen occasionally, but of late years, this has been generally replaced by enamelled articles. 415 [177]

Around the entire hut, or simply enclosing a yard behind it, there is often a fence about five feet high. In the enclosure thus formed, many household duties are performed, such as the pounding and sifting of grain. The grain store *upakuse* often stands in this yard with the pigeon-loft and possibly a hen-house or goat kraal; these are sometimes found in the open space at the front of the house. If a grain store is built within the hut itself, it is then known as *mbungu*. Near the pigeon-loft will be seen a pole with prongs supporting an old pot with water for the pigeons to drink. In a tree in the bush nearby, there may stand a beehive, consisting of a bark cylinder. Similar cylinders are sometimes used as pigeon-houses. 361 343 [231]

The large pots for brewing beer are usually set in the yard or on the back veranda, together with a basket of split bamboo for carrying fowls, *chitetete* (Yao and Chin.). 415

Gourds. Gourds are grown in the village for use as vessels of various kinds. Different shapes serve different purposes; names are given them according to use rather than shape, though these more or less coincide. Ladles for water or beer, *mamalo* or *mpao* (*nacuaro* or *chibe*, Chin.) are usually long-handled gourds (Pl. XIV, figs. 7, 8, 9). Drinking vessels for beer, etc. *chipanda* and a specially large one, *mtumba* are usually of the shape illustrated in Plate XIV, fig. 1; sometimes they are like fig. 5, but this shape is more commonly used for water. *Lipache*, the type illustrated by fig. 2, is also used for drinking or for holding gruel. Oil flasks, *chiasi* (*tsupa*, Chin.), are usually of the double-bellied type (figs. 4 and 6). Salt bottles, *chitumba* (*chipuru*, Chin.), are similar to oil flasks. Rattles, *sanje*, used at dances etc., are also made from gourds, often from those with tuberosities (fig 3). Other uses for gourds include pipes, snuff-boxes, enema funnels, and resonators for musical instruments.

Pottery. The art of pot-making appears to have been known to the Yao for a very considerable period. There is no history relating to its introduction among them. The art is in the hands of the Yao women. As among all Nyasaland tribes, a particular kind of clay is used and no admixture with any binding substance is made. The pots are simply moulded by hand from base to brim and, without the aid of any wheel or other device, wonderful symmetry is attained. 323

After drying, the pots are fired by being set on their bases on the ground and a wood fire is made round and above them. They are then sprinkled with an infusion of the *upungwe* or *utumbi* tree, a head of millet being used for the purpose, after which the pots are set upon a fire and millet husks are thrown into them and allowed so to be incinerated. These customs, a kind of christening of the pots, " insure their turning out well."

No glaze of any kind is used, but they are sometimes coloured red by boiling with a pigment called *upuwa*, prepared from a red sediment found in sluggish streams. The preparation of *upuwa* is in the hands of men and women who make a trade of it, such as a man called

3: Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

323 N'yasi near Sombo. Sometimes pots are also rubbed all over the outside or in patterns with *mwaya*, a natural graphite.

323 531 Patterns of a simple character, often of the herring bone order, are commonly graved about the neck of the pots with the aid of a stick of bamboo. There is considerable variety in the size and shape of the pots made. As with gourds, the pot takes its name from the use to which it is put and not from the shape or size. All pots have rounded bottoms; none have a flattened base or standard.

The following varieties of pots may be mentioned:

323 415 1. *Likwala*, large pots for beer-making. These are usually roughly made and seldom have any decoration on them; they stand about two feet high and are wide-mouthed (Pl. XV, figs. 1, 4).

2. *Lwala* (*mwala*, Chin.): water-pots. These are usually well moulded and well finished pots, full bellied with broad base and a certain amount of neck. They are practically always decorated and often colored. They are about twelve inches high and twelve inches across the broadest diameter (Pl. XV, figs. 8, 9, 10).

3. *Chisbaga* (*mbale*, Chin.): cooking pots used for cooking the flour porridge, *upali*. These are wide, open-mouthed pots six to ten inches high, with belly and more or less straight sides (Pl. XV, figs. 5, 6, 7). This name also applies to the cooking vessel for medicinal concoctions.

4. *Chijwaya* (*mpika*, Chin.): smaller pots of the same type as 3, used for cooking beans, fish, green stuff, and the relish *mbaya* (*mbiwa*, Chin.) (Pl. XV, fig. 3).

5. *Mtula* (*mbata*, Chin.): the bath water pot. The smallest pot used for heating water to bathe the husband after sexual intercourse bears the same name. It is found among both the Anyanja and the Wayao (Pl. XV, fig. 2).

6. *Mbale* (Yao and Chin.): the plate, a shallow, wide-open vessel.

Baskets. The basket work of the Yao is all of one type and is done by the men. All 285 baskets are made of plaited strips of bamboo, the free edges of the strips being bound between thicker pieces of the same wood forming the rim, the binding being done with the stem of a creeper. They are made in various shapes and sizes. Some are rendered waterproof and used as beer mugs. The following types of basket are in use:

285 415 1. *Chiseke* (*kisheve*, Chin.): a circular, open basket, shallow and wide, six to ten inches in diameter; it is used as a food dish or to measure flour, etc. *Chitunga* (*nsungwa*, Chin.), a rather larger one of the same shape, often decorated with beads is used to carry flour, while a still larger basket called *chipeta* is commonly used by the women for winnowing out the chaff from the partly pounded maize (Pl. XVI, figs. 11, 15).

2. *Lukulula* and *chitunda* (in Chin., both are called *ntunga*): deep baskets usually about as deep as they are broad; the bottom is approximately square, but the rim is circular. *Chitunda* is about six inches high and six inches in diameter; *lukulula* is about a foot in all dimensions. These large baskets are used for carrying any food-stuffs in bulk, e.g. grain and pumpkins (Pl. XVI, fig. 16).

286 have said, to this day, and also appearing as the proper dress in all ceremonies. Clothing nowadays, among the majority, consists of calico of various kinds brought in by traders and further referred to under *Dress*.

287 Bark-cloth, *lisunde* (*chisunde*, Chin.) is made by the men. A piece of bark about two feet by one is cut from the *lring* tree; the outside portions are removed and the whole piece, after being well scraped, is soaked in water. When partly softened, it is removed and hammered out with a wooden mallet; the process is repeated till the piece of bark is soft enough to enable it to be wrung in the hands, thus further loosening the fibres. The soaking, hammering, wringing, and pulling are continued till a piece of cloth three by five feet is obtained. This is sun-dried and yields a soft, pliable, and warm material. Several pieces may be sewed together to make a large sheet. Bark-cloth is sometimes stained black by soaking it in a kind of thick mud found on the plains. The mallet consists of a piece of hard wood with serrations on its face, held in a split stick handle; it is called *nikwaru*. A log of wood with a flattened surface, called *nikwapwe*, plays the part of the anvil, the man who is using the mallet usually sitting on one end of the log.

281 Skins. The Yao are unacquainted with the art of tanning. Skins are prepared only by drying, and then softened by hammering with stones. They are not employed as articles of clothing but the larger ones are used to sit upon, the skins of the leopard and the lion being reserved for chiefs. Others are used to make bags to carry flour, for powder pouches, and to cover guns. The blacksmith's bellows are made of goat's skin.

283 String, *lukuji* (*chinpue*, Chin.): Two kinds of string are made, one from flax, the other from the inner part of the bark of the baobab tree. Fishing nets are made from the former, game nets from the latter.

326 Metals and metal working. The only metal ever obtained from the ore by the Wayao was iron, and it is probable that they learned this from the Angoni and Anyanja. The industry is now nearly dead since the introduction of trade articles. A few blacksmiths still ply their trade, but their work is restricted to the manufacture of knives, spear-heads, and razors. Hoes are no longer made. The hoe blade supplied by traders is in the form of the old native-made article, which had in turn displaced the older hoeing-stick. The blacksmith deals with his mass of metal by hammering it with stones. He provides himself with bellows, a small iron hammer, and a rudimentary kind of tongs. He is called *nandipula*.

● 324 Stone. The only important uses for stones among the Yao are for supporting the cooking pots on the fire, for heating water in some medicinal preparations, and for grinding millet. For this last purpose, a large, flat stone, inclined at an angle, is set up in some convenient spot, often on the veranda, and the grain is ground by means of a smaller stone held in the hands.

412 The flour pestle and mortar. Maize flour is prepared by pounding the grain in a [252] big wooden mortar, by means of a wooden pestle, consisting of a pole some five feet long and four inches in diameter with round ends. The mortar consists of a tree trunk about

Mandi; FR4

Metallurgy.

Among the natives in Nyasaland, with the exception of copper in the north (Wahenga) and brass in parts near the Zambesi, iron was the only metal worked. M Y 325

Other metals now used and obtained from traders are, copper, brass, lead, tin, etc. Iron = *ukôndo*; brass = *ungali*; copper = *mkuwa*; of iron, hoes, axes, knives, spears were made.

At the present time copper- and brass-bound spears are still found at the north end of the lake; copper bracelets and body rings also. The brass wire bracelets elsewhere are made from imported metal. Iron-stone ore in the old days was smelted in a furnace of stones made in the form of a long drain 3 feet long and 1 foot high; in this a mixture of lumps of ore and wood charcoal was put, and single bellows of goats' skins were used to make the draught, which is aided by building a chimney at one end; at the other end a hole is made in the ground to receive the molten metal. A quantity of this is then again melted in a hole in the ground with a charcoal fire about it, and then the metal run into a trench to form a thin bar which is then hammered and worked into a spear, etc. At the present time little smelting of ore is done. There are regular metalworkers, who make knives, etc., using a little hearth with goat-skin bellows, a crucible for copper and brass, etc., tongs, pliers, hammer. M Y 326 M Y [501]

FIG. 13.

An iron plate with an aperture for drawing wire and files are also employed.

Bellows.—A goat's skin with a large opening sewn to two sticks; the bag is then held by these sticks and closed and pressed, the air being driven out through an iron tube inserted through one of the legs of the skin.

Boats.

The only form of boat in use is the dug-out canoe without outriggers. No skins are used. These are punted along by bamboo poles in the rivers. On the lake paddles are used, never oars. There are no sailing craft. The *mapasa* is the tree used for making canoes, sometimes also the *mkowa*. They are cut out with a small adze, *mwpa*. The *ekwe* bush is used for caulking, twenty or thirty of the stalks being rammed into the hole. *Mpiso*, a ground-creeper, is also used after being pounded. For bailing anything is used. At Likoma a vessel like a very small canoe called *upe* is employed. A kind of raft made from pith-wood and called *mapembwe* is used to fish from. Occasionally these get washed out into the lake and the fisher has been drowned. M Y 501 M 396 501

The canoes vary in size from 10 to 50 feet and more, the smaller being used as ferry-boats across a stream; the largest were made to carry slaves across the Lake Nyasa in the old days. In punting a canoe, one or two men work, keeping time. In paddling, any number may work, the largest canoes have twenty men working on either side. Down river near Zambesi the paddlers kneel; on the Lake they stand. M Y 501

342 Yao make square houses.[1] Panelled doors and glass windows, deck-chairs and palm
177 furniture are becoming more and more popular. The men wear long Moslem robes
[29] and the women are clothed in cotton. In the rural areas there are usually a few crafts-
men who still ply their trades as carpenters and blacksmiths, though the latter no
326 longer smelt, but use scrap-iron.

Labour Migration

162 Statistics are not available for the Yao of Portuguese East Africa or Tanganyika
164 Territory. Yao constitute 34 per cent. of the total population of South Nyasa district, 15 per cent. of upper Shire, 11 per cent. of Blantyre and Zomba.[2] The proportion of labour migrants in these districts was in 1937 as follows:[3]

District	*Adult males fit to work*	*Percentage of emigrants*	*Number producing economic crops*	*Number of subsistence producers*	*Emigrants not heard of since 1930*
South Nyasa .	24,230	27·1	2,912 (12%)	12,025 (49%)	873
Upper Shire .	24,673	15·9	2,555 (10%)	16,609 (67%)	255
Blantyre . .	25,330	15·6	3,788 (15%)	10,165 (40%)	986
Zomba . .	26,679	12·4	7,720 (29%)	9,040 (33%)	553

[134] South Nyasa district, which is unfertile waterless bush with a long history of famine and food shortage, has the highest proportion of labour migrants. Upper Shire, though not fertile, is more prosperous, benefiting from the tobacco- and cotton-growing industries, and from the dried-fish trade.[4]

SOCIAL ORGANIZATION AND POLITICAL STRUCTURE[5]

Kinship and Local Grouping

611 Among the Yao succession is matrilineal and marriage mainly matrilocal. Accord-
[541] ing to some informants succession formerly passed down the line of brothers, as with the Bemba, but it now passes direct to the eldest sister's eldest son, or to descendants of other sisters in order of seniority.[6] Chiefly succession follows the same rule, but the most senior may be set aside for a more suitable candidate.[7]

611 Clan names, *lukuyo*, are inherited matrilineally, and formerly designated exogamous
614 units,[8] but the marriage prohibition has now ceased to operate. Holders of the same clan name are unable to trace descent from a common ancestress, and for commoners clan names seem to have quite lost their significance; they are, however, carefully remembered in the chiefly lines and in other lines of hereditary rank, such as village headmen.

614 Within the general kinship grouping of the clan, a smaller group is recognized,
613

and £30 per annum. It is profitable to carry fresh fish inland by bicycle even as far as Blantyre,[1] as the shore price to the retailer is 4*s.* a load, which later may fetch from 16*s.* to 24*s.*[2] Yao on the south-west lake shore grow an excellent quality rice.[3] Rice is also grown near Lake Chilwa, but is mainly sold in the market organized near the lake shore by the Agricultural Department.

Division of Labour

The man builds the house, hunts, fishes, makes the nets, baskets, grain-store, game-traps, and, in the old days, the bark-cloth. He cultivates the tobacco. He cuts down the trees and may help with the hoeing and harvesting. The woman hoes, muds the floor of the hut, sweeps, cooks, brings firewood, draws water, brews beer, makes the pots and pipes.[4]

Land Usage

There are two types of garden in the Yao areas south of Lake Nyasa: one the ordinary garden in which the staples grow, and second, gardens along the stream beds. These latter are especially valuable for providing out-of-season crops. In addition most householders have a few small plots for tobacco and ground-nuts.

The main garden is cultivated by the slash-and-burn method, common in Central Africa. The Yao, unlike the Bemba, garden occupies the whole area cleared. Burning is done just before the rainy season (October–November). The ash and soil are hoed into elongated mounds and grain is planted along the ridges. Gardens may be cultivated for more than five years. In the second and subsequent years of cultivation the stalks and weeds are piled up and burnt. There are signs of soil impoverishment. The gardens are cleared in August, and heaped to dry for burning. After the burning the seeds are planted in late November. By February and March green maize is available to supplement the diet, and by the end of April the crops are ready to be harvested. The maize is stored in wicker containers, while sorghum is stored in the huts on a stand. Cassava is planted in large mounds made by turning the turfs over, so that the roots are outside the mound and the vegetable matter inside. Legumes are planted in smaller gardens, or interplanted with the main crop. Ground-nuts are stored, after being shelled, in mud-plastered wicker containers, designed to be rat-proof. Tobacco is planted at the sides of the streams for hand-watering in the seedling stage, and then transplanted about January. The leaves are ready to be plucked about April and soon afterwards they are marketed. Sweet potatoes are planted in the rainy season, and are ready for eating in May. The stream gardens yield out-of-season crops—maize, beans, pumpkins, and also sugar-cane, which is used in the initiation ceremonies.

Craftsmanship

The Yao have few skills. All cultivation is by hoe; axes and knives are their only other technological equipment. The men make mats from reeds and palm leaf, and the women make pottery. The huts are strongly built from poles laced with bamboo and plastered with mud. The roof is thatched with grass. Under Arab influence the

342 Yao make square houses.[1] Panelled doors and glass windows, deck-chairs and palm
177 furniture are becoming more and more popular. The men wear long Moslem robes
[29] and the women are clothed in cotton. In the rural areas there are usually a few crafts-
men who still ply their trades as carpenters and blacksmiths, though the latter no
326 longer smelt, but use scrap-iron.

Labour Migration

162 Statistics are not available for the Yao of Portuguese East Africa or Tanganyika
464 Territory. Yao constitute 34 per cent. of the total population of South Nyasa district, 15 per cent. of upper Shire, 11 per cent. of Blantyre and Zomba.[2] The proportion of labour migrants in these districts was in 1937 as follows:[3]

District	*Adult males fit to work*	*Percentage of emigrants*	*Number producing economic crops*	*Number of subsistence producers*	*Emigrants not heard of since 1930*
South Nyasa .	24,230	27·1	2,912 (12%)	12,025 (49%)	873
Upper Shire .	24,673	15·9	2,555 (10%)	16,629 (67%)	255
Blantyre . .	25,330	15·6	3,788 (15%)	10,165 (40%)	986
Zomba . .	26,679	12·4	7,720 (29%)	9,040 (33%)	553

[134] South Nyasa district, which is unfertile waterless bush with a long history of famine and food shortage, has the highest proportion of labour migrants. Upper Shire, though not fertile, is more prosperous, benefiting from the tobacco- and cotton-growing industries, and from the dried-fish trade.[4]

SOCIAL ORGANIZATION AND POLITICAL STRUCTURE[5]

Kinship and Local Grouping

611 Among the Yao succession is matrilineal and marriage mainly matrilocal. Accord-
[591] ing to some informants succession formerly passed down the line of brothers, as with the Bemba, but it now passes direct to the eldest sister's eldest son, or to descendants of other sisters in order of seniority.[6] Chiefly succession follows the same rule, but the most senior may be set aside for a more suitable candidate.[7]

611 Clan names, *lukoryo*, are inherited matrilineally, and formerly designated exogamous
614 units,[8] but the marriage prohibition has now ceased to operate. Holders of the same clan name are unable to trace descent from a common ancestress, and for commoners clan names seem to have quite lost their significance; they are, however, carefully remembered in the chiefly lines and in other lines of hereditary rank, such as village headmen.

614 Within the general kinship grouping of the clan, a smaller group is recognized,
613

CHAPTER III

THE COMPOSITION OF MODERN CHIEFDOMS

Chiefdoms in the Administrative Mould

361 NO less than in MacDonald's time, modern chiefdoms are in the first place organizations of villages. Physically, the villages consist of solid pole and daub huts of varying sizes. Some huts are rectangular, twenty feet long and fifteen feet wide, [342] with glass windows, panelled doors, and thatched roofs. Others are small and round, about eight feet in diameter. There is also a considerable variation in the compactness of villages: often the huts are only a few yards apart, but sometimes at least a hundred yards or more. Most villages, however, could be circumscribed by a circle of a quarter-mile diameter, though, of course, there are many exceptions. There is a slight tendency for the village to spread itself along a path, in a way faintly suggesting ribbon development, but on the whole there is no particular physical pattern to the Yao village. In fact, though most villages have fairly distinct physical boundaries, and are definitely discrete clusters of huts, some are difficult to identify in this way. To the minds of the local people, however, the 621 village is quite clear and distinct. This is because they see the village primarily as a social unit, and tend to impute into physical boundaries more definition than actually exists. It is in the social sense that I use the word here: the 'village' is a spatial group which recognizes its identity against similar groups.

The importance of the village in Yao structure can hardly be over-emphasized. Membership of a village provides the first index whereby people determine a stranger's background. If, after village membership is fixed, no other links can be found with a stranger, such as distant kinship, the relationship will remain at that level. A gossip identifies the person about whom 621 he is speaking by giving his or her name and the name of his 551 or her village. He says, 'Bt.[1] Mwana of Cigwaja village'.

[1] I use this abbreviation for the Arabic 'binti', 'daughter of'. Binti, pronounced 'biti' by the Yao, with Ali and Wadi, 'son of', appear commonly in Yao names.

578 613 622 adult son, went to Walusa one day and borrowed a chicken. Some days afterwards Walusa asked for payment for the chicken. Ali Cibwana took offence at the way in which Walusa asked for payment and told him so. Walusa remarked that Ali Cibwana was insolent and insisted on the payment for the chicken. Ali Cibwana now said that if his father's brother insisted on asking in this rude way he would not be paid back at all. The tempers of the two men became more and more frayed until at last Walusa threw Ali Cibwana to the ground. When Sanudia, Ali Cibwana's younger brother, saw this he grabbed up a stick and came up to Walusa and asked him why he had thrown his elder brother down. Walusa had hardly time to answer before Sanudia had struck him. At this Walusa's younger brothers joined in the fight. Mpakata now rushed up and started to support his sons against his younger brothers. When Mpakata's sisters and sisters' daughters, who were pounding, heard this, they took up their pounding pestles (poles about five feet long and three inches in diameter) and came running to Mpakata's younger brothers' assistance. When Mpakata saw these women coming with their poles he dashed into his house and emerged with a stick with which he defended himself. The noise and clamour had by this time attracted a number of strangers from a nearby village and they were able to pacify Mpakata's villagers. The matrilineal relatives of Mpakata gathered in one part of the village and Walusa told them they ought to leave. They decided, nevertheless, 'to say goodbye'[1] to Kaumbwe, who was a perpetual elder brother of Mpakata. Kaumbwe called in an unrelated village headman named Idi, and they held a meeting in the village the next day.

The dispute was discussed in the presence of the arbitrator. Walusa said he wished to leave the village with his sisters. Idi, however, told him that he should not do this but that they should take the matter up to Chiwalo's court. On an agreed day Mpakata and his children and matrilineal relatives went to Chiwalo's court where the case was arbitrated on by Capola who lived near to Mpakata. He found Mpakata guilty and ordered him to pay 10*s*. to Walusa. At the same time he told Walusa that he was not to take the female members of the matrilineage away from the village. And there the matter rested.

A village headman in Yao 'binds the village',[2] and when the village is made up of linked groups as well as his matrilineal kin,

[1] Ostensibly to say goodbye but in fact to air their grievances.

[2] *Akutawa musi*. The word *kutawa* may also mean to build. Yao houses are built by binding poles together with ropes and then filling the gaps with mud.

PLATE IX

[facing p. 206]

CHAPTER VIII

THE VILLAGE THROUGH TIME

IN order to present my analysis of the internal structure of Yao villages and of the position of the village in the social structure as a whole, I have given static pictures of villages at particular moments of time. But it should be clear that this description of the enduring social relationships, which appear as a static social structure, is abstracted from a series of on-going processes in which certain social relationships appear as repetitive elements. 621

In reality villages are constantly changing. Their personnel is replaced, their internal lineage composition changes, and they change their sites from chiefdom to chiefdom. It is perhaps easiest to visualize these changes, and the way they affect the structure, by viewing them in terms of the slow ontogenetic development of villages. Villages pass through a cycle which leads from their inception, through internal differentiation out of a larger group, to final break-up through their own differentiation, and the resumption of their original simple form.

Let us consider the typical life history of a hamlet which has just moved into a particular area. It is composed of four or five huts belonging to the daughters of one woman. The mother herself may be alive, as an old woman and very probably a widow. The daughters are adults and have with them their husbands and children. The hamlet settles down to its life in its new area. The warden of this sorority-group probably lives some miles away and the women have to send the older children to call him when they need his help. As the daughters of the [591] women grow up, young men come to marry them. Each couple may start to live in the girl's mother's kitchen at the back of the hut. In time the husband builds a hut next door to the [342] hut of his mother-in-law. Yao huts as a rule are made from pole and daub and they last from five to ten years. White ants eat the poles away and the thatch always leaks a little in very wet weather. The winds and the rains erode away the plaster.

539

"*Lokoto lokoto kondo ka!*"
"Picking up picking up a little basket full!"

to which the listeners exclaim

"*Lokoto!*"
"Overflows!"

At the completion of each sentence in the story, one of his listeners will exclaim, "Go!" When he has finished his story, he says,

"*Ajiskola katuka katukuunga panitwe yakuwere, uuko chipungili!*"
"Take off the fire, the little mouse lest it be singed, by the head it is very hard, the hair (is) in a lump!"

During the intervals of a long story, one of the listeners may break in and sing some little song, such as the song of the *mbendu* in the story of the greedy man, thus giving the story-teller a rest.

The house and household utensils. The Yao house does not differ greatly from the
●342 Nyanja habitation which I have already described elsewhere.[1] The accompanying figure (Pl. XIV, fig. 15) gives the circular plan of a hut with a veranda partly open and partly enclosed to form a room. The central pole of the hut is indicated, the hearth (H), the position of the sleeping mats (M), and the place where the water pots are kept (P). The
352 bed may be a bamboo platform supported by forked sticks a foot above the ground (*usanguuli*), or a dais of mud, over which is spread the sleeping-mat, upon. (Pl. XIV, fig. 14.) Seats, *chilungu*, are made of logs of wood with conveniently placed branches acting as legs. I have seen a symmetrically carved log with shaped legs all in one piece, which suggested by its form and by the presence of a button on the midline of the under surface that it was made in the imitation of an animal. Plank seats with peg legs are now sometimes seen. Wooden pegs are driven into the wall and serve to hang odd articles upon.

[359] The hearth is simply a shallow depression in the mud floor, around which are placed three large stones to support the cooking pots. Sometimes a canopy is built over the hearth, consisting of four upright poles supporting a platform made of reeds and grass, upon which millet and other seed grains are often stored. From this platform *lipulu* (*tsanjo*, Chin.), the gourd containing the supply of salt is often hung. The seed grain tied up in
[251] little bundles is suspended from the *lipulu* where it becomes very dry and smoked, without any ill effect to the next year's crop. (Pl. XIV, fig. 16.) Four pronged branches of trees are often stuck in the ground with a string tied around the prongs, and used as holders for gourds, salt bottles, etc.; this device is called *lipanda* (*pkanda*, Chin.). (Pl. XIV, fig. 10.)
415 The smaller utensils include the porridge stirring stick *mtiko* (Yao and Chin.) (Pl. XIV, fig. 12), several wooden spoons *chikuni* (*chipanda* or *nanaiwa*, Chin.), (Pl. XIV, figs. 11, 13), a number of gourds of various shapes and sizes used as ladles and drinking vessels,

and the baskets and pots. A wooden dish *ubisi* may be seen occasionally, but of late years, this has been generally replaced by enamelled articles.

Around the native hut, or simply enclosing a yard behind it, there is often a fence about five feet high. In the enclosure thus formed, many household duties are performed, such as the pounding and sifting of grain. The grain store *ngulwe* often stands in this yard with the pigeon-loft and possibly a hen-house or goat kraal; these are sometimes found in the open space at the front of the house. If a grain store is built within the hut itself, it is then known as *mbunga*. Near the pigeon-loft will be seen a pole with prongs supporting an old pot with water for the pigeons to drink. In a tree in the bush nearby, there may stand a beehive, consisting of a bark cylinder. Similar cylinders are sometimes used as pigeon-houses.

The large pots for brewing beer are usually set in the yard or on the back veranda, together with a basket of split bamboo for carrying fowls, *chikhuku* (Yao and Chin.).

Gourds. Gourds are grown in the village for use as vessels of various kinds. Different shapes serve different purposes; names are given them according to use rather than shape, though there more or less coincide. Ladles for water or beer, *mwamdo* or *mpao* (*mwamo* or *chiko*, Chin.) are usually long-handled gourds (Pl. XIV, figs. 7, 8, 9). Drinking vessels for beer, etc, *chipondo* and a sparsibly large one, *mtumbu* are usually of the shape illustrated in Plate XIV, fig. 1; sometimes they are like fig. 5, but this shape is more commonly used for water. *Lipombo*, the type illustrated by fig. 2, is also used for drinking or for holding grain. Oil flasks, *chimsi* (*mwpo*, Chin.), are usually of the double-bulbed type (figs. 4 and 5). Salt bottles, *chikumbu* (*chipuru*, Chin.), are similar to oil flasks. Rattles, *ungu*, used at dances etc., are also made from gourds, often from those with tuberosities (fig 3). Other uses for gourds include pipes, snuff-boxes, mortar funnels, and resonators for musical instruments.

Pottery. The art of pot-making appears to have been known to the Yao for a very considerable period. There is no history relating to its introduction among them. The art is in the hands of the Yao women. As among all Nyanjaland tribes, a particular kind of clay is used and no admixture with any binding substance is made. The pots are simply moulded by hand from base to brim and, without the aid of any wheel or other device, wonderful symmetry is attained.

After drying, the pots are fired by being set on their bases on the ground and a wood fire is made round and above them. They are then sprinkled with an infusion of the *mpumpu* or *mtumbi* tree, a bowl of millet being used for the purpose, after which the pots are set upon a fire and millet husks are thrown into them and allowed to be incinerated. These customs, a kind of christening of the pots, " insure their turning out well."

No glaze of any kind is used, but they are sometimes adorned red by boiling with a pigment called *ngumu*, prepared from a red sediment found in sluggish streams. The preparation of *ngumu* is in the hands of men and women who make a trade of it, such as a man called

4: Stanner D-5 (ca. 1909)1910 F27 Tao F27
Maruyi FR4
Njoni FR5

only implement used. Sowing is done after the first rains, about November; the harvest takes place in May to July. Gardens are at varying distances from the villages, depending partly on the soil becoming exhausted after years of cultivation. Boundaries are marked by leaving a line of uncultivated ground, sowing a line of a different crop, tying knots in the young crops at intervals, ditches, etc. In starting a new garden, woodland is often taken; the trees are cut down, leaving stumps 3 feet high; the undergrowth is cleared away and burnt, the ashes distributed over the land, which is then hoed, really very superficially; the earth is then made up into little heaps with a central hole in each, after the first rains four or five grains of the cereal (maize, millet) are dropped in each and covered with earth; as the young shoots grow the hole is more and more filled in.

Fig. 6.

With the cereal is planted the seed of peas, beans, pumpkins, the former on coming up then grow up the maize stalks. The seed is last year's product and not specially selected.

Depredations among crops made by elephant, hippopotamus, large antelope (eland and kudu), pigs and baboons, vary in extent in different districts. Little grass huts are built, raised above the ground like a pile-dwelling, in which watchers are stationed. Fences, sometimes extending for miles, are built. The gardens of the chief are hoed by his slaves or the people of the village. Maize is collected in the cob, and after the outer coverings have been removed is stored; so is the sheaves, millet in the head; beans and peas are stored in baskets. Medicine is put on the ground to ensure a good crop, and a piece of stick is sometimes hung up for good luck.

Cattle, etc.

The keeping of cattle is practically restricted to certain tribes living in districts free from tsetse-fly (Angoni, Wankonde); among these people wealth is reckoned by cattle. The milk is little used; the flesh is eaten only when an animal dies. Marks of ownership are made by cutting the ears (Fig. 6). Cattle are kept in open kraals by Angoni, in a compartment of their houses by Wankonde; they are tended by the small boys as a rule. Goats and sheep are kept all over the country. Castration of cattle is a recognized practice (*bufula*).

Angoni make their shields from cattle skins; their spear handles are covered with goat hair (*lusoli*); hair anklets and armlets in dancing costume are made from goat hair. Skins are used as drum to a small extent.

Hunting.

A man intimates to the community around that he is making a hunt by slashing a boy of about ten years in leaves, who precedes him and the man from his own village through adjacent villages; at each village the lad has to lie down and

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

622 neglect neither his sorority-group nor the husbands in his village,[1] that his sorority-group and his village were his garden and he must take care of the young plants in it. The husbands were the watchmen who look after the women in the village. A headman dare not take sides or be unfair, nor must he talk behind people's backs. He must take care to settle differences amicably by discussion at meetings. They advised him not to pay too much attention to his wives who may have quarrelled with his sisters and tell him that they have been insulting him. When he hears a report like that he may be unfair to his sisters and people will say that he has broken his village through listening to nonsense. This sort of instruction went on through the night.

On Friday when the beer was brewed, Mlamba and Mbalwe, both headmen and perpetual sons of Nyambi, came to the village [344] and told the men to build a small grass shed for the successor to sit in. This the men did, and the women were told to plaster it and clean the huts out for the strangers who would be coming to the ceremony. On Saturday morning before cockcrow, Makoka and Ncimba got up and told the women to cook a big pot of porridge because they were taking Cimombo to bathe and when they returned they would want to find porridge ready. [415] Makoka took some medicine called *mkulumo* in a bark container (*likungwe*) into the toilet enclosure. He put the medicine into [751] two jars of water and told Cimombo to wash himself in it daily as he was an important headman, and it would strengthen his body.[2] After Cimombo had washed he went back into the hut 622 where a mat was spread on the floor and on it were a dish of 266 porridge and three dishes of relish. Makoka and Ncimbo told him to take a little porridge, dip it into one of the relishes—whichever he chose—and eat it. Cimombo did so. They did not tell him that one of the dishes contained human flesh.[3] When he tried the dish of human flesh he vomited and all the villagers cried with joy, saying that he was a good chief because he had

[1] *Mbumba jao ni chamwini wao*—the meaning and significance of this in the village context is explained on p. 183.

[2] This is a euphemism for protective medicine against sorcery.

[3] The immediate question is: Where did the human flesh come from? No informant could tell me and I am inclined to believe that one of the dishes is 'ritually' made into human flesh for this ceremony. This special ceremony was always spoken about as if it were secret, especially from White people.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

The chief identifies a man who comes to see him in exactly the same way, and the Administration has adopted a similar system, except that it has its own definition of the village. During the initiation ceremonies, the initiands[1] are housed in long grass sheds which are subdivided into sections. Each section or room of the long shed houses the boys or girls from one village. If villages share a burial ground, they have allotted portions where they bury their dead separately. In these and many other ways the village is looked upon by the Yao as a distinct unit in the chiefdom.

The chiefdom in the old days was distinctly a territorial unit and all the villages within that area recognized the superiority of the chief. The boundaries of the old chiefdoms were marked by rivers and hills and fixed after conquest and agreement. They are still well remembered. Modern chiefdoms are defined in their limits partly by Government decree and partly by custom. When Principal Headmen were appointed, the districts under them were demarcated with 'due regard being given to the composition of the Native population'. The traditional areas under the various chiefs, therefore, were recognized by the Administration as districts, so that the districts or their sections almost coincided with the chiefdoms. Some disputes between chiefs over boundaries have occurred from time to time and the Administration has had to arbitrate. For example, the Provincial Commissioner of the Southern Province reported a difference between Liwonde and Kawinga in 1936,[2] but through time these differences have been eliminated.

Traditional and Administrative boundaries do not coincide in a few places, for two reasons. Firstly, the Administration has accepted an obvious and physical boundary in preference to an indistinct and social boundary. It has taken the Domasi River as the boundary between Ntumanje and Mposa, though in fact a few villages under Mbela, Kawinga III's son, live on the south side of the river, and fall for Administrative purposes in Ntumanje's area. Mbela is still very strongly associated with Kawinga in ritual and kinship matters. His dealings with the

[1] I am grateful to Prof. Schapera for suggesting this word for those who are undergoing initiation ceremonies. The parallel is with graduands, i.e. those who are undergoing graduation ceremonies.

[2] *Report of the Provincial Commissioner, Southern Province* (1936), 20.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

554 These headmen who are the centres of local social structure
622 are the higher headmen that MacDonald mentions.[1] Many of
692 them to-day are the descendants of the traditional councillors (*ndunu*) who were sent out to the extremities of the chiefdoms to be the outer governors in these areas.[2] Their villages are social centres in that many disputes are taken to these important headmen before they are taken to the Native Authority's court. For example, the dispute between the women of Nampeya and Cikuwita was taken to Ntibwilibwi.[3] The chief usually orders headmen to assemble at the villages of important headmen when he has directions to issue to them. Very frequently the Administrative officers camp there for the night on their tours and call
554 the headmen in to them for conference. The placing of mosques
622 at the villages of these important headmen also indicates their significance as social centres. Most Moslem villages have small
● 346 mosques which the more devout use for the morning and evening prayers during Ramadan only. At the villages of important headmen larger mosques have been built and these are used for the midday prayers on Fridays (*jumu*), when most of the Moslems in each area assemble in their best clothes for communal prayers. Large brick mosques have been built at the court villages of Jalasi, Liwonde and Kawinga. There are other large mosques at the villages of chieftains such as Chiwalo, Chamba, Mposa, and of important headmen such as Kangomba, Nyenje and many others. These chiefs and headmen were all Invaders and are, as I shall show later, almost by definition Moslems. They are also headmen of high rank so that the placing of the mosque, and the other features of local social structure, are largely derivatives of the system of ranking.

554 Rank therefore underlies the structure of local areas as well as the structure of the chiefdoms as wholes. It is, as I show later,
622 closely associated with the historical origin of the headmen. Yet the correlation is not perfect and I shall show that other factors tend to militate against the fixed historical ranking of headmen. Nevertheless, the principle of primacy is the most impoetant single factor.

3:Stanmus D-5 (ca. 1912) 1922 FT7 Yao FT7

against all evils — witchcraft, attack by lions, etc. The *akamusi* then set about building shelters in which the *wali* will remain during their term of instruction. According to the number of the *wali* so the number of places where shelters are built may vary from one, two or three, to as many as eight. Each of these places is called *Ndapala*. They may be many miles apart and are so placed for the convenience of the mothers in various groups of villages who bring the food daily to the group of boys from those villages. 881 [346]

The boys when they originally left the village were wearing a large bark-cloth covering, with beads and collars, which latter articles have been taken by the *m'michila* and his assistants. At *Ndapala* they wear simply a loin-cloth of bark.

During their stay at *Ndapala*, the *wali* are given animal names by the *akamusi* who carry on the instruction of the boys until their return to *Lupanda*, the *m'michila* having gone back to his village immediately after the circumcision. The names given to the boys are commonly names of beasts of prey such as Alikule (*likule* = the jackal), Achisuwi (*chisuwi* = the leopard), etc. [553] [551]

Certain restrictions as to diet are laid upon the *wali* by the *m'michila*, e.g. no meat of an animal killed by a beast of prey, no mudfish, *likumbala*. He will not allow any villager to visit *Ndapala* after seven P.M. and visitors may only be men who have been through the ceremony. An uninitiated man is called *mbalala*, one who has not been to his *Unyago*. 881 262

Other restrictions as to foodstuffs may be made by the *akamusi*, generally in connection with the mythical origin of such food substances. A finger-shaped yam called *lipeta* is taboo, as it is said to have first sprung from the grave of a leper, the inference being obvious. After the *Unyago*, the boys have to undergo a special doctoring before they may partake of them. Bananas and rice are similarly refused them, the latter on account of a story to the effect that rice grew from the nostrils of a dead man, the idea doubtless having relation to the resemblance of rice grains to maggots. Fish is denied them by some masters of ceremonies, as it is said to have originated from the diaper of a woman which she threw away while bathing. [825]

Each *m'michila* may have special observances of his own. One near Zomba caused all cassava to be roasted in a certain way. Rows of pieces of cassava were placed in split bamboo splits and so roasted before the fire in the manner of fish. If roasted in the ordinary way, the cassava would split and show the white floury material inside, signified by the verb *ku-lapala*. If this is eaten by the *wali*, it is said that the preputial wound would reopen. [252]

The length of time spent at *Ndapala* varies from four weeks to as long as three or four months. In the first place they must wait till the circumcision wounds of all are completely healed. Delay may be occasioned by complications having arisen in some cases. Again, permission to return may be withheld by the chief for some reason or other. Should one of the *wali* die at *Ndapala*, the body is buried out in the bush and nothing is said to the parents until after the ceremonies are over and all have returned to the village. 881 [766]

present fortunes. But it is to the human soul after death, when it is considered as having an influence on the lives and fortunes of those it has left behind in the world and consequently as a power to be propitiated and honoured, that the term *mulungu* is more strictly applied. Freed from the body it passes to *mulungu*, and there is regarded as endowed with powers which it never possessed when alive on earth. To pray to such a spirit is described as *kulomba mulungu*, to worship *mulungu*, never *kuoba* in this case. Such *mulungu* worship enters largely into Yao religious or social life. In almost every Yao village there will be found a shrine which is the centre of the worship of the inhabitants. It consists of a carefully built hut enclosed within a strong grass fence or hedge of a species of cactus plant. The hut itself is built of the usual native materials—the walls of wooden posts, bamboos, and strong reed grass bound together with bark-rope and plastered over with clay or stiff mud. The roof is of grass laid on a framework of bamboos, and is generally covered with long strips of white or coloured calico. On the ridge or apex of the roof are fixed a couple of flags or an umbrella or two. One wall is usually left open so that the interior is easily seen. Within, from the bamboo rafters are suspended handkerchiefs, cloths, bunches of beads, etc., all offerings to the *mulungu* of the dead headman or chief from his friends and relatives. The floor is of clay carefully smeared with sand in native fashion. A raised platform or mound of earth in the centre marks the spot where the grave was made. The *awilo* or officials who preside at the funeral obsequies, first dug for about 8 or 10 feet down in a perpendicular direction, and then on the western side of this well they hollowed out a shallow cave in the earth. In this the body was placed, laid on its side with the knees bent up under the chin, and the face turned towards the east. Various articles of personal property were next placed beside the corpse, clothes, ivory, guns, axes, hoes, etc., and the mouth of the cave closed up with wooden posts and a strong reed mat. The grave was then filled in and the surface carefully finished as we have seen. At the head of the mound a native pot was fixed in the ground for the reception of the offering of beer which is an almost invariable accompaniment of any act of worship paid to the *mulungu* of the dead.

Such a shrine marks the grave of almost every Yao chief or headman, and is regarded as the abode of his soul or the spot where his *mulungu* is most accessible. If his successor is about to undertake a long journey or enter on any warlike expedition against an enemy or neighbour, he must first *kutaga mbepesi*, place an offering here to secure the favour and assistance of the *mulungu* of the dead. Should a long-continued drought endanger the prospects of the grain crop, the departed chief must be solicited to send the lacking rain. A feast is first prepared, almost always of beer, sometimes with the addition of native porridge, fowl, or game. The worshippers gather round the shrine bringing part of the food which they have prepared. Their priest for the occasion is the successor of the dead chief, sometimes one or other of the *awilo* who placed the body in the grave, or it may be that any other near relation of the dead man is chosen to represent the people and act as their spokesman. The nearer the relationship the more influence will he have with the dead.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

622 robes (a gown not unlike a woman's dressing-gown), wears a
554 bright-coloured turban, and has one or two men walking behind
292 him, he is a rather important village headman. One particular item of clothing in the Kawinga, Liwonde and Nyambi areas, is the scarlet headband which some village headmen may wear. I shall discuss this later in the context of the competition of village headmen for rank.

622 Another external characteristic of rank, which seems to have
554 disappeared with the changing economic structure of Nyasaland,
411 was the carrying of knives (*nsinjo*) by important village headmen. Previously, status was indicated by the type and size of knife carried in public. The chief usually carried the largest and most ornate. The knife taken from Kawinga on his surrender in Portuguese East Africa was about 18 inches long and had a decorated ivory handle. Smaller knives of similar pattern belonged to his headmen.[1] Nowadays, many young commoners carry knives two or even three feet long, made from the broken blades of motor-car springs.

622 The right of important village headmen to build fences[2] at
554 the back of their huts is also a mark of prestige which seems to have lost its significance. About 50 years ago only important
● 351 headmen had the right to erect a fence at the back of their huts.
[567] This fence, made of tall grass about six feet high, enclosed the grain stores and other food supplies of the household and formed a private compound in which the headman's wife and slaves carried on their daily tasks.[3] It seems likely that private compounds and slavery were positively associated, so that only the important village headmen who had many slaves found it necessary to build fences. All chiefs and most important headmen to-day still erect these fences. Those who hold initiation
[881] rights are obliged to build them because, when the initiands return from the seclusion phase of the initiation ceremony, they are supposed to spend one night in the headman's private compound before going back to their villages. But nowadays, minor village headmen and commoners also frequently build these

[1] See f.n. 4, Chap. II, p. 38.

[2] *Lutenje*, pl. *ndenje*. The enclosed space or 'compound' is *cimbundi*. Typical hut compounds are depicted on Plate IX (*a*) and (*b*), facing p. 206.

[3] MacDonald suggests that the common term *kusyeto* for woman is derived from the adverb *kusyeto*—on the other side (of the fence).

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

 622

compounds, especially in areas where there are man-eating lions,[1] 554
so that it is no longer an infallible indicator of the hut-owner's 351
rank.

Minor village headmen always allow their superiors to sit on 622
a chair. If village headmen of commensurate status are present, 554
chairs may be sought for them all. But a minor village headman 576
never occupies a chair, even if one is available, in the presence of his superior. At a meeting, for example, a chief occupies a chair and so may his most important *nduna* or councillor. The more important headmen sit alone on separate mats, for a man only shares a mat with his equals, and then only rarely. Junior headmen, however many there are, have to try to squeeze themselves on to one mat or squat on the ground.

Important headmen also have the right of walking in front of their juniors. If there are three or four headmen returning from, say, a court case, they arrange themselves in the pathway in an order which reflects their rank. As they file down the narrow field paths the leader is the most senior among the group. After him come the other headmen and last of all the commoners. This order of precedence is also followed when initiands pass through the tribal initiation ceremonies. The sisters' sons and other matrilineal descendants of important headmen precede those of the less important headmen. At Chiwalo's hut also, I [695] have noticed that the more important headmen sit under the verandah while listening to private cases. The less important headmen sit with the commoners under a shelter or out in the sun.

I have been discussing the visible marks of prestige. But high 622
rank also tends to carry with it some other privileges which are 554
not immediately observable. The most obvious is Government 648
recognition. I have already mentioned that under the 1912 Ordinance, village headmen were recognized by the Administration. These Administrative village headmen, who had certain duties to perform, were paid a small annuity and were in earlier days given a 'book' in which the tax payments could be recorded. To-day, the Yao still describe Government recognition as 'having a book'. Administrative village headmen derived more benefit from Government recognition than merely an

[1] The huts in Plate IX (*a*) and (*b*) are in Namwera area where there are man-eating lions. Most huts have compounds. A large proportion of huts in areas where there are no lions also have compounds.

and the baskets and pots. A wooden dish *mbisi* may be seen occasionally, but of late years, this has been generally replaced by enameled articles. 415 [177]

Around the entire hut, or simply enclosing a yard behind it, there is often a fence about five feet high. In the enclosure thus formed, many household duties are performed, such as the pounding and sifting of grain. The grain store *ngolwe* often stands in this yard with the pigeon-loft and possibly a hen-house or goat kraal; these are sometimes found in the open space at the front of the house. If a grain store is built within the hut itself, it is then known as *mbungu*. Near the pigeon-loft will be seen a pole with prongs supporting an old pot with water for the pigeons to drink. In a tree in the bush nearby, there may stand a beehive, consisting of a bark cylinder. Similar cylinders are sometimes used as pigeon-houses. 361 343 [231]

The large pots for brewing beer are usually set in the yard or on the back veranda, together with a basket of split bamboo for carrying fowls, *chitetete* (Yao and Chin.). 415

Gourds. Gourds are grown in the village for use as vessels of various kinds. Different shapes serve different purposes; names are given them according to use rather than shape, though these more or less coincide. Ladles for water or beer, *macomalo* or *mpao* (*nacomero* or *chiko*, Chin.) are usually long-handled gourds (Pl. XIV, figs. 7, 8, 9). Drinking vessels for beer, etc. *chipanda* and a specially large one, *mtumba* are usually of the shape illustrated in Plate XIV, fig. 1; sometimes they are like fig. 5, but this shape is more commonly used for water. *Lipache*, the type illustrated by fig. 2, is also used for drinking or for holding gruel. Oil flasks, *chiasi* (*tempa*, Chin.), are usually of the double-bellied type (figs. 4 and 6). Salt bottles, *chitumba* (*chigwu*, Chin.), are similar to oil flasks. Rattles, *sanje*, used at dances etc., are also made from gourds, often from those with tuberosities (fig 3). Other uses for gourds include pipes, snuff-boxes, enema funnels, and resonators for musical instruments.

Pottery. The art of pot-making appears to have been known to the Yao for a very considerable period. There is no history relating to its introduction among them. The art is in the hands of the Yao women. As among all Nyasaland tribes, a particular kind of clay is used and no admixture with any binding substance is made. The pots are simply moulded by hand from base to brim and, without the aid of any wheel or other device, wonderful symmetry is attained. 323

After drying, the pots are fired by being set on their bases on the ground and a wood fire is made round and above them. They are then sprinkled with an infusion of the *nyumyao* or *utumbi* tree, a head of millet being used for the purpose, after which the pots are set upon a fire and millet husks are thrown into them and allowed so to be incinerated. These customs, a kind of christening of the pots, "insure their turning out well."

No glaze of any kind is used, but they are sometimes colored red by boiling with a pigment called *ngomo*, prepared from a red sediment found in sluggish streams. The preparation of *ngomo* is in the hands of men and women who make a trade of it, such as a man called

539 "*Lokolo lokolo kwale ko!*"
"Picking up picking up a little basket full!"

to which the listeners exclaim

"*Lokolosi!*"
"Overflowed!"

At the completion of each sentence in the story, one of his listeners will exclaim, "Go!" When he has finished his story, he says,

"*Ajikolo kololo kolokwanga pawiwo yakwawo, wuko chipungi!*"
"Take off the fire, the little mouse lost it he singed, by the head it is very hard, the hair (is) in a bunch!"

During the intervals of a long story, one of the listeners may break in and sing some little song, such as the song of the cobwebs in the story of the greedy man, thus giving the story-teller a rest.

342 The house and household utensils. The Yao house does not differ greatly from the Nyanja habitation which I have already described elsewhere.[1] The accompanying figure (Pl. XIV, fig. 18) gives the circular plan of a hut with a veranda partly open and partly enclosed to form a room. The central pole of the hut is indicated, the hearth (H), the position of the sleeping mats (M), and the place where the water pots are kept (P). The
352 bed may be a bamboo platform supported by forked sticks a foot above the ground (*mwapwali*), or a dais of mud, over which is spread the sleeping-mat, *upwa*. (Pl. XIV, fig. 14.) Seats, *chimyu*, are made of logs of wood with conveniently placed branches acting as legs. I have seen a symmetrically carved log with shaped legs all in one piece, which suggested by its form and by the presence of a button on the midline of the under surface that it was made in the imitation of an animal. Plank seats with peg legs are now sometimes seen. Wooden pegs are driven into the wall and serve to hang odd articles upon.

[359] The hearth is simply a shallow depression in the mud floor, around which are placed three large stones to support the cooking pots. Sometimes a canopy is built over the hearth, consisting of four upright poles supporting a platform made of reeds and grass, upon which millet and other seed grains are often stored. From this platform *lipulo* (*mwaja*, Chin.), the gourd containing the supply of salt is often hung. The seed grain tied up in
[251] little bundles is suspended from the *lipulo* where it becomes very dry and smoked, without any ill effect to the next year's crop. (Pl. XIV, fig. 16.) Four pronged branches of trees are often stuck in the ground with a string tied around the prongs, and used as holders for gourds, salt bottles, etc.; this device is called *lipondo* (*phondo*, Chin.). (Pl. XIV, fig. 10.)
415 The smaller utensils include the porridge stirring stick *ntilo* (Yao and Chin.) (Pl. XIV, fig. 12), several wooden spoons *chikwai* (*chipondo* or *nwandowa*, Chin.), (Pl. XIV, figs. 11, 13), a number of gourds of various shapes and sizes used as ladles and drinking vessels,

whole frame-work is secured by bark lashings, the walls, inside and out, and the floor are plastered with mud from an ant-hill, mixed with a little cow dung, if possible. In some houses the walls do not reach up to the roof, leaving a space through which smoke may escape and air enter. M 342

At Chipoli and at Mangoche houses were built on piles and in trees respectively to avoid lions. A house is occupied by a man and his wife and any young children; no other relations are allowed to sleep there. The children, when aged about five years, go to live with the maternal grandmother till their first *ingapo*; there may be from a dozen or more children living with the grandmother, who feeds them and sometimes also provides clothing. Such children are said not to have coitus with each other as they are relations. After *ingapo*, if not married, the girls go to live again at their grandmother's house, the boys to the *ujumbe* or *banda*, four to ten or more using such a house as a dormitory. They get their food from the grandmother, visit her and may use her utensils, sit on her bed, but never so with their mother. M 342 592 M 592 [334]

In houses where there are partitions or verandah rooms these smaller rooms are often used as bed chambers, and always as store rooms for baskets, pots, hoes, etc. The native usually sleeps on a mat laid on the ground; in some cases the ground is raised into a kind of dais (Angoni and at Mangoche). Among Yao and many Mahanje, wooden beds are now used, introduced from the coast. The Angoni make wooden stools from conveniently shaped branches (Fig. 10). The native has so few belongings that he makes nothing in the way of shelves, nor hooks for hangings. Clothes are stored in baskets. The hut is kept swept and all refuse deposited on a dust heap near the hut. M 592 592 M [312] [312] M [336]

FIG. 10.

The doorway is closed by a door made of reeds and grass bound together. This is placed against the inside of the doorway, and a pole dropped in between two sets of supports. In the day time the door often rests against a fifth support. There are no windows and the smoke finds its way out through the roof thatch. A guest house (*bwalo*) with benches (*chimbendi*) round it used to be found in villages, but does not exist any longer. M 342 M [349]

There are no ceremonies connected with the building of a house or the preparation of the materials for its construction. There are no household gods. The fire must be in the middle of the hut, and on one side is the bed. Any people visiting the hut must remain on the opposite side of the fire, except "friends," and on no account must children go round to the other side, because under the bed the woman's diapers are laid to dry. The fire must not be touched by the male children, but is tended by the girls. The fire is generally kept burning continuously, but it is of no consequence if it goes out—a burning branch is brought from a neighbouring hut. At the death of a headman or other person in the village all fires are extinguished, fresh fire is then made in the dead man's house and from this passed from hut to hut. There is only one method of making fire, that is, the fire stick. M 354 [379] M [348] [371]

539

"Lakato lakato lomilo ka"
"Picking up picking up a little basket full?"

to which the listeners assisten

"Lakatoa!"
"Overflowed!"

At the completion of each sentence in the story, one of his listeners will assisten, "Ooi!" When he has finished his story, he says,

"Ajikolo kololo kolokoonga gaanlao gaiwaoro, ooilo ahangaji!"
"Take off the fire, the little mouse lost it to stupid, by the hand it is very hard, the hole (is) to a hangi!"

During the intervals of a long story, one of the listeners may break in and sing some little song, such as the song of the ostrich in the story of the greedy man, thus giving the story-teller a rest.

342 The house and household utensils. The Tao house does not differ greatly from the Wyanja habitation which I have already described elsewhere.[1] The accompanying figure (Pl. XIV, fig. 10) gives the circular plan of a hut with a veranda partly open and partly enclosed to form a room. The central pole of the hut is indicated, the hearth (H), the position of the sleeping mats (M), and the place where the water pots are kept (P). The

352 bed may be a bamboo platform supported by forked sticks a foot above the ground (*ooangwadi*), or a skin of meat, over which is spread the sleeping-mat, upon. (Pl. XIV, fig. 14.) Seats, *shimaya*, are made of logs of wood with conveniently placed branches acting as legs. I have seen a symmetrically carved log with shaped legs all in one piece, which suggested by its form and by the presence of a hollow on the midline of the under surface that it was made in the imitation of an animal. Plank seats with peg legs are now sometimes seen. Wooden pegs are driven into the wall and serve to hang odd articles upon.

[339] The hearth is simply a shallow depression in the mud floor, around which are placed three large stones to support the cooking pots. Sometimes a canopy is built over the hearth, consisting of four upright poles supporting a platform made of reeds and grass, upon which millet and other seed grains are often stored. From this platform *lipala* (*lemoja*, Chin.), the gourd containing the supply of milk is often hung. The seed grain tied up in little bundles is suspended from the *lipala* where it becomes very dry and smoked, without any ill effect to the next year's crop. (Pl. XIV, fig. 16.) Four pronged branches of trees are often stuck in the ground with a string tied around the prongs, and used as holders for gourds, milk bottles, etc.; this device is called *lipanda* (*ghanda*, Chin.). (Pl. XIV, fig. 10.)

659

415 The smaller utensils include the porridge stirring stick *ratile* (Tao and Chin.) (Pl. XIV, fig. 12), several wooden spoons *ahiwoi* (*ahipanda* or *nanaiwoo*, Chin.), (Pl. XIV, figs. 11, 13), a number of gourds of various shapes and sizes used as bailer and drinking vessels,

621 When a villager died in pre-White days, the hut and personal effects were destroyed. Nowadays, with the improving type of [768] dwelling, which frequently includes well-timbered doors and glass-windows, huts are treated with medicine to cleanse them of the harmful effects of the death and they are used again. But [356] all houses must be repaired continually if they are to remain habitable. Eventually most houses fall beyond repair and new houses must be built. The women pull the poles out of the ground and use them for firewood and the site is planted with pumpkins or maize by the nearest relative.[1] A new hut site is then chosen according to the wishes of the owners. As a rule outsiders are neutral about this, and a village member selects a site in accordance with his or her social position in the village. The women still stay near their mother, but they may build on the outside fringe of a group of huts. When the mother's house collapses she may in turn build her hut on the outside fringe of the group near her daughter's hut. In this way the spatial distribution of the huts gradually comes to reflect the segmentation of the lineage.

621 As the woman's daughter's children grow up and marry, the woman's son persuades his wife's relatives to allow him to take 591 his wife to live in his home village. If he is a polygynist he usually takes the senior wife, but he may take the other or others as well. His own daughters now marry uxorilocally in the village if their mother is still alive. If the parents live long enough their daughter's daughters in turn marry and build their huts there. A crisis comes when either the man or his wife dies. The children have to decide whether to stay where they are or to move back to their own matrilineal village. If they do stay at their father's village they form the nucleus of a patrilaterally-linked group. As they grow older the senior male of their matrilineage may come to live with them. Through the years while this internal differentiation is developing within the village, the huts are decaying and being rebuilt. While new hut sites are being selected the physical form of the village is reflecting the continuing social differentiation.

621 At the same time gardens are being planted and crops reaped each year. The soil in the first garden sites has probably been 361 depleted already and is either lying fallow or is under cassava. 166

175 567 621 648 therefore, be weakened, and the component parts of the village scattered. This is what the Administration argued when it wrote about the split-up of communities: 'This tendency is to some extent gratifying, in that it originates in the native's sense of his complete security under the existing Government.'[1] I have not much evidence that this is true, and in fact do not think it is. Second, there is little doubt from my village histories that the slave-groups attached to various village headmen were deserting their former masters and setting up independent villages.

175 361 621 648 It is significant that the report speaks of the 'old large communities'. Duff MacDonald, writing of the Blantyre area in the period 1877–81, says: 'Usually the natives live in small villages containing 10 or 11 huts, occasionally in large villages containing three times as many. They do not like to pack themselves closely. In time of peace few villages contain more than 100 people.'[2] Hynde, writing of the Domasi area, says: 'Sometimes a village consists only of five or six huts; more commonly twelve or twenty and rarely above thirty. The chief's village at Domasi consists of more than 100 houses but that is an exceptional case. The villages occur at intervals of quarter to one mile.'[3] In July 1895, the Collector at South Nyasa made a census of all the villages on the west bank of the Shire (64 villages). These were mainly Yao, but also included some Nyanja. The modal size of villages, calculated from his published figures, is 26 huts.[4] The reports of MacDonald and Hynde agree well, although they describe different areas. The Collector's average was slightly larger, but one is not sure that he has not included two or three settlements under one headman. A village, Changali, was marked as having 217 huts, but a note indicated that they were scattered. Also the numerical accuracy is not above question because a large proportion of hut totals end in 0 or 5, indicating estimation rather than enumeration. From my own observation, the arithmetic mean of a sample of 37 villages in two separate areas was 11 huts (mode was 8 huts).

It seems, therefore, that the optimum size for Yao villages has always been about 10 to 15 huts, and that the disintegration

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

noted by the Administration in 1904 was in fact the break-up of larger communities under important village headmen. These communities were, as is evident from MacDonald's writings, largely made up of slaves and their descendants. In the light of the internal structure of modern villages, I believe that the fragmentation going on at that time was due to the breaking of the bond between captor and slave—a bond formerly reinforced by physical sanctions that included the killing of a slave by his captor. Therefore, while the groups thus linked to the headman may have moved out of his village, his matrilineal kinsmen, who were bound to him by bonds of deep sentiment and religious beliefs, remained. The irreducible 10 to 15 huts were therefore likely to have been those of the headman's own matrilineal kinsmen. When the Administration ascribed the continuing tendency all over the Protectorate to the splitting up of villages into small family groups [1] it was probably describing the splitting off of descendants of slave-wives to found villages of their own. While this process of readjustment was going on, the Administration stepped in with legislation designed to control what it considered to be unchecked social disorganization. The Administration spoke of the necessity to

175 361 621 648

175 621 648

> build up an organization to control the rising generation of natives who, finding themselves without the restraining influences to which their parents were accustomed, have of recent years evinced an inclination to emancipate themselves from the disciplinary responsibilities of village life and obedience to authority, and to adopt habits prejudicial to native family life.[2]

To accomplish this task the Government introduced the District Administration (Natives) Ordinance of 1912. This was the Ordinance about which the Administration wrote in 1913:

> Framed, as it has been, in accord with native ideas and practice, it is a measure which none the less avoids the defects of the archaic system of tribal rule and which has as its aims the gradual formation of a subsidiary local government by means of Sectional Councils of Headmen chosen as far as possible by natives themselves and presided over by the District Resident.[3]

CHAPTER III

THE COMPOSITION OF MODERN CHIEFDOMS

Chiefdoms in the Administrative Mould

361 NO less than in MacDonald's time, modern chiefdoms are in the first place organizations of villages. Physically, the villages consist of solid pole and daub huts of varying sizes. [342] Some huts are rectangular, twenty feet long and fifteen feet wide, with glass windows, panelled doors, and thatched roofs. Others are small and round, about eight feet in diameter. There is also a considerable variation in the compactness of villages: often the huts are only a few yards apart, but sometimes at least a hundred yards or more. Most villages, however, could be circumscribed by a circle of a quarter-mile diameter, though, of course, there are many exceptions. There is a slight tendency for the village to spread itself along a path, in a way faintly suggesting ribbon development, but on the whole there is no particular physical pattern to the Yao village. In fact, though most villages have fairly distinct physical boundaries, and are definitely discrete clusters of huts, some are difficult to identify in this way. To the minds of the local people, however, the 621 village is quite clear and distinct. This is because they see the village primarily as a social unit, and tend to impute into physical boundaries more definition than actually exists. It is in the social sense that I use the word here: the 'village' is a spatial group which recognizes its identity against similar groups.

The importance of the village in Yao structure can hardly be over-emphasized. Membership of a village provides the first index whereby people determine a stranger's background. If, after village membership is fixed, no other links can be found with a stranger, such as distant kinship, the relationship will remain at that level. A gossip identifies the person about whom 621 he is speaking by giving his or her name and the name of his 551 or her village. He says, 'Bt.[1] Mwana of Cigwaja village'.

[1] I use this abbreviation for the Arabic 'binti', 'daughter of'. Binti, pronounced 'biti' by the Yao, with Ali and Wadi, 'son of', appear commonly in Yao names.

593 611 sisters are the points of cleavage in the matrilineage and the group of uterine sisters is seldom divided, unless their daughters are old enough to form a corporate group and to move off with their mother to found a new village under their brother.

The Spatial Representation of Lineage Segmentation

361 613 621 The segmentation of the matrilineage is also shown in the spatial distribution of the huts in a village. The daughters of the women of the matrilineage set up their huts near to their mothers', and as this continues over a number of years, the internal segmentation of the matrilineage is automatically reflected in the disposition of huts. Most Yao villages will show this spatial representation of social distance, some more clearly than others. The clearest example I have is in Meni section of Majaja village, Nyambi's area. The disposition of the huts is set out in the village plan in Appendix C. Here are five fairly distinct groups of huts in the village. Four are descendants of four uterine sisters, the children of the previous Majaja. The space between these four groups is cleared and paths reticulate among the huts. About 200 yards away, the fifth group is out of sight of the others and must be reached by a path leading through the fields. In this cluster of huts live the children of the uterine brother of the four sisters. The matrilineal relatives of Majaja live about half a mile away in a quite distinct cluster.

In Cikoja village the same principles are at work but the situation is somewhat obscured by the number of patrilaterally-linked relatives. A glance at the village plan in Appendix D shows that the major segments, denoted by the symbols Ma and Mc in the plan, are quite distinct in the old village site, the huts of Ma being separated from those of Mc by a broad path and by a patch of bamboos. In the new village site across the stream the same general segmentation is shown where the two sections, Ma_1 and Ma_2, are separated by a path.[1] The separation of the clusters of huts is difficult to represent on a diagram because not only are the huts placed in discrete clusters, but they face in towards one another and the space between them is kept clean. Between the clusters there may be rubbish heaps and small garden patches. I describe later how the village continually

[1] I describe how this section of the village came to be across the river on p. 169.

adjusts itself to the changes in its composition. At this point I wish only to indicate how the differentiation among the various segments of a matrilineage is reflected in the way the members site their huts in a village. 613 621

The Segmentary Process

The segmentary tendencies within the lineage are countered by unifying forces, but the cleavages between the lineage sections show up at the slightest provocation. Once the cleavage starts it widens rapidly and charges of sorcery become more and more frequent between the two sections until eventually one moves out to found a new village. A cleavage of this type has been developing in Cikoja village for the last eight years. When I left the field in 1949, talk of migration was in the air but it had not yet happened. I summarize the major events which led to the present situation. 613 578

The cleavage first manifested itself in 1942 when Bt. Mbwana (F2) [1] fought with her mother's younger 'sister' Ayesi (E8). These two were pounding at the same place in the village and Bt. Mbwana took Ayesi's flat sifting basket. She retained it for about four days without telling Ayesi that she had it. One day Ayesi saw it at the pounding point and asked Bt. Mbwana where she got it. They had a few words about it and Bt. Mbwana returned it and thought no more of it. She was pregnant at the time and was confined about a month later. It was her fifth child but she had a greatly prolonged labour. After labour had been going on for some hours, Cilimba (F1), her eldest brother, thought that there must be something wrong and sent his two younger brothers, Kausi (F3) and Gwili (F4) to a diviner. The diviner indicated that the cause of the difficult birth was that her 'younger mother' Ayesi was bearing her malice,[2] and advised that Ayesi should blow water from her mouth and declare that she bore no malice. Kausi and Gwili returned and went to Bt. Amisa (E4) who was Ayesi's elder sister and told her what the diviner had said. Bt. Amisa did as she was advised and fetched Ayesi to the door of the hut in which Bt. Mbwana was lying, and made her confess. The child was born immediately. After a week Cilimba and Kausi brought a complaint to the village headman Cikoja (E7). They accused Ayesi of trying to kill their sister. Cikoja sent a message to 613 578 845 683

[1] The reference numbers refer to the genealogy in Appendix D.

[2] Difficult labour is usually assumed to be due to adultery, but it may also be due to sorcery or malice. See p. 138, and Chap. VII, p. 185.

Other Types of Village Structure

621 Linked groups in most villages are connected by patrilateral
571 ties, but other kinsmen, or even unrelated persons, are also found in villages. I have been describing essentially the organization of groups. Some kinsmen do in fact come to live in villages because of personal links to the headman or some other villager. If a man or woman does this, he or she usually has a single hut which is placed close to his or her kinsman. If the person lives in the village long enough a related group may grow up around him or her, and when the children reach adulthood this group will become internally organized and corporate in its dealings with the other groups in the village. But this seldom happens, because the ties to the resident kinsman are usually too weak to hold the children, or the causes which drove the founder of the new group out of his or her original village have disappeared. Children may leave a village with their mother because she was accused of being a sorceress, and go to live in the village where her brother is married. When she dies, or the incident is forgotten, they may go back to their matrilineal village. For example, Bt. Mkwinda of Cikoja village ran away with her husband after her child was supposed to have been bewitched by her mother. But her children, as they grew up, came back to marry in the village of origin, or at least to contract marriages near it. In Chiwalo's, Nyambi's and Kawinga's areas, where I have recorded most genealogies of villages, I found few people who were neither matrilineal- nor patrilaterally-linked relatives. In Malemia area, which is nearer Zomba, the situation was
621 somewhat different. The dominant matrilineage- and patrilater-
571 ally-linked groups of the typical Yao village were still quite easily
361 discernible. But there were other related and unrelated groups and huts in the villages. An example of this is Citenjele village,[1] on the north boundary of Malemia's area. There the main village contained the following huts:

Dominant matrilineage	22
Groups linked through present headman	5
Hut linked through present headman's brother	1
Groups linked through previous headman	5
Groups linked through previous headman's brother	4
	37 huts

[1] See also 'An Outline of the Social Structure of Malemia Area', 36–40.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

About 250 yards to the north-west is a single hut belonging to the sister of the husband of one of the present headman's daughters. In the middle of the group on the road is a single hut of a woman who has no connections in the village at all. Her husband works in a mission garden about a mile away. About 100 yards from the north-east edge of the main block is a group of 4 huts which are unrelated to Citenjele, but which had joined him about 25 years ago before he had moved into Malemia area. About 250 yards farther to the north-east there are 2 huts owned by the daughters of the sister of the wife of a man who had married one of the female members of the dominant matrilineage. Due east about half a mile away, there is a group of 6 huts which are owned by Yao. These are unrelated groups and are under Citenjele as Administrative Village Headman, but they are for all intents and purposes separate villages.

There are other types of villages. For example, in Namwera area I found a village composed of a number of unrelated sections. The huts of each could quite easily be distinguished from those of other sections though they were built very close to each other in some parts of the village. Each section was built up on exactly the same pattern as other Yao villages—that is, there was a dominant matrilineage and sometimes some patrilaterally-linked huts. Each section had its own leader who concerned himself with its internal affairs. He, nevertheless, recognized the authority in general of a village headman, who lived in one of the sections of the village. He was the Administrative Headman for the village and he was the first to come into the area. All the other sections had had to ask him for land when they had moved into the area. His authority was confined to his duties as Administrative Headman though he was much respected and the sections called him in regularly as an arbitrator in their affairs. But if the chief called all village headmen to the court, the leaders of the various sections went as well, so that he was not in fact their representative to outside authority in all situations. The relationships between the various sections, therefore, were very much like those between village headmen in Kawinga's area. The only difference seemed to be the amount of physical concentration of the huts.

I tried to find out why these sections lived so close to one another. My informants told me that there were many men away at labour centres and it was necessary to build the huts

361
342
351

(a) Part of a village in Nanwera area. The distinct group of huts on the right is not related to those in the left-hand corner, but is only one section of the village.
(October 1946)

(b) A slightly different view of the same part of the village. The fence encloses the grainbin, kitchen and latrine.
(October 1946)

PLATE IX

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

621 close together so that the few men left in the village could protect
571 the village against man-eating lions. This is certainly an area
where man-eating lions are common and kill people every year.
• 341 It is true also that man-eating lions have ceased their depredations
in Kawinga and Nyambi areas. But I also found a similar type
of village in Malemia area.[1] Here the explanation was that the
villages had been made to live together by the Administration
under the 1912 Ordinance. But the Ordinance was applied to
the whole district, yet there are not many of these villages.

The relationships between the section leaders and the village headman are exactly the same as those between independent headmen farther south. The difference in the villages is the degree of physical concentration of the huts; which brings up for review the concept of 'the village'. I have defined the village as a discrete cluster of huts occupied by a group of kinsmen[2] and hinted that the huts were not always clearly separated from neighbouring huts. In fact the Yao word for village, *mzi*, may be applied to social groups of different orders. I have already mentioned that different sections of a village may be scattered in discrete groups. The term *kamzi* (diminutive) or even *mzi* may be applied to any of these clusters of huts in a situation where the larger kinship section is not involved. A man may tell his friend that he has bought some maize at Meni's village. He means that he bought the maize at the group of huts under Meni in Majaja village. In a court case, however, he would say that he had married a woman in Majaja village even though he were referring to the daughter of Meni.

621 The expanded village—i.e. the groups of kinsmen who recog-
571 nise the leadership of one man, but whose huts are relatively
distantly spaced in discrete clusters—may give a stamp to the
social organization in a small area of, say, a square mile or two.
The dominant matrilineage of the senior headman and his patri-
laterally-linked groups may all live in this area in physically
separate groups, but their kinship is still dominant and they are
for ritual purposes still 'of one fire'. In time any of these groups
may move off and be replaced by complete strangers. The
senior headman still retains his position of authority over the

[1] Ngalango village. It is described in 'An Outline of the Social Structure of Malemia Area', 33-6.

[2] Chap. I, p. 3, and Chap. V, p. 120 f.

621 When a villager died in pre-White days, the hut and personal effects were destroyed. Nowadays, with the improving type of [768] dwelling, which frequently includes well-timbered doors and glass-windows, huts are treated with medicine to cleanse them of the harmful effects of the death and they are used again. But [356] all houses must be repaired continually if they are to remain habitable. Eventually most houses fall beyond repair and new houses must be built. The women pull the poles out of the ground and use them for firewood and the site is planted with pumpkins or maize by the nearest relative.[1] A new hut site is then chosen according to the wishes of the owners. As a rule outsiders are neutral about this, and a village member selects a site in accordance with his or her social position in the village. The women still stay near their mother, but they may build on the outside fringe of a group of huts. When the mother's house collapses she may in turn build her hut on the outside fringe of the group near her daughter's hut. In this way the spatial distribution of the huts gradually comes to reflect the segmentation of the lineage.

621 As the woman's daughter's children grow up and marry, the 591 woman's son persuades his wife's relatives to allow him to take his wife to live in his home village. If he is a polygynist he usually takes the senior wife, but he may take the other or others as well. His own daughters now marry uxorilocally in the village if their mother is still alive. If the parents live long enough their daughter's daughters in turn marry and build their huts there. A crisis comes when either the man or his wife dies. The children have to decide whether to stay where they are or to move back to their own matrilineal village. If they do stay at their father's village they form the nucleus of a patrilaterally-linked group. As they grow older the senior male of their matrilineage may come to live with them. Through the years while this internal differentiation is developing within the village, the huts are decaying and being rebuilt. While new hut sites are being selected the physical form of the village is reflecting the continuing social differentiation.

621 At the same time gardens are being planted and crops reaped 361 each year. The soil in the first garden sites has probably been depleted already and is either lying fallow or is under cassava. 166

[1] Usually the name-heir of a woman, i.e. her daughter's daughter.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

As garden land becomes scarcer, members of the village have probably approached patrilateral or affinal kinsmen in other villages for personal grants of land. The lands immediately surrounding the village have long since become depleted and crops will only thrive on lands some miles away; then the village moves its site. How long it will be before this becomes necessary, depends on the fertility of the soil. Most villages must move eventually. When they do they may move a few hundred yards only, or on the other hand, they may select a site thirty to forty miles away. Whether the site is far or near, the migration is not a mass movement of the village as I have so far assumed for the purposes of analysis. As a rule a few villagers, including the headman, move first. The headman may be there a year or more before the second lot of villagers move. They usually move in sorority-groups so that when they build at the new site they place their huts in sections. Thus, the internal social organization of the village is reflected in the same way as before. The whole move may take three or four years before it is completed.

This process of development of the village and its gradual and continual reformation is sometimes hastened by the conflicts that appear within it. I have from time to time mentioned various conflicts that have led to the split of a village and the subsequent migration of one of its sections. The new section sets up a small hamlet in a distant locality, especially if the reason for its secession was sorcery. Here the general process of evolution is started anew. Its parent village, however, is strengthened by the migration since the dissident elements have left it. It continues to carry on its existence and to throw off other villages from time to time.

The number of villages, in the area I studied, is increasing with the increase of population, but the average size of each village remains constant and appears to have done so for many years.[1] But at the same time some villages as entities are disappearing while new ones are being formed. A few new villages become resorbed by their parent villages when for some reason they cannot continue their separate existence. Other villages fragment and do not split. The individual village members leave the village and go their separate ways. Very frequently when

[1] See the argument in Chap. II, p. 40.

KEY TO CIKOJA VILLAGE PLAN

Ma — Senior segment of dominant matrilineage, i.e. descendants of Nzilaga (C1).

Mb — Second segment of dominant matrilineage, i.e. descendants of Bo. Mkwinda (C6).

Mc — Third segment of dominant matrilineage, i.e. descendants of Lonjola (C8).

Ma_1 — Descendants of Andéya (D1).

Ma_2 — Descendants of Amulanu (D2).

Ma_3 — Descendants of Amawula (D14).

Ma_4 — Descendants of Anjya (D15).

Ma_5 — Descendants of Alusi (D16).

N, O, P, X, Y, Z — Patrilineally-linked lineages.

S — Outsiders.

Ma_1/B — A female descendant of Amawula married to a man from B patrilineally-linked lineage.

3:Stanner D-5 (on. 1912) 1922 FT7 Tao FT7

There has never been any shortage of land and therefore the planting out of gardens was a matter which caused little trouble. A man wishing to make a new garden the next season simply marked the site in the bush by cutting some trees or hoeing around some patches of grass and tying the grass ends into a knot. If anyone else came along and had this plot, the man who had marked it out still claimed it and need not pay for the hoeing down. Whenever a man was doubtful about a piece of land, he would ask advice of the headman of the village. 423

When an abandoned garden had become overgrown, anyone wishing to take it up applied to the headman who sent him to ask the original owners whether they wished to take it up again. The newcomer could take possession only with their permission. 3/1

Often if a village was moved, during the first season the people simply put up shelters in their gardens. Later, the site of the village was chosen and around it a medicine man sprinkled medicine to insure happiness and prosperity. The tree from which this medicine was made became sacred to the village and might not be used for firewood, or was subject to any other taboo the medicine man might care to make. He might also say, "In this village there shall be no pounding of grain at night," etc. 423 [189] [178]

If a village were to be built near a spot previously inhabited, medicine and offerings were made to the departed spirits of the former occupants to put them at rest and "open" the place to the newcomers. The bone-pot from the grave of some former chief or headman, who was supposed to have directed the destinies of the old village, was brought to the new location and here placed in it to insure his continued guidance. [169]

In the case of a village into which a number of men had married, the spouses of the wives went to the spouses of the husbands and asked permission to move the village. Later, beer was brewed in the new village and the spouses invited to come and drink and "put feet in the new village." [203]

Relationship. Family relationship among native presents certain difficulties to the European accustomed to equivalent relationship of males and females on both sides of the family. In the diagram below (Fig. 1) the relationship of the two children (C 3) will be traced. The mother and father (B 10 and 9) are the subjects and some but are addressed as sister and aunt. The maternal uncles elder and younger than the mother (B 11 and 12) are called chombwe and their wives (B 13 and 14) ahongwe. The maternal aunts are addressed as sister, mother, anyone older than the mother being distinguished as ahwe mahokongwe, "the bigger" (B 15), a younger aunt as sister nanamali, "the lesser" (B 17); their respective husbands are addressed atati, atati mahokongwe (B 16), and atati nanamali (B 18). On the father's side the uncles are called atati mahokongwe (B 1) and atati nanamali (B 2), respectively, for those older and younger than the father, and their wives ahwe mahokongwe (B 3) and ahwe nanamali (B 4). The paternal aunts are called atati mahongwe (female mother) (B 5 and 7), their husbands (B 6 and 8) atati. 595* 601

ship. The difficulties of his position are brought home to the employee village headman in speeches made by old and experienced men. On one such occasion I heard a man say, 'Some men who marry into a village are bad and can split a village like this one by telling lies to the headman, saying that his sisters are talking behind his back and are insulting him. When a headman hears all this he might break his village by ill-treating his relatives, thus causing himself to be left all alone.' In this way the headman's responsibility for maintaining harmonious relations between the members of the village and himself is emphasized. His failure to do so results in what they call a hook in the village—the departure of some of the members to live elsewhere—which is a severe blow to the status of the headman. In fact, he is dependent on his dependants for status, and the Yao are quick to point this out to employee headmen, saying, 'A tree cannot grow without branches.'

We can better understand the situation if we consider the social structure of the Yao village a little more closely. The Yao are a matrilineal people and are dominantly matrilocal. They live in small groups of huts scattered fairly evenly over the country and from a few hundred yards to possibly a mile or so apart. Such clusters may contain as few as five or as many as sixty or more huts, occupied by between 20 and 200 people.

These people are almost always kinsfolk, and in the smaller villages they are usually all either matrilineal descendants of a common ancestress or their spouses. In the larger groups there is a more complex situation which I shall analyse below. In the simpler groups there may be no male matrilineal descendants in the village and the leadership of the group is taken over by a senior female descendant of the founder of the village. Usually, however, if the group is large, one of the male matrilineal descendants lives permanently in the village and assumes leadership.

The relationship between a male matrilineal descendant and the female matrilineal descendants who are in his charge is signified by the word '*ukwanda*'. The word particularly refers to the relationship between a man and his sisters and I have therefore translated it as 'security-group'. It includes a man's full sisters, matrilineal female collaterals (whom he calls sisters), their female children, and the female children of these female children, and so on. It is usually used in the sense of 'somebody's security-group'. A man belonging to the descent group of the security-group may refer to these women as 'our security-group'. The man who is in charge of the security-group is referred to as the *ayaw ukwanda*. This could be translated as 'owner of the security-group' but because of the property associations with the word 'owner' in our language, I have instead translated this as 'warden of the security-group' which expresses more accurately the relationship between a man and his female relatives. Even in those groups where there is a female in charge of the village and no male matrilineal descendant is resident in the group, there is usually some one man, possibly married in some other village, who is warden of the security-group. The warden of a security-group has certain peculiar duties to perform on behalf of his charges. First, he is concerned with the good relations between members of the security-group and with other such groups. He has to settle most of the domestic quarrels that take place between members of the security-groups. Second, and this is considered to be a most important function, he is the person who is the

improved on people's memories and remembered by most of the people. Thus it was desirable to find a useful reference date between 1910 and 1940. It might be thought that the death of King George V would be memorable. However, though all who were old enough at the time could remember the witchdoctors, only a few could remember the death of King George.

This dubious chronology was filled in by events of more local significance. For example, Kwesiga's hatch house was built in 1919, the present Nyendi succeeded in 1915, &c. In addition, in particular hamlets there were men who had been in the Army, or had been to work in South Africa or Southern Rhodesia. Usually they could recall the date of going and sometimes of return, though they may have lost count of the intervening years. Such dates were often useful points. A small minority had actually recorded the dates of birth and death of children.

In addition to this, it was possible to fix the ages of the young children by reference to harvests, since the Tao reckon two years in succession, 'last year' meaning before the last harvest and 'the year before last' meaning the period before the harvest before last. Before the year before last, all time is merely *kale kale*, the only indication of the period being the pitch of the voice in which it is said or the presence or absence of an exclamatory 'E!' before speaking.

Particular care was taken to secure the ages of women and the dates at which they had borne children. There was, as mentioned above, some reticence in mentioning the names of dead children, but this was usually met successfully by questioning the women's male relatives who were generally more communicative on these points. In spite of the care taken to obtain this information, it was impossible to fix the ages of six women in the sample, and they have been excluded from the major part of the analysis. In addition, there were thirty-nine men who were not available for questioning. These were all adults, the husbands of women in the hamlets. The Tao are matrilineal and matrilocal, and men tend to spend much of their time away from the hamlet of their relatives-in-law. Since they are in many ways strangers in the hamlets no information could be obtained about them.

2. The Common Background to Fertility

All the hamlets visited were occupied by members of the Tao tribe. The Tao are an Islamized people who achieved the questionable distinction of being slaving slave raiders at the end of the nineteenth century. They are a matrilineal and patrilocally matrilocal people living in hamlets of from about 5 to one hundred or more.

[P. 141 8]

(6) The people with whom this paper is concerned[1] occupy that part of Nyasaland between the Chikala Range in the South; Mount Mangoche in the North; the Shire River in the West; and the Portuguese East African border to the East. This area is represented on the accompanying diagrammatic map. A more detailed description of the general social organisation of the Yao in this area, and of their history and general cultural background is to be published shortly.[2] At
(7) this point it is sufficient to say that the Yao are semi-subsistence cultivators living in village settlements ranging from a few huts to sixty or more, with an average of about twelve. This represents say a population average of about 40 per village but ranging from 15 to over 200.
(8) These village settlements are inhabited by groups
(9) of kinsmen. In general there is a matrilineal core
(10) of kinsmen of whom the village headman, who has the same status as the village, is one. In some more complex villages there are subsidiary matrilineages related to the matrilineal core agnatically

776 THE [illegible] OF THE [illegible] "[illegible]", [illegible]

(776) is swept up, the ground round the house is hoed clean, and the hearth scrubbed.
(776) Concerned here is hoeed by the head-wife of the chief, and after this has been done the ashes of the fire used in the burning are carefully collected and taken to a sacrificial ("[illegible]," or "dragging of poles") where they are deposited.
(776) The chief, as representative of his people, bathes in special medicated water, a
(776) decoction made from the bark of [illegible] and [illegible], and the rest of [illegible]
(776) This completes the ordinary annual ceremony, at which new fire is not made.

(776) On certain special occasions a more elaborate ritual is carried out; such occasions are the death of a chief, a threatened epidemic of infectious disease, a murder (especially by shooting) and the frequent occurrence of quarrels in the village.

In such circumstances, in addition to the ordinary purifie ceremony described above, the purifie sticks of the whole village are removed and all fires extinguished. The discarded sticks and all ashes of the old fires are carried to the meeting of paths, where the former are stuck upright in the ground and the ashes piled together; this is done in procession, all the people taking part. On their return to the village (776) new fire is made by friction by either the chief or his younger brother—usually the latter; fire procured in any other way would nullify the proceedings. Finally (776) all the people bathe in the medicated water and only by the chief at the ordinary ceremony.

§57 776 In addition to this special form of the purifie ceremony, another rite is sometimes performed after the occurrence of a murder or as prophylactic against the spread of epidemic disease. The doctor first makes a kind of trough ([illegible]) from the bark of [illegible] or [illegible], and procures a shekkide (or [illegible]) basket—used as a container to sub-marking. Having collected his medicines he proceeds to the bank of the stream near the usual bathing-place of the village and digs a shallow hole, in which he places the basket; in this he puts the leaves of a certain thorny shrub and covers the whole with the trough, which is bedded up with earth so as to be perfectly firm. He then puts his "medicines" into the trough; these are, first, the head of an iron hammer and a piece of [illegible], both from a smelting furnace. On top of these he puts pieces of the root of a certain tree which has many and particularly sharp thorns, and bits of bark from two trees peculiar for having very straight stems. Having distributed these evenly along the floor of the trough, he fills it with water and then proceeds to construct an arch over the end of the trough farthest from the stream. Two long poles, cut from a kind of tree particularly rich in sap, are planted in the ground, one on each side of the trough and close to it; these are bent over towards each other, and fastened together by means of a strip of their own bark. A bamboo is now planted alongside each, and similarly tied to its fellow. During all these preparations and throughout the ceremony it is essential that the doctor has no knots in any part of his clothing.

The preparations are now complete, and when all fires in the village have been extinguished the people go in procession to the spot where the doctor awaits them. All must be purify clad and must have no metal about them.

(776) The chief opens the ceremony. He steps into the trough and taking some of the medicated water therefrom in his hands he cleans his mouth with it. He then (776) offers a prayer to the spirits of his ancestors, first stating the occasion and recalling the measures which are to be taken to deal with it (new fire, sweeping, discard of purifie sticks and shooting). The prayer over, he splashes the water in the trough over his body and passes through the arch, first throwing some gifts (beads or, in more modern times, money) into the trough. These gifts, generally intended as an offering to the spirits, are the perquisite of the doctor, and everybody is supposed to contribute in turn.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

again. In the past, disputes hinging on murder had this aspect, though they were usually settled by a feud. Nowadays, of course, all murder cases are filed "alongside one of the hands of the chief, but the special fine for bloodshed is still levied in cases of assault. When a man is convicted of assault in the chief's court he will have to pay three separate amounts: one to the victim as compensation, one as a fine to the Native Treasury, and one to the chief "so that he may see again".

A similar provision applies to cases of arson. When a case is brought to the chief because a man has burnt another's hut, the chief will say that the guilty man has "brought a torch into his country". The man convicted of arson will have to pay a special fine to the chief in the same way as the man who caused bloodshed. The association of the unity of the chiefdom with fire probably has some place in the attitude of the chief here. People who have come to a chiefdom as strangers are said to have come to "seek the chief's fire",[1] and all the fires in the chiefdom are supposed to have been kindled from one flame. This expresses the unity of the chiefdom: the burning of the hut, therefore, symbolizes the introduction of discordant elements, as well as being a serious crime in itself.

The Court's Judicial Functions

It is clear from MacDonald's writings that in pre-White days the chief settled most of the serious disputes in his chiefdom. Nowadays, this function of the chief has been given legal sanction under the Native Courts' Ordinance of 1933. "A" grade courts have the power of imposing fines not exceeding £5, or 6 months' imprisonment and 12 strokes whipping; and "B" grade courts may impose fines not exceeding £1 and imprisonment including hard labour not exceeding one month, but not corporal punishment. The Native Authorities, Jalasi, Nyundó, Kawinga and Liwonde, all have "A" courts; the Subordinate Native Authorities, Chikwere, Ngokwe, Chiwalo, Chambo, Mpona, Mlondo, Sowa, have "B" courts. Only a certain proportion of disputes is brought for trial in these Native Authority courts. This is because, firstly, the Administration does not admit the legality of some disputes. Most of these centre on charges of witchcraft,

[1] A similar view of fire in the village commons is discussed in Chap. V, p. 110.

Further enquiries may reveal that this is only a section of a larger village, possibly a hundred or more yards away.

The boundaries of a village may not always be clear. Clusters of huts which are part of one village may be physically nearer another, but in the minds of the Yao, who see not only the huts but also the social relationships of the people occupying them, there is no confusion at all. As a general rule the villages are fairly compact and clearly demarcated from others, and even strangers have no difficulty in recognizing the autonomy of the group which is expressed in many different ways. MacDonald recorded that formerly a headman performed a certain amount of ritual which symbolized the unity of the village.[1] Much of this has fallen away, but the unity remains.

The ritual surrounding the foundation of a new village bears testimony to its persisting political significance. In this ritual the unity of the group, against other similar groups, including the village from which it has sprung, is expressed. On first arrival at a new village site the men build grass sheds, beginning with that of the headman. That night the headman pours a cone of sacred flour at the root of a tree on the site, and asks the spirits of his ancestors whether the site is propitious. Early next morning he examines the cone to see the answer. If a side of the cone has collapsed it does not augur well and another site is selected. If the cone is still whole it is taken that the spirits acquiesce, and permanent huts can be started. The headman then goes into the bush to find medicines[2] which he mixes with groundbeans. That night, with the medicated groundbeans in the hut, the headman has intercourse with his wife. In the morning those who are not usually active come to the headman's grass shed to drink some water in which the medicine has been steeped and eat some of the medicated beans with a little porridge, which the headman's wife has prepared from the sacred flour. This medicine is called 'the medicine to strengthen the village' (*mtowa wakulimbika mwi*). Until then all members of the village should have been continent but after this sexual relationships may be resumed. The object of the medicine is to prevent those

[1] See pp. 50-1.

[2] Mkalangwa and ahoro, two plants commonly used for protection against adultery. See Tao, p. 112.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

who are sexually inactive from contracting *ndaka*.[1] At the same time the headman gives each household a piece of the fire which has been newly kindled in the traditional way by rubbing two sticks together.

The mystical danger inherent in the act of setting up a new village is well brought out in the propitiatory prayer and the abstinence from sexual intercourse. Once again it is the village headman who must make the offering to his ancestors; and it is the village headman who has intercourse with his wife so that the effluvium from his sexual activity may permeate the medicine in the hut and so protect the villagers from *ndaka*. Lastly, it is very important that the whole village cooks and is warmed by one fire. 'We are of one fire' expresses the common origin of two villages; though in fact every time a new village is founded a new fire should be kindled. To bring fire from the village of origin is to bring sorcery, since the Yao believe that sorcery can operate between persons closely linked by kinship only. To have one's own fire is to be autonomous from other groups.

The Duties and Rewards of Headmanship

MacDonald had the perspicuity to see not only that the village headman was the representative of a corporate group and that he represented this group to outsiders, but also that he represented external authority to his villagers. The village headman who in his person stood for the unity of the group, performed certain ritual acts which emphasized this, such as praying to the village ancestors. In spite of the decline of the ritual his position is still regarded as exceptional. Much, however, depends on the rank of the village headman. There may not be much difference in ritual observances and mystical dangers between a headman who has in his charge a meagre three or four huts, and a commoner. In the larger and more important

[1] This is one of the most important mystical concepts of the Yao. I have described this condition and its implications more fully in *Marriage among the Machinga Yao of Southern Nyasaland* (R.-L.I. Paper), forthcoming. Briefly it is a disease characterized by sickness which affects those who are sexually inactive when they are suddenly brought into contact with a person, or an object which he has touched, after having intercourse. The people most affected are the young and the old, i.e. those who cannot have sexual intercourse. Those who are capable of intercourse are expected to have sexual intercourse with a stranger, and so finally themselves against this dread disease.

then Ibiwa to an account of the circumstances attending the Ibiwa and death. The point at issue is whether there is any evidence pointing to death from unnatural causes which requires consulting a diviner. The chief practically always agrees with the relatives, and is said that he will never press them to go to the workhouse commonly. The case may end with this conference, or here may begin the long series of events described under [illegible]

During the month subsequent to the funeral, certain taboos have to be observed. The widow may not bathe, and with the exception of the male, all who attended must refrain from sexual intercourse. At the expiration of this period, beer is brewed in the village, and all the friends and relatives are again summoned. This beer-drinking is called "the beer of [illegible]," or "the beer of reinstatement." In addition to the beer, food is provided, and everyone helps himself without ceremony. Chinchinbe is sung and danced and at the present day, bands of trained dancers attend, including sing'sempong' songs.[illegible] A pot of beer is sunk into the ground, marking the site of the dead man's house. The night of reinstatement [illegible] husbands and wives reunited, and the widow may go through ceremonial intercourse with a man appointed for the purpose called Ibiwa or ndele. Sometimes the widow refuses Ibiwa, and is given medicine instead to cleanse her; her body is then no longer "hot" and likely to bring disease to those about her. A widow does not marry again for two or three years. A young man who loses his wife has no longer any standing in her village after [illegible]. He is usually given a present, with the suggestion that he go elsewhere. After the death of an infant, the mother is considered unclean. She sleeps on a mat apart from her husband till after the ceremony of shaving, and then undergoes a ceremonial coitus with her husband — in which case he is called Ibiwa — after which, ordinary cohabitation is resumed. If she has been a widow, or if the child was born "with disease," another man acts as Ibiwa.

The morning following reinstatement, all the fires in the village are extinguished. A fresh fire is then kindled with the fire-drill, lemenge, either in the chief's house or in some spot nearby, and from there, fire is carried to all the houses. The ashes of the old fire, the stones supporting the cooking pots, and the porridge sticks are taken to the cross-roads, and there destroyed. Everyone then shaves all his own hair, head, axillae, and pubis. The custom of the second shaving by the male, described in *Africana*,[illegible] is, I think, an adaptation from the Anyanja. A year later, beer is again brewed, and all the relatives assembled in the village to partake of it. There is dancing, but no ceremony.

The Tao bury their dead in regular graveyards in wooded country, the thicker the forest the better, often two or three miles away from a group of villages. Different villages bury their dead in different parts of the burial ground; relatives are usually buried near one another. Graves are never revisited, and no one would enter a graveyard except at the time of a funeral, and then only after obtaining permission from the chief. Such spots are

[illegible] Tao taboo, p. 300. [illegible] Ibiwa drinking. [illegible] Swanson, op. cit., p. 131.
[illegible] Tao taboo, p. 300 and 31 1. [illegible] Tao taboo, p. 300.

two feet high and fifteen inches in diameter, hollowed out from above for about two-thirds of its length. Many are made with a kind of lees or stand, and some have roughly carved bosses on the outside; these are called "the breasts," doubtless emblematical of women, a large part of whose life is spent in preparing flour (Pl. XV, fig. 18).

The fire-stick. Matches are becoming more widespread year by year and even the knowledge of how to make fire with a fire drill will be lost. The method employed among the Yao is as follows: a flat surface is cut on a piece of partly rotted wood. In the middle of this a small depression is made, and on one side of the piece of wood a groove is cut leading from the flat cut surface. The piece of wood is held firmly on the ground by one person with a piece of old scorched cloth or some charred sticks at the base of the groove. A second person, by rolling a stick of hard wood rapidly between his hands with the point directed against the depression on the flat surface in which a little cool lees have placed, drills a hole into it. The heat developed is sufficient to cause the powdered rotten wood to start smouldering. This is then turned out on the cloth, which is gently waved in the air till it catches fire (Pl. XV, fig. 19).

Boats. With the exception of a small canoe-like vessel, *Mtepipen*, made of rough bark and used for crossing streams, the Yao have no boats. The dug-out canoes which they use at the present day are made for them by the *Anyanja*. In addition to the bark boat, they use a kind of raft made from the pith tree, *Isoqoro*.

Tobacco. The use of tobacco in some form is universal among the tribes of Nyasaland and the Yao are no exception. The method of use varies among the different peoples; smoking, chewing, and snuffing are all practised, but while the *Anyanja* is essentially a pipe-smoker, the Yao takes snuff, although I think only lately he has also taken up smoking and chewing. A short time ago, a Yao who chewed would have been laughed at. The *Anyanja* do not chew but take snuff to a certain extent; the *Angoni* who do not smoke or chew are inveterate snuff-takers; the *Atumbuka*, *Atonga*, *Awanga*, and *Achewa* are pipe-smokers and to lesser degree snuff-takers.

Tobacco is called *ameo* (Zulu, Chin.). It is prepared by sun-curing the leaf, which is then rolled up into a twist and allowed to dry further. The common tobacco pipe consists of a clay bowl, often ornamented, and a reed stem; it was formerly called *ntilongo*, but is now known as *kalio* (Pl. XV, fig. 11). For hemp, *chamba*, the Yao use a water pipe called *ndumbo* (*upondo*, Chin.); this consists of a bamboo water container from which projects a reed stem ornamented by a clay bowl (Pl. XV, fig. 10). The word *ndumbo* is also used for a tobacco pipe.

When tobacco is chewed, a little lime paste *ambale* made from snail shells is put in the mouth "to bring out the flavor," a small clay jar being used to carry the *ambale*.

Both the Wayao and the *Anyanja* prepare snuff by grinding the broken-up tobacco leaves with a stone (a pestle-and), the powder is then turned out into another shard and warmed over a fire. A few drops of a preparation called *mapuli* is added for flavor. *Mapuli* is

[End Plate 15]

[illegible] the village, the ground round the house is hard-done, and the hedges mended. [illegible] (Ceremonial hoe is turned by the head-side of the chief, and after the hoe has been dressed the adzes of the fire used in the hearing are carefully collected and taken to a necklace ("cross-roads," or "dropping of paths") where they are deposited. The chief, as representative of the people, bathes in special medicated water, a decoction made from the bark of mpange and mkomo, and the rest of mpange. This completes the ordinary annual ceremony, at which now fire is not made.

On certain special occasions a more elaborate ritual is carried out; such occasions are the death of a chief, a threatened epidemic of infectious disease, a murder (especially by shooting) and the frequent occurrence of quarrels in the village.

In such circumstances, in addition to the ordinary purifie ceremony described above, the partition sticks of the whole village are removed and all fires extinguished. The decorated sticks and all adzes of the old fire are carried to the meeting-of-paths, where the former are stuck upright in the ground and the adzes piled together; this is done in procession, all the people taking part. On their return to the village [illegible] are fire is made by friction by either the chief or his younger brother—usually the latter; no personal in any other way would nullify the proceedings. Finally all the people bathe in the medicated water and only by the chief or the ordinary ceremony.

In addition to this special form of the purifie ceremony another rite is sometimes performed after the occurrence of a murder or as prophylactic against the spread of epidemic disease. The doctor first makes a kind of trough (kidongoni) from the bark of mmkomo or mpange, and prepares a shelldale (or chipongoni) basket—used as a strainer in sub-sieving. Having collected his medicines he proceeds to the bank of the stream near the usual bathing-place of the village and digs a shallow hole, in which he places the basket; in this he puts the horns of a certain thorny shrub and covers the whole with the trough, which is banked up with earth so as to be perfectly free. He then puts his "medicines" into the trough; these are, first, the head of an ion hornet and a piece of dog, both from a smelting furnace; the top of these he puts pieces of the root of a certain tree which has many and particularly sharp thorns, and bits of bark from two trees peculiar for having very straight stems. Having distributed these evenly along the floor of the trough, he fills it with water and then proceeds to construct an arch over the end of the trough farthest from the stream. Two long poles, one from a kind of tree particularly rich in sap, are planted in the ground, one on each side of the trough and close to it; these are kept over towards each other, and fastened together by means of a strip of bark ropes bark. A bamboo is now planted alongside each, and similarly tied to its fellow. During all these preparations and throughout the ceremony it is essential that the doctor has no knots in any part of his clothing.

The preparations are now complete, and when all the fires in the village have been extinguished the people go in procession to the spot where the doctor awaits them. All must be partly clad and must have no metal about them.

(Lot 9) The chief opens the ceremony. He steps into the trough and taking some of the medicated water therefrom in his hands he rinses his mouth with it. He then (Lot 9) offers a prayer to the spirits of his ancestors, first stating the emergency and recalling the measures which are to be taken to deal with it (now fire, sweeping, dressed of partition sticks and shooting). The prayer over, he splashes the water in the trough over his body and passes through the arch, fire throwing some gifts (beads or, in more modern times, money) into the trough. These gifts, generally (Lot 9) intended as an offering to the spirits, are the perquisite of the doctor, and everybody is supposed to contribute to them.

6. *Wimpu*: this large double basket one half of which fits over the other like a cover, is now very common among the Tao; it was copied from the Swidili Ajumuda. The body is made in the same way as the other baskets, but each half has a broad rim of wood which is always set prettily into patterns (Pl. XVI, fig. 13, and Pl. XVIII).

285
415
[17]

4. *Chimuchi*: the base ring, a small hemispherical basket rendered waterproof by smearing with a sticky substance prepared from the pounded stem of the mysoo tree or from the root of the spurge plant mixed with charcoal (Pl. XVI, fig. 12).

5. *Limuguda* (*Impu*, Chin.): the base strainer made in the shape of chimuqu, but the strips of bamboo forming the warp and the weft are of different thicknesses, so that spaces are left for the fluid to run through (Pl. XVI, fig. 14).

Mats. In years gone by the Tao made a rough kind of plaited matting of split reeds called *shipumdu*; it is not seen today. Another type of mat seldom used today is the *kitchi* (*ichiu*, Chin.), made of a number of reeds of equal length bound together by several rows of interlacing string (Pl. XVI, fig. 7). Reeds are also used to make the *ngmu* (*yuyum*, Chin.) (Pl. XVI, fig. 10). When dry they are split and flattened out with the smooth surface all on one side. A number of reeds so flattened lying side by side are then sewed together with native string, and form a clean, smooth mat for sitting or sleeping.

285

Mats made of plaited strips of sun-dried palm leaf are now in common use, the art of making them, I believe, having been introduced from the coast. Large mats of this kind called *kanchi* are used in the chief's courtyard (Pl. XVI, fig. 9). Smaller ones called *ichiu*, or by the old people *ichiqu*, made from the leaf of the wild date palm, are used for sleeping (Pl. XVI, fig. 6). Since the advent of the Europeans, mat making has become an important industry, and *kanchi* and *ichiu* are to be found in every European house.

A still finer kind of mat, similar in plan and stained in patterns, has lately been introduced by the Swidili. Red and black dyes are generally used; the red is either *ngmuu*, or a stain called *mahanda* prepared from the bark of a tree called *mandu*; the black dye is made from the root of a vine, *Shumqu* (*chimu*, Chin.), the bili bean.

[14]

The matting made of these strips of palm leaf is in the form of a ribbon from three to six inches wide, according to the fineness of the strips. The ribbon of matting is sewed into the form of a cylinder by plaiting the edges of the ribbon together in a large spiral. This cylinder of matting is then cut down one side and laid flat, and the cut edges finished off with a plaited mat border (Pl. XVI, fig. 8). It will be seen that, owing to the way they are made, these mats are never quite rectangular. The ribbon of matting used for the circular mats is sometimes still and twisted round and round in a flat spiral fashion.

Cloth. The Tao in years gone by made a woven cloth, but the art has long since died out, and I have never seen a piece of native-made cloth. I imagine, inasmuch as bark cloth is still worn by the poorer people, that the native-made woven cloth was only worn by the few, probably the chiefs. The older cloth was exclusively bark-cloth, worn, as I

286

* Wa-mara, a tree.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

622 559 293 robes (a gown not unlike a woman's dressing-gown), wears a bright-coloured turban, and has one or two men walking behind him, he is a rather important village headman. One particular item of clothing in the Kawinga, Liwonde and Nyambi areas, is the scarlet headband which some village headmen may wear. I shall discuss this later in the context of the competition of village headmen for rank.

622 559 311 Another external characteristic of rank, which seems to have disappeared with the changing economic structure of Nyasaland, was the carrying of knives (*ninjo*) by important village headmen. Previously, status was indicated by the type and size of knife carried in public. The chief usually carried the largest and most ornate. The knife taken from Kawinga on his surrender in Portuguese East Africa was about 18 inches long and had a decorated ivory handle. Smaller knives of similar pattern belonged to his headmen.[1] Nowadays, many young commoners carry knives two or even three feet long, made from the broken blades of motor-car springs.

622 559 291 The right of important village headmen to build fences[2] at the back of their huts is also a mark of prestige which seems to have lost in significance. About 30 years ago only important headmen had the right to erect a fence at the back of their huts. This fence, made of tall grass about six feet high, enclosed the grain stores and other food supplies of the household and formed a private compound in which the headman's wife and slaves carried on their daily tasks.[3] It seems likely that private compounds and slavery were positively associated, so that only the important village headmen who had many slaves found it necessary to build fences. All chiefs and most important headmen to-day still erect these fences. Those who hold initiation rights are obliged to build them because, when the initiands return from the seclusion phase of the initiation ceremony, they are supposed to spend one night in the headman's private compound before going back to their villages. But nowadays, minor village headmen and commoners also frequently build these

[1] See fn. 4, Chap. II, p. 38.

[2] *Lamp*, pl. *mlamp*. The enclosed space or "compound" is *chalandi*. Typical fence compounds are depicted on Plate IX (*a*) and (*b*), facing p. 108.

[3] MacDonald suggests that the common wooden footpaths for women to descend from the *chalandi* lamps—on the other side (of the fence).

Both before and after the introduction of guns, the Tao used spears, lances, and bows, [illegible]
shields. The spear is a five-foot long throwing spear with metal head and wooden shaft. No shield was used. Bows and arrows are made from the wood of the *mao* or pinkingpin tree. The string is made of rattan. A double-bulbed bow called *shanji* (or *shiawa* was sometimes used, but, I believe, originally came from the Ataiyals. The arrows, separate, have a metal arrow-head, and were often poisoned with *kanda*.

Hunting. The same weapons are used in hunting: the gun, the spear, and the bow and arrow. Smaller bows and arrows made with bamboo or *ainal* shaft are also employed for shooting birds, one of the arrows has a blunt wooden head and serves to stun the bird. [illegible]

From the Ataiyals, the Tao learned the use of a harpoon for spearing the Hanyanyin [illegible]
seen. The harpoon is a heavy spear-head of iron about eighteen inches long, attached to a rope and float. From the Ataiyals, also, was learned the use of the falling block with spear for killing bears.

Elephants are caught in stakes pits, and the larger antelopes are similarly trapped in pits with the sides sloping towards the bottom, so that as the animal falls lower and lower with exhaustion, it is eventually suffocated.

Small game are driven by dogs into nets set for long distances in the forest, and then [illegible]
speared or shot. Traps are also set for these smaller antelopes and for many other small animals, rodents, etc. Birds are shot or trapped. Bird-lime is also employed. It is prepared from the latices of a number of trees by pounding the vegetable matter in water, the sticky juice so made is applied to sticks or poles. The sticks are placed near drinking places so that the birds alighting to take water become entangled. The poles are affixed to trees so that they appear to be the topmost boughs, this the native does, recognizing the extreme faith of birds to sit on the very top of trees. The strength of the bird-lime is made according to the size of the bird he wishes to catch.

Fishing. I am not sure how far the Tao is a natural fisherman. But long ago he used only a heavy pointed spear to catch his fish. Since then, he has acquired from the Ataiyals the knowledge of making fish-traps and nets, and of using the fish poison. When the Tao came to live and intermarry among the Ataiyals, there was one practice of the latter which they would not adopt and which caused a good deal of ill-feeling. A Hanyanyin man coming home after fishing always used to prepare the fish and, having some ready to cook, he cooked them for his wife, bringing her water at the same time to wash her hands. After eating his own fish, she cooked the rest for her husband. A Tao would never cook for his wife.

Traps. The following is a list of some of the traps I have found in use among the Tao. The sketches will serve to explain their mechanism better than a lengthy description. Some are very ingeniously made, and most small shelter traps made in other parts of the world.

1. *Cadangil lan lamada*, a trap for the mouse-rat (Pl. XXII, fig. 1).
2. *Cadangil lan ratimal*, a trap for sharp-toothed gnawing animals, so called from

Trapping and catching of animals is pursued with great glee by small boys. They make many of the traps, particularly the two kinds of bliss, *ahipanda*, *ahipanda*, *ahiawa*, *kawa*, and *ngaw*. *Ahiwa* is set in rat runs and the rats are driven into them (Pl. XX, fig. 4). Digging-out rats is a favorite amusement for the boys and brings meat to the pot. Map is the best agent for this sport. They are adepts at recognizing burrows which have rats inside. Digging is commenced at one entry to the rat warren, the assaye being stuck with bits of grass. As they get nearer the rat chambers, they smell the earth and so know when they are quite close to the rats. A bunch of grass is then put in this hole, lighted, and kept alight by blowing on it. One of the rats will try to bolt and is knocked on the head. The head is then squashed to kill him effectually, and the skin of the tail of the first rat is always pulled off the body, "so that they may catch many." They will try to guess how many there are going to be, "two and two and five and two!" Each rat when caught is tested under some earth, so that the hunter will not among down and carry it off. When they have finished rat warren, one of the party is appointed to carry all the rats. He has a string round his waist, and the rats are slipped underneath it and so secured. They then go on to another; the hunter will bear the whole catch for the day and may, before they have finished, have several strings of rats round his body, one above the other.

Digging-out crabs, *ka-kapa-ngalu*, is another favorite amusement for children. On days in to dig up anything like sand which makes a squelching sound). Crabs are never eaten with flour, but always with manioc, the grain banks, " crabs and brown-bread!"

Twelve and girls fish with a rod, line, wire hook, and worm, *ka-kapaga-ambu*, to pull up fish. They also catch fish, using the fish poison, *mbulu*. Birds are killed with a bow and a blunt-pointed wooden arrow.

A small boy, seeing a girl or a younger boy with a *ula* of *ambu* and wanting it himself, will say, " Let me make a garb to the sand!" He will then remove, say a couple of rows of *ambu* grains for himself, *ambu* to the corner of the corner, or "Let me make double" (*Ambu* is a shared bead on the *ula*), or " Let me make the man's *ngaw*!" when two ordinary grains are left, surrounded by a simple ring of other grains, on the girl's portion.

Children are taught a little saying about their fingers which contains one of the "The little pig went to market " of man's infancy. Starting with the little finger, they say:

" *Ahuku* *kangaiku* *kangaiku!*"
"The little one (is) the one which cannot draw water!"

Pointing to the ring finger,

" *Kaiakiapu* *ngangaiku!*"
"The little man's brother (is) the one that grabs the sand!"

To the middle finger,

" *Kangaiku* *ambu* *ambu!*"
"(The brother of) the one that grabs the sand (is) the one who finishes sand!"

In beaten with branches, or leaves are thrown at him. Men join from all the villages. Next day they set out in line towards the nets they have set, the inexperience of the hunt in the middle. Game is driven into the nets by the advancing line of men and their fires and is spared. On the other side of the nets are men set as watchers, who would let down the net at the approach of any big antelope, who would otherwise break it. All the game killed is taken back to the hut chief in the leaves, who window is in the background. At the end of the hunt (sunset) the inexperienced of the hunt chooses his portion after it has all been divided up, and gets a hind leg of every beast killed by the others. The net used is 300 or 400 yards long. Hunting is done in the early morning during the month of July.

The Mukwaja and Chipuna did not hunt elephant, but dug game pits. They used bows and arrows. The Tao, Mukwaja and Amangwato, preserving game in the old days, used to make big hunting parties, staying away two and three months and killing elephant and other game. The leader inaugurating the hunt had the first shot at an elephant, and all ivory was his till sold at the court, where the followers get their proportion of ivory brought back. The skins and horns were divided. The flesh was cut into strips and dried over wood fires. The chief has choice of the biggest tusk on the return of the party to the village. Two elephant were shot in the vicinity of the village, the chief claimed the ground tusk, i.e., the tusk on the side on which the elephant dropped. Before starting on such a hunt the chief would be cast to see that they would have good luck. All those taking part would have "medicine" rubbed into little incisions cut on arms, shoulders, and sometimes on body. Mudwale (medicine) was also tied on the gun; it consisted sometimes of a number of pieces of wood threaded on a string, or I have seen another made of sun-dried animals' blood and charcoal. Should the wife of anyone of the expedition commit adultery her husband might get killed. A man going to hunt will never have intercourse with his wife the night before, otherwise he would be unsuccessful.

Bows and arrows are used, the bows being sometimes about 5 to 6 feet long. The "Mudimamano arrow" is employed, and the arrow rests against the left side of the bow. Three kinds of arrows are carried in the same quiver (pachi): operative, a blunt arrow for stunning birds; sukwa, with a large iron blade; and operative, with a small pointed head.

The Mukwaja use a long-handled, short-bladed spear, usually thrown at a short distance (a few yards), when it is grasped in the hand about the middle. From a further distance (thirty yards) it may be pitched by holding at the extreme end. Traps of various kinds, made of a bent sapling and noose, are commonly used. Dogs are used in hunting to drive, to run down small game and to bay the bigger animals at bay. The only arrow poison used in chiefs, made from euphorbia juice and other things, is to used in warfare and elephant hunting. The flesh of animals killed with chiefs is not considered safe to eat. Children from twelve years of age accompany their fathers hunting.

[illegible] In turn, after drinking, they sit down while the n'wanbla gives instructions that have they obey tonight. He takes his basket and starts to run back to Lepanda, singing:

[illegible] "Ka [illegible] [illegible] [illegible] [illegible] [illegible]"
"Where we must go [illegible] [illegible]"

Then going to the back of his hut, he enters and takes a piece of bark left there bent up into a dish containing medicine which has been put in by an assistant. This assistant holds in his hand the neck of one of the birds which was killed at Lepanda. The n'wanbla washes his face and chest with medicine to cleanse his eyes and then leans forward to the assistant and bites a piece off the neck of the bird which the assistant holds out, and eats it. This is ku-kwetsa, "to taste a small piece," after the fear, before starting to eat the flesh, this is generally done by the most important person. The n'wanbla has been followed by his assistants who do as he has done. They all follow him next round the cooking place for the boys at Lepanda, each standing for a moment on the stones which have supported the cooking pots, while the women sit looking on sadly. He begins to dance and the women join in, singing Khomo. He then calls the parents of the soul and leads them to where the leader was. There assembled, he tells them they must not bathe, and that tomorrow morning early, porridge is to be sent to the soul which must be prepared by a woman who has had connection with her husband and who has not washed her hands; this is supposed to make the boys strong. Early in the morning the husband, who likewise has not washed his hands, carries the food to the soul and possibly gives portions to each boy to eat.

When they have partaken of the food, the circumcision is performed by the n'wanbla who has returned the same morning early. The soul ran by one, commencing with the leader, go forward a little to the place where the n'wanbla awaits them. Each round is accompanied by his relations who commonly says, "Come along and you shall see of the honey made by the bumblebee." Each honey is very sweet and called manna. This refers to metaphor terms to the pain the boy is about to undergo. The boy squats down, leaning back on his relations who supports him, while the medicine-man, having washed the hut out to cry out, performs the circumcision with a small knife called shamela. It is a triangular knife with one cutting edge and a handle produced from the opposite corner. Properly the Tsw method is, I believe, only to nick the free margin of the prepuce just to the right of the middle line near the frenum, but complete circumcision is now commonly practised, possibly as the result of Swahili influence. In this case, the prepuce is seized and held by the fingers, and division made by a circular incision without using a clamp or blunt stick. A dressing of charcoal and oil may be applied or medicine is chewed in the mouth and the saliva spat on the wound and the boy sent on to rest under some convenient tree.

When all the soul have been circumcised, they are gathered together in one place and the n'wanbla dividing them into groups, puts on the neck of the leader of each group a necklace made of plaited bark from the palmyra tree. These necklaces contain medicine [illegible]

[illegible] have said, to this day, and also appearing on the proper dress in all ceremonies. Clothing nowadays, among the majority, consists of cotton cloth bought in by traders and further adorned in native fashion.

287 Bark-cloth, Sumale (Mimusoh, Chin.): made by the men. A piece of bark about two feet by one is cut from the living tree; the outside portions are removed and the whole piece, after being well scraped, is soaked in water. When partly softened, it is removed and beaten out with a wooden mallet; the process is repeated till the piece of bark is soft enough to enable it to be wrung in the hands, then further beaten by the [illegible]. The soaking, beating, wringing, and pulling are continued till a piece of cloth from by five feet is obtained. This is non-elastic and yields a soft, pliable, and warm material. Several pieces may be sewed together to make a large sheet. Bark-cloth is sometimes stained black by soaking it in a kind of thick mud found on the plains. The outlet wooden of a piece of hard wood with serrations on its face, held in a split stick handle; it is called mimoure. A log of wood with a flattened surface, called mimpuri, plays the part of the anvil, the man who is using the mallet usually sitting on one end of the log.

281 Skins. The Tao are unacquainted with the art of tanning. Skins are prepared only by drying, and then softened by hammering with stones. They are not employed as articles of clothing but the larger ones are used to sit upon, the skins of the leopard and the lion being reserved for chiefs. Others are used to make bags to carry flour, for powder powders, and to cover guns. The blacksmith's bellows are made of goat's skin.

283 String, Ishenji (Mimpum, Chin.): Two kinds of string are made, one from flax, the other from the inner part of the bark of the baobab tree. Fishing nets are made from the former, game nets from the latter.

316 Metals and metal working. The only metal ever obtained from the ore by the Wapoe are iron, and it is probable that they learned this from the Angoro and Angonja. The industry is now nearly dead since the introduction of trade articles. A few blacksmiths still ply their trade, but their work is restricted to the manufacture of knives, spear-heads, and razors. Hoes are no longer made. The iron blade supplied by traders is in the form of the old native-made article, which had in turn displaced the older hoeing-stick. The blacksmith deals with the ores of metal by hammering it with stones. He provides himself with bellows, a small iron hammer, and a rudimentary kind of tongs. He is called mwitipale.

319 Stones. The only important uses for stones among the Tao are for supporting the cooking pots on the fire, for heating water in some medicinal preparations, and for grinding millet. For this last purpose, a large flat stone, inclined at an angle, is set up in some convenient spot, often on the veranda, and the grain is ground by means of a smaller stone held in the hands.

● 315. [illegible] The flour pestle and mortar. Millet flour is prepared by pounding the grain in a big wooden mortar, by means of a wooden pestle, consisting of a pole some five feet long and four inches in diameter with round ends. The mortar consists of a tree trunk about

two feet high and fifteen inches in diameter, hollowed out from above for about two-thirds of its length. Many are made with a kind of base or stand, and some have roughly carved faces on the outside; these are called "the beauts," doubtless antimacassars of women, a large part of whose life is spent in preparing flour (Pl. XV, fig. 18).

The fire-stick. Matches are becoming more widespread year by year and soon the knowledge of how to make fire with a fire drill will be lost. The method employed among the Tuo is as follows: a flat surface is cut on a piece of partly rotted wood. In the middle of this a small depression is made, and on one side of the piece of wood a groove is cut leading from the flat cut surface. The piece of wood is held firmly on the ground by one person with a piece of old scrubbed skin or some shaved sticks at the base of the groove. A second person, by rolling a stick of hard wood rapidly between his hands with the point directed against the depression on the flat surface in which a little soft bast has been placed, drills a hole into it. The heat developed is sufficient to cause the powdered rotten wood to start smouldering. This is then turned out on the skin, which is gently waved in the air till it catches fire (Pl. XV, fig. 16).

Boats. With the exception of a small canoe-like vessel, *Ahuiyuo*, made of rough bark and used for crossing streams, the Tuo have no boats. The dug-out canoes which they use at the present day are made for them by the Anyanuja. In addition to the bark boat, they use a kind of raft made from the pith tree, *Sangwa*.

Tobacco. The use of tobacco in some form is universal among the tribes of Nyamlani and the Tuo are no exception. The method of use varies among the different peoples; smoking, chewing, and snuffing are all practised, but while the Anyanuja is essentially a pipe-smoker, the Tuo takes snuff, although I think only lately he has also taken up smoking and chewing. A short time ago, a Tuo who chewed would have been laughed at. The Anyanuja do not chew but take snuff to a certain extent; the Angosi who do not smoke or chew are inveterate snuff-takers; the *Ainambuku*, *Ainuaja*, *Ainuaja*, and *Ainkonde* are pipe-smokers and in lesser degree snuff-takers.

Tobacco is called *uwa* (Jaluo, Chin.). It is prepared by sun-curing the leaf, which is then rolled up into a twist and allowed to dry further. The common tobacco pipe consists of a clay bowl, often ornamented, and a reed stem; it was formerly called *ahinuja*, but is now known as *kalu* (Pl. XV, fig. 11). For hemp, *chemba*, the Tuo use a water pipe called *ahinda* (*ngonda*, Chin.); this consists of a bamboo water container from which projects a reed stem surmounted by a clay bowl (Pl. XV, fig. 12). The word *ahinda* is also used for a tobacco pipe.

When tobacco is chewed, a little lime paste contained in a small shell is put in the mouth "to bring out the flavor," a small clay jar being used to carry the contents.

Both the Wapuo and the Anyanuja prepare snuff by grinding the broken-up tobacco leaves with a stone in a pestle; the powder is then turned out into another shard and roasted over a fire. A few drops of a preparation called *magwali* is added for flavor. *Magwali* is

[End Plate 15]

Other hypothetical diseases which are caused by disbelieve to women are mentioned [illegible] *under various other headings. Kanjo: a disease generally characterized by elevation of* [illegible] *the legs but in some cases by pains in the back, or loosely used for a variety of symptoms,* [illegible] *is said to be caused by the entry into the body of a worm which lives in water-pools. This* [illegible] *worm which I have had identified is a gordius worm and not known to be parasitic in man.* [illegible] *Lamai: When a man kills another in battle, he will sit upon the body of his victim; other-* [illegible] *wise he believes he will sicken, with heat and his own belly will swell up like that of the* [illegible] *corpse when putrefaction sets in. He is supposed also to hunger after more killing and blood.* [illegible] *Lilungo is the name of a supposed disease which kills off one child after another in a family* [illegible] *when they are about six months old. Congenital syphilis naturally suggests itself but I* [illegible] *have never been able to verify this idea. Lilungo lya Imbiri: a supposed disease which* [illegible] *causes the death of the first child when the second is born, the second when the third* [illegible] *is born and so on, whatever the intervals between the births. Each child is said to* [illegible] *push (ku-sisi) the previous one out of this world. Under these circumstances the disease* [illegible] *is ascribed to something wrong with the mother or father and they are examined by a* [illegible] *medicine-woman or medicine-man, and any excrescence or an external pile found will be* [illegible] *cut away.*

If a snake bites (ku-lima), the man will prove fatal. If a crocodile seizes a grunting [illegible] *sound when seizing its victim, though he escape he will certainly die.*

Treatment of diseases. Of surgical treatment there is very little to be noted. Nothing in [illegible] *the way of operation is performed with the exception of circumcision (see Legends).*

As abscess is allowed to burst, the smallest tumor is left untouched, but necessary digits [illegible] *which are not sore, attended only by a few pustules, are amputed off.*

The natives cannot extract teeth. They are incapable of rendering any assistance in [illegible] *cases of difficult labor. Dislocations are not recognized as such, but fractures are treated* [illegible] *by the application of wooden sticks placed at intervals round the circumference of the limb* [illegible] *parallel to it and held in position by twisted pieces of bark string (Pl. XXII, fig. 3). The* [illegible] *principle of the tourniquet appears to be unknown.*

The only instruments used consist of a small knife for incisions, a cupping-horn, and a [illegible] *primitive form of funnel for administering enemata (Pl. XXII, figs. 1, 2, 4). The knife has* [illegible] *a triangular blade with a stem which is commonly twisted at one of the corners. The knife* [illegible] *is used for wet-cupping, tattooing, and circumcision (Pl. XXII, fig. 2). The cupping-horn* [illegible] *is a small horn of a calf. The open is pierced and after application to the part, suction is* [illegible] *made with the mouth and then the hole sealed by working a piece of beeswax over it with* [illegible] *the tongue. Six small incisions are made in the skin for the withdrawal of the blood. The* [illegible] *cupping-horn is called chowi (ishowiza, Chin.). Cupping is used for headache and for pain* [illegible] *in the chest and back. The enema funnel, chipelpa (ishiblo', Chin.) is made from the neck* [illegible] *of a gourd to which is attached a hollow straw for introduction into the anus. Half a pint* [illegible] *of an infusion of tamarin is injected for constipation associated with pain.*

[End Plate 22]

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

622 559 693 ministry. This recognition publicly announced their superior status, because not all headmen could be Administrative headmen. We do not know exactly how the Administrative headmen were appointed when the Ordinance was introduced. The observable results, however, are that no headman, as far as I am aware, who was of superior status in the indigenous ranking system, is not an Administrative headman to-day. Being an Administrative headman is then in itself an indicator of rank.

Rather more important than this is the right to hold initiation ceremonies. MacDonald says that these rights were held by the chief only, but it is not clear whether the word 'chief' used here refers to the village headman or the 'chief of the land'. Nowadays, the rights are held by village headmen as well as the chief. The right to hold initiation ceremonies is signified by the possession of a small flat basket (*ziwele*) in which the oblational flour for the ceremonies is carried. When a chief grants a *ziwele* or oblational basket to a village headman, what in fact he does is to grant him permission to approach the spirits of his ancestors. The headman uses the basket on three occasions during the initiation ceremonies. First, before the ceremony is announced he pours a little cone of sorghum meal at the root of a special tree in or near the village. This tree is known as the *nanlo*, or the shrine-tree where all offerings to the ancestors are made. While he works the flour through his fingers to allow it to fall in a cone, he calls on his ancestral spirits and asks them to intercede on his behalf with the spirits of the chief's ancestors. He then formally requests permission to hold the initiation ceremony. This cone is left intact through the night. Should it collapse the interpretation is that the spirits are not willing that the ceremony should take place and it is postponed for some days. Offerings are made until eventually the cone, by remaining intact through the night, indicates that all is propitious for the ceremony to be conducted. The second occasion when the oblational basket is used is when the village headman or chief goes down to the grass sheds where the rites of segregation and aggregation take place. Here he pours flour over a twig and begs the safe conduct of the initiands through this physically and mystically dangerous period. Third, each individual initiand, and his or her mother, is touched on the forehead and forearm with the flour on the evening that the initiands leave for the grass sheds. During

the last rite the owner of the chiwinsi basket exacts a payment of threepence or so from each parent. The headman does gain financially from the initiation ceremony, but it would be wrong to imagine that this is the only reason why he should want to have the right to hold it. The competition for the rights, which are limited to a few, is part of the general political process whereby village headmen compete for privileges and advantages over their fellows.

Village headmen may hold either the boys' or the girls' initiation ceremonies, or both. Sometimes, when they hold both, they delegate the girls' ceremony to a younger brother or some other relative without referring to the chief. For example, Kawinga's clan relative and important retainer, Ngalewanga, had the rights to both initiation ceremonies, and he allowed his perpetual 'son' Isa[1] to hold the girls'. Also in Nyambi area, Mapeja, who had both initiation rights, allowed his perpetual 'son' Nantunga to have the girls' ceremony. It is generally conceded that the right to hold the boys' initiation ceremonies is more valuable than the right to hold the girls'. H. L. Duff, writing in 1906, had also noticed this when he wrote:

> The respective ceremonies seem to be considered as on a somewhat different footing, for the boys' *isyapo* can properly be held only at the village and under the patronage of, so to say, the paramount chief of the neighbourhood, whereas the girls' initiation may take place under the auspices of an inferior headman. This distinction is still jealously observed and any breach of the chief's privileges is apt to lead to bitter dispute.[2]

The sanction the chief holds over the headmen in this respect is mystical. A village headman believes that the initiation will be a success (that is, that the initiands will be free from the harm of wild beasts and illness, or the circumcision wounds of the boys will heal quickly and well), only if the approval of the chief's ancestors is obtained. He cannot hold the initiation ceremonies, unless he has obtained the basket from the chief.

Most people still follow tribal initiation customs, but in the extremes of the area in which I worked, religious ideas are bringing about a change. In the north in Jalasi's area where Islam

[1] The first Isa was the son of Ngalewanga and this relationship is preserved by the modern incumbents of the headmanships. See Chap. V, p. 122.

632 neglect neither his security-group nor the husbands in his village,[1] that his security-group and his village were his garden and he must take care of the young plants in it. The husbands were the watchmen who look after the women in the village. A headman dare not take sides or be unfair, nor must he talk behind people's backs. He must take care to settle differences amicably by discussion at meetings. They advised him not to pay too much attention to his wives who may have quarrelled with his sisters and tell him that they have been insulting him. When he hears a report like that he may be unfair to his sisters and people will say that he has broken his village through listening to nonsense. This sort of instruction went on through the night.

On Friday when the beer was brewed, Mlambo and Mbelwe, both headmen and perpetual sons of Nyumbi, came to the village [349] and told the men to build a small grass shed for the successor to sit in. This the men did, and the women were told to plaster it and clean the huts out for the strangers who would be coming to the ceremony. On Saturday morning before cockcrow, Makoka and Ncimbo got up and told the women to cook a big pot of porridge because they were taking Cimombo to bathe and when they returned they would want to find porridge ready. [485] Makoka took some medicine called *ukulume* in a bark container [751] (*likungwa*) into the toilet enclosure. He put the medicine into two jars of water and told Cimombo to wash himself in it daily as he was an important headman, and it would strengthen his 622 body.[2] After Cimombo had washed he went back into the hut where a mat was spread on the floor and on it were a dish of 266 porridge and three dishes of relish. Makoka and Ncimbo told him to take a little porridge, dip it into one of the relishes—whichever he chose—and eat it. Cimombo did so. They did not tell him that one of the dishes contained human flesh.[3] When he tried the dish of human flesh he vomited and all the villagers cried with joy, saying that he was a good chief because he had

[1] *Mlambo jao ni akamwini wao*—the meaning and significance of this in the village context is explained on p. 183.

[2] This is a euphemism for protective medicine against sorcery.

[3] The immediate question is: Where did the human flesh come from? No informant could tell me and I am inclined to believe that one of the dishes is 'ritually' made into human flesh for this ceremony. This special ceremony was always spoken about as if it were secret, especially from White people.

538 "[illegible] [illegible] [illegible] [illegible]"
"[illegible] [illegible] [illegible]"

in which the listeners ululate

"[illegible]"
"[illegible]"

At the completion of each sentence in the story, one of the listeners will ululate, "[illegible]" When he has finished his story, he says,

"[illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible]"
"Take off the fire, the little mouse has it; he stayed, by the hand it is very hard, the hole (is) in a hung[illegible]"

During the intervals of a long story, one of the listeners may break in and sing some little song, such as the song of the animals in the story of the gentle man, thus giving the story-teller a rest.

542 The house and household utensils. The Yao house does not differ greatly from the Nyasaja habitation which I have already described elsewhere.[1] The accompanying figure (Pl. XIV, fig. 10) gives the circular plan of a hut with a veranda partly open and partly enclosed to form a room. The central pole of the hut is indicated, the hearth (H), the position of the sleeping mats (M), and the place where the water pots are kept (P). The
552 bed may be a bamboo platform supported by forked sticks a foot above the ground (camp-bed), or a slab of wood, over which is spread the sleeping-mat, square. (Pl. XIV, fig. 14.) Seats, stools, are made of logs of wood with conveniently placed branches acting as legs. I have seen a symmetrically carved log with shaped legs all in one piece, which suggested by its form and by the presence of a hollow on the middle of the under surface that it was made in the imitation of an animal. Plank seats with peg legs are now sometimes seen. Wooden pegs are driven into the wall and serve to hang odd articles upon.

[558] The hearth is simply a shallow depression in the mud floor, around which are placed three large stones to support the cooking pots. Sometimes a canopy is built over the hearth, consisting of four upright poles supporting a platform made of reeds and grass, upon which millet and other seed grains are often stored. From this platform lipale (lenje, Chin.), the gourd containing the supply of salt is often hung. The seed grain tied up in little bundles is suspended from the lipale where it becomes very dry and smoked, without any ill effect to the next year's crop. (Pl. XIV, fig. 16.) Four pronged branches of trees are often stuck in the ground with a string tied around the prongs, and used as holders for gourds, salt bottles, etc.; this device is called lipanda (phanda, Chin.). (Pl. XIV, fig. 16.)
419 The smaller utensils include the partridge whistling stick usile (Yao and Chin.) (Pl. XIV, fig. 13), several wooden spoons chikwai (chipanda or cumulowe, Chin.), (Pl. XIV, figs. 11, 12), a number of gourds of various shapes and sizes used as bottles and drinking vessels,

[1] "Notes on some tribes of British Central Africa," op. cit., p. [illegible].

and the baskets and pots. A wooden fish relief may be seen occasionally, but of late years this has been generally replaced by recorded articles.

Around the entire hut, or simply enclosing a yard behind it, there is often a fence about five feet high. In the enclosure thus formed, many household duties are performed, such as the pounding and sifting of grain. The grain store spoken often stands in this yard with the pigeon-loft and possibly a hen-house or goat kraal; these are sometimes found in the open space at the front of the house. If a grain store is built within the hut kraal, it is then known as *ukungu*. Near the pigeon-loft will be seen a pole with prongs supporting an old pot with water for the pigeons to drink. In a tree in the back nearby, there may stand a feeding, consisting of a bark cylinder. Similar cylinders are sometimes used as pigeon-houses.

The large pots for brewing beer are usually set in the yard or on the back veranda, together with a basket of split bamboo for carrying fowls, *ukuhlanda* (Tsw and Chin.).

Gourds. Gourds are grown in the village for use as vessels of various kinds. Different shapes serve different purposes; names are given them according to use rather than shape, though there more or less coincide. Ladles for water or beer, *umemelo* or *ugqu* (*umemo* or *ukhu*, Chin.) are usually long-handled gourds (Pl. XIV, figs. 7, 8, 9). Drinking vessels for beer, etc. *ukiyanda* and a specially large one, *umemba* are usually of the shape illustrated in Plate XIV, fig. 1; sometimes they are like fig. 4, but this shape is more commonly used for water. *Lejanda*, the type illustrated by fig. 5, is also used for drinking or for holding grain. Oil flasks, *ukinsi* (*inupa*, Chin.), are usually of the double-bulbed type (figs. 6 and 9). Salt bottles, *ukinsula* (*ukipuru*, Chin.), are similar to oil flasks. Bottles, *umyu*, used as dancers etc., are also made from gourds, often from those with tubers, *ion* (fig. 3). Other uses for gourds include pipes, snuff-boxes, snares, funnels, and resonators for musical instruments.

Pottery. The art of pot-making appears to have been known to the Tsw for a very considerable period. There is no history relating to its introduction among them. The art is in the hands of the Tsw women. As among all Nyamkani tribes, a particular kind of clay is used and no admixture with any binding substance is made. The pots are simply moulded by hand from base to brim and, without the aid of any wheel or other device, wonderful symmetry is attained.

After drying, the pots are fired by being set on their bases on the ground and a wood fire is made round and above them. They are then sprinkled with an infusion of the *ipungwe* or *ukuski* tree, a kind of millet being used for the purpose, after which the pots are set upon a fire and millet husks are thrown into them and allowed to be incinerated. These customs, a kind of christening of the pots, "insure their turning out well."

No glaze of any kind is used, but they are sometimes coloured red by boiling with a pigment called *ugwa*, prepared from a red sediment found in sluggish streams. The preparation of *ugwa* is in the hands of men and women who make a trade of it, such as a man called

[illegible] Wyul near Sanaha. Sandstone pots are also utilized all over the outside or in patterns with orange, a natural graphite.

Potsherds of a simple character, often of the boiling bowl order, are commonly grouved about the neck of the pots with the aid of a stick of bamboo. There is considerable variety in the size and shape of the pots made. As with gourds, the pot takes its name from the use to which it is put and not from the shape or size. All pots have rounded bottoms; some have a flattened base or standard.

The following variables of pots may be mentioned:

1. *Lotenda*, large pots for hair-washing. These are usually roughly made and seldom have any decoration on them; they stand about two feet high and are wide-mouthed (Pl. XV, figs. 1, 4).

2. *Londa* (*ulonda*, Chin.): water-pots. These are usually well moulded and well finished pots, full bellied, with broad base and a certain amount of neck. They are practically always decorated and often coloured. They are about twelve inches high and twelve inches across the broadest diameter (Pl. XV, figs. 2, 3, 10).

3. *Chinlaga* (*ulinda*, Chin.): cooking pots used for cooking the flour porridge, *upuh*. These are wide, open-mouthed pots six to ten inches high, with belly and more or less straight sides (Pl. XV, figs. 5, 6, 7). This name also applies to the cooking vessel for medicinal concoctions.

4. *Chijungu* (*ungulu*, Chin.): smaller pots of the same type as 3, used for cooking beans, fish, green stuff, and the relish *ndungu* (*ndunu*, Chin.) (Pl. XV, fig. 8).

5. *Ifinda* (*ulinda*, Chin.): the bath water pot. The smallest pot used for heating water to bathe the husband after sexual intercourse bears the same name. It is found among both the Anyanja and the Wayao (Pl. XV, fig. 9).

6. *Ifinda* (Yao and Chin.): the plate, a shallow, wide-open vessel.

Baskets. The basket work of the Yao is all of one type and is done by the men. All baskets are made of plaited strips of bamboo, the free edges of the strips being bound between thicker pieces of the same wood forming the rim, the binding being done with the sinew of a creeper. They are made in various shapes and sizes. Some are rendered waterproof and used as bore vessels. The following types of basket are in use:

1. *Chinda* (*lukuru*, Chin.): a circular, open basket, shallow and wide, six to ten inches in diameter; it is used as a food dish or to measure flour, etc. *Chilungu* (*nungunu*, Chin.), a rather larger one of the same shape, often decorated with beads is used to carry flour, while a still larger basket called *uliputa* is commonly used by the women for winnowing out the chaff from the partly pounded maize (Pl. XVI, figs. 11, 12).

2. *Lulidula* and *ulipunda* (in Chin., both are called *ulungu*): deep baskets usually about as deep as they are broad; the bottom is approximately square, but the rim is circular. *Chilunda* is about six inches high and six inches in diameter; *lulidula* is about a foot in all dimensions. These large baskets are used for carrying any food-stuffs in bulk, e.g. grain and pumpkins (Pl. XVI, fig. 16).

3. *Wimpoi*: this large double basket one half of which fits over the other like a cover, is now very common among the Yao; it was copied from the Swahili *kipandi*. The body is made in the same way as the other baskets, but each half has a broad rim of wood which is always set prettily into patterns (Pl. XVI, fig. 18, and Pl. XVII).

4. *Chimoshi*: the lower wing, a small hemispherical basket combined *mwangwai* by sewing with a sticky substance prepared from the pounded stem of the *mpoon* tree or from the root of the *mpoon* plant mixed with charcoal (Pl. XVI, fig. 12).

5. *Limangale* (*lingu*, Chin.): the lower container resembles in the shape of *chimoyo*, but the strips of bamboo forming the warp and the weft are of different thicknesses, so that spaces are left for the fluid to run through (Pl. XVI, fig. 14).

Mats. In years gone by the Yao made a rough kind of plaited matting of split cane called *chipanda*; it is not seen today. Another type of mat seldom used today is the *kidulo* (*ldulo*, Chin.), made of a number of canes of equal length bound together by several rows of interlacing string (Pl. XVI, fig. 7). Reeds are also used to make the *ngwan* (*ngwan*, Chin.) (Pl. XVI, fig. 10). When dry they are split and flattened out with the smooth surfaces all on one side. A number of canes so flattened lying side by side are then sewed together with native string, and form a clean, smooth mat for sitting or sleeping.

Mats made of plaited strips of sun-dried palm leaf are now in common use, the art of making them, I believe, having been introduced from the coast. Large mats of this kind called *kanda* are used in the chief's courtyard (Pl. XVI, fig. 8). Smaller ones called *mkeka*, or by the old people *mlungu*, made from the leaf of the wild date palm, are used for sleeping (Pl. XVI, fig. 6). Since the advent of the Europeans, mat making has become an important industry, and *kanda* and *mkeka* are to be found in every European house.

A still finer kind of mat, similar in plan and stained in patterns, has lately been introduced by the Swahili. Red and black dyes are generally used; the red is either *mpoon*,[1] or a stain called *mshanda* prepared from the bark of a tree called *mundu*; the black dye is made from the root of a vine, *lilungu* (*ldilun*, Chin.), the Irish bean.

The matting made of these strips of palm leaf is in the form of a ribbon from three to six inches wide, according to the fineness of the strips. The ribbon of matting is sewed into the form of a cylinder by plaiting the edges of the ribbon together in a large spiral. This cylinder of matting is then cut down one side and laid flat, and the cut edges finished off with a plaited mat border (Pl. XVI, fig. 6). It will be seen that, owing to the way they are made, these mats are never quite rectangular. The ribbon of matting used for the circular mats is narrower still and sewed round and round in a flat spiral fashion.

Cloth. The Yao in years gone by made a woven cloth, but the art has long since died out, and I have never seen a piece of native-made cloth. I imagine, inasmuch as bark-cloth is still worn by the poorer people, that the native-made woven cloth was only worn by the few, probably the chiefs. The older cloth was undoubtedly bark-cloth, worn, as I

[1] Vide supra, p. 141.

and the feature of it was the introduction of life-size representations of animals made of bamboo and grass with men inside.

I once saw these at a *namwali* ceremony among the Awisa (q.v.).

12. *Nkula.*—Woman only present; danced on the occasion of a girl's first menstruation.

13. *Litiwa.*—Women only, on the occasion of the quickening with first child.

Y 535

14. *Njeula.*—Men and women, a quick shuffling step while standing in a circle.

15. *Sukusu.*—The body shaking (shoulders) dance of boys, they walk round in a ring, some fifty of them, the drums in the middle; when the bass drum breaks into a quicker time they all start shaking shoulders and bodies with intervals for two or three steps.

16. *Nanja.*—Danced in a circle, men and women alternately.

17. *Nkonde.*—A big dance with *sanji* rattles.

18. *Chilende.*—Dancing boys dance.

19. *Mferusu.*—(1907) men and women; each carries a bango reed filled with pebbles—no drums.

20. *Mangenji.*—A coast dance; palm leaf bags filled with pebbles are tied on the legs.

21. *Sanji.*—A *pas-de-deux*, each man with a rattle and head-dress; for a few moments they wander round each other picking up the time and tune, and then jump into a very fast step dancing and jumping into the air shaking the rattles.

22. *Chimaviavini.*—A *pas-seul* by a man carrying a viol and bow with anklets of small sticks.

Y M 535

23. *Mnawe.*—Danced no longer. At Mponda's village a big crowd used to dance with skins round the loins and wooden anklets: in their hands they carried live snakes which had been rendered harmless by putting medicine over their holes before digging them out. Four drums as in *chindimba* were used. The women all fled away.

M Y 241 M Y [423] N [422] only implement used. Sowing is done after the first rains, about November; the harvest takes place in May to July. Gardens are at varying distances from the villages, depending partly on the soil becoming exhausted after years of cultivation. Boundaries are marked by leaving a line of uncultivated ground, sowing a line of a different crop, tying knots in the young crops at intervals, ditches, etc. In starting a new garden, woodland is often taken; the trees are cut down, leaving stumps 3 feet high; the undergrowth is cleared away and burnt, the ashes distributed over the land, which is then hoed, really very superficially; the earth is then made up into little heaps with a central hole in each, after the first rains four or five grains of the cereal (maize, millet) are dropped in each and covered with earth; as the young shoots grow the hole is more and more filled in.

FIG. 6.

With the cereal is planted the seed of peas, beans, pumpkins, the former on coming up then grow up the maize stalks. The seed is last year's product and not specially selected.

M Y [343] [417] M Y [251] Depredations among crops made by elephant, hippopotamus, large antelope (eland and kudu), pigs and baboons, vary in extent in different districts. Little grass huts are built, raised above the ground like a pile-dwelling, in which watchers are stationed. Fences, sometimes extending for miles, are built. The gardens of the chief are hoed by his slaves or the people of the village. Maize is collected in the cob, and after the outer coverings have been removed is stored; so is the sholwe, millet in the head; beans and peas are stored in baskets. Medicine is put on the ground to ensure a good crop, and a piece of stick is sometimes hung up for good luck.

CATTLE, ETC.

N 231 [422] The keeping of cattle is practically restricted to certain tribes living in districts free from tsetse-fly (Angoni, Wankonde); among these people wealth is reckoned by cattle. The milk is little used; the flesh is eaten only when an animal dies. Marks of ownership are made by cutting the ears (*Fig.* 8). Cattle are kept in open kraals by Angoni, in a compartment of their houses by Wankonde; they are tended by the small boys as a rule. Goats and sheep are kept all over the country. Castration of cattle is a recognised practice (*bufalo*).

N 281 Angoni make their shields from cattle skins; their spear handles are covered with goat hair (beard); hair anklets and armlets in dancing costume are made from goat hair. Skins are used as drums to a small extent.

HUNTING.

M 224 A man intimates to the community around that he is making a hunt by clothing a boy of about ten years in leaves, who precedes him and the men from his own village through adjacent villages; at each village the lad has to lie down and

567 **Slavery.** Slaves were acquired by capture or purchase, or were received as payment. Prisoners taken by the vassals of one chief in a fight with the partisans of another chief became slaves. Slave raids were also made by the Wayao upon the weaker Anyanja or again expeditions were sent out hundreds of miles away into the Chipeta country to buy slaves.

[422] Slaves were a man's goods and chattels, to do with mainly as he pleased, but no man might kill a slave without bringing the case before his chief and obtaining consent. While some were bought and sold and sometimes found their way into a slave caravan bound for the coast, many, perhaps the majority, lived the life of ordinary individuals in the villages. A man who was unhappy in a village and wished to escape from his vassaldom might run away to another village and there commit some act so that he might be claimed as a slave. The custom was to go to the village and sit by the site of a house which had been pulled down after the death of the occupant, and the saying is, "He has been called by the dead man's spirit."

[554] Many a slave has become an important man in the village and slaves were often the trusted advisers of their chiefs, but there was no means of becoming a freeman. Neither a slave himself nor a second party could purchase his freedom. A slave capturing another man in warfare, for instance, could not ask for his own freedom in exchange for his captive, but anyone so taken became, in a way, the slave of a slave, and the master could not sell the second slave without the permission of the slave captor. An old slave might often be allowed to do just as he pleased and to all intents and purposes was a free man, but he was never actually freed. A slave might earn a return for work done for others than his master; part of this he would probably give to his master, but there was no regular tax upon such earnings.

The idea in accumulating slaves seems to have been to increase the population of the villages and hence their power and progeny. This is borne out by the fact that marriage [582] between free men and slaves was allowed. Marriage between a free man and a slave woman was unaccompanied by any ceremony and was therefore rather in the nature of recognised concubinage. Such a wife, if unsatisfactory, could be sold out of the village, but generally she was well treated. The children of two slaves were of course born into slavery; the children of a slave woman by a freeman husband, were not quite emancipated, as the father could not remove the child from the village of the slave mother's master, and in very extreme cases, it might be sold by him.

Women might marry slave husbands and often a master married his daughters to his slave men whom he thought well of. This amounted to a guarantee to the slave that he [421] would never be parted with. A woman with a slave husband could not leave him informally; she could not sell him, inasmuch as women have no property.

643 423 **Land Ownership.** The ownership of all land was vested in the chief, but he appeared to hold it in surety for all the people over which he ruled. Headmen had no land rights.

II. The Political Structure
BEFORE THE WHITES CAME

173 643 167 (*kuhamula lukongolo*), i.e. to surrender to the chief in the area. Also the chief sent out expeditions to capture slaves or he purchased slaves with the cloth and beads he had exchanged for ivory at the East coast.

643 421 Within his territory certain privileges and rights were held by the chief and he had certain religious duties to perform in which the unity of the people in the territory was expressed. In general the chief had rights over any ivory either found or hunted in his territory. If a dead elephant were found the tusks belonged to the chief, though he usually rewarded the finder with cloth. [224] If a man killed an elephant the tusk that lay on the ground belonged to the chief while the other belonged to the killer. [439] The killer's tusk was included in the chief's caravan to the coast and its value paid in cloth to the killer when the caravan returned.

643 651 The chief was also entitled to an annual tribute of food and beer from all villages in his area, but this was used to entertain visitors who came to the court-village.

643 782 The chief's religious duties lay mainly in propitiating the spirits of his ancestors on occasions when the community at large, in contrast to the chief's own private affairs, was either threatened or directly affected. The most obvious occasion was immediately before the rains came when flour was poured on the tree shrine and the spirits of the ancestors asked for good rains. Later when the rains were over a similar sacrifice was made asking for a good harvest. Sacrifices to the ancestors were also made on two other public occasions. They were made when some calamity had occurred or was believed to be impending. A run of unsuccessful campaigns induced Cingwalugwalu, a son of the Yao chief Mponda near Fort Johnston, to ask his father's father's brother to make sacri-

Moravi FR4

M Y 501 When a number are working they take time from the front man, the rear man steering with his ordinary paddle. The passengers sit in the middle, a chief towards the stern. They never lose sight of land even in crossing the widest part of the lake. Stones are now used occasionally as anchors up the lake; grass houses are made to shelter canoes. The smaller canoes are 2 feet to 2½ feet high, the very large ones used to be 4 and 5 feet high; except on the lower river, where canoes have ends similarly shaped, they are made with a bow more pointed than the stern and having a beak (Fig. 15). There is no ornamentation and no figure heads.

M Y [422] In every lake-shore or river-side village or collection of huts will be found one or more canoes; these belong to some one man, others using them paying a fee. At the launching of a new canoe, beer is made and the women dance, and medicine is made for its safe journey.

SWIMMING.

M 481 Not even all lake-shore natives swim, though most do. The art is learnt in childhood and not taught. They are not very fast swimmers, and I do not think could swim very far. They sometimes dive head first and practise staying under water. They swim rather like a dog, both arms coming a little out of water, but not a trudgeon stroke; arms are kept straight. They sometimes swim on the side, but never use the ordinary breast stroke.

GAMES.

M Y 524 Several games are played resembling the game of *ubwa* introduced from Zanzibar (Mancala); *ubwa* is played on a board in which rows of holes have been cut; beans are used as counters.

Mchombum.—A game found among Anyanja and Machinga; it may be played on a *ubwa* board, but is often played in holes made in the ground with stones. The Angoni game *chipalapala* is played in the same way. At Fort Anderson is a lump of stone in which hollows have been made similar to those made in the ground. It is the only piece of stone-work I know in the country. Children and women play knucklebones (*mdodo.*)

A man tries in one breath to keep saying *ubiri-biri-biri* . . . . while another makes a pile of stones from another pile of ten, taking one at a time, saying, "To take and put it there makes one," etc. Men play at guessing in which hand an object is hidden, or one out of ten men sitting in a house has to guess with whom a certain object is. No forfeits.

Tendande (= the spikler) is cat's cradle.

Tiali (hide and seek), one hiding, five or six seeking.

M Y [177] There are no dice games. Cards were introduced from the coast before the advent of Europeans into the country; the games are various and difficult to follow.

M Y 526 A slip-shod kind of wrestling is practised by Anyanja youths; the Machinga

Land Tenure

The rules governing land tenure were those which would be expected of a society which suffered from no land shortage. A man was entitled to as much land as he could cultivate, the limitation being that he should consult the headman as to his neighbours' boundaries. Abandoned gardens could only be taken up with the permission of the original cultivator.[1] 423

MAIN CULTURAL FEATURES

Religion

The Yao are largely Islamized. Codrington remarked that the perpetuation of this faith was distinctly antagonistic to British influence, and it received considerable attention from chiefs and headmen. Schools for the instruction of youth in reading and writing Swahili in Arabic characters were established in nearly every village, where also prayers were made at regular intervals in the day. The Moslem fasts and feasts were also observed, and the Yao were not inclined to embrace Christianity.[2] Their conversion to Islam did not take place till the nineteenth century, long after their first introduction to the Arab traders at Kilwa and Zanzibar, although they had adopted Swahili modes of dress much earlier.[3] 771 797

According to Hetherwick, Islam is strongest on the lake shore and on the east border of Nyasaland, chiefly round the old slave-trade centres. Makanjira's on the south-east side of the lake, and Domira Bay on the west, were the centres of Moslem propaganda. The Moslem population around Zomba and Blantyre consists mainly of Yao men, who have built themselves mosques in their own villages, or use the large mosques of Indian Moslem merchants. In the west districts, lower Shire, Ruo, central Shire, Lilongwe, Fort Manning, the Moslem population does not total more than 732. In the districts round Fort Johnston and Kotakota, the Moslems are one-ninth of the total population, while in Zomba district they number one-fifth.[4]

The Yao pagan religion was a form of ancestor worship. Apart from diviners and medicine men, there was no regular priestly profession. Intercession with the ancestors was performed by the chief, on behalf of the chiefdom, by the headman on behalf of the village, and by the head of the matrilineal kin for his dependents.[5] A man was qualified to approach his ancestors individually only if he had been initiated and had a house of his own.[6] 771 769

Some of the ritual duties of the chief have already been mentioned. When his people were visited by drought or epidemic, or when he fixed the day for the beginning of the millet harvest, he made an offering of flour and of beer poured into a pot in the ground at the grave of a dead chief. The village headman made similar offerings to the spirit of his dead predecessor. The spirits of the dead Nyanja chiefs, ousted by the Yao invasion, were regarded as still powerful in the homelands of their people. For instance, Kangomba, whose shrine was on Mount Soche, used to be appealed to for rain, and on the principle that the most appropriate mediator between a dead man and the living is a descendant of the former, the Yao chief, Kapeni, when he wished to propitiate 771 631 622 775 782

622 558 837 166 hut of one of Meya's wives. Meya's sister wrote a letter to tell him of this and he replied that he could do nothing until he returned. In 1946, Meya returned to be demobilized. The third night after his return he questioned his wives about their fidelity during his absence. They at first held out against him but before long he intimidated them into admitting that they had slept with the village headman. Meya now went to complain to Mapata, who was Cikumba's perpetual mother's brother, and he said that he would come to the village the next day.

When Mapata came he confronted Cikumba with the accusation. Cikumba denied it until Mapata called the women. When they confessed Cikumba was forced to admit his guilt. Mapata now decided to call in an arbitrator, Isa, an important but unrelated headman who lived close at hand. Isa said he would come the following day when the matter could be thrashed out. When Isa and Mapata came they asked the women about the affair in public. They admitted the charge and Cikumba did not deny it. Isa then remonstrated with him for being a bad man and said that he was ashamed to hear about it. Cikumba had to pay £6 10s. to the injured man, Meya, who, however, refused to take it. He argued that Cikumba ought to have behaved as a father to him. But Cikumba had not. He, Meya, could not remain living in the village because his wives would be as Cikumba's wives. Isa said that he could not object because Cikumba had caused the trouble and had broken the village himself. How could he complain? Meya took two-thirds of the huts in the village away with him.

The Headman as a Representative of a Corporate Group

622 689 The headman is not only responsible for keeping the peace between the members of his village, but he is also supposed to control his members in their relationships with other villages. If members take corporate action against other villages, even if they do so without the consent of the headman, the chief will consider the village headman responsible. This was brought out clearly in the relationships between Cikoja, Mapata and Masimbo in Chiwalo's section.

622 689 423 226 Cikoja and Mapata are two of the more important headmen in Chiwalo's section. Masimbo is a minor village headman who lives in Mapata's village area. The quarrel arose over the question of fishing rights in a small pool lying between the two main villages. This pool was excavated by Cikoja and his villagers in 1924 during

a severe drought, and he claimed the rights over it. One day in 1930, some boys from Mapata village came down to the pool with fish-poison. At about noon some boys from Cikoja's village arrived with their traps. When they saw the Mapata boys using fish-poison they told them to desist and tried to take away the fish. This led to a fight in which knives were drawn. One of Cikoja's boys ran back to tell him, and in anger he came down to the pool with some adults. The Mapata boys now ran back to Masimbo who immediately assembled some men and came to the assistance of the Mapata boys. The two groups joined battle immediately and there were casualties on both sides. Mapata heard about this and came running down to separate them. 622 689 423 226

The next morning they took the dispute to Chiwalo. He started by asking why Mapata had used fish-poison in someone else's pool without permission. Mapata replied that he did not know that his boys had gone down there. He said that Masimbo had told him about the conflict and that he had gone down to stop it. He was not aware of it before. Chiwalo now turned to Masimbo and said, 'Masimbo, you are in the wrong. You have caused the children to suffer. You went to make war because of your children. The people of Mapata, they are in the wrong because they did not report to the owner of the pool.' 622 689 423

When Cikoja was asked if he had anything to say he only replied that he was ashamed of what had happened because he was the first in the area, and until then they had been friends. The conflict had arisen because the children had done something which they did not know was wrong.

Chiwalo ordered Masimbo to pay 5*s*. and Mapata 6*s*. to Cikoja. He then told Cikoja that he should brew some beer and share it with the other two villages so that friendship might be restored and the children might go from village to village without fear. The chief's instructions were carried out and normal amicable relationships were re-established.

The way in which the villages acted as corporate groups is well illustrated by this incident. The responsibility of the village headmen for the activity of their members also emerges. The chief found Masimbo in the wrong for causing the fight, but he also fined Mapata because his boys had used fish-poison. The fines were paid by the village headmen, Masimbo and Mapata, to the village headman Cikoja, for they are the representatives of the corporate groups under them. 622 689

In no other field of village relationships is the corporate 621 423

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

621 identity of villages more clearly seen than in the arguments that arise over rights over waterholes. These are usually dug next to
423 a stream or a marsh, or in some other place where the water will percolate into them. The physical labour of digging a waterhole establishes the rights to it, and a village retains these rights if at some time in the past any of its members had dug it.

621 In normal years, and of course during the rainy season, there is enough water for all and no friction arises, but in drought
423 years difficulties arise. Friction between Nampeya and Ciku-
685 wita arose in this way in 1933.
622

During the dry season the waterholes that were normally used were drying up and the people of Nampeya decided to open up a disused one. When Cikuwita's people saw Nampeya's people using it they came to use it too. Nampeya's women saw this and told the other people they had no right to use the waterhole. Words passed between them and eventually there was a tussle between the two groups, during which a waterjar of one of Cikuwita's women was broken. Cikuwita's women said they would take the case up to Ntibwilibwi, a headman of local importance, and when they returned to their village they complained to their headman who took the complaint to Ntibwilibwi. He sent a message to Nampeya to arrange a date on which the dispute might be settled. On that day the members of the two villages gathered at Ntibwilibwi's hut. The dispute was settled amicably: the person who broke the waterjar was ordered to take a chicken and give it to the owner of the jar, and Cikuwita was told to gather his people the next day and make them dig a waterhole of their own.

The villagers in each of these situations had acted with regard to their fellows primarily as members of villages. They had seen themselves as members of corporate groups and had interacted as such. In the dispute in which the jar was broken, the individual responsibility was fixed and compensation awarded, but at the same time the village headman was instructed on behalf of his villagers to make a new well and thereby ensure peace in the future. In all these disputes, however, the headman had appeared as the responsible representative of his village.

567 **Slavery.** Slaves were acquired by capture or purchase, or were received as payment. Prisoners taken by the vassals of one chief in a fight with the partisans of another chief became slaves. Slave raids were also made by the Wayao upon the weaker Anyanja or again expeditions were sent out hundreds of miles away into the Chipeta country to buy slaves.

[423] Slaves were a man's goods and chattels, to do with mainly as he pleased, but no man might kill a slave without bringing the case before his chief and obtaining consent. While some were bought and sold and sometimes found their way into a slave caravan bound for the coast, many, perhaps the majority, lived the life of ordinary individuals in the villages. A man who was unhappy in a village and wished to escape from his vassaldom might run away to another village and there commit some act so that he might be claimed as a slave. The custom was to go to the village and sit by the site of a house which had been pulled down after the death of the occupant, and the saying is, "He has been called by the dead man's spirit."

[554] Many a slave has become an important man in the village and slaves were often the trusted advisers of their chiefs. But there was no means of becoming a freeman. Neither a slave himself nor a second party could purchase his freedom. A slave capturing another man in warfare, for instance, could not ask for his own freedom in exchange for his captive, but anyone so taken became, in a way, the slave of a slave, and the master could not sell the second slave without the permission of the slave captor. An old slave might often be allowed to do just as he pleased and to all intents and purposes was a free man, but he was never actually freed. A slave might earn a return for work done for others than his master; part of this he would probably give to his master, but there was no regular tax upon such earnings.

The idea in accumulating slaves seems to have been to increase the population of the villages and hence their power and prosperity. This is borne out by the fact that marriage [582] between free men and slaves was allowed. Marriage between a free man and a slave woman was unaccompanied by any ceremony and was therefore rather in the nature of recognised concubinage. Such a wife, if unsatisfactory, could be sold out of the village, but generally she was well treated. The children of two slaves were of course born into slavery; the children of a slave woman by a freeman husband, were not quite emancipated, as the father could not remove the child from the village of the slave mother's master, and in very extreme cases, it might be sold by him.

Women might marry slave husbands and often a master married his daughters to his slave men whom he thought well of. This amounted to a guarantee to the slave that he [421] would never be parted with. A woman with a slave husband could not leave him informally; she could not sell him, inasmuch as women have no property.

Land Ownership. The ownership of all land was vested in the chief, but he appeared to hold it in surety for all the people over which he ruled. Headmen had no land rights.

GB 423

There has never been any shortage of land and therefore the plotting out of gardens was a matter which caused little trouble. A man wishing to make a new garden the next season simply marked the site in the bush by scoring some trees or hoeing around some patches of grass and tying the grass ends into a knot. If anyone else came along and hoed this plot, the man who had marked it out still claimed it and need not pay for the hoeing done. Whenever a man was doubtful about a piece of land, he would ask advice of the headman of the village. 423

When an abandoned garden had become overgrown, anyone wishing to take it up applied to the headman who sent him to ask the original owners whether they wished to take it up again. The newcomer could take possession only with their permission. 361

Often if a village were moved during the first season the people simply put up shelters in their gardens. Later, the site of the village was chosen and around it a medicine man sprinkled medicine to insure happiness and prosperity. The tree from which this medicine was made became sacred to the village and might not be used for firewood, or was subject to any other taboo the medicine man might care to make. He might also say, "In this village there shall be no pounding of grain at night," etc. 423 [789] [778]

If a village were to be built near a spot previously inhabited, medicine and offerings were made to the departed spirits of the former occupants to put them at rest and "open" the place to the newcomers. The beer-pot from the grave of some former chief or headman, who was supposed to have directed the destinies of the old village, was brought to the new location and beer placed in it to insure his continued guidance. [769]

In the case of a village into which a number of men had married, the sponsors of the wives went to the sponsors of the husbands and asked permission to move the village.[1] Later, beer was brewed in the new village and the sponsors invited to come and drink and "put foot in the new village." [273]

Relationship. Family relationship among natives presents certain difficulties to the European accustomed to equivalent relationship of males and females on both sides of the family. In the diagram below (Fig. 1) the relationship of the two children (C 5) will be traced. The mother and father (B 10 and 9) are the *achikulu* and *wase* but are addressed as *amao* and *atati*. The maternal uncles older and younger than the mother (B 11 and 15) are called *akwelume* and their wives (B 12 and 16) *akuguse*. The maternal aunts are addressed as *amao*, mother, anyone older than the mother being distinguished as *amao wakulungwe*, "the bigger" (B 13), a younger aunt as *amao wanandi*, "the lesser" (B 17); their respective husbands are addressed *atati*, *atati wakulungwe* (B 14), and *atati wanandi* (B 18). On the father's side the uncles are called *atati wakulungwe* (B 1) and *atati wanandi* (B 5), respectively, for those older and younger than the father, and their wives *amao wakulungwe* (B 2) and *amao wanandi* (B 6). The paternal aunts are called *atati wakungwe* (female uncles) (B 3 and 7), their husbands (B 4 and 8) *atati*. 593 601

Marayi FR4
Ngoni FR5

M Y 241 only implement used. Sowing is done after the first rains, about November; the harvest takes place in May to July. Gardens are at varying distances from the villages, depending partly on the soil becoming exhausted M Y [423] after years of cultivation. Boundaries are marked by leaving a line of uncultivated ground, sowing a line of a different crop, N [422] tying knots in the young crops at intervals, ditches, etc. In starting a new garden, woodland is often taken; the trees are cut down, leaving stumps 3 feet high; the undergrowth is cleared away and burnt, the ashes distributed over the land, which is then hoed, really very superficially; the earth is then made up into little heaps with a central hole in each, after the first rains four or five grains of the cereal (maize, millet) are dropped in each and covered with earth; as the young shoots grow the hole is more and more filled in.

FIG. 8.

With the cereal is planted the seed of peas, beans, pumpkins, the former on coming up then grow up the maize stalks. The seed is last year's product and not specially selected.

M Y [343] Depredations among crops made by elephant, hippopotamus, large antelope (eland and kudu), pigs and baboons, vary in extent in different districts. Little [417] grass huts are built, raised above the ground like a pile-dwelling, in which watchers are stationed. Fences, sometimes extending for miles, are built. The gardens of the chief are hoed by his slaves or the people of the village. Maize is collected M Y [251] in the cob, and after the outer coverings have been removed is stored; so is the *ukuhwer*, millet in the head; beans and peas are stored in baskets. Medicine is put on the ground to ensure a good crop, and a piece of stick is sometimes hung up for good luck.

CATTLE, ETC.

N 231 The keeping of cattle is practically restricted to certain tribes living in districts free from tsetse-fly (Angoni, Wankonde); among these people wealth is [422] reckoned by cattle. The milk is little used; the flesh is eaten only when an animal dies. Marks of ownership are made by cutting the ears (*Fig.* 8). Cattle are kept in open kraals by Angoni, in a compartment of their houses by Wankonde; they are tended by the small boys as a rule. Goats and sheep are kept all over the country. Castration of cattle is a recognised practice (*bufula*).

N 281 Angoni make their shields from cattle skins; their spear handles are covered with goat hair (beard); hair anklets and armlets in dancing costume are made from goat hair. Skins are used as dress to a small extent.

HUNTING.

M 224 A man intimates to the community around that he is making a hunt by clothing a boy of about ten years in leaves, who precedes him and the men from his own village through adjacent villages; at each village the lad has to lie down and

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

crop failures. Also I was told that important village headmen are buried with their heads pointing to the east.

The Yao concept of the past is reflected in the principles of political organization of these Machinga chiefdoms. The invasion is the datum point from which rank mainly stems. We may classify modern headmen into: those who were in the area before the Yao invasion, i.e. the Aborigines; the Invaders; and those who have come in since the invasion and have had to submit themselves to the Machinga chief, i.e. the Newcomers. The principle behind this classification of headmen is fundamental to Yao political structure. Stated most simply it is the rule that MacDonald quoted in describing the development of local organization: 'However large the settlement may become the man that is first in is the chief or headman.'[1] This is, of course, somewhat of a simplification, but the rule contains the essence of the principle. It was reversed for the Aboriginal Nyanja because the Yao subjugated them. But the claims of the Nyanja chiefs to rank because they had occupied the land first were recognized by the Yao who absorbed them into the social structure in positions of high rank.

But the principle holds among the Yao themselves, and for the Nguru in their movements after the White conquest. The operation of the principle is clearest in the structure of small local areas such as Chiwalo's. When Chiwalo's area was first settled, just after World War I, there were large tracts of unoccupied land. The first headmen to move into this region were Cigwaja, Kapaloma, Nyanje, Makata and Mumbwa. The local chief Chiwalo followed Cigwaja, but as Cigwaja was one of the Invader headmen under Chiwalo during the period of invasion, he now recognized Chiwalo as the chief. The area that is now Chiwalo's chiefdom was divided out among these five headmen. As other headmen came into the area they had to approach one of these five for land rights. These, when granted, were granted irrevocably in a block to the new village headman who then had sole rights to distribute the land afterwards. If he had the land to spare, he may have granted a portion of it to yet another village headman, and this action was also irrevocable. The land occupation pattern in any particular area is therefore extremely complex, because in addition to the village garden areas, indivi-

[1] MacDonald, *Africana*, i, 147. See p. 35 above.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

duals may hold garden plots in other village areas which they have temporarily borrowed in a private arrangement with the individual owner. But when the system is seen in relation to the pattern of occupation of the area, it is greatly simplified. Each garden may be traced back to the original owner through three or four village headmen. The pattern of the reversion of rights follows the same system. The garden land of a village which has recently moved in and is moving out again reverts directly to the village headman who granted it. If he has moved out it reverts back to the village headman from whom it was in turn acquired.[1] These original landholders form the central points of locally organized areas to-day. For example, in Chiwalo's area there is Chiwalo at the top of the scale, then there are Kapaloma, Cigwaja, Mumbwa, Makata and Nyanje as the most important village headmen, and they take precedence over any of the other village headmen. All the others who have come into the area since then, of whom many are Nguru, rank very much lower.

From the smallest village to the chiefdom as a whole, therefore, there is a series of overlapping areas of organization. In any particular area chosen at random in a chiefdom as large as, say, Kawinga's, there will probably be two or three small villages which recognize the primacy of one of their number. The headman of this village may be called in to arbitrate in disputes over land or personal quarrels or even in the private consultations held after the death of a village member (*mapeto*). But the superior headman in turn recognizes *his* superior who was in the area before him. This system is extended over larger and larger areas, each headman in turn recognizing some other headman who was in the area before him, until ultimately the primacy of the Invader chief over all his headmen is established by the same principle. There is no clear-cut district organization as among the Zulu and Bemba.[2]

[1] See also 'Preliminary Notes on Land Tenure and Agriculture among the Machinga Yao', *Human Problems*, x (1950), 1–13. This system of land-holding has been called 'estates of holding' by Gluckman. See his *Essays on Lozi Land and Royal Property*, Rhodes-Livingstone Paper, No. 10 (Livingstone, 1943), p. 29 ff.

[2] See the essays by Gluckman and Richards in Fortes, M., and Evans-Pritchard, E. E., *African Political Systems*, Oxford University Press for the International African Institute (London, 1940).

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

came to the village and in accommodating strangers while he was away. He told them that disputes were to be referred to the headman immediately. Turning to the new headman he said he had to report anything unusual that occurred in the village, and that he was authorized to arbitrate in small cases in his and surrounding villages. 622 537

Kawinga then left the centre of the crowd and went back to where he had been sitting. Then an officiating headman, addressing particularly the women, said, 'Only a few months ago there was a quarrel between the present chief and his elder sisters. These women ran away to Malemia's area in Zomba district without reporting the matter to anyone. This must stop. With effect from to-day any troubles must be brought to the headman without delay: he will settle them. A tree cannot grow without branches and a headman or a chief cannot be known without his people's respect. Do not behave as children. This man cannot do things alone: he must have your help. We leave him in your hands and we do not want to hear about any more trouble. Follow all the instructions the chief has given you.' He took his leave and Nyenje was taken back inside the hut. The people now dispersed to where there was beer and dancing.

The Structural Reincarnation of Village Headmen and Perpetual Relationships

There appear to be a number of significant aspects of the installation ceremonies. First, there is the ritual death and rebirth of the village headman. The heir is 'killed' by a blow with the fist on the forehead, but is reborn the headman. The Yao do not believe that the spirit of the headman is inherited by the heir;[1] he has only eaten the name.[2] But socially he is born again and, logically consistent with this idea, he takes the wives of his predecessor without further marriage negotiation. He also takes over the property of the dead man, his clothes and his huts. 622 829 [587 428]

But this structural reincarnation of the headman has the important implication that the headman is immortal. He shares this characteristic with the group of which he is the leader. When 622 829 601

[2] *Kulya lina* is a synonym for succeeding to headmanship.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

562 601 'sisters' and 'mothers' because alternate generations are merged in kinship terminology and in behaviour. A man's sister's daughter, for example, is called 'mother', and her daughter (his granddaughter) in turn becomes 'sister'. A woman calls her male matrilineal descendants 'children' (*muanangu*), or 'grandchildren' (*yisikulu*); her matrilineal male progenitors 'mother's brother' (*akwelume*), or 'brother' (*alumbwangu*).[1] By extension, therefore, another way of expressing common matrilineal descent is to say that two people are the children of one person, *ubanakajumo*, even though that person may be their great-grandmother. A term which is almost synonymous with this is *mucitumbu cimo*, 'in one womb', used as 'we were conceived in one womb', though once again the reference may be to a common grandmother. But the inclusiveness of these terms varies in different contexts. Any may refer to the matrilineage of maximal span within the village, or to a section of the matrilineage seen as a segmented organization of parts. It is only by reference to the particular ancestress that the range of the term may be determined.

The Unity of the Matrilineage

613 A person identifies himself most closely with the members of his matrilineage from whom he expects most help and whom he, in turn, is expected to help. If he is called upon to pay a heavy fine it will be the members of his own matrilineage who will club together to find sufficient money. They, more than others, [753] support him in his quarrels. They come to his aid when he is ill or injured, by consulting the diviner and trying to find the sorcerer who is causing his illness, and by finding medicines which will bring him back to good health. They send him money if he has left the country and needs it to return. The goods he brings home from the labour centres will be shared mostly [764] among his matrilineal relatives. They will find the food to be used at his funeral and also see that his burial is properly carried [438] out. He owes these duties in turn to them. His property will stay almost entirely within the matrilineage after his death.

613 763 Relationship, unless qualified, is looked upon as being entirely matrilineal. This is well illustrated by the beliefs about the

[1] She most commonly addresses them as *acimwemi*. See p. 147.

3:Stanaus D-5 (ca. 1912) 1922 FT7 Yao FT7

generous and popular, the donations may mount up to a useful sum. Dancing goes on late 843
into the afternoon when all return to the village.

The man may not speak to his guardian again until after the birth of the child. The two women guardians, the *nkumwal* and the *nabanga*, as a rule cease sexual intercourse with their husbands during the same period or, at all events, during the last month before the birth of the child.

The child born of a woman who has not gone through *Lóiwe* is buried alive. [847]

Chieftainship. The Yao when they migrated to their present country were headed by a number of their chiefs. These eventually settled in different areas adjacent to one another, 622
each ruling over a considerable tract of country. The chief was supported by a number 643
of headmen, each of whom looked after a village; the chiefs and headmen in turn being assisted by the village elders.

Often among a chief's counselors one found a number of his relatives, and sons and 643
brothers were often made headmen. A man assuming chieftainship often had to dispose of a brother of whom he was afraid.

Chieftainship is hereditary, the chief's name being passed on to each successor. Succession is to eldest son of the eldest sister or a son of some other sister. Failing these, it passes to a grand-nephew. If there is no acceptable adult nephew, a full brother may succeed.

Mackenzie's account of the Malenya's succession[1] is, I believe, incorrect. The old [114]
Malenya (Nalutumbo) was succeeded according to custom by his nephew, Kambola who, as Malenya, was called Ndalama. Kumtaja was not a younger brother of Nalutumbo or Kambola, but a cousin of the latter. Ndalama was succeeded by a nephew, not the eldest but the second son of a sister, the eldest having already succeeded to the chieftainship of Kumtaja was therefore ineligible. The present Malenya will be succeeded by a grand-nephew, the son of a daughter of his eldest sister, his sister having no sons.

A successor inherited all the wives and slaves of the deceased chief and all his goods 643
and chattels, guns, ivory and gardens. Any small possessions might be divided among the 428
deceased's children and in the case of guns, those who had always used them often laid claims not to be separated from their weapons; these claims were often allowed by the new chief.

In the same way, any ordinary man's successor is his nephew, the son of a sister, who inherits all goods and chattels and slave wives, but not free-born wives, nor gardens, which go to the free wives. Stock is generally divided among the children.

Before 1891, when a British Protectorate was formally declared over Nyasaland, each 643
chief ruled supreme. He was consulted as to the dates for *Unyago*; he directed the harvesting, etc.; he proclaimed war and generally was paramount among his people. It will be seen, therefore, that he was a busy man, but he received no direct remuneration. His [554]
wealth consisted of slaves and ivory. Slaves he obtained in warfare and as blood money,

[1] Op. cit., vol. I, p. 186.

11:Sanderson D-5 (ca. 1920) 1920 FT7 Yao FT7

601 In Table II, the relationships mentioned in Column 1 are defined in Columns 2-8.

Thus a brother (of (*a*)) is, *inter alia*, the son of (*a*)'s father's brother (Column 3), the husband of the daughter of (*a*)'s father's sister (Column 4), and so on (see Table II).

Before the tables can be fully intelligible, however, a brief explanation of terms having no English equivalent is necessary :—

(*a*) *Akwepo* and *Akowa* are terms exclusively given to relations by marriage.

Akowa is a brother or sister by marriage—it is not advisable to use the terms "brother-in-law" or "sister-in-law" as they are too circumscribed.

Akwepo has not even an approximate equivalent in English owing to the diversity of relationships included (*e.g.*, wife's mother and great-grand-daughter's husband).

Meidani is a special term given to the children of a paternal aunt or maternal uncle, to distinguish them from those of a paternal uncle or maternal aunt.

[582] *Meidani* are not only allowed to marry but are encouraged to do so.

Akwiwana is used only for a maternal uncle, and *chipwa* is the reciprocative term for a sister's son.

The use of inverted commas with English terms (*e.g.*, "brother") indicates that the person is regarded by the Yao as being of the same relation to him as the term usually signifies in English. Thus a Yao regards the son of his maternal aunt, for instance, as being exactly the same relation as his own brother (by the same parents); this relationship is indicated as "brother."

601 *Succession.* The common rule of discriminating between the children of a brother and sister and those of two brothers or of two sisters is present here, and is combined with the equally common one of succession to the sister's son.

The rule of succession is, strictly speaking, to the eldest son of the eldest sister. If, however, a man and his advisers consider him to be unsuitable, or in event of his death, the succession passes to the following in order of precedence : younger son of the eldest sister, younger son of a younger sister, and son of own daughter.

Only by general consent can the succession pass elsewhere, but it not infrequently happens that intrigue procures the death of all the legal heirs of a wealthy or powerful man. In such cases, but only by general consent, the succession may pass to a brother (by the same mother), any "son," or even to a powerful vassal ; it is often felt that a wealthy or influential man is likely to conduce to the peace and welfare of the country rather as the chief, than as a probably turbulent vassal of a man whose succession is apt to be controversial. On the death of such a man, however, matters are often in a state of chaos owing to the multitude of claimants, the members of the two families ; I have known two such cases. A man, also, who

[TEXT CONTINUES ON Page 374--ANALYST]

11:Sanderson D-5 (ca. 1920) 1920 FT7 Yao FT7

601 602 knows that he is not legally justified in "entering into the name" is loath to do so, as he knows that he is not expected to make a successful chief. The defeat of Salimu, the fifth Makanjila, by the British in 1893 was, and still is, ascribed to the fact that he belonged to the male line.

The term *chipwa* (*mwipwagwao*, "his *chipwa*") may be used for any child of a sister. A female title (common amongst the Yaos) descends to the eldest daughter of the eldest son of the bearer of the title.

589 601 *Marriage.*—Relatives who are forbidden to marry are called *achidawako*; they include all those given in the table except *asidani*, *achiwesukulu* ("grandchildren"), and the wife of the maternal uncle. An heir, on succeeding, may marry the wife or wives of his maternal uncle, but not if he has previously married one of his daughters. 589

It is legal, though rare, for a man to marry the daughter of his own child (*chiwukulu*).

619 601 "*Brothers*" *and* "*Sisters.*"—The term *ulongo* is used to describe an exogamous clan, and the members are known as *mlongo* (singular)—*achalongo* or *wa chilongo*, collectively. This word *mlongo* is probably a corruption of *wa ulongo* ("in the clan") as it requires the use of the term *mjakwe* (*ajao*) "a companion," instead of the possessive pronoun. Thus *mlongo mjakwe* (*achilongo ajao*), "his (their) clan relatives" (instead of *mlongo jwakwe*, *achalongo wao*).

601 There is no general term corresponding to the English "brother." The nearest is *alumbu*, which describes the relationship between a "brother" and a "sister," it is rarely used by women, however.

The elder "brother" of a man is called *akulu* or *achinwene*. These terms are used for all sons of a father's elder "brother" or of a mother's elder "sister," and for the elder brother by the same parents. They are also used by a woman for any "brothers," older or younger, senior or junior, in preference to the term *alumbu*.

Mpwanga is used for a son of a father's younger "brother" or of a mother's younger "sister," and for a younger brother by the same parents. It is used by a woman for her "sisters" in exactly the same way, but is never used by a woman of a man.

A man calls his "sister" *chewali*, collectively, *mwanjawa chewali*; a girl refers to an elder, or senior "sister," by means of the same term; a man refers to a "sister" as *alumbwangu* or as *chewali*.

The term *chiwukulu* is used for a "grandchild" (*mwiwukuluwangu*, "my 'grandchild'").

"*Father*" *and* "*Mother.*"—A paternal aunt is distinguished as *atati wakongwao* ("female father") if necessary, though she is, of course, not addressed as such. The elder brother of a father is referred to as *atati wakulungwao* ("the great father"), his younger brother as *atati wanandi* ("the little father"). Other *achatati* are similarly distinguished.

11:Sanderson D-5 (ca. 1920) 1920 FT7 Yao FT7

408 It is becoming increasingly evident, however, that the law of succession is being avoided, not by extension of the number of marriageable relatives, but by laxity in the observance of the law itself. Nowadays the legal heir is never quite sure of his position, though, as a matter of fact, there is not now much competition for a position which, under European rule, is often exacting and yet unprofitable.

581 Moreover, owing to the abrogation of the drastic native laws regulating the sanctity of the marriage tie, marriages are becoming increasingly temporary in character. This is reflected in the system of relationship, as the relatives by marriage are becoming equally temporary.

1: Tew E-4 (no date) 1950 FT7 Yao FT7

expressed also in the speeches by the marriage sureties. The couple are exhorted to refer disputes to the sureties, and to consult the diviner in case of sickness.[1] After the rite these two sureties have special responsibilities towards the couple; grievances are referred to them, and they must be present when adultery cases are heard in court. If the marriage witness ceremony has not been performed, the relationship is not regarded as legal and no adultery compensation can be claimed by the husband. 585

Divorce used to be a private affair, which was merely signalized by one party giving to the other an arrow as a token of separation.[2] Nowadays all divorce cases go to court. The woman is usually asked to choose between her husband and the adulterer, and the compensation paid to the former, if she decides to leave him, is higher—amounting to about 10*s*. A man can be sent away from the village by his wife's kin, but if he has given no grounds for divorce he can claim compensation and will also take back any gifts made to his wife. A few small gifts to his mother-in-law are not reclaimed. Divorces are easily obtained and frequent. Grounds for the divorce of a man may include failure to pay hut tax, one of the specific duties of the husband. 586 [431]

The custom of making a marriage payment is recorded by Johnson[3] (on the east coast of Lake Nyasa) as a relatively new adoption. When given it is divided between the bride's father, mother, and mother's brother and brother.[4] 583 177

Slavery

Domestic slavery was an important institution in the Yao social system. Slaves were obtained by capture, purchase, or in compensation for injury.[5] A man would pay a debt by giving slaves (wives or members of his matrilineal kin group) to his creditors.[6] A man might voluntarily enslave himself to a man having charge of many women, as a means of obtaining a wife.[7] The children of a free man and a slave woman were not emancipated, as their father could not take them from the village of their mother's master, who had the right to sell them.[8] Slaves took part in the ordinary life of the village; women slaves ranked as junior wives of their masters and shared the usual work of women. Men might be supplied with guns for hunting or might accompany their masters to war, trade for them, spin, weave, sew, make baskets.[9] The institution of domestic slavery was an expression of a dominant motif in Yao culture—the association of status with a large number of dependents. Its abolition by the British was in itself a major blow to the prestige and authority of the chiefs. 567 [554]

Information about the social organization of the Yao in Portuguese East Africa is scanty, but it is in agreement with what is known of the Nyasaland Yao; Heckel, who knew the Yao in Lindi district, Tanganyika Territory, confirms the correctness of Stannus's account of the South Nyasa Yao. 184 602

The Yao came into Nyasaland in small parties of kinsmen. Their experience and their superior weapons soon enabled them to dominate the Nyanja among whom they settled, and today they dominate the population of the Southern Province. They are organized into loose groups of villages, under petty, independent chiefs. They seem 175 [621] [631]

cipete yearly in the great initiation festival for boys and girls. Consequently as they repeat each year the lessons of their own initiation, the ceremonies are the main vehicle of Yao culture.[1]

There are also two Moslem ceremonies:

(1) *Jandu*, the boys' Moslem baptism, which takes about seven days, and is usually worked in with *lupanda*:

(2) *Nsondo*, the girls' Moslem baptism, which is the same as *jandu*,

but usually quite separate from *ciputu*. It is important that the wife of a Moslem should have her *nsondo* so that she knows how to prepare the food properly at Ramadan.

Menstrual and Other Taboos

Menstruation is held to be dangerous. A special mat is used by the woman during this time, and is rolled up and kept during the rest of the cycle. The hut is completely replastered after menstruation. Intercourse during menses leads to disease of the man. Sexual contact is dangerous to persons at certain other periods: during initiation ceremonies, during mourning, and for babies who have not been through the protective rite. The danger is thought to lie in *ndaka*, a dread disease characterized by swelling. This may be transmitted by salt in the food. Deaths are often attributed to 'salt'. Much of the significance of the mourning is that medicines are prepared which protect the mourners against the dangers attendant on sexual activity.

Burial Rites

News of a death must be sent to the chief by a messenger carrying a single fowl. The chief gives a present of calico for wrapping the body, and a goat for the burial men. These are called *awilo*, neighbours unrelated to the dead, who volunteer for certain duties. They prepare the body for burial and carry it in procession to the graveyard outside the village. No uninitiated person is allowed to see the funeral. All who attend the burial are prohibited from sexual intercourse for one month. After this time the prohibition is lifted by a ceremony of beer drinking and feasting, and on the following day all fires in the village are extinguished, and then relit, and the mourners are shaved. A year later beer is brewed for a final ceremony.

For a period after her husband's death a widow is unclean, and has to be purified by ritual intercourse with a man who is paid. The widow is not allowed to remarry for two or three years. A widower leaves his wife's village, after receiving a parting gift. The widows of ordinary persons are not inherited. If a man has himself a 'name' (rank and social position), he has an heir, who inherits also the wives of his predecessor. But if the heir (the maternal nephew) has married a cross-cousin (mother's brother's daughter) he would not consider the wife's mother as his inherited wife.

Before the burial the dead man's hut used to be destroyed, together with his possessions. Immediately afterwards a consultation is held as to whether retaliatory action against sorcerers is called for. The *awilo*'s duties include not only the conducting of the burial, but also the subsequent inquiry and the conduct of the second ceremony, the beer drinking, at which they shave the mourners. A man who has

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

villages, however, the headman's activities may be as circumscribed by ritual prohibitions as the chief's are. 622 554

The village headman is subject not only to mystical dangers but also to other dangers deriving from his position of authority. It is significant that villagers never go to a diviner to find out the cause of a village headman's death. When I asked informants why this was so, they said, 'Well, what's the use of it? He has enemies on all sides in the village who are trying to kill him with their magic.' In harmony with this view of village headmanship, the symbolic object which represents the village headman in the diviners' gourds I have seen, is a small ring of grass (*singwa*), a copy of the grass cushion women place on their heads when they are carrying loads. This symbolizes the ring of enemies which surrounds the village headman. The saying 'the tortoise defecates on the one who carries it',[1] usually applied to chieftainship, applies equally well to a village headman. 622 787 578 482

A village headman may expect little material benefit from his position of authority. If he is an Administrative village headman he may be paid a small annuity of 5*s*. or 10*s*.[2] Returning labour migrants may give him a blanket or a military overcoat, or perhaps a few shillings, but this is not usual. If he is not a strict Moslem he will almost certainly be given a pot of beer from every brewing made for sale in the local 'club house'. On the other hand, if an important stranger, particularly a White official, arrives in the village he feels he must give his guest a chicken. It is mannerly to reciprocate with another gift, but not all Whites know this, or, if they do, do not observe it. In particular if the chief comes to his village, he will be expected to entertain him and here can expect no recompense—the chief 'eats from his country'. 622 651 431

The Yao know that the position of headman is no sinecure. Frequently the one chosen to succeed refuses to accept the position, especially if he is well placed in employment. It is significant that the word for an heir is *litegwa*[3]—the one who is trapped. An 622 554

[1] *Ngonjo jikunyela usyene iwajigele.*

[2] Until recently this was true. As I was leaving the field in 1949, I heard that the Administration had decided to abandon this system in favour of one in which only group headmen would be remunerated.

[3] Substantive form of the passive of the verb *kutega*—to set a trap as for animals. This word is not widely known, especially among the younger Yao.

765 might not break up for a week, but the practice was often modified to some degree, people returning to their homes during the day and coming back each night to sleep in the deceased's village. At the present time, there is a tendency to cut the proceedings short, and the mourners generally disperse on the second day after the funeral. This period of waiting is usually whiled away by playing and singing *chindimba*.

768 On the day before the company leaves the village — now, often on the day after the
765 funeral — the ceremony of shaving the head takes place. The *awilo*, assisted in the case of a large party, by those who helped at the burial, shave the heads of all the dead man's relatives. When this is completed, they begin to tear down the deceased's house. The grass from the roof, with the hair removed from the heads of the relatives, is carried to the cross-roads and burned. The walls of earth are torn down and made into a heap; on the top, a stick is raised, and at its base is placed the dead man's snuff box. Sometimes a cactus euphorbia, *ngachi*, is planted on the mound and cassava round about. The snuff box is kept replenished with snuff. This, with the cassava, is reserved for the *awilo;* no one else may partake of them.

While the house is being pulled down, the chief *mbilo* ties around the neck of the widow a single string of beads or a small piece of calico, *ng'onji*. After the house has been demolished, the *awilo* return to their homes and on the following morning, everyone else departs.

767 The position of *mbilo* is a strange one. Every man in the course of his life probably acts as undertaker for some friend; many have probably performed the service several times. He receives no regular payment, but beads, and, nowadays, coins are often thrown into the pot of water with which he wets the heads of those he shaves after the funeral, and he has the freedom of the village in which he has so acted forever afterward, the degree of freedom being determined by the distance which he has travelled to officiate. When Wandalama died, a headman named Chisui from Makanjila's on Lake Nyasa, over a hundred miles away, acted as one of the *awilo*. The occasions on which he revisited Malemya's village are
[431] well remembered, as they were marked by much frolicking and some obscenity. He was the recipient of enormous presents of fowls, sheep, and anything else he cared to take, and having commandeered men from the village to carry these gifts for him, he would leave, accompanied by all the people, yelling and shouting their joy at seeing him again.

Any fowls or other provisions that friends may present to the deceased's relatives at the time of the funeral to help defray expenses are given to the *awilo;* no one else may eat them. Some may be kept against the next death in the family.

A few days after the funeral, recourse is had to the chief to settle whether any action
768 must be taken in regard to the cause of the death. Some near relative of the dead man will
622 be chosen for this purpose; he must not be shaved by the *awilo* at the time of the funeral. The consultation takes place at some secluded spot outside the village. The chief always brings some one with him to witness what is said. On arriving at the appointed place, the chief salutes the unshaven mourner who is probably accompanied by other relatives, and

3: Stanzas D-5 (ca. 1912) 1922 FT7 Yao FT7

843 538 when in child-birth there is delay in delivery it is said of the woman "*Ahalehee*," "she is stuck," from *ha-halehee* "to be suspended, to be caught by a thorn"; *wajeja*, well dressed, is a slang exclamation meaning "everything, everything is out!" The verse refers, of course, as all obstetricians will recognize, to the moment of crowning of the oncoming head during parturition when it appears to be stuck; then suddenly it slips over the perineum and "everything, everything is out."

843 533 The *nahanga* now gives way to the songs of the other women. In different districts different versions of the songs are sung, but the other women will quickly pick up the refrain of the song sung by a woman who has come in from some distance.

843 After these songs, the *nahanga* instructs the woman and her husband in the care they must take until after the child is born. Macdonald says, speaking of the instructions "but of the quality, we prefer to be silent."[1] What a pity he allows no one else to judge!

The woman is especially cautioned against sitting with her legs crossed; they must be kept apart lest the child in her womb be suffocated. She is also told many useful things concerning her pregnancy and confinement. The husband is cautioned to cease intercourse with his wife or if he has intercourse, his wife may not lie on her back, lest the child be injured.

While this instruction is going on, all the assembled women cook and eat the feast [751] which has been made for them. When all has been said, the *nahanga* anoints the man with castor oil, which has in the meantime been warmed, and ties round the neck of the woman the *litiwe*, a cord made of plaited bark-cloth with a tassel in front; at the base of the tassel white beads are strung for good luck, and at the end of the tassel, red beads are affixed, having symbolic reference to the haemorrhage at the time of childbirth. The woman wears only a strip of calico of two hands breadth called *nlatu*. She is anointed on the head, body, and limbs.

The tying of the *litiwe* is the sign for dancing to begin. It is a dance in which women try to excel one another. They come with all their tattoo marks on buttocks, thighs, and abdomen renovated; they wear diaper-fashion a narrow strip of cloth, always black in color, and round their bodies numerous strings of beads. With the beginning of the dancing, their other clothes are thrown off and practically naked, they vie with one other in exhibiting their charms and skill in dancing, which afterwards becomes the subject of much discussion among the women onlookers. "So and so is really too old and skinny for such exhibition," and "So and so has buttocks as flat as a wall," while "Such and such a one is fat and beautiful and dances wonderfully, with such *abundos*," etc. In front of the woman [431] is set a wooden plate, in front of the man a mat, and on these are thrown donations by the dancers and onlookers, consisting of beads etc., or nowadays pennies and small silver coins to help to pay the expenses of the entertainment and, in the woman's case, to buy medicine which may be necessary should the baby fall ill. When the wedded couple are

436 calico currency was an impossibility.'[1] The Africans could hardly have resisted the change over to a money economy. The taxation system introduced in 1893 was based on the Governor of
436 Zululand's Proclamation III of 1887, and ruled that a tax defaulter
651 was liable to be conscripted for labour until he had earned the
687 amount of his tax. Coffee estates owned by Whites in the Highlands were at the same time in need of labour.[2] Tax was then taken in kind but it was soon changed to cash as a further inducement to Africans to come on to the labour market. The Africans were forced into the cash economy of the Protectorate even if they were unwilling. The measures were so successful that in 1899 the *Gazette* announced that the labour market in Blantyre was flooded.[3]

Modern Economic Structure

177 In modern Nyasaland, the wants of the Africans have become even more varied than they were in the earlier days. Most younger
511 men wear European-type clothing and shoes. Many own bicycles and sewing machines. Many houses have glass windows and panelled doors and most of them are furnished with some rough furniture which has been bought from local craftsmen. Many have beds and mosquito nets. Few women cannot boast of enamel dishes to replace their clay pottery or china cups to replace drinking gourds. The food habits of the peoples too have broadened. Most households use sugar these days, and many people drink tea. I should say that all households occasionally buy soap. Certainly all need salt, which formerly was burnt from the saline grass around Lake Shirwa or dissolved out of special soils in Portuguese East Africa. The stock-lists of an Indian-owned village shop in Chiwalo's area and of an African-owned canteen in the same area, which I have set out in Appendix A, indicate the range of the wants of the modern African.
434 It is clear that these wants are over and above food require-
463 ments. The people in these tribal areas live primarily on the

crops grown in their gardens. For their other wants they need cash, and they obtain it either by the sale of their agricultural produce, by trading with their fellows, or by seeking work either within or outside the area. The sale of agricultural produce is probably the most important. A few Africans earn a small living as blacksmiths, bicycle repairers, diviners and leeches, fish pedlars and tailors. There are some African canteen or small shop owners, but this field is dominated by the Indians, who between them have a few dozen village and roadside stores.

A certain amount of money is sent or brought home by labour migrants. I could not estimate how much this is for each household. It cannot be very high on the average, because not a great proportion is working at labour centres outside the area of study.[1] Within the Territory there are few opportunities of earning wages. In Jalasi's area there are one or two White tobacco estates, which employ at the most a few hundred labourers, and a number of Indian storekeepers who may between them employ a hundred men. Otherwise the Government itself, through the Agriculture Department in particular, may employ a hundred or more labourers. There are more opportunities south of Chikala and in the densely populated Malemia area where a considerable number are employed in the neighbouring township, Zomba, and on the surrounding estates. The cash income per adult, male and female, in the area where this study was made probably does not exceed £40 to £50 per annum, and the Yao rely mainly on the sale of their own produce to earn this amount.

[1] I estimate from genealogies that about 22 per cent of the men over the age of 18 were at labour centres in 1947–8. Table 3 of the 1945 Census shows that, excluding those in the Army, 28 per cent of the men over the age of 18 were away from Liwonde and Fort Johnston districts when the census was taken.

STOCK SOLD AT AN INDIAN-OWNED STORE IN CHIOJA VILLAGE, 1948

(Prices where I recorded them)

●435 Cloth at 2/- to 4/6 a yard.
443 Blankets at 8/- to 20/- each.
Women's blouses, 6/9 each.
Men's vests.
Shirts and shorts (together 18/-).
Modern men's caps.
Scarves.
Sewing thread.
Cooking utensils—Pot diam. 6 in., 7/6.
Tin plates, 2/- each.
Hoes, 2/10 to 3/6, according to size.
Salt (1*d.* a cup holding about 4 oz.).
Soap (1*d.* or 2*d.* per tablet, according to size).
Tobacco (1*d.* and 6*d.* a packet).
Cigarettes at 1*d.* a packet of 10.
Tea, 1/6 lb.
Drink glasses.
Ink.
Exercise books.
Playing cards.
Shoe polish.
Shoe whitening.
Pads.
Envelopes.

STOCK CARRIED BY AFRICAN CANTEEN, LA. SMALL SHOP HOLDER

12 jars of solid brilliantine.
80 cakes of blue soap.
120 cakes of red soap.
100 packets of 10 cigarettes.
100 packets of tobacco.
6 small mirrors.
25 strings of beads.
60 lb. of coarse salt.

302 Shaving is a rite practised in mourning.[1] Some old men and women, especially medicine men, make a practice of never cutting the hair and never washing it (Pl. VII, fig. 3). One occasionally sees beauties with very long hair in the villages.

[15]

The Tao do not follow the Angoni practice of tying up into tags the hair which has been allowed to grow long with palm leaf string, but they sometimes tie up a single wisp and make it up with medicine; this is called *kadzuki* or *ajuzuki* (plur.).

The scalp may be shaved in various fashions. Among men, it is quite common to trim the hair on the forehead, *ka-ajibile*; they must not, however, trim the hair behind (Pl. XVIII, fig. 2). Women, on the contrary, trim both in front and back; a man doing so would be laughed at. A woman for the ceremony of *Lilime* shaves the front hair a little higher still, but she must be careful not to do so at other times, otherwise she would make herself a laughing stock (Pl. XVIII, fig. 10). The hair is sometimes shaved on either side of the midline in front, in imitation of temporal baldness; both baldness and this method of shaving are called *nanzunze* (Pl. XVIII, fig. 4). Or again, among old Yao men the crown is shaved; this and natural baldness are called *lakasi* (Pl. XVIII, fig. 5). It is a fashion much affected by old men and great annoyance is caused them by any young upstart who does the same. Other methods include for men *nyuka*, "a rat's path," an antero-posterior median line shaved (Pl. XVIII, fig. 9); *ingalangandinja*, two shaved lines made from back to front on either side of the head (Pl. XVIII, fig. 3); for men and women, *kpandalinda*, "the garden *ja* (dead) overgrown", one lateral half of the head shaved (Pl. XVIII, fig. 7); for men, *nakuche* a count of hair left along the mid-line, both sides of the head being shaved (Pl. XVIII, fig. 8); *mwezi* (*chilimbo cha mwezi*), "the moon," a crescent shaped area shaved on one or both sides of the head (Pl. XVIII, fig. 6).

The eyebrows and eyelashes are always left to grow normally among the Yao.

The Yao man used to take great pride in his beard; it was the object of a good deal of washing and combing. It grew to considerable length and was not cut or trimmed, but the hair growing down low over the throat was shaved, as was also the hair immediately below the mouth on the under lip and the moustache, as it was thought to get in the way when drinking. The whiskers were allowed to grow like the beard.

[832] Hair on the chin or upper lip of a woman is rarely seen and on account of its rarity is much prized. Such hairs have a monetary value for making medicines, a single hair being sold for eight yards of calico or two shillings. Body hair is considered to be a sign of strength; on the chest, it is known as *chanpalanu* (*ka-chanpalanu*, to be strong). Body hair including hair on the back is by no means as rare as has been supposed. Sir H. H. Johnston says that he has never seen it,[2] a statement which shows lack of observation. The hair on the forearms and thighs is called *chanja* or *chandwada*; Hetherwick translates this word,[3] I think wrongly, as hair on the body. Body hair is never removed in any way. A man named Katundidi ("the little vulture") of Ulundu had a very large amount of body hair; he was likened to a baboon and was a source of much interest to the children who saw him.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

that the Yao occupied in Central Africa as middlemen and traders. As far back as 1798 Lacerda described the Yao rôle as active traders. They bartered ivory, slaves, beeswax and tobacco with the Arabs along the East Coast of Africa for guns, gun-powder, cloth and beads. We cannot easily estimate what proportion of the population was engaged in whole-time slaving and trading. The larger proportion must have found it necessary to cultivate their gardens of finger-millet and sorghum in the rainy season to supply them with the major food crops. It seems likely that slave-raiding and trading were occupations mostly followed during the dry season.

The Yao therefore had become accustomed to a variation of activities and division of labour, at least a century before the Whites came to Nyasaland. Their wants at this time had already become sufficiently diversified to include cloth, beads, gun-powder and guns. All these trade goods are more durable than the foodstuffs which are the measure of wealth among a people who support themselves entirely by their own produce. But the individual want for these trade goods was limited, and the Yao used their surplus rather as capital for trading farther inland with other tribes.

There is considerable evidence, both from my informants and the writings of early travellers, that these trade goods—ivory, cloth and slaves—came to be used as currency, and most people recognized a fixed relationship between the three commodities. A female slave could be exchanged for an amount of calico or ivory that was constant over fairly large parts of Central Africa; the value of a tusk of ivory could be expressed in calico in the same way. By enterprise, therefore, in trading and raiding, an individual could accumulate wealth in the form of calico, guns, beads, ivory or slaves. But the personal consumption of trade goods is of necessity limited, so that the Yao preferred to accumulate their wealth in the form of slaves. The reason for this lies in the general political structure of the early chiefdoms, which I describe later. Slaves were not only labourers and serfs; they also increased the military and political power of their masters. At the same time slaves could be sent to the coast in a caravan and bartered for cloth, or, since they were always prized, they could be used to settle claims for compensation from aggrieved neighbours. The slave trade therefore, although related to domestic

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

slavery in that a trader could at any moment send some of his own slaves to the coast, was actually quite a separate institution.

Although the advent of the White Administration stopped both domestic slavery and the slave-trade to the coast, both of which were vitally important elements in Yao economy, it did nothing to decrease or reduce the variety of the wants of the Africans. On the contrary, it obviously increased those wants. The missionaries, who were the first Whites to settle in Nyasaland, were forced to import large quantities of cloth and beads so that they could buy foodstuffs and pay their labourers. They quite unintentionally, therefore, became competitors with the Yao in this trade. By some accounts their goods were both superior and cheaper. As early as 1878 the African Lakes Company was sponsored by the Church of Scotland Mission, so that it could take over the trading part of their dealings with the Africans. The planters and traders who began to settle in the highlands after 1890 brought more and more cloth, beads and other trade goods into Nyasaland to pay wages and buy foodstuffs.

When the Protectorate was proclaimed in 1891 and the Administration started to put down domestic slavery and the trade in slaves to the coast, the monopoly of trade in goods fell directly into the hands of the Whites. After 1893, when coinage was introduced, the economy of the country rapidly changed from one based on barter with slaves and ivory as the main outgoing commodities, and slaves, calico, beads and brass rings as the incoming commodities, to an economy in which the wants had become even more diversified. In 1895, the *British Central African Gazette* could record:

> The wants of the people of this part of the world not long ago were limited to sufficient calico to clothe the family, but in one short year their wants now include boots, size and quality a minor point, turbans, coats, and in fact at a distance the half-naked native of yesterday has the appearance of Sikh soldiery.[1]

That the Yao took to the use of money is illustrated by the Acting Commissioner's statement in 1897: 'The Yao thoroughly appreciate having a currency. It has proved, in fact, a great step towards civilising the native of this part of Africa. He is now able to accumulate his earnings, which formerly in the days of a

[1] Vol. i, 2 (Sept. 26th, 1894).

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

436 calico currency was an impossibility.'[1] The Africans could hardly have resisted the change over to a money economy. The taxation system introduced in 1893 was based on the Governor of
436 Zululand's Proclamation III of 1887, and ruled that a tax defaulter
651 was liable to be conscripted for labour until he had earned the
687 amount of his tax. Coffee estates owned by Whites in the Highlands were at the same time in need of labour.[2] Tax was then taken in kind but it was soon changed to cash as a further inducement to Africans to come on to the labour market. The Africans were forced into the cash economy of the Protectorate even if they were unwilling. The measures were so successful that in 1899 the *Gazette* announced that the labour market in Blantyre was flooded.[3]

Modern Economic Structure

177 In modern Nyasaland, the wants of the Africans have become
511 even more varied than they were in the earlier days. Most younger men wear European-type clothing and shoes. Many own bicycles and sewing machines. Many houses have glass windows and panelled doors and most of them are furnished with some rough furniture which has been bought from local craftsmen. Many have beds and mosquito nets. Few women cannot boast of enamel dishes to replace their clay pottery or china cups to replace drinking gourds. The food habits of the peoples too have broadened. Most households use sugar these days, and many people drink tea. I should say that all households occasionally buy soap. Certainly all need salt, which formerly was burnt from the saline grass around Lake Shirwa or dissolved out of special soils in Portuguese East Africa. The stock-lists of an Indian-owned village shop in Chiwalo's area and of an African-owned canteen in the same area, which I have set out in Appendix A, indicate the range of the wants of the modern African.
434 It is clear that these wants are over and above food require-
463 ments. The people in these tribal areas live primarily on the

132 completely exhausted or reduced to a mere trickle. The average annual rainfall over
[136] the last ten years is 29·75 in. The shore waters of Lake Pamolombe are well stocked
[137] with fish. Both districts are well wooded, with a large variety of timber trees. In the dry sandy soil where the population is unable to live for lack of water, the prevalent type is *tsanya*. A line of foothills from Zomba to Chikala are conserved as Forest Reserves.[1]

MAIN FEATURES OF ECONOMY[2]

241 The Yao are chiefly agriculturists, and in the old days were also hunters. As they
[231] live largely in tsetse-infested areas, they do not keep cattle, except for a few herds near Fort Johnston and Zomba, in Nyasaland, and on the east of Lake Nyasa,[3] in the mountains of the Ruvuma valley around Mataka's.[4]

439 Abdullah describes a time when the Yao were economically self-sufficient, making their own bark-cloth, weaving, burning herbs for salt, and working iron for the tools they needed. Nevertheless, the tradition of coastward journeys for trading with the Arabs was well developed before the Europeans came to the country. They used to trade cattle and salt from the Manganja and Lomwe for tobacco and hoes, and in
[567] exchange for slaves they got from the Arabs gunpowder, guns, swords, beads, coloured cloths, earthenware, and foodstuffs.[5] Slaving expeditions were among the most important activities of the chiefs.[6] The old tradition of the absence of the men from the village owing to these expeditions, is continued in modern times by soldiers and labour migrants to Southern Rhodesia and the Union. These men send back remittances to the area, but the main population is supported by agriculture. Cash is needed for purchasing salt and cloth, for paying certain dues and fines formerly paid in kind—adultery compensation, diviner's and initiation fees—as well as for tax and rent. Consequently, while certain crops, such as tobacco and ground-nuts, are grown for cash, any food crop is liable to be sold in one form or another in local markets or by the roadside.

262 The food crops are maize, sorghum, finger millet, sweet potatoes, ground-nuts,
[241] legumes. Fish is an important article of diet. Eggs are believed to cause sterility and are only eaten by those outside the child-propagating age; milk is disliked and never consumed.[7] *Termite alates* (flying ants) are a much relished food when they come out on nuptial flights. Rice is considered a superior food, and is eaten when possible on ritual occasions.[8]

249 Tobacco is the main cash crop, with individual production under the supervision
437 of the Agricultural Department. The average cash earned per grower in 1943–4 was £5. 3*s*. This is overwhelmingly an external trade. Ground-nuts, which are sold at government-controlled markets to licensed buyers, bring in only a few shillings a year
226 to the average seller. Women obtain cash by selling beer. At the lake shore the fishing
439 industry is very important. Natives owning big nets are said to make between £20

and £30 per annum. It is profitable to carry fresh fish inland by bicycle even as far as Blantyre,[1] as the shore price to the retailer is 4*s.* a load, which later may fetch from 16*s.* to 24*s.*[2] Yao on the south-west lake shore grow an excellent quality rice.[3] Rice is also grown near Lake Chilwa, but is mainly sold in the market organized near the lake shore by the Agricultural Department.

Division of Labour

The man builds the house, hunts, fishes, makes the nets, baskets, grain-store, game-traps, and, in the old days, the bark-cloth. He cultivates the tobacco. He cuts down the trees and may help with the hoeing and harvesting. The woman hoes, muds the floor of the hut, sweeps, cooks, brings firewood, draws water, brews beer, makes the pots and pipes.[4]

Land Usage

There are two types of garden in the Yao areas south of Lake Nyasa: one the ordinary garden in which the staples grow, and second, gardens along the stream beds. These latter are especially valuable for providing out-of-season crops. In addition most householders have a few small plots for tobacco and ground-nuts.

The main garden is cultivated by the slash-and-burn method, common in Central Africa. The Yao, unlike the Bemba, garden occupies the whole area cleared. Burning is done just before the rainy season (October–November). The ash and soil are hoed into elongated mounds and grain is planted along the ridges. Gardens may be cultivated for more than five years. In the second and subsequent years of cultivation the stalks and weeds are piled up and burnt. There are signs of soil impoverishment. The gardens are cleared in August, and heaped to dry for burning. After the burning the seeds are planted in late November. By February and March green maize is available to supplement the diet, and by the end of April the crops are ready to be harvested. The maize is stored in wicker containers, while sorghum is stored in the huts on a stand. Cassava is planted in large mounds made by turning the turfs over, so that the roots are outside the mound and the vegetable matter inside. Legumes are planted in smaller gardens, or interplanted with the main crop. Ground-nuts are stored, after being shelled, in mud-plastered wicker containers, designed to be rat-proof. Tobacco is planted at the sides of the streams for hand-watering in the seedling stage, and then transplanted about January. The leaves are ready to be plucked about April and soon afterwards they are marketed. Sweet potatoes are planted in the rainy season, and are ready for eating in May. The stream gardens yield out-of-season crops—maize, beans, pumpkins, and also sugar-cane, which is used in the initiation ceremonies.

Craftsmanship

The Yao have few skills. All cultivation is by hoe; axes and knives are their only other technological equipment. The men make mats from reeds and palm leaf, and the women make pottery. The huts are strongly built from poles laced with bamboo and plastered with mud. The roof is thatched with grass. Under Arab influence the

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

themselves Alomwe. These people came from that part of Portuguese East Africa immediately to the east of Nyasaland. They speak a group of dialects mutually intelligible and widely different from either Yao or Nyanja. Culturally and structurally they are similar to the Yao and Nyanja, practising matrilineal descent and uxorilocal marriage, and living in small groups of matrilineal kin. Their religious and mystical beliefs are also the same. Some of the linguistic groups that form this congeries are the Shirima, Kokhola, Metho, Thokwani, Ratha, Kuwa, Nahara, Marenje, Nyamwelo, Mihavani and Nikhukhu. These people have been migrating into Nyasaland over the last fifty years, and now predominate in the Cholo and Chiradzulu districts. 563

The Nyanja were the original inhabitants in these areas, but have been almost completely displaced by the Yao, except in Liwonde along the Shire River and in Kawinga along the Lake Shirwa shores. Linguistically they are more akin to the Yao than to the Lomwe, but their language is still unintelligible to the Yao. Culturally they appear to be similar to the Yao, and they have accepted certain Yao institutions such as the boys' initiation ceremonies (*lupanda*), and have been fitted into the social and political structure.

The Ngoni, of whom there are very few here, are concentrated on the south side of the Chikala Range, in the areas of Chamba and Mposa, who are subordinate chiefs to Kawinga. They are the remnants of various Ngoni armies that raided into Nyasaland during the last two or three decades of the nineteenth century. As far as I could ascertain they have adopted Nyanja ways and language.

Historical Background to the Modern Economic Situation

Nyasaland to-day, as part of the British Empire, is in the general world economic system, and the Africans in the tribal areas participate in this system, though not to the same degree as the White planters in the Shire and Dedza Highlands. If the Yao were ever a people who supported themselves by their agriculture alone, they had adopted a more complex economy long before the Whites came to Nyasaland. Later, when I discuss their historical background, I outline briefly the position 439

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

439 that the Yao occupied in Central Africa as middlemen and traders. As far back as 1798 Laçerda described the Yao rôle as active traders. They bartered ivory, slaves, beeswax and tobacco with the Arabs along the East Coast of Africa for guns, gun-powder, cloth and beads. We cannot easily estimate what proportion of the population was engaged in whole-time slaving and trading. The larger proportion must have found it necessary to cultivate their gardens of finger-millet and sorghum in the rainy season to supply them with the major food crops. It seems likely that slave-raiding and trading were occupations mostly followed during the dry season.

The Yao therefore had become accustomed to a variation of activities and division of labour, at least a century before the Whites came to Nyasaland. Their wants at this time had already become sufficiently diversified to include cloth, beads, gun-powder and guns. All these trade goods are more durable than the foodstuffs which are the measure of wealth among a people who support themselves entirely by their own produce. But the individual want for these trade goods was limited, and the Yao used their surplus rather as capital for trading farther inland with other tribes.

436 There is considerable evidence, both from my informants and
the writings of early travellers, that these trade goods—ivory,
439 cloth and slaves—came to be used as currency, and most people
567 recognized a fixed relationship between the three commodities. A female slave could be exchanged for an amount of calico or ivory that was constant over fairly large parts of Central Africa; the value of a tusk of ivory could be expressed in calico in the same way. By enterprise, therefore, in trading and raiding,
439 an individual could accumulate wealth in the form of calico, guns,
556 beads, ivory or slaves. But the personal consumption of trade
567 goods is of necessity limited, so that the Yao preferred to accumulate their wealth in the form of slaves.[9] The reason for this lies in the general political structure of the early chiefdoms, which I describe later. Slaves were not only labourers and serfs; they also increased the military and political power of their masters. At the same time slaves could be sent to the coast in a caravan and bartered for cloth, or, since they were always prized, they could be used to settle claims for compensation from aggrieved neighbours. The slave trade therefore, although related to domestic

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

slavery in that a trader could at any moment send some of his own slaves to the coast, was actually quite a separate institution.

Although the advent of the White Administration stopped both domestic slavery and the slave-trade to the coast, both of which were vitally important elements in Yao economy, it did nothing to decrease or reduce the variety of the wants of the Africans. On the contrary, it obviously increased those wants. The missionaries, who were the first Whites to settle in Nyasaland, were forced to import large quantities of cloth and beads so that they could buy foodstuffs and pay their labourers. They quite unintentionally, therefore, became competitors with the Yao in this trade. By some accounts their goods were both superior and cheaper. As early as 1878 the African Lakes Company was sponsored by the Church of Scotland Mission, so that it could take over the trading part of their dealings with the Africans. The planters and traders who began to settle in the highlands after 1890 brought more and more cloth, beads and other trade goods into Nyasaland to pay wages and buy foodstuffs.

When the Protectorate was proclaimed in 1891 and the Administration started to put down domestic slavery and the trade in slaves to the coast, the monopoly of trade in goods fell directly into the hands of the Whites. After 1893, when coinage was introduced, the economy of the country rapidly changed from one based on barter with slaves and ivory as the main outgoing commodities, and slaves, calico, beads and brass rings as the incoming commodities, to an economy in which the wants had become even more diversified. In 1895, the *British Central African Gazette* could record:

tenance of the whole state under a new king,[1] but the Yao 175
political units seem to have split into two factions when divisions 643
appeared within them. The dissident faction left the parent chiefdom and established itself somewhere else as an independent entity.

The picture my informants have given me substantiates Mac- 175
Donald's account, though his contact was mainly with Mangoche 439
and not with Machinga Yao. My informants, however, placed 484
greater emphasis than he did upon the importance of trade with 567
the coast. A slave-trading trip was not a venture which the 622
ordinary village headman could undertake with equanimity. 643
The journey to the coast, to Quilimane or to Kilwa, was long and arduous, and strong military protection against bandits was needed. A caravan could only be sent by a chief or someone of like status, so that the coastal trade became the monopoly of the chiefs. Headmen who had ivory and slaves to send to the coast included them in the chief's caravan. When it returned, the headmen were able to collect calico and beads to the value of their contribution. Gun-powder also seems to have been a chief's monopoly. Thus, in fact, he did have some physical control over the military activities of his subject village headmen, since he could withhold supplies of gun-powder if he wished. But in a society where minor chieftains were inimically poised against each other, the maxim 'a chief without people is nothing' had much more significance than it has to-day: a village headman's ultimate sanction was that he could withdraw his support from one chief and give it to another.

The Effects of White Conquest

It was into a society thus organized that the first Missionaries 175
came. I have already described how the Missionaries, by taking 643
in runaway slaves, and by occasional armed combat, entered 648
into political relationships with the chiefs. With the establishment of the Protectorate, the policy, clearly expressed in Sir Harry Johnston's letter,[2] was to stamp out slavery. This was done in numerous campaigns against the Yao chiefs [3] so that by

two feet high and fifteen inches in diameter, hollowed out from above for about two-thirds of its length. Many are made with a kind of base or stand, and some have roughly carved bosses on the outside; these are called "the breasts," doubtless emblematical of women, a large part of whose life is spent in preparing flour (Pl. XV, fig. 15). 412 [532]

The fire-stick. Matches are becoming more widespread year by year and soon the knowledge of how to make fire with a fire drill will be lost. The method employed among the Yao is as follows: a flat surface is cut on a piece of partly rotted wood. In the middle of this a small depression is made, and on one side of the piece of wood a groove is cut leading from the flat cut surface. The piece of wood is held firmly on the ground by one person with a piece of old scorched cloth or some charred sticks at the base of the groove. A second person, by rolling a stick of hard wood rapidly between his hands with the point directed against the depression on the flat surface in which a little sand has been placed, drills a hole into it. The heat developed is sufficient to cause the powdered rotten wood to start smouldering. This is then turned out on the cloth, which is gently waved in the air till it catches fire (Pl. XV, fig. 16). 372 [177]

Boats. With the exception of a small coracle-like vessel, *likuiqua*, made of rough bark and used for crossing streams, the Yao have no boats. The dug-out canoes which they use at the present day are made for them by the Anyanja. In addition to the bark boat, they use a kind of raft made from the pith tree, *bunqua*. 501 [439]

Tobacco. The use of tobacco in some form is universal among the tribes of Nyasaland and the Yao are no exception. The method of use varies among the different peoples; smoking, chewing, and snuffing are all practiced, but while the Anyanja is essentially a pipe-smoker, the Yao takes snuff, although I think only lately he has also taken up smoking and chewing. A short time ago, a Yao who chewed would have been laughed at. The Anyanja do not chew but take snuff to a certain extent; the Angoni who do not smoke or chew are inveterate snuff-takers; the Atumbuka, Atonga, Asenga, and Ankonde are pipe-smokers and in lesser degree snuff-takers. 276

Tobacco is called *sona* (*fodia*. Chin.). It is prepared by sun-curing the leaf, which is then rolled up into a twist and allowed to dry further. The common tobacco pipe consists of a clay bowl, often ornamented, and a reed stem; it was formerly called *chilongo*, but is now known as *halie* (Pl. XV, fig. 11). For hemp, *chamba*, the Yao use a water pipe called *ndundu* (*ngunda*, Chin.); this consists of a bamboo water container from which projects a reed stem surmounted by a clay bowl (Pl. XV, fig. 13). The word *ndundu* is also used for a tobacco pipe.

When tobacco is chewed, a little lime paste *swakala* made from snail shells is put in the mouth "to bring out the flavor," a small clay jar being used to carry the *swakala*.

Both the Wayao and the Anyanja prepare snuff by grinding the broken-up tobacco leaves with a stone in a potsherd; the powder is then turned out into another sherd and warmed over a fire. A few drops of a preparation called *magodi* is added for flavor. *Magodi* is

II. The Political Structure
BEFORE THE WHITES CAME

173 643 167 (*kukamula lukongolo*), i.e. to surrender to the chief in the area. Also the chief sent out expeditions to capture slaves or he purchased slaves with the cloth and beads he had exchanged for ivory at the East coast.

643 421 Within his territory certain privileges and rights were held by the chief and he had certain religious duties to perform in which the unity of the people in the territory was expressed. In general the chief had rights over any ivory either found or hunted in his territory. If a dead elephant were found the tusks belonged to the chief, though he usually rewarded the finder with cloth. If a man killed an elephant the tusk that lay on [224] the ground belonged to the chief while the other belonged to the killer. The killer's tusk was in- [439] cluded in the chief's caravan to the coast and its value paid in cloth to the killer when the caravan returned.

643 651 The chief was also entitled to an annual tribute of food and beer from all villages in his area, but this was used to entertain visitors who came to the court-village.

643 782 The chief's religious duties lay mainly in propitiating the spirits of his ancestors on occasions when the community at large, in contrast to the chief's own private affairs, was either threatened or directly affected. The most obvious occasion was immediately before the rains came when flour was poured on the tree shrine and the spirits of the ancestors asked for good rains. Later when the rains were over a similar sacrifice was made asking for a good harvest. Sacrifices to the ancestors were also made on two other public occasions. They were made when some calamity had occurred or was believed to be impending. A run of unsuccessful campaigns induced Cingwalugwalu, a son of the Yao chief Mponda near Fort Johnston, to ask his father's father's brother to make sacri-

STOCK SOLD AT AN INDIAN-OWNED STORE IN CHOJA VILLAGE, 1948

(Prices where I recorded them)

435 Cloth at 2/- to 4/6 a yard.
443 Blankets at 8/- to 20/- each.
Women's blouses, 6/9 each.
Men's vests.
Shirts and shorts (together 18/-).
Moslem men's caps.
Scarves.
Sewing thread.
Cooking utensils—Pot diam. 6 in., 7/6.
Tin plates, 2/- each.
Hoes, 2/10 to 3/6, according to size.
Salt (1*d.* a cup holding about 4 oz.).
Soap (1*d.* or 2*d.* per tablet, according to size).
Tobacco (1*d.* and 6*d.* a packet).
Cigarettes at 1*d.* a packet of 10.
Tea, 1/6 lb.
Dark glasses.
Ink.
Exercise books.
Playing cards.
Shoe polish.
Shoe whitening.
Pads.
Envelopes.

STOCK CARRIED BY AFRICAN CANTEEN, I.E. SMALL SHOP HOLDER

12 jars of solid brilliantine.
80 cakes of blue soap.
120 cakes of red soap.
100 packets of 10 cigarettes.
100 packets of tobacco.
6 small mirrors.
25 strings of beads.
60 lb. of coarse salt.

1: Tew E-4 (no date) 1950 FT7 Yao FT7

and £30 per annum. It is profitable to carry fresh fish inland by bicycle even as far as Blantyre,[1] as the shore price to the retailer is 4*s.* a load, which later may fetch from 16*s.* to 24*s.*[2] Yao on the south-west lake shore grow an excellent quality rice.[3] Rice is also grown near Lake Chilwa, but is mainly sold in the market organized near the lake shore by the Agricultural Department.

Division of Labour

The man builds the house, hunts, fishes, makes the nets, baskets, grain-store, game-traps, and, in the old days, the bark-cloth. He cultivates the tobacco. He cuts down the trees and may help with the hoeing and harvesting. The woman hoes, muds the floor of the hut, sweeps, cooks, brings firewood, draws water, brews beer, makes the pots and pipes.[4]

Land Usage

There are two types of garden in the Yao areas south of Lake Nyasa: one the ordinary garden in which the staples grow, and second, gardens along the stream beds. These latter are especially valuable for providing out-of-season crops. In addition most householders have a few small plots for tobacco and ground-nuts.

The main garden is cultivated by the slash-and-burn method, common in Central Africa. The Yao, unlike the Bemba, garden occupies the whole area cleared. Burning is done just before the rainy season (October–November). The ash and soil are hoed into elongated mounds and grain is planted along the ridges. Gardens may be cultivated for more than five years. In the second and subsequent years of cultivation the stalks and weeds are piled up and burnt. There are signs of soil impoverishment. The gardens are cleared in August, and heaped to dry for burning. After the burning the seeds are planted in late November. By February and March green maize is available to supplement the diet, and by the end of April the crops are ready to be harvested. The maize is stored in wicker containers, while sorghum is stored in the huts on a stand. Cassava is planted in large mounds made by turning the turfs over, so that the roots are outside the mound and the vegetable matter inside. Legumes are planted in smaller gardens, or interplanted with the main crop. Ground-nuts are stored, after being shelled, in mud-plastered wicker containers, designed to be rat-proof. Tobacco is planted at the sides of the streams for hand-watering in the seedling stage, and then transplanted about January. The leaves are ready to be plucked about April and soon afterwards they are marketed. Sweet potatoes are planted in the rainy season, and are ready for eating in May. The stream gardens yield out-of-season crops—maize, beans, pumpkins, and also sugar-cane, which is used in the initiation ceremonies.

Craftsmanship

The Yao have few skills. All cultivation is by hoe; axes and knives are their only other technological equipment. The men make mats from reeds and palm leaf, and the women make pottery. The huts are strongly built from poles laced with bamboo and plastered with mud. The roof is thatched with grass. Under Arab influence the

3: Stanner D-5 (ca. 1912) 1922 FT7 Yao FT7

585 dress of her married life begins. The man and woman live together peaceably enough as a rule, each attending to his own sphere of work. The man builds the house, the woman
462 ● mends the floors; she sweeps and cooks, she is the hewer of wood and drawer of water. The man hunts, fishes, makes mats, baskets, the grain store, game traps, and bark-cloth; he looks after the tobacco, and makes the snuff, while his wife brews the beer. He it is who fashions the gourd vessels and carves the spoons, while the woman is the potter (Pl. III, 4) and pipe-maker. Together they hoe and together they harvest, but to the woman falls the monotonous drudgery of pounding and sifting the corn for flour.

842 The Yao have a custom like that of the Anyanja. A sister brings to the house of the newly wedded pair a log of green wood from a mbonga tree which is very hard; the log
[522] may be two feet in diameter and four feet long. Should the bride not become pregnant before it is burned away, the husband is laughed at and they may both be teased by having
[558] many logs brought to the house. A man who has no children is much despised and there is a saying, "He must have eaten some ground-nuts," punning on the word for a thick-skinned variety of ground-nut, chimbwanda, a word which also means sterility. An impotent
[837] man may, with the consent of his wife, introduce some male friend into the house, any children born in consequence being claimed as the husband's. He usually chooses some friend from a distance to obviate any attachment springing up between him and the wife. Two married couples may, all consenting, exchange consorts for the night, but they never live together like this for long periods.

582 There is one well-defined marriage taboo; a man may not marry a woman of his own clan. In the old days, he was also restricted to his own tribe, except in the case of slave
[611] wives and wives by capture. Since the clan is inherited from the mother,[1] a man may not
[587] marry the daughters of his maternal aunts, but he may marry his other female cousins. He may not marry two sisters nor a deceased wife's sister; neither do two brothers marry two sisters.

595 The number of wives is limited only by the husband's ability to provide for them. In addition to free wives, a man might formerly have a number of slave wives. The head wife is called *Inapele*, the other wives, *mapembe*. The word given by Macdonald, *alwapele*,[2] meaning the junior wives, is a Chinyanja word and, I think, wrongly applied.

582 It has been said that a man always marries into the village of his wife. For this reason,
[917] female children are always prized as it means an increase in the number of able-bodied
[583] men added to the village. In rare cases, the wife might be taken to the husband's village, as is the Anyanja practice.[3] This, of course, is true in the case of chiefs and headmen. Here, we may also note that no payment is made for the wife and no dowry is received with her.

589 To revert to betrothal, occasionally the sponsors will not agree to the marriage and a
843 runaway match takes place, but in the end, the marriage is usually regularized by the sponsors coming to an agreement. If, however, the woman has in the meantime become

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

436 calico currency was an impossibility.'[1] The Africans could hardly have resisted the change over to a money economy. The taxation system introduced in 1893 was based on the Governor of
436 Zululand's Proclamation III of 1887, and ruled that a tax defaulter
651 was liable to be conscripted for labour until he had earned the
667 amount of his tax. Coffee estates owned by Whites in the Highlands were at the same time in need of labour.[2] Tax was then taken in kind but it was soon changed to cash as a further inducement to Africans to come on to the labour market. The Africans were forced into the cash economy of the Protectorate even if they were unwilling. The measures were so successful that in 1899 the *Gazette* announced that the labour market in Blantyre was flooded.[3]

Modern Economic Structure

777 In modern Nyasaland, the wants of the Africans have become
511 even more varied than they were in the earlier days. Most younger men wear European-type clothing and shoes. Many own bicycles and sewing machines. Many houses have glass windows and panelled doors and most of them are furnished with some rough furniture which has been bought from local craftsmen. Many have beds and mosquito nets. Few women cannot boast of enamel dishes to replace their clay pottery or china cups to replace drinking gourds. The food habits of the peoples too have broadened. Most households use sugar these days, and many people drink tea. I should say that all households occasionally buy soap. Certainly all need salt, which formerly was burnt from the saline grass around Lake Shirwa or dissolved out of special soils in Portuguese East Africa. The stock-lists of an Indian-owned village shop in Chiwalo's area and of an African-owned canteen in the same area, which I have set out in Appendix A, indicate the range of the wants of the modern African.
434 It is clear that these wants are over and above food require-
465 ments. The people in these tribal areas live primarily on the

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

crops grown in their gardens. For their other wants they need cash, and they obtain it either by the sale of their agricultural produce, by trading with their fellows, or by seeking work either within or outside the area. The sale of agricultural produce is probably the most important. A few Africans earn a small living as blacksmiths, bicycle repairers, diviners and leeches, fish pedlars and tailors. There are some African canteen or small shop owners, but this field is dominated by the Indians, who between them have a few dozen village and roadside stores.

A certain amount of money is sent or brought home by labour migrants. I could not estimate how much this is for each household. It cannot be very high on the average, because not a great proportion is working at labour centres outside the area of study.[1] Within the Territory there are few opportunities of earning wages. In Jalasi's area there are one or two White tobacco estates, which employ at the most a few hundred labourers, and a number of Indian storekeepers who may between them employ a hundred men. Otherwise the Government itself, through the Agriculture Department in particular, may employ a hundred or more labourers. There are more opportunities south of Chikala and in the densely populated Malemia area where a considerable number are employed in the neighbouring township, Zomba, and on the surrounding estates. The cash income per adult, male and female, in the area where this study was made probably does not exceed £40 to £50 per annum, and the Yao rely mainly on the sale of their own produce to earn this amount.

[1] I estimate from genealogies that about 22 per cent of the men over the age of 18 were at labour centres in 1947–8. Table 3 of the 1945 Census shows that, excluding those in the Army, 28 per cent of the men over the age of 18 were away from Liwonde and Fort Johnston districts when the census was taken.

1: Tew E-4 (no date) 1950 FT7 Yao FT7

342 You make square houses.[1] Panelled doors and glass windows, deck-chairs and palm
177 furniture are becoming more and more popular. The men wear long Moslem robes
[29] and the women are clothed in cotton. In the rural areas there are usually a few craftsmen who still ply their trades as carpenters and blacksmiths, though the latter no
326 longer smelt, but use scrap-iron.

Labour Migration

162 Statistics are not available for the Yao of Portuguese East Africa or Tanganyika
464 Territory. Yao constitute 34 per cent. of the total population of South Nyasa district, 15 per cent. of upper Shire, 11 per cent. of Blantyre and Zomba.[2] The proportion of labour migrants in these districts was in 1937 as follows:[3]

District	*Adult males fit to work*	*Percentage of emigrants*	*Number producing economic crops*	*Number of subsistence producers*	*Emigrants not heard of since 1937*
South Nyasa	24,230	27·1	2,910 (12%)	12,095 (49%)	873
Upper Shire	24,873	15·9	1,555 (10%)	18,849 (87%)	633
Blantyre	25,330	13·6	3,788 (15%)	10,185 (40%)	986
Zomba	18,879	12·4	3,790 (20%)	9,040 (53%)	511

[39] South Nyasa district, which is unfertile waterless bush with a long history of famine and food shortage, has the highest proportion of labour migrants. Upper Shire, though not fertile, is more prosperous, benefiting from the tobacco- and cotton-growing industries, and from the dried-fish trade.[4]

SOCIAL ORGANISATION AND POLITICAL STRUCTURE

Kinship and Local Grouping

611 Among the Yao succession is matrilineal and marriage mainly matrilocal. Accord-
[59] ing to some informants succession formerly passed down the line of brothers, as with the Bemba, but it now passes direct to the eldest sister's eldest son, or to descendants of other sisters in order of seniority.[5] Chiefly succession follows the same rule, but the most senior may be set aside for a more suitable candidate.[6]

611 Clan names, *dzinyo*, are inherited matrilineally, and formerly designated exogamous units,[7] but the marriage prohibition has now ceased to operate. Holders of the same
614 clan name are unable to trace descent from a common ancestress, and for commoner clan names seem to have quite lost their significance; they are, however, carefully remembered in the chiefly lines and in other lines of hereditary rank, such as village headmen.

614 Within the general kinship grouping of the clan, a smaller group is recognized,
613

[1] Watson, 1908, p. 125; Macdonald, 1882, vol. i, pp. 20-2, describes a round hut.
[2] 1931 Census information is taken because the district boundaries were changed between 1931 and 1945, so that the information in the 1945 Census would not be compatible or comparable with that given in the 1937 Survey of Male Adult Population in the *Bell Report*, Appendix A.

crops grown in their gardens. For their other wants they need cash, and they obtain it either by the sale of their agricultural produce, by trading with their fellows, or by seeking work either within or outside the area. The sale of agricultural produce is probably the most important. A few Africans earn a small living as blacksmiths, bicycle repairers, diviners and leeches, fish pedlars and tailors. There are some African canteen or small shop owners, but this field is dominated by the Indians, who between them have a few dozen village and roadside stores.

A certain amount of money is sent or brought home by labour migrants. I could not estimate how much this is for each household. It cannot be very high on the average, because not a great proportion is working at labour centres outside the area of study.[1] Within the Territory there are few opportunities of earning wages. In Jalasi's area there are one or two White tobacco estates, which employ at the most a few hundred labourers, and a number of Indian storekeepers who may between them employ a hundred men. Otherwise the Government itself, through the Agriculture Department in particular, may employ a hundred or more labourers. There are more opportunities south of Chikala and in the densely populated Malemia area where a considerable number are employed in the neighbouring township, Zomba, and on the surrounding estates. The cash income per adult, male and female, in the area where this study was made probably does not exceed £40 to £50 per annum, and the Yao rely mainly on the sale of their own produce to earn this amount.

[1] I estimate from genealogies that about 22 per cent of the men over the age of 18 were at labour centres in 1947-8. Table 3 of the 1945 Census shows that, excluding those in the Army, 28 per cent of the men over the age of 18 were away from Liwonde and Fort Johnston districts when the census was taken.

6: Mitchell E-5 (1946-1947) 1949 FT7 Yao FT7

believe that she will die. The man's representatives are therefore able to establish the child's paternity from the birth-pang confessions of the woman.

The child is kept in the hut where it was born, for six or seven days, while the umbilical cord dries and falls off. During this time (*kwal*) the child is unnamed, and it is named only when it is taken out of the hut. Should it die during this period of seclusion it remains unnamed and is referred to by a special term (*ilaya*, pl. *matupa*). I have therefore been able to enumerate live births by means of the distinction made between miscarriages and still-births (*kwenga*) and children who lived long enough to be referred to as *matupa*. After the birth of the child the woman may not have intercourse for four or five months. To do so would be to endanger the life of the child with a disease called *ndoka*,[1] which is contracted by a sexually inactive person when he comes into contact with a sexually active person. The husband may have intercourse with a second wife, but must take care to medicate himself so that he does not endanger the life of his child. When the child is about 4 or 5 months of age the parents perform ritual intercourse and medicate the child against the mystical dangers of sexual activity; sexual relations are then resumed.

The Yao say that a second child should not be born while the first is still being suckled. Since lactation continues for about two years I am uncertain whether monogynists remain continent, as they say they do, or whether *coitus interruptus* is practised. It is quite usual for husbands to become labour migrants when their children are still very young. I have known women to write to their husbands who are away working and tell them to return because their children have 'grown', i.e. have been weaned. Labour recruiters had difficulty in recruiting men immediately after the soldiers had been demobilized at the end of the war, because the women objected, saying that they had remained childless long enough and the men must first wait until children were born. However, actual examination of birth-dates shows that children are sometimes born within a year of one another and sometimes there are quite big gaps. The two-year gap between children is probably an ideal which few attain.

5. The Estimation of Fertility

(a) *Sundbarg's Age Divisions*

As a preliminary estimate of fertility, Sundbarg's trichotomy of ages may be considered. The argument behind this division of the population into Youth, Middle Age, and Old Age is that those populations with a high proportion of youth have a greater tendency to increase. Table V shows this trichotomy for the Yao with the same material for some other populations shown for comparison. Where the gross reproduction-rate is known for the period shown in the table, this is included.

At any one time a certain proportion of the population is absent from the area, usually at some labour centre. Hence the proportions of the population are distributed abnormally. In all there appeared to be a total of sixty-three men, women, and children absent from the hamlets, who would otherwise have been living there. Hence in Table V these have been included in the totals in the 'Yao with absentees' proportions.

[1] A disease of this sort is believed in by many Central African tribes. Among the Nyanja-speaking peoples it is known as *ciwapi*.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

villages, however, the headman's activities may be as circumscribed by ritual prohibitions as the chief's are. 622 554

The village headman is subject not only to mystical dangers but also to other dangers deriving from his position of authority. It is significant that villagers never go to a diviner to find out the cause of a village headman's death. When I asked informants why this was so, they said, 'Well, what's the use of it? He has enemies on all sides in the village who are trying to kill him with their magic.' In harmony with this view of village headmanship, the symbolic object which represents the village headman in the diviners' gourds I have seen, is a small ring of grass (*singwa*), a copy of the grass cushion women place on their heads when they are carrying loads. This symbolizes the ring of enemies which surrounds the village headman. The saying 'the tortoise defecates on the one who carries it',[1] usually applied to chieftainship, applies equally well to a village headman. 622 787 578 [482]

A village headman may expect little material benefit from his position of authority. If he is an Administrative village headman he may be paid a small annuity of 5*s*. or 10*s*.[2] Returning labour migrants may give him a blanket or a military overcoat, or perhaps a few shillings, but this is not usual. If he is not a strict Moslem he will almost certainly be given a pot of beer from every brewing made for sale in the local 'club house'. On the other hand, if an important stranger, particularly a White official, arrives in the village he feels he must give his guest a chicken. It is mannerly to reciprocate with another gift, but not all Whites know this, or, if they do, do not observe it. In particular if the chief comes to his village, he will be expected to entertain him and here can expect no recompense—the chief 'eats from his country'. 622 651 431

The Yao know that the position of headman is no sinecure. Frequently the one chosen to succeed refuses to accept the position, especially if he is well placed in employment. It is significant that the word for an heir is *litegwa*[3]—the one who is trapped. An 622 594

[1] *Ngwe jikwepele nayene iwajigele.*

[2] Until recently this was true. As I was leaving the field in 1949, I heard that the Administration had decided to abandon this system in favour of one in which only group headmen would be remunerated.

[3] Substantive form of the passive of the verb *kutega*—to set a trap as for animals. This word is not widely known, especially among the younger Yao.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

tenance of the whole state under a new king,[1] but the Yao 175
political units seem to have split into two factions when divisions 643
appeared within them. The dissident faction left the parent chiefdom and established itself somewhere else as an independent entity.

The picture my informants have given me substantiates Mac- 175
Donald's account, though his contact was mainly with Mangoche 439
and not with Machinga Yao. My informants, however, placed 484
greater emphasis than he did upon the importance of trade with 567
the coast. A slave-trading trip was not a venture which the 622
ordinary village headman could undertake with equanimity. 643
The journey to the coast, to Quilimane or to Kilwa, was long and arduous, and strong military protection against bandits was needed. A caravan could only be sent by a chief or someone of like status, so that the coastal trade became the monopoly of the chiefs. Headmen who had ivory and slaves to send to the coast included them in the chief's caravan. When it returned, the headmen were able to collect calico and beads to the value of their contribution. Gun-powder also seems to have been a chief's monopoly. Thus, in fact, he did have some physical control over the military activities of his subject village headmen, since he could withhold supplies of gun-powder if he wished. But in a society where minor chieftains were inimically poised against each other, the maxim 'a chief without people is nothing' had much more significance than it has to-day: a village headman's ultimate sanction was that he could withdraw his support from one chief and give it to another.

The Effects of White Conquest

It was into a society thus organized that the first Missionaries 175
came. I have already described how the Missionaries, by taking 643
in runaway slaves, and by occasional armed combat, entered 648
into political relationships with the chiefs. With the establishment of the Protectorate, the policy, clearly expressed in Sir Harry Johnston's letter,[2] was to stamp out slavery. This was done in numerous campaigns against the Yao chiefs[3] so that by

3: Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

19. That portion of the gut of animals having folds of mucus membrane inside, may be eaten only by old people past the child-propagating age. If a young woman should eat it, she would have difficulty in labor. 771 784 062

20. It is believed that people who eat too freely of a little fish like whitebait called *matemba* get obstruction of the bowel by the wedging together of the bones. The treatment adopted is to pass up the rectum a smooth stick with a pad of rag at the end. This cannot be done by the person himself and so the aid of another has to be called in; only an intimacy, such as the relationship of brother-in-law gives, will warrant this service being asked.

21. The Yao believe that there is a little insect which lives in the ear, called *chiseyene lipikusile*, which tells the person what is said to him, the wax in the ear being its excrement. The pupil is called *musanache jua liso*, the child of the eye. [825]

22. Among women, the uterus is called *nameso* (*meso* = eyes); it is supposed to be a little person who holds the foetus. When the child is born, *nameso* cannot find it and starts looking about, the movements causing the afterpains.

23. A man making his first journey to the coast used to sprinkle himself with water from every stream he crossed to give him a safe journey. In the same way, women at the present day going between Zomba and Blantyre sprinkle their babies with water from each stream. [484]

24. An ant-like insect called *ndupotumba* (*tumbutumba*, Chin.) [*dasylabris mephistis*] is lucky. On seeing it a native pats its belly and then rubs his own, wishing for plenty of food that day. If he is embarking on a journey or beginning some enterprise, he will wrap one of these insects in a fold of his loin cloth and take it with him for luck. [825]

25. When a native hears the *mwipe* bird call (its call is like the mew of a cat), if he wants something, he immediately says, "Oh *mwipe*, I want so-and-so. Be quiet and I will then be quiet, too!" If the bird ceases calling, he knows the wish will be granted. The female bird is said to be the more certain prophet.

26. The snake, *nalulukuti*, which lives in trees and is of a buff clay color with green markings, is said by natives to pierce the chest and tie a knot in itself on each side so that it can only be withdrawn by cutting off one knot. When the snake is thus withdrawn, its blood mixes with that of the man and he will die.

27. Natives have a habit of marking the spot where any event takes place by a stone by the side of the path, and every passer-by will add a stone for luck. In this way some large piles of stones have been made. [777]

28. A man resting on his way home from a long journey places a stone in the fork between the branches of a nearby tree, so that on his arrival he may find his wife has put by some food for him and has not used up the day's stock of flour.

29. A chameleon found digging in the path is said to presage the death of the finder's nearest relative. [787]

769 A man leaving his village on some expedition and wishing to be assured of safe conduct
● 484 will procure some millet flour. Going quietly into his house, he squats down in one corner
787 and gently sifts the flour through his hand so that it falls on the floor in the form of a little
cone, repeating as he does so, his prayer for safe conduct beginning and ending with the
word *chonde!* please!

[539] *"Chonde! chonde! wa-ku-mulungu ombuje mlanguaye maso pangu nilicone*
"Please, please! those at above ancestor clear eyes mine that I may see
litala, ngwiche 'chenene kunguja, chonde! chonde! chococonde!"
the path, may I arrive well where I go, please, please, please!"

He then covers the cone of flour with a basket. On the morrow, he will uncover it to see what has happened. According as the cone has remained intact or has fallen to one side or the other, the omen indicates whether or not the journey should be undertaken, the reaction being caused by the spirits to whom his supplication was addressed.

✓769 Again, there may have occurred much sickness in a village and the people conclude that the pest has come to remind them that they have not been attentive to their deceased chief. "His grave-house in the village has been allowed to fall into decay," and so on. They will decide that his spirit must be propitiated. The grave-house is rebuilt, a pot is sunk in the ground, and beer is poured in, and round about heaps of flour are placed. Prayer is made to the chief at whose grave they are worshipping, supplicating him in person and "all others who are with you at *Mlungu*," asking that he will no longer cause ill to befall the village.

When a village is moved, the beer-pot from the grave of the old chief is taken to the new village and a ceremony similar to that just described takes place, with the prayer that he will come to the new village and continue to exercise his benevolent care over its people.

✓731 In 1880 when there was a threatened famine on account of long drought in Zomba dis-
769 trict, Malemya decided that supplication for rain must be made to the spirits of his illustrious predecessors. Kasonga, one of Malemya's wise men, acted as high priest. A large amount of beer was brewed and the night before the ceremony, twenty sheep and fifty goats were slaughtered. Plates of the meat, of rice and porridge were then placed on the ground round the grave-house of the old Malemya, and pots of beer set into the ground at intervals. At the head of the grave, little heaps of *mbepesi* flour were arranged. This flour had been prepared by such of Malemya's wives as were not near a menstrual period. The following morning, a fence was built round the grave, outside which all the people collected, while beyond them again was a second fence. Kasonga, accompanied by an assistant then appeared, and amid absolute silence entered the inner enclosure. He addressed to the old Malemya, at whose grave they were all assembled, a prayer for rain. He then repeated the prayer, invoking the aid of all the past line of chiefs down to the reigning Malemya, re-
[516] peating their names. Returning to the outer enclosure, he again uttered the prayers, all the assembled multitude repeating them after him while lying face down, resting on their

3: Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

Women stick on a small spit a pretty green and white beetle, one of the *Cetoniidae*. The free end of the spit is then held between the teeth. At different positions on the stick, the buzzing of the impaled insect gives rise to different notes. The beetle is named *chingmungwengu* or *chiwuwuwu* (*nangalire*, Chin.). The wing-covers of another beetle, *matochetache*, a *Lamellicorn*, are used by women for the making of a musical instrument. The wing-covers of some twenty of these insects are threaded on a string arranged round the shoulders and feet of the player as she sits on the ground. The string on each side, as it passes from the shoulder to the foot of the same side, is plucked by the fingers of the opposite hand, different notes being obtained by different degrees of tension put on the string by pressure with the feet. The wing-covers give a buzzing quality to the notes which all natives like. 534 237

Mention should also be made of the horn, *lipenga*, commonly made of a long piece of reed or bamboo with a trumpet-shaped end, made out of a portion of a gourd. Antelope horns are also used. The horn is blown on journeys. [484]

Dancing. Dancing among the Yao, as among many other peoples, is the outcome of the pleasure experienced in rhythmical movements. The first accompaniment was probably the clapping of hands to mark time, followed by some exclamatory sounds more or less prolonged and occurring at regular intervals. Later, there was probably some refrain and, later still, drums were added to mark time, and songs formed an additional accompaniment. I believe that, here, dancing has always been an expression of pleasure and happiness and has been secondarily introduced at many ceremonies. In the majority of cases, such ceremonies were occasions of joy, the only exception being at funerals, but there I think their introduction was rather as a means of passing the time and avoiding silent brooding than as any real part of the rite. 535

The names given to various dances indicate their time or rhythm, and are, therefore, comparable to our own words, waltz, two-step, etc. There may be a number of airs for each time, and many sets of words to each air. The time may be given by clapping only, or by the addition of drums. Anyone acquainted with these dances, hearing drumming in the distance, can at once recognise the dance that is going on.

The drums which are used at dances (Pl. XXII), are made of a hollowed-out log of wood with a skin tambour stretched over the mouth of the drum and fixed by wooden pegs. On the tambour is smeared a layer of beeswax. The tambour is tightened by warming over a fire, so that the correct note is obtained; a fire is always kept burning close to the spot where drums are being played. 534 535

Likuti: a drum shaped somewhat like a native flour mortar, three to six feet high with the tambour one to two feet in diameter. The drum usually lies on the ground, the player sitting on the barrel of the drum, or he may have it suspended from him by a cord, the body of the drum dragging on the ground between his legs. It is played with both hands and gives a deep, resonant note, "*ti, ti, tii*" (Pl. XXII, figs. 12, 15). 534

4: Stannus D-5 (ca. 1909) 1910 FT7 Yao FT7
Marovi FR4

Gaga, the residue after pounding maize, is eaten by the women. No oils are used in cooking, but of fat and suet any native is very fond. Meat may be dried and smoked if in large quantity: flesh, fish and fowl is commonly roasted on spits; small pieces of chicken may be made into a kind of stew with beans and eaten as the relish. When on a journey the fire is commonly made against a tree. The cooking vessels are cleaned before use, not after. The fried fish eaten is often partly decomposed, and meat which is very high, even with maggots, is cooked and eaten, maggots and all. M Y 262 [252] [251] [484] [264]

Taboo.—Bushbuck is not eaten by many natives, as they say it feeds near graveyards. Fowls are not eaten by some, as this diet causes them to vomit; a snake-catcher never eats vegetables, and at the same time puts medicine on his hands. Many abstain from the flesh of certain animals as certain skin diseases are said to be caused thereby; all such diseases bear the name *wokwenga*. M Y [753]

A man who loses a relation by drowning takes an oath that he will never again eat fish, and never drink water from such lake, river, etc. Here the idea is of course simply to avoid eating part of the relation.

A Nyanja and Machinga will not eat the flesh of the hippopotamus, because on the body they say there are the marks of a string round the loins and of a mat on his back, adding that long ago he was a man. Animals of prey would never under any circumstances be eaten. Milk used never to be drunk by an adult, as it was said to cause a man to become as a child. A man would not dare to drink woman's milk as it was said he would surely die of dysentery. M [825] M [272]

Tobacco, etc.—The smoking of tobacco was a custom introduced from the coast. Chewing was general among Machinga and Yao men and women, while the Angoni and Mañanja snuffed. With the tobacco a little lime, made by burning shells, was taken in the mouth. Giddiness and sleepy sensations were experienced after chewing. The Nyasa and Awisa smoke a hubble-bubble, the water vessel being a large sausage-shaped gourd with a reed stem supporting a large bowl of *mbabwa* wood, sometimes very nicely carved (Plate XXVII, Figs. 5 and 7). The Amyanja smokes a pipe with the bowl made of clay and the stem of bamboo (Plate XXVII, Fig. 6); these are made by the women. Tobacco is grown in nearly every village, a large-leaved rather coarse variety; it is sun-dried and rolled up into hollow rings 6 inches in diameter and 3 inches broad. For snuff (*Fadia womuna*) the sun-dried tobacco is further dried over a fire on a pan, when cold it is ground on a stone with a smaller stone by the women, and with it is mixed some ashes of the *ngoa* fig-tree. M Y 276 [177]

At Blantyre I obtained a water-pipe made of bamboo stem; this was the water reservoir; a stem of reed supports a little clay bowl. The mouth is placed over the upper end of the bamboo. Bhang (*cannabis indica*) is smoked in a pipe of this kind.

AGRICULTURE.

The people live by cultivating the soil. Both sexes help in hoeing and planting, the collecting of the crops being mostly done by women. The hoe is the M Y 241

FT7 Yao FT7
[P. 141 C]

through one or other incumbent of the position of village headman.[4] Succession to posts of authority, including that of the chief, is matrilineal. Ideally the succession should pass to the first-born son of a man's eldest sister, but this is not always followed, for the personal qualities of the successor are most important.

The total African population of the area studied is 65,000. There are one or two Indian traders and two Europeans permanently resident in the area. One European is a missionary in the north-east corner and the other an Agricultural officer in the north centre of the area. Part of the area is administered by the District Commissioner, Zomba, and part by District Commissioner, Fort Johnston, and these officers tour the districts under their jurisdiction. Occasionally other White officials and labour recruiters appear, but in the main, Whites are not often seen in this area. The one road traversing it is usually impassable for a part of the rainy season.

vomited human flesh.[1] They said that they had a strong headman and that they could trust him; he was a good headman without witchcraft. If he had been a sorcerer they would have kept scolding him until the next morning.

About two hours after sunrise the people gathered and started dancing. At about this time Cimombo was brought out of the hut and put in the grass shed which had been built for the occasion. This was the climax of the ceremony.[2] He sat on a chair in the grass shed with one of his two wives on either side. Makoka then started a chant, exhorting the visitors to come to throw pennies at Cimombo's feet. Some of the people there made speeches about the type of behaviour they would expect from him. Then Nyambi arrived from the court village in a ricksha. When the noise had subsided he told the people that if they disobeyed Cimombo it meant that they disobeyed the chief. He emphasized the importance of the rank of the new headman. After the speech he presented 12*s.* to Cimombo which was received on his behalf by Ncimbo. Nyambi then left and the ceremony was over, but the people remained to dance and drink beer.

This description of the procedure following the 'coming out of the hut' is somewhat sketchy. The interaction of the headman and his villagers on this formal and ceremonial occasion is of great interest and importance. During the entire ceremony the headman adopes the pose which is appropriate for any Yao initiand. His hands are on his lap or on the arms of the chair and his head is bowed forward with eyes downcast. He neither speaks nor moves. His attendants, when necessary, wipe the sweat off his face or chase away the flies. The other occupants of the mat, who may be his wives, and sometimes his heir, adopt similar postures. In contrast to this, is the behaviour of the villagers who run about shouting wildly, the men discharging muzzle-loading guns, and women ululating in the typical Central African way.

Before the new headman comes out of the hut his mentors

[1] This is a test based on the witchlore of the Yao, who believe that sorcerers kill relatives with magic and then share out the flesh of their victims with fellow sorcerers in ghoulish feasts.

[2] Called the 'coming out from the hut' (*kukupoka nyumba*). It is of course the first public appearance of the headman in his newly assumed status.

* A "gamma" was a one-wheeled conveyance in which an Administrator or chief was wheeled around while on tours. Nowadays gammas are hardly ever used and the men who used to be employed to push them are used mainly as messengers.

two feet high and fifteen inches in diameter, hollowed out from above for about two-thirds of its length. Many are made with a kind of base or stand, and some have roughly carved heads on the outside; these are called "the lionesses," doubtless entertained of women, a large part of whose life is spent in preparing flour (Pl. XV, fig. 10).

The fire-stick. Matches are becoming more widespread year by year and soon the knowledge of how to make fire with a fire drill will be lost. The method employed among the Yao is as follows: a flat surface is cut on a piece of partly rotted wood. In the middle of this a small depression is made, and on one side of the piece of wood a groove is cut leading from the flat cut surface. The piece of wood is held firmly on the ground by one person with a piece of old scorched cloth or some shaved sticks at the base of the groove. A second person, by rolling a stick of hard wood rapidly between his hands with the point directed against the depression on the flat surface in which a little wood has been placed, drills a hole into it. The heat developed is sufficient to cause the powdered rotten wood to start smouldering. This is then turned out on the cloth, which is gently waved in the air till it catches fire (Pl. XV, fig. 11).

Boats. With the exception of a small coracle-like vessel, *kiwinyau*, made of rough bark and used for crossing streams, the Yao have no boats. The dug-out canoes which they use at the present day are made for them by the Anyanja. In addition to the bark boat, they use a kind of raft made from the pith tree, *bangwa*.

Tobacco. The use of tobacco in some form is universal among the tribes of Nyasaland and the Yao are no exception. The method of use varies among the different peoples; smoking, chewing, and snuffing are all practised, but while the Anyanja is essentially a pipe-smoker, the Yao takes snuff, although I think only lately he has also taken up smoking and chewing. A short time ago, a Yao who chewed would have been laughed at. The Anyanja do not chew but take snuff to a certain extent; the Angoni who do not smoke or chew are inveterate snuff-takers; the *Atumbuka*, *Atonga*, *Awanga*, and *Ankonde* are pipe-smokers and in lesser degree snuff-takers.

Tobacco is called *usua* (John. Chin.). It is prepared by sun-curing the leaf, which is then rolled up into a twist and allowed to dry further. The common tobacco pipe consists of a clay bowl, often ornamented, and a reed stem; it was formerly called *ikilanga*, but is now known as *kalio* (Pl. XV, fig. 11). For hemp, *chamba*, the Yao use a water pipe called *ukonde* (*upondo*, Chin.); this consists of a bamboo water container from which projects a reed stem surmounted by a clay bowl (Pl. XV, fig. 12). The word *ukonde* is also used for a tobacco pipe.

When tobacco is chewed, a little lime paste *ucukule* made from small shells is put in the mouth "to bring out the flavor," a small clay jar being used to carry the *ucukule*.

Both the Wayao and the Anyanja prepare snuff by grinding the broken-up tobacco leaves with a stone in a potsherd; the powder is then turned out into another sherd and warmed over a fire. A few drops of a preparation called *mapuli* is added for flavor. *Mapuli* is

March: FR?

Metallurgy.

Among the natives in Nyasaland, with the exception of copper in the north (Wahenga) and brass in parts near the Zambezi, iron was the only metal worked. M Y 225

Other metals now used and obtained from traders are, copper, brass, lead, tin, etc. Iron *ne chikondo*; brass *ne napeli*; copper *ne mkuwa*; of iron, hoes, axes, knives, spears were made.

At the present time copper- and brass-headed spears are still found at the north end of the lake; copper bracelets and body rings also. The brass wire bracelets elsewhere are made from imported metal. Iron-stone ore in the old days was smelted in a furnace of stones made in the form of a long drain 3 feet long and 1 foot high; in this a mixture of lumps of ore and wood charcoal was put, and single bellows of goats' skins were used to make the draught, which is aided by building a chimney at one end; at the other end a hole is made in the ground to receive the molten metal. A quantity of this is then again melted in a hole in the ground with a charcoal fire about it, and then the metal run into a trench to form a thin bar which is then hammered and worked into a spear, etc. At the present time little smelting of ore is done. There are regular metal-workers, who make knives, etc., using a little hearth with goat-skin bellows, a crucible for copper and brass, etc., tongs, pliers, hammer. M Y 226 M Y [20]

FIG. 15.

An iron plate with an aperture for drawing wire and files are also employed.

Bellows.—A goat's skin with a large opening sews to two sticks; the bag is then held by these sticks and closed and pressed, the air being driven out through an iron tube inserted through one of the legs of the skin.

Boats.

The only form of boat in use is the dug-out canoe without outrigger. No skins are used. These are punted along by bamboo poles in the rivers. On the lake paddles are used, never oars. There are no sailing craft. The sequoia is the tree used for making canoes, sometimes also the mbawa. They are cut out with a small adze, *mwapa*. The *chee* hook is used for caulking, twenty or thirty of the sticks being caulked into the hole. *Mpine*, a ground-creeper, is also used after being pounded. For baling anything is used. At Likoma a vessel like a very small canoe called *ngo* is employed. A kind of raft made from pith-wood and called *mapondwe* is used to fish from. Occasionally these get washed out into the lake and the fisher has been drowned. M Y 501 M Y 501 M Y 501

The canoes vary in size from 10 to 50 feet and more, the smaller being used as ferry-boats across a stream; the largest were made to carry slaves across the Lake Nyasa in the old days. In punting a canoe, one or two men work, keeping time. In paddling, any number may work, the largest canoes have twenty men working on either side. Down river near Zambezi the paddlers kneel; on the Lake they stand.

4: Stanner D-5 (ca. 1909)1910 FT7 Yao FT7
Moravi F84

When a number are working they take time from the front man, the rear man starting with his ordinary paddle. The passengers sit in the middle, a chief towards the stern. They never lose sight of land even in crossing the widest part of the lake. Canoes are now used occasionally as anchors on the lake, canoes are made to shelter canoes. The smaller canoes are 2 feet to 2½ feet high, the very large ones used to be 4 and 5 feet high; except on the lower river, where canoes have made similarly shaped, they are made with a bow more pointed than the stern and having a beak (Fig. 18). There is no ornamentation and no figure heads.

In every lake-shore or river-side village or collection of huts will be found one or more canoes; these belong to some one man, others using them paying a fee. At the launching of a new canoe, beer is made and the women dance, and medicine is made for its safe journey.

SWIMMING.

Not even all lake-shore native swim, though most do. The art is learnt in childhood and not taught. They are not very fast swimmers, and I do not think could swim very far. They sometimes dive head first and practise staying under water. They swim rather like a dog, both arms coming a little out of water, but not a trudgeon stroke; arms are kept straight. They sometimes swim on the side, but never use the ordinary breast stroke.

GAMES.

Several games are played resembling the game of *ohwe* introduced from Zanzibar (Mancala); *ohwe* is played on a board in which rows of holes have been cut; beans are used as counters.

Mikombwe.—A game found among Anyanja and Machinga; it may be played on a *ohwe* board, but is often played in holes made in the ground with stones. The *Angoni* game *chipalapalo* is played in the same way. At Fort Anderson is a lump of stone in which hollows have been made similar to those made in the ground. It is the only piece of stone-work I know in the country. Children and women play knucklebones (*mdodo*.)

A man tries in one breath to keep saying *mbiri-biri-biri* . . . . while another makes a pile of stones from another pile of ten, taking one at a time, saying, "To take and put it there makes one," etc. Men play at guessing in which hand an object is hidden, or one out of ten men sitting in a house has to guess with whom a certain object is. No forfeits.

Tendwada (=the spider) is cat's cradle.

Fisi (hide and seek), one hiding, five or six seeking.

There are no dice games. Cards were introduced from the coast before the advent of Europeans into the country; the games are various and difficult to follow.

A slip-shod kind of wrestling is practised by Anyanja youths; the Machinga

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

calico currency was an impossibility.'[1] The Africans could hardly have resisted the change over to a money economy. The taxation system introduced in 1893 was based on the Governor of Zululand's Proclamation III of 1887, and ruled that a tax defaulter was liable to be conscripted for labour until he had earned the amount of his tax. Coffee estates owned by Whites in the Highlands were at the same time in need of labour.[2] Tax was then taken in kind but it was soon changed to cash as a further inducement to Africans to come on to the labour market. The Africans were forced into the cash economy of the Protectorate even if they were unwilling. The measures were so successful that in 1899 the *Gazette* announced that the labour market in Blantyre was flooded.[3]

Modern Economic Structure

In modern Nyasaland, the wants of the Africans have become even more varied than they were in the earlier days. Most younger men wear European-type clothing and shoes. Many own bicycles and sewing machines. Many houses have glass windows and panelled doors and most of them are furnished with some rough furniture which has been bought from local craftsmen. Many have beds and mosquito nets. Few women cannot boast of enamel dishes to replace their clay pottery or china cups to replace drinking gourds. The food habits of the peoples too have broadened. Most households use sugar these days, and many people drink tea. I should say that all households occasionally buy soap. Certainly all need salt, which formerly was burnt from the saline grass around Lake Shirwa or dissolved out of special soils in Portuguese East Africa. The stock-lists of an Indian-owned village shop in Chiwalo's area and of an African-owned canteen in the same area, which I have set out in Appendix A, indicate the range of the wants of the modern African.

It is clear that these wants are over and above food requirements. The people in these tribal areas live primarily on the

4: Stanner D-5 (ca. 1909) 1919 FT7 Yao FT7 Marsh F84

case sound might be administered; if adjudged guilty the accused would be burned on a pile of wood.

Evidence is given without taking any oath; a false witness is not punished.

Justice is summarily summary. At Mponda's, after conviction of adultery with one of the chief's wives, a man's throat was cut on the spot. Drowning was the usual punishment with Mponda.

Punishments for all offences practically consist payment.

Greetings, Salutations, etc.

The correct salutation among Machinga Yao and Mahanja on meeting is clapping the hands, the hands in front of and at right angles to the body parallel to each other, thumbs against the fingers. The clapping should be continued for ten minutes after having passed; after passing a chief it should be continued for half-an-hour.

Another form consists in slowly beating the breast with the right hand, the head slightly inclined forward. The lower in station make salutation first to the higher; a man to a chief, a woman to a man; exception is made in the case of an old woman, who is saluted by the man. Scattered all over the country a raising of one or both arms is a common form of salutation, but is probably only a corruption of the military salute.

Slapping of the arms or thigh with the right hand is also seen, among old men usually. In imploring mercy from, or on the first occasion of meeting, the chief, a man lies prone on the ground and catching the foot of the chief, puts it on his neck—a sign of absolute submission. Women kneel at the approach of a man. Words and expressions of salutation are few—*Moyo* (=heart) being the only old expression used. Now commonly one hears a word (sounding like *salut*) probably a corruption of good morning, and the Swahili greeting *Salaam* with the double hand-shake of Mohammedans.

A man returned to his village after an absence some awhile, then his wife comes to him and kneeling grasps him, weeps, her husband returning weeps.

Years ago, a man of any importance was received with firing of guns and shouting. A headman is received now with *Mwapulele*, the women wobbling their tongues in their mouths. Ashes are put on the head as a sign of joy.

In the morning the husband and wife do not greet each other, but in the village friends "give each other good morning" (=*Moyo*). On waking in the morning, a woman cracks all her joints (=*Kulim chala*). She then massages her husband and cracks the joints of his fingers.

One man wishing to see another goes to his house, and squatting outside the door cries "*Ndo!*" three times (=there), at the same time clapping his hands. If no answer be given he goes away, even though he knows the man is within, no answer meaning that the inmate does not wish to be seen. If invited to enter he does so, the man of the house rises and gives him salutation. He makes small

BIRTH

Birth takes place in the bush, some distance from the hamlet, in the presence of female relatives of the woman and of her husband. If the child is stillborn, or miscarried, it is buried in the bush. The husband and wife must abstain from sexual intercourse for some months, until a special ritual intercourse is performed. A man who breaks this taboo is liable to contract a fatal disease, *kwanaga*. Difficult births are attributed to: (*a*) a curse spoken by a matrilineal relative—this is made effective by the intervention of the ancestors, and to remove it it is necessary to perform a rite making clear that no malice is borne; (*b*) the adultery of the woman or her husband, in which case confession will save the woman from dying; and (*c*) sorcery. 844 [845] 845

If a child is born alive it is brought to the hut of the mother or one of her female relatives, where it is secluded until its naming ceremony, about six days later. Only after the naming is the child considered to be a member of society. A second child should not be born while the first is still suckling, i.e. for about two years. When the child is about four or five months old it is ritually immunized against the dangers of sexual activity, and the parents may resume relations. Elaborate magical precautions are taken to ensure the child's survival. Children sleep with their mother, the boys until they are old enough to go to the boys' dormitory, and the girls until marriage.[1] 844 852 [513]

INITIATION

The yearly initiation ceremonies, *unyago*, are the principal cultural institution of the Yao. That for the boys, *lupanda*, is the most important, and may only take place under a chief or superior village headman, whereas a girls' initiation ceremony may take place under an ordinary headman. The right to hold a boys' initiation ceremony therefore becomes a mark of status which is jealously disputed.[2] The right is expressed as 'having a *cisela*'. A *cisela* is the small basket in which the special sacrificial flour is carried. 881 852 [554]

Yao carry out initiation between the ages of seven and eleven, whereas generally in East Africa it is postponed until puberty.[3] In response to requests from the headmen the chief appoints the time and place of the boys' initiation ceremony for a group of villages. It is held at the end of the dry season, before the bush is burned. Each initiate is accompanied by a sponsor, *nkwanzi*, who may be a brother, uncle, or friend. Before they set out for the place appointed to be *lupanda*, they all assemble before the chief to be anointed with millet-flour specially prepared by his head wife. The word *lupanda* refers to a forked stick over which the sacrificial flour is poured. This stick is planted at the place of assembly, the *masakasa*. The boys, their sponsors, and the master of ceremonies, *m'nkiwa*, are accompanied with dancing as far as *masakasa* by their friends. The next day the initiates go to a spot in the bush, where the circumcision (formerly only an incision) is performed, and remain in the bush school, *ndagala*, for about two months, until the wounds are completely healed. The Yao circumcision rite is said not to have been introduced by the Arabs.[4]

During these weeks the boys are subjected to rigorous discipline and instructed in various skills and tribal lore. They sleep in long dormitory huts, with partitions dividing the boys of different villages from each other. The chief appoints the day for

593 brother, is called *asyene mbumba*, or 'the warden of the sorority-group'. As one would expect among a matrilineal people, the link between a man and his mother and sisters is strong. But it is the link with his sister that is strongest. She relies on him for protection, particularly when she becomes ill, but also in her [582] relationships with her husband. Her brother will be her junior marriage surety, and he will give the consent which will allow a man to marry her. Also a woman's brother will have to consult [731] the diviner and find the medicines when she or her children sicken. In times of distress, as, for example, if her crops have failed, she will appeal to her brother for help. Similarly the man is dependent on his sister in a number of subtle ways. He can always rely on her for hospitality, and is able to get a meal from her if he needs it. But his dependence on his sisters for prestige is much more important. The significance of this will emerge when we see the *mbumba* organization in the light of the segmentation and fission of the lineage. A man can only found a new village if he has the full support of his sisters. A sister also plays a most important rôle at the birth of his children. She represents him both at the first fœtal-quickening ceremony and at the birth of his child, when she listens to the birth-pang confessions of his wife.[1]

At the same time the relations of sister and brother are restricted by custom. A man must never appear too familiar with his sister, especially in sexual matters. He may not, for example, [513] sleep in the same hut as she does; if she is away and he sleeps in her empty hut he must not make his bed in the place where she usually sleeps. He may not even sit on her sleeping mat. [835] Authentic cases of incest with a sister are extremely rare, whereas I recorded three or four cases of father-daughter incest while I was in the field. Supposed cases of brother-sister incest are recounted and discussed widely. This is understandable because [754] a man who is suspiciously familiar with his sister is suspected of being a sorcerer, since it is widely believed that a sorcerer usually obtains the power that he needs for the performance of his dire deeds by sleeping with his sister. The riddle of the initiands—'What is the sweetest fruit which may not be tasted?' Answer, 'Your sister'—neatly reflects the attitude of the Yao.

The close link of brother and sister is also reflected in the

[1] The significance of this is explained in Chap. VII, p. 185.

3:Stanmus D-5 (ca. 1912) 1922 FT7 Yao FT7

539

40. *Gwaru kwale ntukuta!*
Lying on the rock, heat!

This is a slang expression which in full would read, "It is nice and warm lying on a rock in the sun, but it is not so comfortable as being in bed in company with your wife; you can go on waiting but you won't get anything." This might even be said to a dog, watching as a dog will, every morsel of food lifted to its master's mouth.

41. *Kubapilila mwai pa nkina!*
To have hopes of water for maggots!

It is a custom before lying down to sleep on the floor mat, to take it up and pour boiling water on the earth floor to kill any blood-sucking maggots (Congo floor-maggot, *Auchenorrynchia*). If you see a pot cooking on the fire, you naturally think there is food being prepared but you may be disappointed; it may only be the pot for heating the water to kill the maggots. The saying is thus used to a man who has made an assignation and is disappointed but goes on waiting. [513] [751]

42. *Kuluma ngwa!*
To bite cockroach-like!

The cockroach is described by natives as going up to what it will eat, remaining quiet for some moments, and then suddenly taking a bite. This is said of a man who comes up to you smiling and then hits you a hard blow. [825]

Among the Yao as among other tribes that I have previously mentioned,[1] signs of salutation to a superior are made by clapping the hands or patting the breast or buttock with one hand, at the same time crouching down. A woman will go off the path and kneel, looking away from a superior passing along the roadway. 576

A person going by the door of a hut where others are sitting, will say "*Kwimanga bana!* At the door here." Passing behind anyone, he will say "*Ku-nyu ^mwai!* At the back!" Meeting anyone on a path, a man will simply say, "*Icho*, here," adding perhaps, "*Ku-ikala!* all is well!" A chief or headman on returning to his village after a journey, is greeted by the women with trilling of the tongue (*Ku-lulula*). [201]

Man and wife do not greet each other in the morning. The wife rises first and draws water and places it in the hut for the husband's use but nothing may be said.

When a visitor is entertained and a chicken cooked for a repast, the "pope's nose" is always for the visitor. The right hand only is used in dipping into the common pot. A man of small importance, though replete, will go on making pretence of eating at a common meal by taking very small amounts so that his superior shall finish first, and rise and go away before him.

I may here add the words used by the Yao for the sounds made by various animals; they are interesting to compare with those of other languages: 192

[1] 'Notes on some tribes of British Central Africa,' op. cit., p. [illegible]

881 The evening of the first day is called *lyuwa lya mahunemi*, or "the day of singing," as singing is kept up far into the night, but the exact significance of the word *khunemi* I have been unable to find out.

[515] The second day is spoken of as *lyuwa lya mamawa*, "the day of washing of hands," (*kumawa*, "to wash the hands") when the *wali* are specially instructed as to the necessities of washing hands before preparing food, etc.; precept is followed by practice. The night is spent quietly; for this day's proceedings few people probably will have remained.

On the third day, however, they come back again from their villages in crowds to witness the performance of *usuma*, *lyuwa lya usuma*, "the day of house moving" (*kusuma*, "to change one's abode, carrying goods and chattels with one"). A representation is given of an onslaught on a village by enemies and all pretend to run away carrying their worldly goods with them. The part of the attackers is played by a number of women who, armed with guns and having donned belts and powder horns, rush in on the crowd from the bush and make prisoners of all they can catch. The men are put in miniature slave-sticks; women who are seen trying to run off with a child on the back, one round the neck and one on each hip, are driven as prisoners into a group. When all the noise and fun are over, the prisoners are released. This is often followed by a mock trial. Two women dressed up to impersonate chiefs of rival tribes, argue an old, imaginary quarrel, usually pretending that there has been a raid by one party on an ivory caravan going to the coast, with stealing of the ivory, while the other party in revenge has caught and killed some of the people belonging to the first mentioned. The thing may be kept up for an hour with much talking and great zest, all those taking part being women. Finally each party agrees to give compensation for the damage done; each presents the other with bundles of sugar cane, and friendship is reestablished. That night, everyone again rests quietly.

The fourth day is known as *lyuwa lya kuzyunga* (*kuzyunga*, "to go round about," referring to the dancing which goes on). Dancing takes place during the day and also the ceremony of *Lukwi* to be referred to later. One of the favorite songs sung this day runs as follows:

[533 539] "*Ndambe'ji nkambe'ponje ninde nnuma nkonyuw'ye, ennu! ambunnje upenjinnu!*"
"(Took this) a present don't give me free wait for me little girl, dear me! and we'll have some fun together!"

On the fifth day, return is made to the villages. The girl *wali* attended constantly by their *ahumwi* then live together for the period of instruction in huts in a special enclosure in the chief's village or in similar enclosures in a number of villages. The *wali* may go out into the village but must go about with bowed head and look no man in the face; they wear bark-cloth called *kiwile* and should they meet anyone, they must pull over their faces the [753] kind of hood with which their garments are provided. They may not share food with outsiders. If they did so, the latter would sicken with a disease called *chiwabela*.

M Y 252 M Y 264 spoon into a clean shallow basket or on to a plate. The *ndiwo* or relish, consisting of vegetables such as beans or a kind of spinach, a little fish or chicken, is cooked in a separate pot, and round these those about to eat collect. Washing their left hands in water, they take some of the porridge and making a sausage shape of it, dip it in the *ndiwo* and then cram it into their mouths.

M Y 217 258 Salt was obtained either from natural deposits or from "salt earth" on a stream bank near Fort Johnston, or from the ashes of burnt *bango* reeds or *machedza*; by a method of percolation through porous pots.

M Y 271 515 The native rather drinks between meals—water. After eating he may wash his mouth out and clean his teeth, using the frayed end of a piece of wood as a brush.

M Y 273 *Alcohol.*—With the exception of the people living on the lower river, who drink fermented palm juice,[1] beer is the common alcoholic beverage. Beer is made from maize (*chimanga*) or millet (*mapira*); the crop of the latter is very largely used for beer making; it makes the best beer and is certainly preferred by Angoni.

Gruel is prepared by boiling flour with water; after an hour leaven (*chimala*) is added fermentation sets in; and it may be drunk the next day; it is the sweet beer, *utiko* or *catondera*. On the second day it is again boiled and is allowed to cool; the third day more leaven is added (*chikutiko*); the fourth day fresh gruel is made, and the contents of the original pot, now called *nganga*, is added to it, making two pots of beer. It may be drank the same day while hot or allowed to cool and taken on the second day.

Food-stuffs.

M Y 262

1. Maize (*chimanga*), millet (*mapira, mawaere*), rice (*mpunga*).
2. Cassava—sweet potato.
3. Beans and peas of many varieties.
4. Pumpkins, cucumbers, melons (*dzungu, mkuka, chibwende*).
5. Many kinds of leaves growing wild—also pumpkin leaves, of which a kind of spinach is made.
6. Bananas (*paw-paw*), sugar cane and reeds are sucked.
7. White ants, locusts, honey.
8. M Y [177] Numbers of small animals are eaten by Chipeta, Angoni, etc. With the spread of Mohammedanism this is going out; rats, mice, hares, rock-rabbit, etc. Chipeta will eat dog, and I once saw one eat baboon. Frogs, shell-fish, snakes, crocodiles, crows, vultures, eagles, are never eaten.
9. Fish (*nsomba*), fresh or dried, is much eaten, thirteen varieties being enumerated.
10. Chickens, ducks, wild birds that they may snare.

[1] Spirits used to be made by distilling from beer and banana and palm-juice by means of a pot and a gun barrel.

Village headman, Nyenje, at his installation ceremony. He is not entitled to wear a scarlet headband but wears a coloured one instead. On his right sits his sister, on his left his wives, adopting the posture correct for an initiand—head bowed, eyes downcast, hands in the lap. A villager is dropping a penny into the cloth at the headman's feet while the headman's representative collects the pennies.

(July 1947)

[facing p.114]

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

vomited human flesh.[1] They said that they had a strong headman and that they could trust him; he was a good headman without witchcraft. If he had been a sorcerer they would have kept scolding him until the next morning.

About two hours after sunrise the people gathered and started dancing. At about this time Cimombo was brought out of the hut and put in the grass shed which had been built for the occasion. This was the climax of the ceremony.[2] He sat on a chair in the grass shed with one of his two wives on either side. Makoka then started a chant, exhorting the visitors to come to throw pennies at Cimombo's feet. Some of the people there made speeches about the type of behaviour they would expect from him. Then Nyambi arrived from the court village in a ricksha. When the noise had subsided he told the people that if they disobeyed Cimombo it meant that they disobeyed the chief. He emphasized the importance of the rank of the new headman. After the speech he presented 12*s.* to Cimombo which was received on his behalf by Ncimbo. Nyambi then left and the ceremony was over, but the people remained to dance and drink beer.

This description of the procedure following the 'coming out of the hut' is somewhat sketchy. The interaction of the headman and his villagers on this formal and ceremonial occasion is of great interest and importance. During the entire ceremony the headman adopts the pose which is appropriate for any Yao initiand. His hands are on his lap or on the arms of the chair and his head is bowed forward with eyes downcast. He neither speaks nor moves. His attendants, when necessary, wipe the sweat off his face or chase away the flies. The other occupants of the mat, who may be his wives, and sometimes his heir, adopt similar postures. In contrast to this, is the behaviour of the villagers who run about shouting wildly, the men discharging muzzle-loading guns, and women ululating in the typical Central African way.

Before the new headman comes out of the hut his mentors

[1] This is a test based on the witchlore of the Yao, who believe that sorcerers kill relatives with magic and then share out the flesh of their victims with fellow sorcerers in ghoulish feasts.

[2] Called the 'coming out from the hut' (*kulupeka nyumba*). It is of course the first public appearance of the headman in his newly assumed status.

769 A man leaving his village on some expedition and wishing to be assured of safe conduct
484 will procure some millet flour. Going quietly into his house, he squats down in one corner
787 and gently sifts the flour through his hand so that it falls on the floor in the form of a little cone, repeating as he does so, his prayer for safe conduct beginning and ending with the word *chondo!* *please!*

[539] "*Chondo! chondo!* *wa-ka-mulungu* *mulungu* *wilungungu* *wuno* *gungu* *wilinuna*
"Please, please! those at above *ucumbe* *chiwe* *nyu* *nine* that I may see
kinda, *ugunda* *'chumwe kungugu,* *chondo! chondo! chonondo!"*
the path, may I arrive well where I go, please, please, please!"

He then covers the cone of flour with a basket. On the morrow, he will uncover it to see what has happened. According as the cone has remained intact or has fallen to one side or the other, the omen indicates whether or not the journey should be undertaken, the reaction being caused by the spirits to whom his supplication was addressed.

769 Again, there may have occurred much sickness in a village and the people conclude that the past has come to remind them that they have not been attentive to their deceased chief. "His grave-house in the village has been allowed to fall into decay," and so on. They will decide that his spirit must be propitiated. The grave-house is rebuilt, a pot is sunk in the ground, and beer is poured in, and round about heaps of flour are placed. Prayer is made to the chief at whose grave they are worshipping, supplicating him in person and "all others who are with you at *Mbunga,*" asking that he will no longer cause ill to befall the village.

When a village is moved, the beer-pot from the grave of the old chief is taken to the new village and a ceremony similar to that just described takes place, with the prayer that he will come to the new village and continue to exercise his benevolent care over its people.

731 In 1880 when there was a threatened famine on account of long drought in Zomba dis-
769 trict, Malenya decided that supplication for rain must be made to the spirits of his illustrious predecessors. Kawanga, one of Malenya's wise men, acted as high priest. A large amount of beer was brewed and the night before the ceremony, twenty sheep and fifty goats were slaughtered. Plates of the meat, of rice and porridge were then placed on the ground round the grave-house of the old Malenya, and pots of beer set into the ground at intervals. At the head of the grave, little heaps of millet flour were arranged. This flour had been prepared by each of Malenya's wives as were [illegible] over a menstrual period. The following morning, a fence was built round the grave, inside which all the people collected, while beyond them again was a second fence. Kawanga, accompanied by an assistant then appeared, and amid absolute silence entered the inner enclosure. He addressed to the old Malenya, at whose grave they were all assembled, a prayer for rain. He then repeated the prayer, invoking the aid of all the past line of chiefs down to the reigning Malenya, repeating their names. Returning to the outer enclosure, he again uttered the prayers, all
[514] the assembled multitude repeating them after him while lying [illegible], resting on their

3:Stannus D-5 (ca. 1912) 1922 FT? Yao FT?

516 knees and elbows, at intervals swaying their bodies from side to side and slapping their 751 hands. Kasunga then ordered all to go and bathe, men and women separately. As they 769 returned from the stream, rain began to fall.

Intercession on behalf of the sick may be made, especially by anyone who is likely to 755 be accused of causing the illness by witchcraft.[1] The man standing with arms outstretched, 769 downwards and a little in front of his body, the hands supine, takes some water in his mouth and discharges it in a stream on the ground, (probably as a sign of purification of his tongue), and then invoking "all the spirits above," asks that they will intercede to restore health to the sick man and bear witness to his own innocence of any wish to do the sick man injury. *Ku-pempe* is the word meaning to offer sacrifice and prayer.

Harvesting and hunting are occasions when sacrifices may be offered. It was formerly 769 the custom for the chief to determine the day on which harvesting of millet should begin. On the day appointed, a big drum was beaten in the village and word passed round; then 241 everyone would go down to his garden, gather a head of millet, and bring it back to the 782 village where it was all handed over to the chief's headwife. After drying and thumbing, a little of the grain was laid at the grave of an old chief by one of the reigning chief's advisers, the remainder being again distributed to all the people gathered together in the village meeting-place, who ate it raw. After this ceremony, harvesting began.

In passing through a millet garden, if a child asks his mother to give him some to eat, she plucks a bunch or two and reverently laying one at the foot of a *mawe* tree for the spirits or at the base of some other tree, if she cannot see a *mawe*, she gives the rest to the child.

When a hunting expedition makes its first killing, part of the flesh of the animal is laid 782 at the base of a tree as a thank offering to the spirits and in anticipation of further favors 224 to be conferred. All such offerings are supposed by the natives to be partaken of by the spirits, though they are well aware that they do not actually diminish in quantity. There is an interesting point in this connection: any man who has acted as *nbile* (undertaker) to some well-known man may appropriate these offerings. In the case of the hunting offering, he will run round the tree, saying, "I am a hyaena, the spirits will not mind me," and will then take part of the flesh-offering and eat it.

In the same way, a *nbile* may drink from a grave beer-pot after three days, when the spirits are supposed to have taken what they want.

With the exception of the *mawe* tree above mentioned (*ndima*, Chin.), and possibly 824 another called *nsilo-mpuma* (Chin.), which is never used as firewood and which is supposed 778 to be used by *mamai*, I do not think there are any sacred trees properly so-called. Miss Werner supposes that many of the big trees (often a species of *Ficus*) in villages are sacred.[2] The truth is, I believe, simply that a village is made naturally round a big tree which conveniently offers its shade for the village meeting place. The spirits of deceased chiefs may

3:Sianmuse D-5 (ca. 1912) 1922 FT? Tao FT?

535

Chindindo: the *chindindo* songs are the favourites among all the other people. They have been in late years partly replaced by others, but, at the present time, there is a tendency to return to them; they are staid in tone and the dance is sedate. *Chindindo* is always played at moonlight. While the whole company sits around in a circle with the drums at one side, a couple of people do the dancing in the middle. The drums used are a *chingonge*, two *ishoma*, and a *likati*. With the commencement of drumming, a man well known for his songs steps out into the middle and begins singing; he is followed by another man or maybe a woman who sings a second part; the two singers are generally people who have found that they sing well together. Two such people will be welcomed, and they may sing many songs, while any young upstarts who do not sing well together, will be given to understand that their performance does not meet with approval. People have their favourite songs, and there may be much heart-burning if an old man finds some one else singing a song that he considers especially his own. As they sing, they dance their peculiar shuffling steps. (The words of some of these songs are given later.)

Salupe: an Angoni dance sometimes danced by the Yao. It resembles *chindindo* in that all sit singing and clapping while, one at a time, men dance in the open space to time given by bamboo sticks knocked together. The songs are all hunting songs.

It is impossible to describe the steps used in all the dances; for each dance, they differ, of course, and except by a cinematograph film, they cannot be reproduced. The movements of the feet are ordinary stepping motions or patting of the ground with the feet, the actual movements being very small, so that in most cases it is impossible to devise any means of making out the steps. To enable them to perform these steps, they commonly dance with the knees bent, the buttocks protruded behind, and the back arched. In some cases, this attitude is extreme. [97]

There is a large series of dances which, to the uninitiated spectator, appear to resemble each other very closely. The general plan of the dance is as follows. The drums are placed in the middle; around them in a circle are the dancers and outside them, the onlookers. The circle may be thirty or forty strong, composed of men only or of men and women as the case may be. Commonly, the ring of dancers is divided into two halves, each half being headed by a leader who sings the song, all joining in the refrain, while the onlookers do the clapping. When the drums begin, they all walk round in a circle, but at a given signal, one of the drums gives out a new time, and the whole circle starts dancing with short, shuffling movements already described, usually progressing in the circle, sometimes going backwards, sometimes facing the drums or turning right around in the line.

M'mwanda is a dance of, I believe, recent introduction which has replaced to some extent *chindindo*, much to the disgust of the older people who dislike the innovation. They shake their heads and say, "*Chilondo chimwalile!*" "The world is finished." The drums used are *likati*, *ishpelipe*, *mokoto*, and *chingonge*. It is danced by men and females only. [77]

Ujende or, as it was known some years ago, *mpamboli*, is danced like *mwanda*, but the

[illegible]

[illegible]

[End Plate 1]

Amusements. Among the natives of east central Africa, the chief form of amusement, apart from dancing, might be said to be sitting and chatting; it is interesting to note that there is a word to express "sitting up all night talking." Often the younger members of the community will gather about one of the older men and listen to his stories of travel or fighting in the old days, and some men gain quite a reputation as raconteurs. Or again riddle asking is indulged in to pass the time. Women and girls do not assist at these sittings. 521

Among the Tao youth, wrestling, *ku-kopana* (from *ku-kopa*, to try), is practised with a fixed grip and no leg-work; the victor always accentuates his victory by hitting the man who is down, and pummelling his face with his fist or a stone. 526

A ball game, played originally with a ball of native rubber from which it derives its name, *ungilo*, is a great favourite among boys. A dozen or more are divided into sides but all mixed up together. The ball is then thrown into the air to a member of the same side, any of the opposite side jumping into the air to try and catch it, accompanied by the clapping of hands to time.

"Hide-and-seek," *ahijanajawa*, and "touch," *ahaw ar ahaulele* (*ahijanai*, Chin.), are played by boys.

Chimuapo: toward the end of the ball game, when it is decided to finish, each boy as he catches the ball puts it to his nose to smell (*ku-uapa*, to smell). He is then "out." At the end of a game of "touch" played in the water, when one touches another, he jumps out of the water, puts his cloth up to his nose "to smell," and is then "out." His cloth may be thrown to him to "smell" while still in the water, after which he gets out without hurry. The object is not to be the last "in." I am unable to explain this custom.

Kanchi-kanen is played by girls, *nakale*, from "*chi*" the exclamation made when catching anything. 524

Mahandwe: the Board and Counter game is played in nearly every Tao village. Dr. Sandeman[1] has given a very complete account of a number of the games played by the several tribes in Nyassaland and I need add nothing to his explanation of the methods of playing.

Similar games are widespread throughout Africa and are well known on the West Coast under the same *mancala*. The several games are played, either simply with holes in the ground and small stones, or with a board and a kind of seed procured from Zanzibar. The board is called *mahandwe* and the pebbles or seeds or other convenient "counters" *ajimbwa*. Dr. Sandeman uses this word as the name of one of the games. The Angoni call the counters *mandie*. The holes in the board or in the ground (Pl. XXIII, fig. 11) are called *ipete* (sing. *ahipete*) from *ku-pata*, to strike, beat, or put down with a thud, to "plank down," and refers to the way the counters are "planked down" in the holes on the board when playing. The large receiver at the end of the board is simply to hold the counters out of play and is called *ngombe*, "the house," or *kinda*, "the hole." The counters are [17]

[1] Mansfield G. Sandeman, "Native games of Central Africa," (Trans. Anth. Inst., 1912, vol. 42, p. 78-106).

[illegible] Down of her married life begins. The man and woman live together peaceably enough as a rule, each attending to his own sphere of work. The man builds the house, the woman [illegible] mends the floors; she sweeps and works, she is the bearer of wood and drawer of water. The man hunts, fishes, makes mats, baskets, the grain store, game traps, and bark-cloth; he looks after the tobacco, and makes the snuff, while his wife brews the beer. He it is who fashions the gourd vessels and carves the spoons, while the women is the potter (Pl. III, 4) and pipe-maker. Together they hoe and together they harvest, but to the women falls the monotonous drudgery of pounding and sifting the corn for flour.

[illegible] The Vie have a custom like that of the Ovimbundu. A sister brings to the house of the newly wedded pair a log of green wood from a mbonge tree which is very hard; the log may be two feet in diameter and four feet long. Should the bride not become pregnant before it is burned away, the husband is laughed at and they may both be teased by having many logs brought to the house. A man who has no children is much despised and there is a saying, "He must have eaten some ground-nuts," pointing on the word for a black-skinned variety of ground-nut, ohinkumbu, a word which also means sterility. An impotent man may, with the consent of his wife, introduce some male friend into the house, any children born in consequence being claimed as the husband's. He usually chooses some friend from a distance to obviate any misfortunes springing up between him and the wife. Two married couples may, all consenting, exchange consorts for the night, but they never live together like this for long periods.

[illegible] There is one well-defined marriage taboo; a man may not marry a woman of his own clan. In the old days, he was also restricted to his own tribe, except in the case of slave wives and wives by capture. Since the clan is inherited from the mother,[illegible] a man may not marry the daughters of his maternal aunts, but he may marry his other female cousins. He may not marry two sisters nor a deceased wife's sister; neither do two brothers marry two sisters.

[illegible] The number of wives is limited only by the husband's ability to provide for them. In addition to free wives, a man might formerly have a number of slave wives. The head wife is called kapuko, the other wives, mnyanako. The word given by Mackenzie, ohuapuko,[illegible] meaning the junior wives, is a Chinyanja word and, I think, wrongly applied.

[illegible] It has been said that a man always marries into the village of his wife. For this reason, female children are always prized as it means an increase in the number of slave-bodied men added to the village. In rare cases, the wife might be taken to the husband's village, as in the Ovimbundu practice.[illegible] This, of course, is true in the case of chiefs and headmen. Here, we may also note that no payment is made for the wife and no dowry is received with her.

[illegible] To revert to Ovimbundu, considerably the spouses will not agree to the marriage and a separation might take place, but in the end, the marriage is usually regularized by the spouses coming to an agreement. If, however, the woman has in the meantime become

[illegible] [illegible] [illegible]

Amusements. Among the natives of east central Africa, the chief form of amusement, apart from dancing, might be said to be sitting and chatting; it is interesting to note that there is a word to express "sitting up all night talking." Often the younger members of the community will gather about one of the older men and listen to his stories of travel or fighting in the old days, and some men gain quite a reputation as raconteurs. Or again middle-aged is indulged in to pass the time. Women and girls do not assist at these sittings. 5A1

Among the Tao youth, wrestling, *ba-kiyaw* (from *ba-kiya*, to try), is practised with a fixed grip and no leg-work; the victor always commemorates his victory by hitting the man who is down, and pummelling his face with his fist or a stone. 5A6

A ball game, played originally with a ball of native rubber from which it derives its name, *mpira*, is a great favorite among boys. A dozen or more are divided into sides but all mixed up together. The ball is then thrown into the air to a member of the same side, any of the opposite side jumping into the air to try and catch it, accompanied by the clapping of hands to time.

"Hide-and-seek," *ahiyanyiwa*, and "tennis," *chee ne chenide* (*chiyawi*, Chin.), are played by boys.

Chimuqa: toward the end of the ball game, when it is decided to finish, each boy as he catches the ball puts it to his nose to smell (*ba-muqa*, to smell). He is then "out." At the end of a game of "tennis" played in the water, when one touches another, he jumps out of the water, puts his cloth up to his nose "to smell," and is then "out." His cloth may be thrown to him to "smell" while still in the water, after which he gets out without hurry. The object is not to be the last "in." I am unable to explain this custom.

Kanikiwanwa is played by girls, naked, from "*ikil*" the embarrassing mode when outside anything. 5A9

Mchemlwa: the Board and Counter game is played in nearly every Tao village. Dr. Sandeman[1] has given a very complete account of a number of the games played by the several tribes in Nyamland and I need add nothing to his explanation of the methods of playing.

Similar games are widespread throughout Africa and are well known on the West Coast under the same name. The several games are played, either simply with holes in the ground and small stones, or with a board and a kind of seed procured from Zanzibar. The board is called *mchemlwa* and the pebbles or seeds or other convenient "counters" *ajimbwa*. Dr. Sandeman uses this word as the name of one of the games. The Angoni call the counters *mawile*. The holes in the board or in the ground (Pl. XXII, fig. 10) are called *tpata* (sing. *ahipata*) from *ka-tpata*, to strike, beat, or put down with a thud, to "plant down," and refers to the way the counters are "planted down" in the holes on the board when playing. The large counter at the end of the board is simply to hold the counters out of play and is called *ngombe*, "the house," or *kimbu*, "the hole." The counters are

[1] Mumford S. Sandeman, "Native games of Central Africa" (Journ. Anth. Inst., 1910, vol. 40, p. 184-194).

called *bowy* wuhoso or nanhowu, the words given by Dr. Sanderson, are not known to the Tao in this district. There is a simple game played among the Anyanja children and therefore called *ohiwa* (*ahihiah* or *ho ahihiwa*), but the common game played is more difficult as shown by Dr. Sanderson. *Ahiwahiwa* is being partly displaced by a Swahili variety called *bao*, or *ohwa* by the Tao, *ohwa* (Pl. IV, fig. 4). I may here also point out that the words *wuwoso* and *nanhu*, which Dr. Sanderson uses for the Manyanja and Angoni varieties of the game, are often replaced by *wyhoso* and *tawa*.

Tao children play at keeping house in little grass structures, made near the village or in the fields, while their parents work. Children who are only toddle may be seen practising dancing the steps of their elders. The boys play with miniature bows and arrows made of a kind of grass, *wow*, and make a toy dart-tube, *ulé* (Pl. XXII, fig. 3). Little dug-out canoes eighteen inches long are made for them to sail in pools.

Among the kids in a village, games of fighting are much indulged in; two sides are opposed and their weapons are of various kinds. Sometimes each is armed with a length of bamboo, into the hollow end of which seed and pebbles are put, representing powder and shot. This end of the bamboo is then rapidly swung in the direction of the "enemy" and will discharge the seed and pebbles into the face of the opponent. This is called *ulé ja wanaja* ("gun for seed"). The boys are sometimes armed with maize cobs for throwing at each other.

Chiwere is another form of fighting. Armed with a collection of small stones, each Boko bin stones at the enemy with very good aim, using the fore-finger of the right hand to propel the stone, the index of the left hand acting as trigger and the left thumb as the spring. The name comes from *we* the sound of the whizzing stone as it goes through the air.

In a pool opposing sides fight with rudimentary syringes made of bamboo, driving streams of water into each other's faces. This is called *tjuwere*, from the sound of the stream of water, or *ulé ja mani* ("gun for water"). In the water they also play *chinzingichinga*, (*ho tsingichinga*, to press down). Boys are ranged on two sides; each tries to "collar" one of the opposing side and put him down into the water, holding him down between his legs. An old water trick is for a boy to go down to the bottom and there squat with his face turned upwards, the mouth stretched wide open by the fingers; viewed from the surface the face looked flat and very grotesque. There is also diving for reserve, *chitsitilla* (*ho tsitilla*, to dive for).

A kind of skipping, called *chiwere*, from *we* *we* the sound of the rope as it goes round in the air, is a great favorite. A rope with a heavy rope about fifteen feet long, with a bundle of grass at the free end enclosing a lump of heavy wood or stone, swings it round and round his head. The faster it goes, the higher it will fly out, while the boys in turn run in and jump over it. Sometimes a boy is caught by the rope and gets a nasty blow, occasionally resulting in a broken limb.

9: Nyasaland D-5 (ca. 1912) 1922 FT7 Yao FT7

Taking advantage of the natural inquisitiveness of youth, a favorite trick for making money is for a man to appear in a village making pretense of having a peep-show, something contained in a covered basket or in a cloth. On payment of some small amount, the youth is allowed to peep in, maybe only to see a dead mouse; finding he had been "done," he of course bursts out laughing and, anxious that all his companions should also be "done," he does not "give it away" and so the peep-show man makes quite a good living. 857 673 543

Two girls play with dolls of two kinds, *lilole*, made from little gourd-like fruits called *lilenge*, and others called *mwanaka*, "a child," made from maize cobs. These dolls they carry about on their backs as mothers do their children. *Lilole* is made of three of these little spherical fruits glued together with beeswax; on the one which represents the head, seed, red and blue, of the *ulenganje* tree are mounted in rows to represent hair, and often beads, as in the *mbumba* method of hair-dressing. One sees similar dolls made for the children of other tribes. Thus, among Mazitura's Angoni, a doll called *mwana*, "a child," is made in a clumb-bell form of two small spherical gourds joined by a bundle of sticks bound together with string and wax; on the head-piece string is mounted to represent hair. Their children also play with little clay images of cattle and men, a custom they have preserved from their old Zulu ancestors but foreign to the Yao. The Ankonde children have carved wooden dolls not seen in any other tribe. *M'wanaka* is made from a maize-cob by shredding the papery coverings of the cob; on these shreds are threaded white and red varieties of maize to represent beads, or the shreds are plaited into a number of tags to represent hair. 857 524

Latterly, the children have taken to making hoops and show considerable skill in driving them with a piece of bent reed (Pl. XXII, fig. 8), while the older boys make two-wheeled representations of bicycles with a very clever imitation of all the parts of the machine. [m]

The whipping-top, *nanpelpe* or *nanpanpe* (*ngoli*, Chin.), is found among the boys' toys. It is made of a conical piece of wood with a flat top and no metal peg. It is started spinning by pulling off the string wound round the top. The whip consists of a piece of string fastened to the end of a stick. Sometimes tops of large size are used, and two boys whip them from opposite sides (Pl. XXII, fig. 6).

A game called *ukipanda* is played by youths; it takes its name from *ku-pata*, to strike, and refers to the action of striking with a finger the hand in which a bean is guessed to be. A spiral is drawn with the finger in the sand with a central point to represent a village, and a tail-piece prolonged on one side to a second point which represents a slave-market on the coast. Along the line, a number of other points are demarcated to represent sleeping places en route. At the village, two white beans are put to represent the two players and with each is a smaller brown bean to represent his slave. At the slave-market are placed a variety of beans to represent trade-goods, cattle, beads, etc. Each of the two players in turn shakes a single bean in his closed hands and then shows the hands, separating them at the

3:Stanner D-5 (ca. 1912) 1922 FT7 Yao FT7

857 same time so that the bean is concealed in one hand; the other player has to guess in which
524 the bean lies and this he does by striking with the finger the hand in which he imagines the bean to be. If the striker guesses correctly, he moves his man and his slave to the first sleeping-place. It is then his turn to hide the bean. So it goes on till one or the other arrives at the slave-market. Here he barters his slave for trade-goods and returns in the same way; whoever gets home first wins, and the loser is said "to have died on the road," a not uncommon event in the old days. It is interesting to note that cheating is sometimes attempted
[788] by palming beans between the fingers, so that in the hand guessed, the bean is palmed between the fingers, and, in the other hand, a bean is released from between the fingers into the palm.

526 *Njoge* (sailors, Chin.): a kind of simpina, which takes its name from the object which is thrown to knock down the simpina. The game is played by youths and men, equal numbers sitting in two parallel rows fronting each other on the ground, the two rows composed of a dozen or more persons, a few yards apart. Each person has set up in front of him on the ground a maize cob from which the grain has been stripped, or each may have a number of them, perhaps six. In the former case, the cobs are perhaps two feet apart, in the latter only a few inches. Each player is provided with several njoge, from six to twenty-four in number. The njoge is a piece from the side of a gourd, slightly concavo-convex and slender in plan, with the edge often cut into serrations. A piece of reed is fixed through a hole in the centre, projecting an inch or an inch and a half from the convex surface, thus forming a kind of tentorium, two or three inches in diameter (Pl. XXII, fig. 9). It is held between the thumb and second finger by the foot-piece; by a sharp movement of the fingers, it can be spun out of the hand and, at the same time, jerked forward by another sharp movement at the wrist. At a given signal, the players on both sides start launching forth their little tops which spin away towards the maize cobs of the opposing side, the object being to knock them down. When there are many on a side, each with a number of cobs, many fall with the first onslaught, but as fewer and fewer remain, it becomes more difficult, and players try to show their skill by aiming at the cobs furthest away from them, along the opposite line. The game goes on till only one cob is left standing; then, if a player of the opposite side knocks it down, he puts one of his own up again, and the side which had the one remaining puts one up, and so the game may go on. When they are tired of playing, they say, "*Kwisale tsonge*," "We must finish the game," literally "Come on, we must small."[1] A knife is then stuck in the ground on either side, the blade pointing to the opposite side, and each man, when he has hit the knife of the opposing side with his njoge, is considered to have shown his skill, and goes off. The last man remaining is laughed at as being a fool at the game. If a headman is playing, he makes sure of having his try first, so that he will not be left in to the last. The game has a great fascination for the natives and it is said of Malenya, the uncle of the present chief (1912), that he was

[1] Vide supra, p. 356.

3:Stanner D-5 (ca. 1912) 1922 FT7 Yao FT7

526

so unfriendly a player that if anyone wanted to make a jokes at his expense, he would snap his fingers, imitating the action of throwing the njenje.

Chipulupulu: a Mang'anja game now played by the Yao which takes its name from *kupulupulu*, to scratch as a fowl does looking for food. The words used in the game are all Chinyanja. A number of beans, perhaps twenty, are put down in a row at intervals on the ground. One player manipulates the beans, while the other has his back turned so that he cannot see. The first player calls, "*Chipulupulu chipulupulu!*" the second answers, "*Mwana kkanga* (child of a guinea-fowl)." The first then says "*Nanga apa!* (What about here?)", pointing to the first bean; the second player answers "*Tolani!* (Pick it up!)." At the second round, the first player having picked up the first bean, points to the place where it was and repeats his cry, but at the words, "*Nanga apa,*" the second player has to say, "*Palibe!* (There is none!)." Then he comes to the second bean and says, "*Nanga apa*" and the second player, knowing that he has come to the second bean, answers, "*Tolani!*" When three, four, or five beans have been picked up, the first player asks three, four, or five times, "*Nanga apa?*" and the second player to each question should answer, "*Palibe!*" and then, when the first player points to a bean and not to a blank, the second player should know that he has come to a bean and answer, "*Tolani!*" instead of "*Palibe!*" When played quickly, it is not altogether easy to answer correctly, as the end of the line of beans is approached.

Chipuzo cha mapalo (to strike with the hand) is played with four pebbles or beans. Starting with two in each hand, the fists are closed and then making similar movements of throwing from each hand, two are thrown from one hand, or one from each as the case may be, as a sleight-of-hand. One of the two thrown on the ground is then taken up in each hand, and the guesser has to say in which the three are. This he indicates by striking the hand with one of his fingers. This game has many variations.

Chikutuku: a game of jumping from a big rock over a fire. Before jumping, the boys sing, "*Chikutuku chikutuku ndi!*" 857 529 528

Chindumudumu (to-dum, to pinch): each of a number of boys heavily pinches hold of the skin of the back of the hand of his neighbor, one hand above the other. They then sing:

"*Chindumudumu chindumudumu, ndibidule!*"
"Pinch Pinch, out number!"

At the word ndibidule, everyone should break away while digging his nails into the hand beneath him. Some one of them is sure to have had his attention distracted and forgot to pinch hard, while he himself receives a pinch hard enough to make him jump.

Running game, each boy learns a note: — "*ma . . . ta,*" each one is a different boy. Anyone changing his note is disqualified.

Ipuzo: a number of stems of a reddish grass with long joints, or small millet stalks are bound together by their upper ends. The free ends are heated in a fire, then hanged down 529 857

3:Sikanse D-5 (ca. 1912) 1922 FT? Yao FT?

524 657 on a stone. They explode with a noise like the sound of a gun. The boys send them off, one after the other, imitating fighting, or sometimes bang them down on some one's head. They go off, making the sound *(pang)*.

Small boys or girls among themselves play a clapping game called *pyapiile*. One sings:

[537] "*Pyapiile pyapiile, pyapiile pyapiile, pyapiile pyapiile, fumpwe wangi'je pa mlungu pa' ruwa!*
"Bump bump bump bump bump bump the one who has passed movement the at the door at his mother's,

Ngumbe, hanu, hanili! etc.,
let him clap once, twice! etc.

They all clap together at the word "once," "twice," and so on. No one knows how many times they are going to be called on to clap, and some one is sure to clap when no word is given and so is caught and made fun of, as the one who has misbehaved.

[52 A01] *Lilomin* (lo-lomin, to clap): simple clapping when pleased with anything is commonly indulged in, mostly by women and girls.

Little girls play at making little pots. This is called *gumbeinige*, (lo-gumbe *ainige*, to model a pot). They also play at pounding grain, called *ainiduli*, "learning to keep time," the word itself being an imitation of the sounds. Five or six pound in one mortar; in between strokes, they throw the wooden pestles up in the air, catching them again in time.

[537] "*Jukupilude hatuli pa' ujo wanni ja ululugu!*"
"The one who opens little mortar that that one which is bewitching!"

This is the song of a game played by little girls. One sits in the middle with a stepper on her head, to represent a grain mortar, while the others form a ring round her holding hands. As they sing, the circle at one point swings in, and one of the girls passes in front of the one sitting down, her back to her all the time, the hands passing over her head. This they do one after the other very quickly and anyone who touches the girl in the middle, "who bounds down the mortar," takes the place of the girl in the middle.

[538] "*Ammumuyo Ammumuyo ujulati ulul!*"
"Our wives, our wives, nothing all (interjection)!"

is the song of a game played by a lot of boys together or a lot of girls together; they do not join with one another. Two opposing groups are formed of equal numbers. Each is led by one of the older children and behind him is the rest of the group, each holding on to the cloth of the one in front. The followers of each leader represent his wives. The two parties then sing and manoeuvre for the leader to get at the tail of the other group and "seize" a wife or two from his opponent. It becomes very exciting. As they go faster and faster, some of the tail may get swung off and captured by the other side before they can again join their own.

Trapping and catching of animals is pursued with great glee by small boys. They make many of the traps, particularly the two kinds of *kilion*, *chipuzo*, *chijuwala*, *chimwa*, *lisuwa*, and *upwa*. *Lilion* is set in rat runs and the rats are driven into them (Pl. XX, fig. 4). Digging-out rats is a favorite amusement for the boys and brings meat to the pot. May is the best month for this sport. They are adepts at recognizing burrows which have rats inside. Digging is commenced at one entry to the rat-warren, the escape holes being closed with tufts of grass. As they get nearer the rat chambers, they smell the earth and so know when they are quite close to the rats. A bunch of grass is then put in this hole, lighted, and kept aglow by blowing on it. One of the rats will try to bolt and is knocked on the head. His head is then squashed to kill him effectually, and the skin of the tail of the first rat is always pulled off for luck, "so that they may catch many." They will try to guess how many there are going to be, "ten and ten and five and two!" Each rat when caught is buried under some earth, so that the hawks will not swoop down and carry it off. When they have finished one warren, one of the party is appointed to carry all the rats. He ties a string round his waist, and the rats are slipped underneath it and so secured. They then go on to another; the carrier will bear the whole catch for the day and may, before they have finished, have several strings of rats round his body, one above the other.

Digging-out crabs, *ku-kupa ngulu*, is another favorite amusement for children; (*ku-kupa* is to dig up anything like sand which makes a squelching sound). Crabs are never eaten with flour, but always with *mnunu*, the grain banks, "crabs and brown-bread!"

Youths and girls fish with a rod, line, wire hook, and worm, *ku-kupuza uwuku*, to pull up fish. They also catch fish, using the fish poison, *mtuto*. Birds are killed with a bow and a blunt-pointed wooden arrow.

A small boy, seeing a girl or a younger boy with a cob of maize and wanting it himself, will say, "Let me make a path to the meat!" He will then remove, say a couple of rows of maize grains for himself, work to the interest of the owner; or "Let me make *ilumba*" (*ilumba* is a shaved head on the scalp), or "Let me make the snail's eyes!" when two ordinary grains are left, surrounded by a simple ring of other grains, as the girl's portion.

Children are taught a little saying about their fingers which reminds one of the "This little pig went to market" of one's infancy. Starting with the little finger, they say:

> "*Alabe* [illegible] *kangalabe* [illegible]"
> "This little one (is) the one which cannot draw water!"

Pointing to the ring finger,

> "*Kambalapuse* [illegible]"
> "This little one's brother (is) the one that picks the meat!"

To the middle finger,

> "*Kipuguwale* [illegible] [illegible]"
> "(The brother of) the one that picks the meat (is) the one who finishes meat!"

3: Stanzas D-5 (ca. 1912) 1922 FT7 Yao FT7

657 To the hole:

524 "*Lukungulo luwa ng'ulube luwa luwandula mwilimuka!*"

539 "(This one is) the leg of an ox which walks on the plain!"

To the thumb:

"*Chamuwa*"

"The fifth"

657 Cat's Cradle are known as *chinjewa*, "the spider's web" (Pl. XXIII). The position
524 of the string on the hands is as in Position I of Miss Haddon's book and this is followed by Opening A, given by the same author.[1] (Pl. XXIII, figs. 1, 2.) Three methods of arriving at the same figure, which is called "the net," are shown here (Pl. XXIII). Variety C is followed by the making of a knot, figured in C 13, known as "the child." There are probably a number of other forms made by natives, but these, which I saw one of my women patients make, will serve as an example.

539 Musical Instruments. The number of instruments proper to the Yao appears to be small, indeed probably only two in number, the *mwpolompondo* and the *chilipulipu*, with perhaps the three baked flute, *chimbwe*.

The former is constructed on the principle of a xylophone; it consists of two trunks of banana trees laid on the ground and held in position by stakes. They are not quite parallel but approach each other somewhat at one end, being from one to two feet apart; on these rest cross-wise a number of pieces of wood of varying thickness and length, kept in position by pegs driven into the banana trunks on each side of each billet. These are struck with sticks by a single player, or by two persons sitting on opposite sides of the instrument. Another variety is found in which the pieces of wood, which may have holes bored in them to effect differences in sound, are arranged over a hole scooped in the ground (Pl. [illegible], fig. [illegible]).

The *chilipulipu* consists of a piece of plank hollowed out to form a resonator on which are fixed a number of keys of bamboo or metal of different lengths. These are arranged across a bridge, and the free ends are set in vibration by twanging with the fingers.

[FT] The instrument now most commonly seen is the one which was introduced, I think, from the coast about 1890 to 1900. It is a type of guitar.

An instrument played by women — and this again is of recent introduction among the Yao — is the *mlomporo*, which consists simply of a stick of wood about a yard long to which is affixed a single string. One end is held between the teeth, the other in the hand; it is twanged by being struck with the thumb and finger of the other hand close to the mouth, which is opened to different degrees, and gives a variety of notes resembling those of a jews' harp.

The *ching'wengwengwengo* and drums are referred to under *Dancing*.

Morari F84

When a number are working they take time from the front man, the rear man steering with his ordinary paddle. The passengers sit in the middle, a chief towards the stern. They never lose sight of land even in crossing the widest part of the lake. Stones are now used occasionally as anchors up the lake; grass houses are made to shelter canoes. The smaller canoes are 2 feet to 2½ feet high, the very large ones used to be 4 and 5 feet high; except on the lower river, where canoes have made similarly shaped, they are made with a bow more pointed than the stern and having a beak (Fig. 18). There is no ornamentation and no figure heads.

In every lake-shore or river-side village or collection of huts will be found one or more canoes; these belong to some one man, others using them paying a fee. At the launching of a new canoe, beer is made and the women dance, and medicine is made for its safe journey.

SWIMMING.

Not even all lake-shore natives swim, though most do. The art is learnt in childhood and not taught. They are not very fast swimmers, and I do not think could swim very far. They sometimes dive head first and practise staying under water. They swim rather like a dog, both arms coming a little out of water, but not a trudgeon stroke; arms are kept straight. They sometimes swim on the side, but never use the ordinary breast stroke.

GAMES.

Several games are played resembling the game of wari introduced from Zanzibar (Mancala); wari is played on a board in which rows of holes have been cut; beans are used as counters.

Mikombwa.—*A game found among Anyanja and Machinga; it may be played on a wari board, but is often played in holes made in the ground with stones. The Angoni game chipalapala is played in the same way. At Fort Anderson is a heap of stones in which hollows have been made similar to those made in the ground. It is the only piece of stone-work I know in the country. Children and women play kawitikawa (mabale).*

A man tries to cut boards to keep saying ndiwa-kiwa-dwa . . . . while another makes a pile of stones from another pile of ten, taking one at a time, saying, "To take and put in there makes one," etc. Men play at guessing in which hand an object is hidden, or one out of two men sitting in a house has to guess with whom a certain object is. No forfeits.

Pendanda (white spider) is cat's cradle.

Pati (hide and seek) one hiding, five or six seeking.

There are no dice games. Cards were introduced from the coast before the advent of Europeans into the country; the games are various and difficult to follow.

A slip-shod kind of wrestling is practised by Anyanja youths; the Machinga

4: Stannus D-5 (ca. 1909) 1910 FT7 Yao FT7
Marawi FR4

wrestle thus: each man passes his right arm round his opponent's waist and grips his opponent's left wrist. When one has thrown the other, the victor spits on his hand, dips it in the dust and then smears his victim on the forehead.

The boys practise long jumping. Small boys make miniature bows and arrows, spears, etc., to play with; in their ways and frolics small children resemble European children exactly. Little girls play at dolls—they cut cucumbers into shape and dress them in calico cloth, carrying them on their backs and making gestures to suckle them.

The first words spoken by an infant are *ma* (*amai*=mother) and *ta* (*atata*=father); at two years *mama* and *tata* are words used; a word soon learnt is *tatawa* "No! I don't want to."

The only acting I ever heard of occurred when my own Machila men once acted a village scene, in which a woman (a man dressed up) while pounding corn was seized and raped by another man. At the right moment her husband and others rushed in and collared the man, who was condemned to have his head cut off; the execution followed.

DANCES.

The following is a list of dances; opposite each is the name of the tribe who dance it:—

1. *Chimlinda*, Yao.	13. *Lelaw*, Yao.
2. *Lilomba*, Yao.	14. *Njoda*, Yao.
3. *Ulale*, Yao.	15. *Sokwa*, Yao.
4. *Mitowai*, Mahenje.	16. *Nanjo*, Yao.
5. *Kwajo*, Mahenje.	17. *Nkondi*, Yao.
6. *Pimbumbwa*, Mahenje.	18. *Chikwale*, Yao.
7. *Mkanse*, Mahenje.	19. *Mkwaw*, Yao.
8. *Kwangwa*, Mahenje.	20. *Mwapwji*.
9. *Mtanda*, Mahenje.	21. *Sanji*.
10. *Chilwi*.	22. *Chiwawawa*.
11. *Pingwa*, Mahenje.	23. *Mawa*, Mahenje and Yao.
12. *Ntala*, Mahenje.	24. *Mwaiwabola*, Yao.

1. *Chimlinda*.—Danced at the *malele* (mourning ceremony) generally inside the house unless a very large number of people are present.

All sit round and clap while one after the other man and woman get up and dance in a rocking motion from one foot to the other, a small drum held against the chest; in former times a large *ulu* lying on the ground used also to be used—now two or three, standing on legs, are employed. When danced in the dead man's house, the body lies at one end of the room with the *Ankhola* sitting by it. On one side are the walkers, and on the other the dancers, the dance being sometimes started immediately after death, sometimes the following morning and continued for three days.

This dance is also performed at almost any beer drinking.

Amusements. Among the native of east central Africa, the chief form of amusement, apart from dancing, might be said to be sitting and chatting; it is interesting to note that there is a word to express "sitting up all night talking." Often the younger members of the community will gather about one of the older men and listen to his stories of travel or fighting in the old days, and some men gain quite a reputation as raconteurs. Or again riddle-asking is indulged in to pass the time. Women and girls do not assist at these sittings. 5A1

Among the Tao youth, wrestling, *ku-lingana* (from *ku-linga*, to try), is practised with a firm grip and no leg-work; the victor always accentuates his victory by hitting the man who is down, and pummelling his face with his fist or a stone. 526

A ball game, played originally with a ball of native rubber from which it derives its name, *mpira*, is a great favorite among boys. A dozen or more are divided into sides but all mixed up together. The ball is then thrown into the air to a member of the same side, any of the opposite side jumping into the air to try and catch it, accompanied by the clapping of hands to time.

"Hide-and-seek," *chijumujum*, and "touch," *chao* or *chaokile* (*chijum*, Chin.), are played by boys.

Chimuqu: toward the end of the ball game, when it is decided to finish, each boy as he catches the ball puts it to his nose to smell (*ku-muqu*, to smell). He is then "out." At the end of a game of "touch" played in the water, when one touches another, he jumps out of the water, puts his cloth up to his nose "to smell," and is called "out." His cloth may be thrown to him to "smell" while still in the water, after which he gets out without hurry. The object is not to be the last "in." I am unable to explain this custom.

Kumbla-bomo is played by girls, mainly, from "*ku*" the onomatopoic mark when striking anything. 529

Wikombo: the Board and Counter game is played in nearly every Tao village. Dr. Sandeman[1] has given a very complete account of a number of the games played by the several tribes in Wynnland and I need add nothing to his explanation of the methods of playing.

Similar games are widespread throughout Africa and are well known on the West Coast under the same name. The several games are played, either simply with holes in the ground and small stones, or with a board and a block of wood procured from Zanzibar. The board is called *mikombo* and the pebbles or seeds or other convenient "counters" *ujombo*. Dr. Sandeman uses this word as the name of one of the games. The Angoni call the counters *mamba*. The holes in the board or in the ground (Pl. XXII, fig. 11) are called *tpata* (*ding*, *chipata*) from *ku-pata*, to strike, hunt, or put down with a thud, to "plant down," and refer to the way the counters are "planted down" in the holes on the board when playing. The large container at the end of the board is simply to hold the counters out of play and is called *ngamba*, "the house," or *kimba*, "the hole." The counters are

[1] Sandeman, "Native games of Central Africa" (Trans. Anth. Inst., 1914, vol. 44, p. 148-154).

called bowy, nsikene or nsenkene, the words given by Dr. Sanderson, are not known to the Tao in this district. There is a simple game played among the Anyanja children and there here called ulowa (ukhlala or for children), but the nsenkene game played is more difficult as shown by Dr. Sanderson. Mikombwe is being partly displaced by a Swahili variety called bao, or ulwa by the Tao, ulwa (Pl. IV, fig. 4). I may here also point out that the words nsenen and nsala, which Dr. Sanderson uses for the Mwanyanja and Angoni variation of the game, are often replaced by nylwa and tawa.

Tao children play at keeping house in little grass structures, made near the village or in the fields, while their parents work. Children who can only toddle may be seen pounding dancing the steps of their elders. The boys play with miniature bows and arrows made of a kind of grass, ssaw, and make a toy dart-tube, ut (Pl. XXII, fig. 3). Little dug-out canoes eighteen inches long are made for them to sail in pools.

Among the lads in a village, games of fighting are much indulged in; two sides are opposed and their weapons are of various kinds. Sometimes each is armed with a length of bamboo, into the hollow end of which sand and pebbles are put, representing powder and shot. This end of the bamboo is then rapidly swung in the direction of the "enemy" and will discharge the sand and pebbles into the face of the opponent. This is called ut ja mwanga ("gun for sand"). The boys are sometimes armed with cruise cobs for throwing at each other.

Chinene is another form of fighting. Armed with a collection of small stones, each thinks his stone at the enemy with very good aim, using the bow-finger of the right hand to propel the stone, the index of the left hand acting as trigger and the left thumb as the spring. The same comes from ne the sound of the whizzing stone as it goes through the air.

In a pool opposing sides fight with rudimentary syringes made of bamboos, driving streams of water into each other's faces. This is called ipinene, from the sound of the stream of water, or ut ja mwi ("gun for water"). In the water they also play chinkingichinge, (ku-kingichinge, to press down). Boys are ranged on two sides; each tries to "collar" one of the opposing side and put him down into the water, holding him down between his legs. An old water trick is for a boy to go down to the bottom and there squat with his face turned upwards, the nostrils stretched wide open by the fingers; viewed from the surface the face looked flat and very grotesque. There is also diving for sweets, chikwetile (ku-kwetile, to dive for).

A kind of skipping, called ilinene, from ssi ssi the sound of the rope as it goes round in the air, is a great favorite. A rope with a heavy rope about fifteen feet long, with a bundle of grass at the free end enclosing a lump of heavy wood or stone, swings it round and round his head. The faster it goes, the higher it will fly out, while the boys in turn run in and jump over it. Sometimes a boy is caught by the rope and gets a nasty blow, occasionally resulting in a broken limb.

1: Swanson D-4 (on. 1912) 1932 FT? Too FT?

[857] [524] some time so that the bean is sustained in one hand; the other player has to guess in which the bean lies and this he does by striking with the finger the hand in which he imagines the bean to be. If the striker guesses correctly, he moves his man and his shere to the first sleeping-place. It is then his turn to hide the bean. So it goes on till one or the other arrives at the shere-market. Here he barters his shere for trade-goods and returns in the same way; whoever gets home first wins, and the loser is said "to have died on the road," a not uncommon event in the old days. It is interesting to note that cheating is sometimes attempted [789] by palming beans between the fingers, so that in the hand guessed, the bean is palmed between the fingers, and, in the other hand, a bean is released from between the fingers into the palm.

[526] *Njanga* (native, Chin.): a kind of ninepins, which takes its name from the object which is thrown to knock down the ninepins. The game is played by youths and men, equal numbers sitting in two parallel rows fronting each other on the ground, the two rows composed of a dozen or more persons, a few yards apart. Each person has set up in front of him on the ground a maize cob from which the grain has been stripped, or each may have a number of them, perhaps six. In the former case, the cobs are perhaps two feet apart, in the latter only a few inches. Each player is provided with several njanga, from six to twenty-four in number. The njanga is a piece from the side of a gourd, slightly concave-convex and circular in plan, with the edge often cut into serrations. A piece of cord is fixed through a hole in the centre, projecting an inch or so inch and a half from the convex surface, thus forming a kind of tentorium, two or three inches in diameter (Pl. XXII, fig. 9). It is held between the thumb and second finger by the foot-piece; by a sharp movement of the fingers, it can be spun out of the hand and, at the same time, jerked forward by another sharp movement at the wrist. At a given signal, the players on both sides start launching forth their little tops which spin away towards the maize cobs of the opposing side, the object being to knock them down. When there are many on a side, each with a number of cobs, many fall with the first onslaught, but as fewer and fewer remain, it becomes more difficult, and players try to show their skill by aiming at the cobs furthest away from them, along the opposite line. The game goes on till only one cob is left standing; then, if a player of the opposite side knocks it down, he puts one of his cobs up again, and the side which had the one remaining puts one up, and so the game may go on. When they are tired of playing, they say, "*Kasinda nonoga*." "We must finish the game," literally "Come on, we must small."[1] A knife is then stuck in the ground on either side, the blade pointing to the opposite side, and each man, when he has hit the knife of the opposing side with his njanga, is considered to have shown his skill, and goes off. The last man remaining is laughed at as being a fool at the game. If a headman is playing, he makes sure of having his toy first, so that he will not be left in to the last. The game has a great fascination for the native and it is said of Malenya, the uncle of the present chief (1912), that he was

[1] Vide supra, p. 340.

3:Stanner D-5 (ca. 1912) 1932 ??? Too ???

526

to unfamiliarize a player that if anyone wanted to make a joke at his expense, he would snap his fingers, indicating the action of throwing the ninge.

Chipulupuse: a Mang'anja game now played by the Yao which takes its name from *kapulupuse*, to stretch as a fowl does looking for food. The words used in the game are all Chinyanja. A number of beans, perhaps twenty, are put down in a row at intervals on the ground. One player manipulates the beans, while the other has his back turned so that he cannot see. The first player calls, "*Chipulupuse chipulupuse!*" the second answers, "*Wanse Mungu* (child of a guinea-fowl)." The first then says "*Nungu apa!* (What about here?)", pointing to the first bean; the second player answers "*Palenji!* (Pick it up!)." At the second round, the first player having picked up the first bean, points to the place where it was and repeats his cry, but at the words, "*Nungu apa,*" the second player has to say, "*Palibe!* (There is none)." Then he comes to the second bean and says, "*Nungu apa?*" and the second player, knowing that he has come to the second bean, answers, "*Palenji!*" When three, four, or five beans have been picked up, the first player asks three, four, or five times, "*Nungu apa?*" and the second player to each question should answer, "*Palibe!*" and then, when the first player points to a bean and not to a blank, the second player should know that he has come to a bean and answer, "*Palenji!*" instead of "*Palibe!*" When played quickly, it is not altogether easy to answer correctly, as the end of the line of beans is approached.

Chipuzu cha wapuli (to strike with the hand) is played with four pebbles or beans. Starting with two in each hand, the fists are closed and then making similar movements of throwing from each hand, two are thrown from one hand, or one from each as the case may be, as a sleight-of-hand. One of the two thrown on the ground is then taken up in each hand, and the guesser has to say in which the three are. This he indicates by striking the hand with one of his fingers. This game has many variations.

Chikutuku: a game of jumping from a big rock over a fire. Before jumping, the boys sing, "*Chikutuku chikutuku ooh!*" 557 529 526

Chidumudumu (to-dum, to pinch): each of a number of boys heavily pinches hold of the skin of the back of the hand of his neighbor, one hand above the other. They then sing:

"*Chidumudumu chidumudumu, ooh!*"
"*Pinch Pinch, not another!*"

At the word *ooh!*, everyone should break away while digging his nails into the hand beneath him. Some one of them is sure to have had his attention distracted and forgot to pinch hard, while he himself receives a pinch hard enough to make him jump.

Running round, each boy hums a note:—"*um . . . m,*" each one in a different key. Anyone changing his note is disqualified.

Ipuse: a number of stems of a reedlike grass with long joints, or small millet stalks are bound together by their upper ends. The free ends are heated in a fire, then hanged down 529 557

G. Blackman D-S (m. 1995)1910 FT7 Tue FT7
Market 1 F69

When a number are working they take time from the head man, the man
P 7 standing with his ordinary paddle. The passengers sit in the middle, a chief
501 towards the stern. They never lose sight of land even in crossing the widest part of
the lake. Houses are now used occasionally as stalkers up the lake; great houses are
made to shelter canoes. The smaller canoes are 2 feet to 2½ feet high, the
very large ones used to be 4 and 5 feet high; except on the lower river, where
canoes have made similarly shaped, they are made with a bow more pointed than
the stern and having a beak (Fig. 18). There is no ornamentation and no figure
heads.

In every lake-shore or river-side village or collection of huts will be found
P 7 one or more canoes; those belonging to much one man, others using them paying a
[illegible] fee. At the launching of a new canoe, beer is made and the women dance, and
medicine is made for the safe journey.

Swimmers.

P 7 Not even all lake-shore natives swim, though most do. The art is learnt in
[illegible] childhood and not taught. They are not very fast swimmers, and I do not think
could swim very far. They sometimes dive head first and practise staying under
water. They swim rather like a dog, both arms coming a little out of water,
but not a trudgeon stroke; arms are kept straight. They sometimes swim on
the side, but never use the ordinary breast stroke.

Games.

P 7 Several games are played resembling the game of *ohwe* introduced from
524 Zanzibar (Mancala); *ohwe* is played on a board in which rows of holes have
been cut; beans are used as counters.

Ndamalwa.—A game found among Anyanja and Mashinga; it may be played
on a *ohwe* board, but is often played in holes made in the ground with stones. The
Angoni game *chipalapala* is played in the same way. At Fort Anderson is a heap
of stones in which hollows have been made similar to those made in the ground.
It is the only piece of stone-work I have in the country. Children and women
play hoop-kicking (*nchalo*).

A man tries to use hands to keep saying *ndwi-ndwi-ndwi* . . . . while
another makes a pile of stones from another pile of ten, taking one at a time,
saying, "To take and put it there makes one," etc. Also play at guessing in which
hand an object is hidden, or one out of two men sitting in a house has to guess with
whom a certain object is. Its forfeits.

Pembenda (=the spider) is cat's cradle.

Fisi (hide and seek), one hiding, five or six seeking.

P 7 There are no dice games. Cards were introduced from the coast before the
[illegible] advent of Europeans into the country; the games are various and difficult to follow.

P 7 A slip-shod kind of wrestling is practised by Anyanja youths; the Mashinga
● 536

wrestle then; each man passes his right arm round his opponent's waist and grips his opponent's left wrist. When one has thrown the other, the victor spits on his hand, dips it in the dust and then smears his victim on the forehead.

The boys practise long jumping. Small boys make miniature bows and arrows, spears, etc., to play with; in their ways and bodies small children resemble European children exactly. Little girls play at dolls—they cut cucumbers into shape and dress them in rather cloth, carrying them on their backs and making pretence to suckle them.

The first words spoken by an infant are *ma* (mother) and *ta* (father); at two years names and into one words and; a word was learnt in Anyanja "No! I don't want to."

The only acting I ever heard of occurred when my own Mashile man came and a village man, in which a woman (a man dressed up) while pounding corn was seized and raped by another man. At the right moment her husband and others rushed in and collared the man, who was condemned to have his head cut off; the execution followed.

Dances.

The following is a list of dances; opposite each is the name of the tribe who dance it:—

1. *Chinalinda*, Tan.	13. *Jolum*, Tan.
2. *Jidumbe*, Tan.	14. *Kjinda*, Tan.
3. *Gulu*, Tan.	15. *Sukum*, Tan.
4. *Mdawari*, Mahenje.	16. *Mangla*, Tan.
5. *Kwajo*, Mahenje.	17. *Mlondi*, Tan.
6. *Pindumdoro*, Mahenje.	18. *Chikondi*, Tan.
7. *Mkwaro*, Mahenje.	19. *Mkwaro*, Tan.
8. *Kwangwara*, Mahenje.	20. *Mangwaji*.
9. *Mlondo*, Mahenje.	21. *Angi*.
10. *Chikai*.	22. *Chiwawawa*.
11. *Pingwa*, Mahenje.	23. *Mawu*, Mahenje and Tan.
12. *Pindi*, Mahenje.	24. *Mwajambula*, Tan.

1. *Chinalinda.*—Danced at the mdoto (mourning ceremony) generally beside the house where a very large number of people are present.

All sit round and clap while one after the other men and women get up and dance in a rocking motion from one foot to the other, a small drum held against the chest; in former times a large one lying on the ground used also to be used—now two or three, standing on legs, are employed. When danced in the dead man's house, the body lies at one end of the room with the *Akalinda* sitting by it. On one side are the women, and on the other the dancers, the dance being sometimes started immediately after death, sometimes the following morning and continued for three days.

This dance is also performed at almost any beer drinking.

Z: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

wanted human flesh.[1] They said that they had a strong headman and that they could trust him; he was a good headman without witchcraft. If he had been a sorcerer they would have kept wedding him until the next morning.

About two hours after sunrise the people gathered and started dancing. At about this time Cimombo was brought out of the hut and put in the grass shed which had been built for the occasion. This was the climax of the ceremony.[2] He sat on a chair in the grass shed with one of his two wives on either side. Makoka then started a chant, exhorting the visitors to come to throw pennies at Cimombo's feet. Some of the people then made speeches about the type of behaviour they would expect from him. Then Nyambi arrived from the court village in a rickshaw. When the noise had subsided he told the people that if they disobeyed Cimombo it meant that they disobeyed the chief. He emphasized the importance of the rank of the new headman. After the speech he presented 12s. to Cimombo which was received on his behalf by Nzimbo. Nyambi then left and the ceremony was over, but the people remained to dance and drink beer.

This description of the procedure following the "coming out of the hut" is somewhat sketchy. The interaction of the headman and his villagers on this formal and ceremonial occasion is of great interest and importance. During the entire ceremony the headman adopts the pose which is appropriate for any Yao initiand. His hands are on his lap or on the arms of the chair and his head is bowed forward with eyes downcast. He neither speaks nor moves. His attendants, when necessary, wipe the sweat off his face or chase away the flies. The other occupants of the mat, who may be his wives, and sometimes his heir, adopt similar postures. In contrast to this, is the behaviour of the villagers who run about shouting wildly, the men discharging muzzle-loading guns, and women ululating in the typical Central African way.

Before the new headman comes out of the hut his mamwe

[1] This is a use based on the witchdoctors of the Yao, who believe that sorcerers kill relatives with magic and then share out the flesh of their victims with fellow-sorcerers in ghoulish feasts.

[2] Called the "coming out from the hut" (*kukupulo ngombe*). It is of course the first public appearance of the headman in his newly assumed status.

[illegible] gives an excellent idea of the average figure. It is circular in plan, often with a little hillock in the centre known as *bokonki bonyongoli*, "the hill of debt," and disposed in the quadrants are four depressions.

[illegible] When the soul are introduced to Chiquno, they stand round in a circle while the *n'ombilo* stands in one of the depressions with perhaps two of his assistants in others. The *n'ombilo* sings:

[illegible] "*Ryoro bonyongoli chimyongoli ramondo ntiyondo bodondo, ramo!*
[illegible] "*Ntu bolo ramondo ma I bora ekki I would have died on the plain, mother!*"
"*Ntiyondo ntiyondo!*"

or

"I have lived by the great hole of my life; I should have died in the plain!"

while all three make movements as of pudding a mass. The depressions are said to represent graves. I believe this is the recognized form but I have also seen an oblong figure with two mounds of unintelligible meaning. Chiquno is usually found near *nshongwani*.

Chinto, when represented, stands beyond *nshonda*. It consists of two branches at right angles forming a cross, which are covered over with logs and earth and the whole outlined with flour in a decorative pattern. The end of one limb of the cross is left open and round this opening a mound of grass is made. As the soul approach *Chinto*, some of the assistants or shamans descend into the branches for the ceremony. The *n'ombilo* takes up his stand at the centre of the cross and sings:

"*Chinto, ramo, bodondo chinto!*"
"*Chinto, mother, come-on chinto!*"

[illegible] [illegible] There as everyone says "*Listen, listen!*" saying is heard "coming out of the bowels of the earth," followed by drumming and the singing of the *chinkinda* songs (sometimes *nshonda* or *mondo*); a horn is sometimes heard as well as *bokinda*, trilling with the tongue against the lips. *Chinto* is called "the resting place of all departed spirits" and the sounds are said to be the echoes of their doings. The word is not met with elsewhere among the Tete, although it occurs in the Chinyanja and in other languages of this country with the meaning "the heavens."

Chinsin is said by Bodinowitch to be "a large fish that forms one of the pictures at the Dipungu," but I have never seen it or heard of it, and I am doubtful of the correctness of the statement.

[illegible] *Chingi'ombongi'ombo*: Dr. Dorsey's photograph[illegible] is an excellent representation of this figure, which consists of a mound of earth flattened on the top, and decorated with geometric patterns in flour which extend to the ground. In the centre and at the four corners, so to speak, are implanted billets of wood with decorative lines and dots in black and red on the white wood (Pl. II, figs. 1, 2). The billets are three inches in diameter and project twelve to fifteen inches above the ground.

[illegible] Bonifacio of the Fort language op. cit., p. 141. [illegible] Op. cit., Pl. III, fig. 2.

323 Wood near Sandia. Sometimes pots are also painted all over the outside or in patterns with orange, a natural graphite.

323 578 Potsherds of a simple character, often of the boating bowl order, are commonly gouged about the neck of the pots with the aid of a stick of bamboo. There is considerable variety in the size and shape of the pots made. As with gourds, the pot takes its name from the use to which it is put and not from the shape or size. All pots have rounded bottoms; some have a flattened base or standard.

The following varieties of pots may be mentioned:

323 485 1. *Lobedu*, large pots for beer-making. These are usually roughly made and seldom have any decoration on them; they stand about two feet high and are side-mouthed (Pl. XV, figs. 1, 6).

2. *Lomb* (*ulombo*, Chin.): water-pots. These are usually well moulded and well finished pots, full bulked with broad base and a certain amount of neck. They are practically always decorated and often coloured. They are about twelve inches high and twelve inches across the broadest diameter (Pl. XV, figs. 8, 9, 10).

3. *Chinkuge* (*ulombo*, Chin.): cooking pots used for cooking the flour porridge *upuk*. These are wide, open-mouthed pots six to ten inches high, with bulky and more or less straight sides (Pl. XV, figs. 1, 4, 7). This name also applies to the cooking vessel for medicinal concoctions.

4. *Chipungu* (*mpulu*, Chin.): smaller pots of the same type as 3, used for cooking beans, fish, green stuff, and the edible *mbugu* (*ndiwa*, Chin.) (Pl. XV, fig. 3).

5. *Mtulo* (*ulombo*, Chin.): the bath water pot. The smallest pot used for heating water to bathe the husband after sexual intercourse bears the same name. It is found among both the *Anyanja* and the *Wayao* (Pl. XV, fig. 2).

6. *Mtulo* (*Yao* and Chin.): the plate, a shallow, wide-open vessel.

Baskets. The basket work of the *Yao* is all of one type and is done by the men. All baskets are made of plaited strips of bamboo, the free edges of the strips being bound between thicker pieces of the same wood forming the rim, the binding being done with the sinew of a creeper. They are made in various shapes and sizes. Some are rendered waterproof and used as beer vessels. The following types of basket are in use:

285 285 416 1. *Chinde* (*lukoro*, Chin.): a circular, open basket, shallow and wide, six to ten inches in diameter; it is used as a food dish or to winnow flour, etc. *Chitungu* (*usungwa*, Chin.), a rather larger one of the same shape, often decorated with beads is used to carry flour, while a still larger basket called *ukyuta* is commonly used by the women for winnowing and the shell from the partly pounded maize (Pl. XVI, figs. 11, 12).

2. *Lulembela* and *ukitumbe* (in Chin., both are called *usungu*): deep baskets usually about as deep as they are broad, the bottom is approximately square, but the rim is circular. *Ukitumbe* is about six inches high and six inches in diameter; *lulembela* is about a foot in all dimensions. These large baskets are used for carrying any foodstuffs in bulk, e.g. grain and pumpkins (Pl. XVI, fig. 10).

(Fig. 10), and an antelope from Mysur's in Bonito district (Fig. 11), also two birds at Pinnel's which I should think represent a bird and a snake (Figs. 12, 13). It is interesting to compare these attempts which show a natural feeling for shape, with others, the work of an Aspend youth in bonds with a Sawyerne mission station, who depicts the mission, his donkey, his dog, and a chair but with little or no sense of form. Note the dots above the animals' backs which represent their hair seen from the other side (Pl. XVIII, figs. 14-16).

The models of animals and other objects made in relief on the ground at Lepanda, and of animals in grass and bamboo at Chipata, are referred to under *Initiation Ceremonies*.

Decoration is limited to the making of patterns of geometric design on many household articles. The grooving of pots is mentioned under *Pottery*: gourd vessels sometimes have lines and triangles cut on the surface; ivory bulb handles may have concentric circular grooves on them, the same being true of ivory nose-rings and necklaces. Spear handles and walking sticks, snuff-boxes, pipes, the head-rest and the necks of musical instruments too, are commonly engraved with designs. The wooden rim of the mbangwi basket is always so treated. A series of these designs from baskets is reproduced (Pl. XVIII). Occasionally geometric patterns are painted on the walls of huts. The best example I have seen is shown in the photograph which represents a Mohammedan mosque in South Nyasa district. This, I think, gives the key to the origin of these geometric patterns, namely, Swahili influence among the Yao (Pl. IV, fig. 1).

Personal ornamentation. The skin color admired most among the Yao is a rich brown and is likened to the color of the antlipod, *Kimpala*. A very black skin is not liked and a man is said to be "as black as a crow." Very light colored skins are equally disinclined to some and considered to resemble the color of a wasted corpse. The hair should be jet black. Young men anoint their heads with a decoction of mondongo pods in boiling oil to make the hair black and lustrous. When the hair is turning white, a substance made of the charred roots of a plant called *chinyjo* is put on to make it black.

Native magpies that some among them have red hairs on their heads or in their beards, and such a man is called *mutumu*, *mutumu* being the name of a mongoose which lives on the mission tree and is covered with long red hairs.

The old men used to wear wigs, *chitindi*, made of knotted string blackened and oiled to look like hair; the women wore one called *chikwan*. These were used to disguise greyness or baldness.

The women sometimes let the hair grow long and then thread beads on strips of it. This fashion is called *chinyao*. The large red bead, *chikidiki*, is now used for the purpose. This fashion was adopted by the old women and there is charge of the *Chipata* ceremony. Strings of beads threaded on the hair falling down round the head are called *Shanbala* or *mdumbula* (plur.). Women sometimes thread beads on the crest of hair called *mkwela*. Ordinarily the hair is periodically shaved or sometimes cut with a knife, but the process is painful and therefore unpopular.

Marsoli पेंग

Journal of the Royal Anthropological Institute, Vol. 53, 1923, Plate XXVIII.

[p. 339(8)]

and the feature of it was the introduction of life-size representations of animals made of bamboo and grass with men inside.

I saw new dance at a successful ceremony among the Awisa (p.).

12. *Ifiala.*—Women only present; danced on the occasion of a girl's first menstruation.

13. *Lilwa.*—Women only, on the occasion of the quickening with first child.

14. *Ifiyala.*—Men and women, a quick shuffling step while standing in a circle.

15. *Sakwa.*—The lady dancing (*Mwalwa*) dance of boys, they walk round in a ring some fifty of them, the drums in the middle; when the bass drum beats into a quicker time they all start shaking shoulders and bodies with intervals for two or three steps.

16. *Kanyin.*—Danced in a circle, men and women alternately.

17. *Mwala.*—A big dance with small circles.

18. *Chilulula.*—Dancing boys dance.

19. *Mfwenza.*—(1907) men and women; each carries a large mat filled with pebbles—as drums.

20. *Mwapanji.*—A mask dance; palm leaf bags filled with pebbles are tied on the legs.

21. *Sanja.*—A pas-de-deux, each man with a rattle and hand-drum; for a few moments they wander round each other pitting up the time and tune, and then jump into a very fast step dancing and jumping into the air shaking the rattles.

22. *Chimwimbwimbi.*—A pas-seul by a man carrying a whistle and bow with rattles of small shells.

23. *Mwawa.*—Danced on bangas. At Mpanda's village a big sacred mat is danced with drums round the bites and rattle rattles; in their hands they carried five snakes which had been rendered harmless by putting rattlesnake over their bodies before digging them out. Four drums as in *chimbimbe* were used. The women all had swap.

Description of Plates.

[End Note 2]

[End Plate 15]

[End Plate 17]

The chief, having appointed a day on which the ceremonies shall begin, sends a messenger with a bowl to a medicine-man whom he asks to conduct the ceremonies. The medicine-man is called a'mbiddo "he of the tails." He carries his medicines stuffed in the tail-skin of a gnu or zebra and we shall see that his tail or tails play a very important part. Having sent word back to the chief of his acceptance of the invitation, he goes his wife to prepare some fresh medicine-oil with which he will consecrate his medicines, and sends out the boys of the village to collect firewood. A big bonfire is made and dancing goes on all that night in his village. Early next morning he returns to the door of his hut where his wife hands him his "tails." He then immediately departs for the village of the chief. His wife bills with her tongue, this being the sign of his departure, and dancing men, some friend (often his brother) who acts as his chief assistant, his wife, and others will go with him.

He signals his approach to the chief's village by singing:

"Ka [illegible] [illegible] [illegible]" "Tan at the village!" "[illegible] (I don't be long)!"

As he nears the village, all the women hail his arrival by billing the tongue (ko-kokoo). He goes straight to the open space in front of the chief's house where the chief meets him. The chief immediately goes into his house and producing a cloth, gives it to the a'mbiddo who then places his "tail" on the ground, (mbiddo, "things put down"); these are the signs of the compact. A house is given to the a'mbiddo wherein he may rest and sleep.

That night, all the mothers of the boys who are to undergo their initiation, now called mali (dog, mouth), pound flour for the morrow. Early the next morning, the a'mbiddo visits the place where the pounding is going on and collects a little flour from each woman's basket into a small basket he himself carries.

The chief then gives him a cock and a hen, an ass and a hoe; with these he goes off accompanied by the halves of the cock to the spot where Lepanda will be made. Arrived there, he first points out the spot where his ass hut is to be erected. This is quickly built, followed by the shelters for the cock.

The cock and hen are then killed and cooked, also some porridge; the entire food is cooked; the liver is not cooked separately. When it is ready, the a'mbiddo takes a piece of the liver from the pot and some porridge from the other pot together in one hand and then throws them into a little hole where his "tail" has been resting. At this spot, Lepanda is made. The a'mbiddo then partakes of both again and eats; after he has finished, the other men eat.

After the building of the shelters is finished, fire-wood is collected. On the ends of the green shelters figures of animals in grass may be strung up on poles, but they have no definite significance.

In the meantime in the village, the chief has had ebiyani (ceremonial flour) prepared. It is made from millet by his head wife, who must not be near a menstrual period.

two feet high and fifteen inches in diameter, hollowed out from above for about two-thirds of its length. Many are made with a kind of loom or stand, and some have roughly carved lions on the outside; these are called "the lionsts," doubtless antiquarians of women, a large part of whose life is spent in preparing flour (Pl. XV, fig. 16).

The fire-stick. Matches are becoming more widespread year by year and soon the knowledge of how to make fire with a fire drill will be lost. The method employed among the Tuc is as follows: a flat surface is cut on a piece of partly rotted wood. In the middle of this a small depression is made, and on one side of the piece of wood a groove is cut leading from the flat cut surface. The piece of wood is held firmly on the ground by one person with a piece of old scoured cloth or some charred sticks at the base of the groove. A second person, by rolling a stick of hard wood rapidly between his hands with the point directed against the depression on the flat surface in which a little sand has been placed, drills a hole into it. The heat developed is sufficient to cause the powdered rotten wood to start smouldering. This is then turned out on the cloth, which is gently waved in the air till it catches fire (Pl. XV, fig. 16).

Boats. With the exception of a small coracle-like vessel, *Mangpan*, made of rough bark and used for crossing streams, the Tuc have no boats. The dug-out canoes which they use at the present day are made for them by the *Anyanja*. In addition to the bark boat, they use a kind of raft made from the pith tree, *Sangan*.

Tobacco. The use of tobacco in some form is universal among the tribes of Nyanland and the Tuc are no exception. The method of use varies among the different peoples; smoking, chewing, and snuffing are all practised, but while the *Anyanja* is essentially a pipe-smoker, the Tuc takes snuff, although I think only lately he has also taken up smoking and chewing. A short time ago, a Tuc who chewed would have been laughed at. The *Anyanja* do not chew but take snuff to a certain extent; the *Angoni* who do not smoke or chew are inveterate snuff-takers; the *Atumbuka*, *Atonga*, *Ainaga*, and *Ankonde* are pipe-smokers and to lesser degree snuff-takers.

Tobacco is called *nwa* (Jaffa, Chin.). It is prepared by sun-curing the leaf, which is then rolled up into a twist and allowed to dry further. The common tobacco pipe consists of a clay bowl, often ornamented, and a reed stem; it was formerly called *ulidonge*, but is now known as *kalu* (Pl. XV, fig. 11). For bamp, chewing, the Tuc use a water pipe called *ndonde* (*ngonde*, Chin.); this consists of a bamboo water container from which projects a reed stem ornamented by a clay bowl (Pl. XV, fig. 12). The word *ndonde* is also used for a tobacco pipe.

When tobacco is chewed, a little lime paste *nsolude* made from snail shells is put in the mouth "to bring out the flavor," a small clay jar being used to carry the *nsolude*.

Both the Wapoto and the *Anyanja* prepare snuff by grinding the broken-up tobacco leaves with a stone in a pestle; the powder is then turned out into another shard and roasted over a fire. A few drops of a preparation called *mapuli* is added for flavor. *Mapuli* is

[illegible] as one will break. With the exception of marine birds such as the stork and the heron, most birds are considered fit to eat. The hornbill is not eaten, as it is supposed to carry part of a corpse on its nose.[1] Fowls form a regular article of diet, but some taboos in this connection are mentioned elsewhere.

Eggs are eaten only by children and old people; that is, by those outside the child propagating age. Milk is never consumed in any form. They say, "What a disgusting habit, to suck the juice of an animal while it is still alive!"

Pregnant women will not eat certain things lest the child be born with some deformity, such as the snout of a pig, or the white stripes of a zebra.

Art and decoration. Sculpture can hardly be said to be an art known to the Tuc. The only piece of stone work I have ever seen was a gnomic boulder, on the surface of which cup holes had been made for the game of *Bao* (Pl. [illegible], fig. 4).

Of late years, individuals here and there have begun carving wooden figures of men and animals. The Tuc, of course, make no idols. It is uncertain exactly how long it is since any of these people started producing wooden figures. I should think that this art has sprung up within the past twelve or thirteen years, that is to say, since there has been a market for them among European residents. In the first place only native and some of the common animals, the shoat and leopard, were represented; since then, many animals and Europeans have been copied. The native is extraordinarily clever in reproducing characteristic features in drug pots, so that a Portuguese is easily distinguished from an Englishman. The little models in ivory of animals and native household objects, made by the Dwalali people on Lake Hyam, have never been copied by the Tuc. Neither do they make clay images of men and cattle as do the Zulu-descended Angoni and cattle-keeping Wandonde. No native would allow any wooden figure to remain in his house for fear of ill luck; the women especially would look askance at them, fearing some misfortune to their next pregnancy. Little wooden figures of birds, however, are sometimes seen affixed to the point of the hut roof.

The making of carved figures, then, is of recent introduction, or rather is a recent result in the evolution of the Tuc, as they were not taught but self-inspired in the work.

The ability to make representations of objects by drawing appears in the same way to originate spontaneously here and there on a spot. Natives with a talent for drawing are found among all the tribes, and among the Tuc, it is said, there have always been some who have been able to draw. Naturally enough, their representations are made on the walls of their houses, and their subjects are generally animals of the forest, sometimes men and women, or some other objects of particular interest.[2] (Pl. [illegible], fig. 1). I also give sketches of some other drawings I have noted (Pl. [illegible]): the line figure of a man at Mukangila's

[1] Nilo-supra, p. [illegible].

[2] Cf. A. Werner, "A Native Painting from Nyasaland," [illegible], London [illegible], vol. [illegible], no. [illegible], p. [illegible].

(fig. 14), and an antelope from Mpowo's in Bombo district (fig. 15), also two birds at Pimol's which I should think represent a bird and a snake (figs. 16, 17). It is interesting to compare these attempts which show a natural feeling for shape, with others, the work of an Acholi youth in touch with a European mission station, who depicts the missionary, his donkey, his dog, and a chief but with little or no sense of form. Note the dots above the animals' backs which represent their hair seen from the other side (Pl. XVIII, figs. 18-20).

The models of animals and other objects made in relief on the ground at *Lapondo*, and of animals in grass and bamboo at *Chopola*, are referred to under *Initiation Ceremonies*.

Decoration is limited to the making of patterns of geometric design on many household articles. The graving of pots is mentioned under *Pottery*: gourd vessels sometimes have lines and triangles cut on the surface; ivory hair bandles may have concentric circles graven on them, the same being true of ivory pore-clips and earrings. Spear handles and walking sticks, snuff-boxes, pipes, the head-rest and the necks of musical instruments too, are commonly engraved with designs. The wooden rim of the *ntongwi* basket is always so treated. A series of these designs from baskets is reproduced (Pl. XVIII). Occasionally geometric patterns are painted on the walls of huts. The best example I have seen is shown in the photograph which represents a Mahammedan mosque in South Nyoro district. This, I think, gives the key to the origin of these geometric patterns, namely, Swahili influence among the Tuc (Pl. VI, fig. 1).

Personal ornamentation. The skin color admired most among the Tuc is a rich brown and is likened to the color of the antlopod, *kipagala*. A very black skin is not liked and a man is said to be "as black as a bean." Very light colored skins are equally distasteful to some and considered to resemble the color of a wanted wife. The hair should be jet black. Young men anoint their heads with a decoction of *nandungu* pods in boiling oil to make the hair black and lustrous. When the hair is turning white, a substance made of the charred roots of a plant called *ekinyo* is put on to make it black.

Native magician that some among them have red hairs on their heads or in their beards, and such a man is called *nakimoro*, *nakimoro* being the name of a caterpillar which lives on the *nimoro* tree and is covered with long red hairs.

The old men used to wear wigs, *ekirwyi*, made of knotted string blackened and oiled to look like hair; the women wore one called *ekikoro*. These were used to disguise greyness or baldness.

The women sometimes let the hair grow long and then thread beads on wisps of it. This fashion is called *ekinyo*. The large red bead, *ekiduku*, is now used for the purpose. This fashion was adopted by the old women and those in charge of the *Chopola* ceremony. Strings of beads threaded on the hair falling down round the head are called *kimbuka* or *nakimbuka* (plate). Women sometimes thread beads on the crest of hair called *nakoko*. Ordinarily the hair is periodically shaved or sometimes cut with a knife, but the process is painful and therefore unpopular.

vomited human flesh.[1] They said that they had a strong headman and that they could trust him; he was a good headman without witchcraft. If he had been a sorcerer they would have kept scolding him until the next morning.

About two hours after sunrise the people gathered and started dancing. At about this time Cimombo was brought out of the hut and put in the grass shed which had been built for the occasion. This was the climax of the ceremony.[2] He sat on a chair in the grass shed with one of his two wives on either side. Mikoka then started a chant, exhorting the visitors to come to throw pennies at Cimombo's feet. Some of the people there made speeches about the type of behaviour they would expect from him. Then Nyambi arrived from the court village in a rickshaw. When the noise had subsided he told the people that if they disobeyed Cimombo it meant that they disobeyed the chief. He emphasized the importance of the rank of the new headman. After the speech he presented 12s. to Cimombo which was received on his behalf by Ncimbo. Nyambi then left and the ceremony was over, but the people remained to dance and drink beer.

This description of the procedure following the 'coming out of the hut' is somewhat sketchy. The interaction of the headman and his villagers on this formal and ceremonial occasion is of great interest and importance. During the entire ceremony the headman adopts the pose which is appropriate for any Yao initiand. His hands are on his lap or on the arms of the chair and his head is bowed forward with eyes downcast. He neither speaks nor moves. His attendants, when necessary, wipe the sweat off his face or chase away the flies. The other occupants of the mat, who may be his wives, and sometimes his heir, adopt similar postures. In contrast to this, is the behaviour of the villagers who run about shouting wildly, the men discharging muzzle-loading guns, and women ululating in the typical Central African way.

Before the new headman comes out of the hut his mentors

[1] This is a test based on the witchcraft of the Yao, who believe that sorcerers kill relatives with magic and then share out the flesh of their victims with fellow sorcerers in ghoulish feasts.

[2] Called the 'coming out from the hut' (*kulupoka nyumba*). It is of course the first public appearance of the headman in his newly assumed status.

2: Mitchell E-5 (1946-1949) 1956 FTT Two FTT

632 impress on him the difficulty of his position, and when he is
633 taken outside some of this is repeated in public. At Nkaotenga's installation ceremony in December 1946, which I attended, the following incidents took place. Shortly after he was taken out
632 of the hut, Cigunda, one of the officiating headmen, said:
633 "Younger brothers of Nkaotenga, are you happy that Kanduli[1] has an elder brother? You women, have you cooked beer so that you can have your village headman?" In reply the men and women clapped their hands and a few came forward to throw some coppers into a cloth at Nkaotenga's feet. Cigunda went on to say, 'From to-day no woman will be impudent to the chief, because you are all of the same womb. All you men listen, only this man is your village headman!' Cigunda now turned to Nkaotenga who did not change his posture in the least. 'You village headman Nkaotenga, don't listen to what your wife says, because she will fight with your sisters and tell you that they have been cursing you. You should make enquiries when you have heard these things because you are a big man [i.e. important headman]. From to-day onwards you are a big man. Every person will be trying to spoil your name by saying that you are a bad man. You need to be patient and easy-going.' Turning to the public, Cigunda said, 'Even you husbands [*akamwini*] do not listen to what your wives say if they try to undoce the village headman, because some husbands can break the village.' Thereupon one husband got up feeling around for a penny, found he did not have one, and with much ostentation borrowed one from a fellow-husband sitting next to him. He then came forward to where Nkaotenga was sitting and said, 'You say some husbands can break a village. Is that true? But husbands build the villages? They can't break the villages.' Then very deliberately he threw the penny into the cloth at the headman's feet and went back to his seat. His speech was greeted with acclamation from the husbands. Cigunda said nothing after that and the ceremony was over.

632 In September 1948, during the installation ceremony of Mapuza,
633 one of Kawinga's less important headmen in the northern part of his area, the significance of the relationship of the headman to his relatives for the continuation of the village as a whole, was brought out more clearly. After the headman was

[1] A personal brother of Nkaotenga.

2: Mitchell E-5 (1946-1949) 1956 FTT Yao FTT

brought out of the hut, as always, songs were sung and speeches were made. One of the songs was: 'A tree when it grows, grows with its branches.'[8] This is a reference to the dependence of the village headman upon the increase of his relatives for an increase in his rank. The Yao compare kinship with a tree, the component segments of the matrilineal lineage (the tree) being the branches. Then one of the officiating headmen mentioned that there were many sisters' sons of the old Maputa but that Kawinga and Chiwalo had selected the one on the chair to be the headman. He then exhorted the others neither to be jealous nor to resort to sorcery, but to exalt the name[9] that it might live long. This was followed by a song which introduced a second theme, 'A husband however rich he becomes here, cannot climb high.'[10] This song emphasizes that the uxorilocal husbands of the village can never achieve rank outside their own matrilineal villages however rich they are. The officiating headman then went on to say that some women rebuke their husbands when they speak subversively, but others side with them against the village headman. He told the husbands and women that they were wrong to do this and that they must desist. After this followed a public rebuke of the village as a whole. One of the younger brothers of the new headman pointed out that when the mother of the previous Maputa had died she had been buried in the graveyard and not in the village. He rebuked the villagers and told them that, when the present chief died, he should be buried in the village. A man who had been charged with neglect by his wife (his cross-cousin) paid the headman the compensation which he had refused to pay to her. One of the headmen then exhorted the villagers to respect their headman; to send someone to accompany him on his journeys to see to his wants; never to allow the headman to carry a gift he had been given, and so on. The ceremony ended when Kapalowa, who was representing the chief, hinted that Maputa might be allowed to wear a scarlet headband in the near future.

Village headmen represented the chief at Nkaccleng's and

[8] *Mtwa pankhala akwa ilimanyanki.*

[9] *Kwenya lina*—to come the name to climb.

[10] *Tonde, mnde, mkamwini nanilile mnwe ngakwede ini.* Tonde is the word for billy goat and its use here emphasizes the procreative functions of the husband in the village.

L-Document B-5 (ca. 1910) 1922 P?? Van P??

When the sun sets, all the boys to undergo the ceremonies (mali) together with their sponsors or guardians, shamans, (ishamans' dog,) are called together to the village open-space (pang'ungu). The ishamans attends his ward throughout the ceremony; he may be an elder brother, an uncle, or someone else who volunteers for the service.

The mali are lined up and headed by a "leader," mulilongulu, who is usually the most important boy, perhaps a relative of the chief; then they pass one by one in front of the chief who anoints each on the forehead with ulupwi from a small basket. As each boy passes, his mother runs up and throws into the basket a string of beads or nowadays small silver coins. When all have passed, the chief sends some near relative with the basket still containing some flour and the beads or money to the n'mitchilo who is waiting at Lupanda.

This is his signal to prepare to receive the mali; he dresses, and accompanied by drummers goes to meet the file of mali. The mali accompanied by their shamans, their mothers and sisters, sing as they approach:

"Tunje lunga (ungupi) ulukuli ungu!"
"Let us go back, perhaps there is no ceremony!"

The n'mitchilo as he meets them sings:

"Ambiki! pakwiu ame wamuki'ne kulala Ilunda lwiu uulupi!"
"Why to come with them these children to have (a small drum) to come with it!"

and follows this in answer to the song of the mali with:

"Ku ulili ulungu, (Response) Kwa lwa! (Chorus) Ilungu uuu!"
"To the village don't go back. Don't go back all!"

The mali now on the outskirts of Lupanda are formed into a ring, behind them their shamans and behind them their mothers and sisters. Then the n'mitchilo leads the way to Lupanda singing:

"Lilunda lya ulunda!"
"Space of an elephant!"

Next, he calls all the mothers to form in two lines resting at right angles on Lupanda and sings to them:

"Lupanga lulu pasi lwula'wa lwangali ulungu!"
"The angle lighted on the ground as in the air there is not some relationship!"

The n'mitchilo and his chief assistant each provided with a "tail" strike lightly on the basket which each woman has on her head; then each with a hand on the basket, they lift it down to the ground. Starting with the mother of the "leader," they go round to each mother in turn. The n'mitchilo then to the sound of drums and clapping by the women dances and runs round peeping into each basket exclaiming, "I see so and so in this basket!" naming cows, goats, medicine, women's pedands and so on, after which the women take the baskets of food away to the boys' shelters. The n'mitchilo next sings:

S-Steamer D-S (on. 1903) 1952 3'77 Use 3'77

"[illegible] messenger, he [illegible], [illegible] [illegible] messenger!"
"I will go and bring my child - he [illegible], where I am going home. I had [illegible]!"

[illegible] 513 514

and running round he seizes hold of one of the mat and swings him sit down at [illegible], continuing this until he has placed them all in a circle round [illegible]. He then sings a song about the little basket which the chief sent him containing the remains of the whipped fowl:

"[illegible] [illegible] [illegible], [illegible] [illegible], [illegible]!"
"Little basket the owner asks for it back, give me [illegible], [illegible]!"

His wife who has been waiting in his hut nearby brings him the basket. Holding it in his hands, he prays to the spirits of his ancestors and all the previous ambidos-men to whom his ambidos-tails have belonged, invoking their aid that they ensure may go well.

Still holding the basket he begins to dance, singing:

"[illegible] [illegible] [illegible]!"
"Let them (sc) enter fowl [illegible] (Let us baptise them)!"

and dipping his right elbow into the basket he smears each small on the forehead with the whipped fowl. He then goes into his hut and fetches a bundle of powdered roots (which no woman may touch), ambidos called ambidi, that is, a ambidos used for its aphrodisiac properties. Holding the ambidos between the palms of his uplifted hands, he starts singing:

"[illegible] [illegible], [illegible] [illegible]!"
"I cannot find not love to make this, we find (with) my brother-in-law!"

He is immediately surrounded by his assistants and the drummers, who dance round him, all holding their hands about his arm, after which he unbinds the bundle of ambidos and puts a little on the tongue of each small, beginning with the leader. He then takes some sweet-beer made by the chief's wife and pouring it into his old ambidos-gourd, he mixes in some ambidi and gives some to each small to drink after which he sings:

"[illegible]! [illegible] [illegible] [illegible] [illegible], [illegible] [illegible]
"I've have drank a mixture of water and ambi fowl, of eating eggs
[illegible] [illegible], [illegible], [illegible] [illegible] [illegible]
you stop now, you have drank (but) I have passed water (in it),
well(,)! [illegible]!"
you thought to be chief!"

[300] Next he goes into his hut with the small basket containing the whipped and points his assistant with the fowl, a semicircle round the forehead, a line down the middle of the face, a band across the chest, a line down each arm with rings round the arms and forearms, and a line down the middle of the back. They go out again into the ring and while the m'middle sings:

* This may be a reference to smoke, the mythical way.

"[illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible]"
"The [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible]"

The assistant with the basket held in his mouth acts the part of the mangaye, a medium-sized lizard with brilliant blue body and orange head which bobs its head up and down. The assistant lies on his belly and bobs his head and shoulders up and down, lifting himself on his hands. (Children often clap their hands as they watch the mangaye bobbing up and down "like a bi-motor" and call out to it to cast lots for them.) The assistant then crawls up to the healer and puts the basket on his head. Bowing his face to the ground for a moment, he again takes the basket and places it on the head of the next recruit and so on all around.

After this the said go and sit near the bonfire which is not yet lighted, while the o'wichile sings to the women:

"[illegible] [illegible] [illegible]"
"The bonfire Let him [illegible] a [illegible]."

and the women give him a basket of leaves with which he makes sifting movements, singing: "Shall I throw them away, shall I put them in the cooking pot?" while the women sing.

His assistants are then told to go and light the bonfire. He himself goes to his hut and places his "talk" in the whisper basket, and carrying it to the bonfire, he throws some of the fire on the fire, "to regulate the heat." This is the sign to begin the dancing which goes on all night while the pot is round the fire, each lying with his head on the waist of the next, the leader in front.

In the early morning of the second day, the o'wichile holding his "talk" in his hands runs unintelligible over all the nothing well and facing the same way, runs back, after which the boys are called.

He sings a song:

"[illegible] [illegible] [illegible]"
"The red ants [illegible] [illegible]"

and he pretends to pick them off the boys. After this, he sings:

"[illegible] [illegible] [illegible] [illegible]"
"Pick [illegible] [illegible]"

as he goes to each recruit and throws his "talk" into the boy's hands, receives it back and then puts it on his head till the mother places a coin on his head which is the payment made to the assistant. *Ko-bayan* = to enter; *ngabayan* = not at home; *ndabalayan* = is it not at home, is it not present? The meaning of the phrase in the song is, "Is your mother not here to pay the fee?" *M'bababayan* is a pun on *ndabalayan*, "little mother." This is followed by another song:

"[illegible] [illegible] [illegible] [illegible]"
"The little house, [illegible] [illegible] [illegible]"

[illegible] as he climbs a tree with his back to the trunk; at the top he hangs by his legs and looks down on the crowd, his assistants doing the same. Coming down he runs to his feet, throwing his "tail" into the air and catching it again, he retires.

[illegible] This is about also c.o.; all sent till about dawn o'clock, the will assemble using food cooked by their mothers in the darkness. About dawn o'clock, the o'mitchi takes a big gourd and putting his "tails" into it covered with a white cloth, gives it to his assistant who carries it on his head and follows him to a pool of water, accompanied by all the women except very young men who have not borne children. The brother then to go " such hunting."

At the pool he enters the water with his assistants round him, except the assistant with the gourd, who stands on the bank. The o'mitchi makes movements as of hunting for game in the water singing:

"Chumangala [illegible] [illegible] [illegible]"
"There must be hunting otherwise I should have had to not prestige [illegible] without [illegible]"

He pretends to catch a crab and his hands are immediately grasped by his assistants in the water who all help him to convey it to the gourd as the " tail " is taken out of it.

[illegible] The crowd then returns to Luganda to meet the mambunde ceremony. Mambunde is a representation of an animal made of bark on a frame work covered with wool and painted with four in spiral markings, hence the name (mbunde is a part of a spiral shell from the Zambezi coast much prized by natives as an ornament). The animal is really the white antelope with horns and the o'mitchi's " tails " in place; there is a rear inside it. It is made perhaps a mile away and then brought near to Luganda and placed in a cleared area.

The o'mitchi on his return from crab-hunting has gone into his hut and put on his full regalia; then, accompanied by his drummers, he comes out and is immediately followed by the wall and the rest of the crowd. Knowing where the mambunde will be put, he leads the people in the opposite direction calling out to them to look out for the antelope. They, of course, all look in the wrong direction, so when he knows mambunde is in place, he stands around and sings, " There is the animal!"

In the old days the chief was present for this, a platform being built for him. When the mambunde appeared, he gave his hunters much powder (no bullets) and they shot at the animal. The animal would fall as if hit and the o'mitchi would approach to shake it as his beast, but it would promptly get up and charge, to be driven off by the crowd, whereupon it would run away into the bush.

Lots are then cast by the o'mitchi, using a tortoise shell stuffed with medicine. The wall all stand in a circle with their mothers behind them, while the o'mitchi goes to the leader and throws the tortoise at the boy's chest. If it sticks there, all is well and he proceeds to each boy. Should the shell not stick on the boy's chest, it proceeds 10-back to that individual and he has to be dealt with further. The o'mitchi, holding his " tail," and his assistant holding a horn of medicine, stand back to back, with the boy between

[illegible]

them. They then rub the boy up and down with their backs, after which the unknown [illegible]
throws the horn on the boy's chest. If it sticks, the bad luck is overcome and the women
will call joyfully with their tongues; if it drops to the ground, evil is foretold and lamentations are to the boy's lot as Ungande are whispered round. He is given further medicine
against the predicted evil, but lore will not again be cast about him.

[illegible]
533
539

Next the n'wichile sings:

"Kwakulaku mwaku, mwajile ngwanu, jlu ngwanji
"The one who weeps hate, (you) father is still living, were that I may there-fore,
mwakulaku mwaku, mwajile ngwanu"
On one who weeps hate, (you) father is still living! (Chorus) "*Lwali, jwali!*"

Lwali is a word meaning "shining up in all directions" and refers to the hair.

One assistant holds a pot of water, a second, a leaf of the myombo tree, and the n'wichile a razor. They approach the leader; water is rubbed on the forehead by the first assistant, the second smears the place with the leaf. The n'wichile then removes a little tuft of hair from the boy's forehead and puts it in the boy's left palm, followed by the nail paringe from the left hand, and a tuft of hair from the back of the head. This is done to each round in turn after which he sings:

"Tumuje Kwakumwakulu"
"Let us throw them" (the palm-nutshells, to throw by *ch-ring*)

as he walks round them, after which the boys go to their mothers who are allowed to trim the hair on the forehead in any way they like. This may take ten minutes, after which they return, still holding their hair and nails in their hands. As they return, the n'wichile, throwing his "tail" under the left arm, starts off, all the rest falling in behind him, and then he leads the way into the bush accompanied only by the rest, singing:

"Kwali ku mwaku mwaulji"
"The Kwali make the mwaku tree smooth"

He searches through the forest until he finds *chilulu*, a small dome-shaped ant hill about a foot high. He carries his "tail" under his arm and a reed-buck's horn of medicine in his hand. Arrived at the *chilulu*, he skips the top off the ant hill with the horn and his "tail," scrapes a hole in the exposed surface with the horn, and then smears this hollow with medicine from the horn. The leader then approaches and drops his hair and nail paringe little by little into the hole, followed by each round in turn; each immediately turns about and never looks back on the ant hill. When all have done so, the n'wichile sets the top of the ant hill back into its place, having the "tail" and medicine horn in his exile; he then turns about and becomes the last of the file as they march back to *Lupande* while he sings the same song as before.

This particular ceremony is the most sacred of the Ungande as it is known only to the *wali*. It is the sign of burying the past of childhood. If another n'wichile could find such

a place, he would take part of it and he sometimes said to his own medicine " he make him a more powerful n'nimbin."

On the way back, the n'nimbin takes a piece of bamboo in his right hand and when he comes to a sylvatic sapling, the boys all surround him in a ring; with the " tall" in his left hand he strikes the sylvatic sapling, and as it rebounds, he strikes it with the bamboo; while the sapling swings backwards and forwards, he sings:

> " *Kpawa* *ngamami* *ndwal* *ni* *ngimbin!*
> "Nothing I have struck together the bamboo and the sylvatic tree!
> *Ndimbin!* *ommili* *Ndimbin!* "
> *Sharpen for yourself* "

The n'nimbin takes both his " talls." Holding them in his left hand against the sylvatic sapling, the leafy part of the talls opposite, and in the other hand a stick sharpened with knives, he rubs the sapling at a point just below the " talls," still singing the song given above. The stick is said to represent an axe. After this, he takes a reed axe and cuts off the top of the sapling. Then all the boys seize the sapling and wrench the bark off without cutting it anywhere, while the n'nimbin continues to sing. The bark he puts in his trouser and sings as he jumps about:

> " *Tinjimbin* *pepenjin,* *Ndimpin* *ndimbin* *gulubin!* "
> "I shall fall into the pit, jumping about here and there! "

When they arrive at *Lepumbi*, the n'nimbin throws grass to his own hut to make string from the bark, the boys to the place where *Lepumbi* is made. This is at about three in the afternoon.

When the string is ready, the n'nimbin takes it to cross-roads, plaits it into necklaces, and anoints them with medicine for the soul. On his return to his own house, the mothers have cooked porridge for the boys, and the baskets of food are put ready at *Lepumbi*. The n'nimbin then stops to and sings:

> " *Tulu* *(ngil)* *ndigi* *ommu* *ommu, mungu ndimungundigul* "
> "(A) little mouse (food) many children, mother, all are to be fed! "

As he does so, he takes some food in his hand and puts it into the mouth of the healer, and so on all round, while all the people keep at a distance. Then with a hoe he makes a small mound where *ching'ombo-ng'ombo* will be sacrificed and puts on it a little of the whipped from his house. Here he seats the healer and round him sit all the other men. The n'nimbin then sings:

> " *Tinomdo* *chomo* *chungu* *Ndo kondugi'lo* *chomungulo* *ngomugul* "
> "I will take all heads my today where they go to it seems they will never come back! "

* *Kwada*, to what a hole.

He collects from the boys' necks the beads they are wearing, lifting them off with his medicine horn; these are all his perquisites, to be sent off to his house. He then starts singing:

"*Kuhilongola Lupanda ngoma ngulungwe gulule Jolumungu, mulule*"
"The leader (of) *Lupanda* (is) an animal big worth killing with a spear, tail!"

This means to the leader's relatives that the boy is worth a spear; one is promptly brought and hurled against the leader; the *ni'mbilo* stops up and taking it, hands the spearhead and sends it towards his house. He then sings:

"*Ngulu mali Kalungu kwajuka mali*
"Things which are put to have up against cows. Bile anger cows to have things up against cows
kwajuka kwajuka"
Bile cows!"

The relatives then bring all kinds of presents and lays them against the boys; these are the perquisites of the dancing men. The *mali* go away to eat now with their element behind the shelters. The element tie up any food that is left in heaven, for later use. They then return to the roughly-made *ching'ombang'ombe* where the *ni'mbilo* meets them. The *mali* stand in a circle round him and outside them is a ring, the parents, while the leader is set on the *ching'ombang'ombe* mound.

The *ni'mbilo* sings:

"*Ewanjisi ndungu yu mu'yu kupasi ulumali, mulungu, mulungu*"
"Two of the buffalo hair (it, feathers) on the head you put there mulungu call me,"

as he then goes around and touches each mandi with his "tail." The idea here is that the *mali* with flour on their foreheads resemble buffaloes which have white patches on their horns, and they will therefore be as strong as those beasts in the bush whither they are about to go.

The *ni'mbilo* then runs away to his hut and breaking a hole through the back, makes for the bush. The assistants know this disappearance is the signal of his departure for *Nkhopola*. This happens about four o'clock. All exclaim "*Aumbi!*"; (to exclaim thus is *kwumbira*, "to exclaim with apprehension.") The assistants head off in the same direction, followed by the element and their *mali*, while the mothers of the boys who may never see them again, throw sticks on the path as they run away as the sign of forgetting their sons for the time being.

All the men will also accompany the *mali* until they find the *ni'mbilo*. He having left the chief's basket at *Lupanda* has brought some of the *mkopani* with him in his own basket. One of the men brings a gourd full of water; the *ni'mbilo* pours some of the water into his basket of flour and gives a drink of this first to the leader and then to each *mandi*

881 in turn. After drinking, they sit down while the *n'michila* gives instructions that here they sleep tonight. He takes his basket and starts to run back to *Lupanda*, singing:

[533] 539

"*Ku*	*tunjile*	*pulikiya*	*ushimbuje*	*kutunjiye*	*ku M'unda!*"
"Where	we went to		manure		to *M'unda!*"

Then going to the back of his hut, he enters and takes a piece of bark left there bent up into a dish containing medicine which has been put in by an assistant. This assistant holds in his hand the neck of one of the fowls which was killed at *Lupanda*. The *n'michila* washes his face and chest with medicine to cleanse his eyes and then leans forward to the assistant and bites a piece off the neck of the fowl which the assistant holds out, and eats it. This is *ku-lumiva*, "to taste a small piece," often the liver, before starting to eat the flesh; this is generally done by the most important person. The *n'michila* has been followed by his assistants who do as he has done. They all follow him next round the cooking place for the boys at *Lupanda*, each standing for a moment on the stones which have supported the cooking pots, while the women sit looking on coldly. He begins to dance and the women join in, singing *likwata*. He then calls the parents of the *wali* and leads them to where the bonfire was. There assembled, he tells them they must not bathe, and that tomorrow morning early, porridge is to be sent to the *wali* which must be prepared by a woman who has had connection with her husband and who has not washed her hands; this is supposed to make the boys strong. Early in the morning, the husband, who likewise has not washed his hands, carries the food to the *wali* and personally gives portions to each boy to eat.

881 304 When they have partaken of the food, the circumcision is performed by the *n'michila* who has returned the same morning early. The *wali* one by one, commencing with the leader, go forward a little to the place where the *n'michila* awaits them. Each *mwali* is accompanied by his *nkwawusi* who commonly says, "Come along and you shall eat of the honey made by the bumblebee." Such honey is very sweet and called *mawa*. This refers in sarcastic terms to the pain the boy is about to undergo. The boy squats down, leaning back on his *nkwawusi* who supports him, while the medicine-man, having warned the lad not to cry out, performs the circumcision with a small knife called *chiwanda*. It is a triangular knife with one cutting edge and a handle produced from the opposite corner. Properly the Yao method is, I believe, only to nick the free margin of the prepuce just to the right of the middle line near the frenum, but complete circumcision is now commonly practised, possibly as the result of Swahili influence. In this case, the prepuce is seized and held by the fingers, and division made by a circular incision without using a clamp or forked stick. A dressing of charcoal and oil may be applied or medicine is chewed in the mouth and the saliva spat on the wound and the boy sent on to rest under some convenient tree.

[412] [753]

881 [751] When all the *wali* have been circumcised, they are gathered together in one place and the *n'michila* dividing them into groups, puts on the neck of the leader of each group a necklace made of plaited bark from the *mjombo* tree:[1] these necklaces contain medicine against all evils - witchcraft, attack by lions, etc.

[1] See supra, p. 224.

3:Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

some sweetener into a big gourd. These his assistants will carry away, together with a hoe, to *Lupanda*, whither the *m'mikhila* now goes to remain while brewing goes on for four days. 881

During their stay at *Lupanda*, the *m'mikhila* and his assistants live on flour and chickens begged from the mothers of the *wali*. On the first day nothing is done; on the second day they begin making the *lupango* or figures in relief of animals, etc., to be described later; *Nanimpunsi* is made this day. On the third day the other figures are made and on the fourth day *ching'undung'unda*. Into the ground where *ching'undung'unda* is made, some of the strong beer, known as *ngongo*, which is added to the flour and water mixture on the fourth day as signified by *ku-kolejola*, is poured by the *m'mikhila*. 273

When the work at *Lupanda* is finished, the *m'mikhila* carrying his "tail" leads his assistants wearing their feather headdresses back to the chief's village singing:

"*Ninguhele* *nkuse* *kungo* *akolejele* *ku* *musi*, *mulungu* *achamasi*
"I must go and see beer perhaps they have mind at the village, ancestors oh dear!
Chilawile *chamajusi* *ngolgo* *ssusa* *ninguwile* *ssisi*"
The going out of a day or two ago if I had not taken tobacco I would have died of hunger!" [533 539]

Arriving at the village where the brewing is going on, the *m'mikhila* takes a cup and putting his "tails" on the ground, he dips into the pot of beer belonging to the leader's mother, pours some on his "tail," and then drinks some. Then he puts more into a gourd, together with some medicine, and going up to the chief who sits in his verandah overlooking the brewing place, he kneels, and first drinking a little himself, he presents the drinking gourd of beer to the chief who drinks and then returns the cup to the *m'mikhila* who finishes it. Picking up his "tail," he then goes straight back to *Lupanda* while his assistants with some men nominated by the chief go round choosing pots of beer in turn. The assistants choose by striking a pot with a medicine-tail. These pots of beer are then put aside to cool, while moderate drinking begins in the chief's house. This takes place in the morning of the day on which the *wali* will return from *Ndapale* to *Lupanda*, and in the afternoon, the people from the village will go out to *Lupanda* to take part in the return. The return is made about sunset.

The *wali* at *Ndapale* are put into their shelters and the doorways barricaded. At sunset or just after, the place is set on fire and the *wali* have to charge their way through the bark of the shelters. They then form in line, wearing a slip of bark cloth round their loins and over this, a kind of kilt called *mapejuwise* if made of frilled-out bark-cloth, or *mujenge* if made of palm leaves. Accompanied by the *akamasi*, they proceed towards *Lupanda*, each carrying a stick of smouldering wood and an unlit torch of bark-cloth. 881 [297]

The burning of the huts at *Ndapale* has been the sign to the *m'mikhila* that the *wali* have left; he puts round his waist a bark cloth belt, *chambe*, and a calico sash round his chest with the ends hanging down behind and on his head he wears the *lisungu* headdress made of the feathers of *chinungu*, the widow-bird. In each hand he carries the tail of gnu or zebra, held right end up, with the hollow end filled with "medicine." Thus arrayed, he goes out 881 533 539

861
533
539

along the path towards *Ndapula*, to meet the *wali*, accompanied by the drummers and all the women, singing:

"*Mahumba* *hwinepula* *mto!*"
"The leaves down the stream!"

When he meets the *wali*, they all throw their lighted torches at him and he flees back to *Lapunda*. The *wali* continue their procession and are brought round to the still unlit bonfire known as *chilungali*.

At the order of the *m'michila*, the fire is now lighted and the *wali* lie around it. The *m'michila* again appears with the drummers, and all the women and other villagers form a big circle round about. He sings:

"*Chombolo* *chilungeja* *mkoja,* *wonda'wo* *chilungajapa!*"
"The (lord) fire is now flaring up people there it is afraid of them!"

Dancing and singing them go on all night while the *wali* lie round the fire where they are allowed to sleep. As dawn approaches, the *m'michila* again sings:

"*Chonda!* *Mwalire,* *amwali,* *Amwaw* *mwanache,* *mkala*
"Please! it is crying, you girl, arrange the child, the girdle of beads round its waist
mwanche *ukapapa!*"
lest there be exposure of the person!"

Amwaw: a woman carries her child bound to her back by a piece of cloth passing under her own arms and tied in front. If the cloth gets loose, she jogs the child up higher on her back as she rearranges the cloth; this is what is meant by *amwaw*.

The *akowani* waken the *wali* as the *m'michila* sings:

"*Kwambaliva* *mtu!*"
"To nose after the scent!"

That is, he is looking about for the *ingapa*. He then leads them off to *nahumpumi*, the whale, the first of the *ingapa*.

I shall first go on with an account of Mlenzale's practice to the end of the ceremony and then discuss the *ingapa* in greater detail.

Arrived at *nahumpumi*, the *m'michila* sings;

"*Nahumpumi* *nalitonda,* *nahumpumi* *anitili* *hankiha!*"
"The whale in the pool, the whale has blocked the ford!"

after which he straddles the head of the whale while one of his assistants does the same at the tail and thus sitting, they do a kind of wriggling dance, singing to the time marked by clapping of hands:

"*Nahumpumi* *ntundumula, ah! ah!* (Repeat) *Apulapula* *wata hundama;* *apulapula*
"The whale showed his back above the water, ah! There it did fall me; there
wata hundama; *Kwa, hwa, hwa, hwa!*"
it did half break;"

The w'mikilo then gets off on the left side, his assistant on the right and they stand in the shallow depressions. The w'mikilo starts asking riddles; he says, "*Ndawi* (riddle)!" and is answered by his assistant "*Jiicho* (let it come)!" Here is one: 881 533 539

"*Kangwe, hapito pasi!*"
"The little mouse it has defeated, it has gone into the ground!"
Answer: "*Mikhipi!* (roots)!"

He then goes round the crowd for the answer—if they cannot guess, they say, "*Ali ungwe,*" "it is yourself (to answer)." There are hundreds of such riddles.

The w'mikilo points to the tusks depicted in the *chinguge* and tells the people, "Long ago this used to be an elephant; look at the tusks." The hump at its back he tells them is the same as *ching'undung'undu* which they will find farther along.

They pass next to *mbunda*, the zebra; a pair, male and female, is always figured.

"*Ajiji ngati mbunda ja mbuje Achimunda! Youpe pahati!*"
"This one is it not the zebra of Mister Mkunda! everything (is) beautiful!"

Sometimes a story is told to show that the zebra used to go to the sea to drink but swallowed the whale, he ran away and came to the country of the python.

Then to *nsia*, the python; he sings:

"*Anamto hunjingi! pawa, ejo! Youpe pahati!*"
"You python come and answer! all (is) beautiful!"

At the crocodile, *ngwena*, he sings:

"*Changwena ulendo, pawa! ejo! ulugwena mungulugulu mani!*"
"Mr Crocodile devourer, he sleeps at the side of the water!"

At *mawi*, the moon:

"*Anawi ulendo, pawa! ejo, mawi!*"
"You moon devourer, !"

Next, they come to *wahala ulawa*, the people drunk with beer. Two men lie on the ground, feet to feet with nothing on; the pudenda are covered with bark-cloth and the whole of their bodies painted with earth and flour to look like two female figures in earth. The song is:

"*Wahala ulawa: hamlale mawali, wahala ulawa!*"
"Drunk with beer: come and see the women, drunk with beer!"

A moral is pointed: the disgrace to a woman who gets drunk, lies on the ground, and exposes her person. As the w'mikilo makes these remarks, the figures breathe stertorously as a drunken woman would. He conducts the wali and all the other people past many of the other images such as *chimi*, *ngulu*, *mbunda*, *mbula*, etc., and only stays at those he considers his own special *ingupo*. The seven specially dealt with by Mkunda were as above together with *mbulayi*, the mbile antelope: [534 669]

881
533
539

"Anambatapi ulumba, pempe pakata!"
"You sable dancit, everything (is) lovely!"

Next comes *chombolo*, the ferry. There is no image but two posts represent the ferry; the *m'wichila* stands on one side of the two posts with his two assistants opposite him, one holding a bunch of leaves, the other a burning log: the first fans the log of the second, using leaves as bellows, while the *m'wichila* sings:

"Ngumba, ngumba, kujikututa, ngumba!"
"The female pudenda, where it pushes itself!"

after which the *wali* one by one are pushed through between the two assistants. *Chombolo* signifies the passage from one part of the ceremony to another; here, from the *ingoge* to *ching'undang'unda*. *Ku-jombolo* = to cross a stream.

As they reach *ching'undang'unda* the *m'wichila* sings:

"Ching'undang'unda nalilombile jingawe ngwe jakupochela wailumba!"
"Ching'undang'unda I have marked out if it were calico distinctive of chiefs!"

One of his assistants is told to go and get a pot of beer. When it is brought he sings:

"Awali, kamemba, nawila kunyuma!"
"You girl, little fly, wash your hands behind you!"

881
533
539
608

This is the sign for the woman who volunteers for the service to the leader, to come forward, followed in turn, as each *wawali* is dealt with, by other women. The woman stands back to back with her *wawali* and they hold hands, while the *m'wichila* comes and pours a little beer on their hands; they make movements as of washing the hands and then separate, the woman rejoining the crowd, the boy standing to one side until all have performed the rite. This woman ever afterwards is treated by the *wawali* as his adopted sister. After this, each *nkowusi* takes his *wawali* into the bush near by and holding the boy's cloth over the lad's head, he waits there for the boy's relatives to come and redeem him with fees. It is a point of honor that as many relatives as possible shall turn out to show that the boy is much liked, this being, of course, so much the better for the *nkowusi* who gets a present from each. The *nkowusi* then uncover the boys' faces and hand over the lads to their mothers who take them away to rest in the shelters.

The *m'wichila*, meantime, has withdrawn to his hut, where all the relatives later collect; he then comes out holding his "tail," singing:

"Kwenda akajoja ukwanangera kupa!"
"Come and bathe those who love to bathe!"

Each adopted sister or woman guardian takes her *wawali* brother on her back and carries him off to the stream to bathe. The woman sets her *wawali* down on the bank and then leans across his back while the *m'wichila* comes along and dipping his "tail" into the

stream, sprinkles the boy on the chest with the water. Then the positions are reversed and the woman receives the "tail" on her chest, after which they plunge into the water and bathe, each pouring water over the other. The woman rubs the boy's back and he in turn shyly rubs the back of his woman guardian. Clothes are not removed. Everyone looks on.

While this is going on, the *m'michila* and his assistants build a kind of fence across the return road; as the people start back, he sings:

"*Mete*	*ukusuma*	*namupewa*	*wakumba masika!*"
"Fire my	they are buying	I myself	they give me the spirits!"

that is "everyone has got to buy from me the gifts I myself have from the spirits." As each woman comes up carrying her *mwali*, the mother runs out and makes a payment to the *m'michila* so that her son may be allowed to pass. The boys are carried back to the shelters where they rest. The mother of the leader cooks food into which the *m'michila* puts medicine; he then gives some to each *mwali* to eat, after which they partake of the food prepared by their mothers, while the *m'michila* goes to the village for the beer drinking, returning in the afternoon. In the interval the dancing men dance *chambe*, etc.

Oil standing in separate basins on the ground has previously been prepared for anointing the *wali*. The *m'michila* takes each basin and passes it across the palm of his hand on which he has smeared medicine, each basin being set down on the ground again. Taking a stick, he smears it with medicine from his "tail," and he dips it into each basin. He then comes with his "tail" to detect any woman who may have had any sexual intercourse instead of remaining continent during the stay at *Ndagala*. He dips his "tail" into each basin of oil in turn and holds it up for the oil to run off. If the oil runs off in a stream, the mother as she stands behind her basin of oil is welcomed as a good mother; if the oil runs off drop by drop, "*ndoli*," the woman is laughed to scorn. Her basin is changed for that of another woman or her oil is thrown away and some from another basin is put in its place so that no harm shall result to the boy.

The *akumusi* then take the boys into the bush near by. The *magajawias* dress is removed, the body anointed with the oil, and fresh bark-cloth dyed black is put on. Little bows and arrows are made of small branches and grass and with these the *wali* shoot as they again enter *Lupanda*, putting the bows down on *ching'undang'unda* to the trilling of all the women present.

Immediately after this, the return is made to the village, just after sunset, the women having been busy gathering up all their belongings, while the boys were being anointed.

Some of the assistants lead the procession, the *wali* following in single file, all much subdued and walking very slowly, dressed in the new bark-cloth round the loins, with many ropes of beads round the neck and body, a headband of bark, and down the back a string of beads to which is attached a tassel. Each carries in his hand a wand about five feet long, *sepepe*, with a pattern burned in the shaft and two rattles, *mawwe*, affixed at the upper end.

881 While the *wali* thus march solemnly along shaking their wands, the assistants begin singing:

"*Ku* *mlango* *aziwiri!*"
"To the gate they have shut!"

[533] 534] to which the *wali* reply:

"*Kusowa* *hushupila!*"
"There is no place where to pass!"

The *m'michila* remains at *Lupanda* till everyone else has left; he then sets fire to the shelters and leaving without looking back, runs to overtake the procession and then leads it on towards the village still at a slow pace, while all around is a yelling crowd of delighted mothers and other relatives and the assistants and drummers, all singing and shouting.

When the outskirts of the village are reached, the *m'michila* halts and waits for the chief to come out and give them permission to enter. The chief brings calico which unrolled on the ground measures the length of the procession of *wali*. Headed now by their leader, the *wali* walk over this calico, while the assistants roll it up behind them for the *m'michila*, as it is part of his payment. Flour may be brought him at the same time, carried by the chief's wives.

At an *Unyago* I witnessed at Kuminama's, the halt was called on the bank of a stream at the edge of the village where a bamboo arch had been erected. The arrival of Chief Malemya at this point with calico and flour was the sign for a demonstration by his young men who ran forward as if in battle, firing off blank rounds from old Tower muskets and executing a kind of war dance.

After the calico has been handed over, the chief returns to his kraal and the procession continues into the village, across the village open space to the fence round the chief's house. There, the *wali* enter by a gateway and disperse over the courtyard where they find [777] their sleeping-mats laid out ready for them by their mothers. The *m'michila* lays his "tail" on the leader's mat to bring good luck thenceforth. With Mlemala, there is no further part for the *wali*, but in some cases they are called upon by the chief to give an exhibition of their dancing and drumming. The *wali* sleep that night in the kraal and disperse the following day.

In the morning, the *m'michila* takes his "tail" and a stirring stick made from a millet stalk with the roots on it, and strikes the ground at points in a row in front of the chief's [223] house. Here the pots of beer which have been prepared are placed in rows, those chosen by the chief and those chosen by the *m'michila*, and drinking commences. The *m'michila*, before he joins in, takes the *wali* to an ash-heap in the village and there sprinkles them with [574] medicine from a grain-mortar after which they go with their *akamusi* behind a house and change into new clothes. They then go and salute the chief by clapping their hands and depart to their villages, duly initiated and somewhat subdued by what they have been through. Their new names as "men" may be given them by the *akamusi* either at *Lupanda* [553] OR after the return to the village.

3: Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

778 gives an excellent idea of the average figure; it is circular in plan, often with a little hillock in the centre known as *hulumbi kangongoli*, "the hill of debt," and disposed in the quadrants are four depressions.

88| When the *wali* are introduced to *Chinyasa*, they stand round in a circle while the
778 *m'michila* stands in one of the depressions with perhaps two of his assistants in others.
The *m'michila* sings:

●533 "*Nyasa kangongola chinyapwila mwamcha ninyamila kwilumbo, amao!*
539 "The lake enormous was I born child I would have died on the plain, mother!"
Ninyamila ninyamila!"

or

"I have lived by the great lake all my life; I should have died in the plains."

while all three make movements as of paddling a canoe. The depressions are said to represent canoes. I believe this is the recognised form but I have also seen an oblong figure with two outlines of unmistakable canoes. *Chinyasa* is usually found near *nahungumi*.

Chiuta, when represented, stands beyond *mbunda*. It consists of two trenches at right angles forming a cross, which are covered over with logs and earth and the whole outlined with flour in a decorative pattern. The end of one limb of the cross is left open and round this opening a screen of grass is made. As the *wali* approach *Chiuta*, some of the assistants or *akamusi* descend into the trenches for the ceremony. The *m'michila* takes up his stand at the centre of the cross and sings:

"*Chiuta, amao, kwiloli chiuta!*"
"*Chiuta*, mother, come see *chiuta!*"

88| Then as everyone says "Listen, listen!" crying is heard "coming out of the bowels of the
778 earth," followed by drumming and the singing of the *chindimba* songs (sometimes *mkonde* or *masche*); a horn is sometimes heard as well as *kululuta*, trilling with the tongue against
[775] the lips. *Chiuta* is called "the resting place of all departed spirits" and the sounds are said to be the echoes of their doings. The word is not met with elsewhere among the Yao, although it occurs in the Chinyanja and in other languages of this country with the meaning "the heavens."

Chiuta is said by Hetherwick[1] to be "a large fish that forms one of the pictures at the *Usapo*," but I have never seen it or heard of it, and I am doubtful of the correctness of the statement.

778 *Ching'undang'unda:* Dr. Davey's photograph[2] is an excellent reproduction of this figure, which consists of a mound of earth flattened on the top, and decorated with geometric
[531] patterns in flour which extend to the ground. In the centre and at the four corners, so to speak, are implanted billets of wood with decorative lines and dots in black and red on the white wood (Pl. X, figs. 1, 2). The billets are three inches in diameter and project twelve to fifteen inches above the ground.

[1] Handbook of the Yao language, op. cit., p. 141. [2] Op. cit., Pl. III, fig. 3.

881 The evening of the first day is called *lyuwa lya nukuwowi*, or "the day of singing," as singing is kept up far into the night, but the exact significance of the word *Kluwowi* I have been unable to find out.

[515] The second day is spoken of as *lyuwa lya mawuwa*, "the day of washing of hands," (*kuwuwa*, "to wash the hands") when the *wali* are specially instructed as to the necessities of washing hands before preparing food, etc.; precept is followed by practice. The night is spent quietly; for this day's proceedings few people probably will have remained.

On the third day, however, they come back again from their villages in crowds to witness the performance of *uuma*, *lyuwa lya uuma*, "the day of house moving" (*kuuma*, "to change one's abode, carrying goods and chattels with one"). A representation is given of an onslaught on a village by *mamiso* and all pretend to run away carrying their worldly goods with them. The part of the attackers is played by a number of women who, armed with guns and having donned belts and powder horns, rush in on the crowd from the bush and make prisoners of all they can catch. The men are put in miniature slave-sticks; women who are seen trying to run off with a child on the back, one round the neck and one on each hip, are driven as prisoners into a group. When all the noise and fun are over, the prisoners are released. This is often followed by a mock trial. Two women dressed up to impersonate chiefs of rival tribes, argue an old, imaginary quarrel, usually pretending that there has been a raid by one party on an ivory caravan going to the coast, with stealing of the ivory, while the other party in revenge has caught and killed some of the people belonging to the first mentioned. The thing may be kept up for an hour with much talking and great zest, all those taking part being women. Finally each party agrees to give compensation for the damage done; each presents the other with bundles of sugar cane, and friendship is reestablished. That night, everyone again rests quietly.

The fourth day is known as *lyuwa lya kwayunga* (*kwayunga*, "to go round about," referring to the dancing which goes on). Dancing takes place during the day and also the ceremony of *Lakwi* to be referred to later. One of the favorite songs sung this day runs as follows:

[533 539] "*Ndumbe'ji nkumbe'pwipe ewinde mwimwe nkwapwe'pa, ewwe! ewkwenge wpwejimwe!*"
"(Tusk this) a present don't give me free wait for me little girl, dear me! and we'll have some fun together!"

On the fifth day, return is made to the villages. The girl *wali* attended constantly by their *akwawi* then live together for the period of instruction in huts in a special enclosure in the chief's village or in similar enclosures in a number of villages. The *wali* may go out into the village but must go about with bowed head and look no man in the face; they wear bark-cloth called *kiuko* and should they meet anyone, they must pull over their faces the [753] kind of hood with which their garments are provided. They may not share food with outsiders. If they did so, the latter would sicken with a disease called *chiwubulu*.

3: Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

woman guardian shows to her man red and white beads in her hand and tells him that white indicates health while red means sickness, thereby pointing out to him their deep-rooted beliefs in the diseases associated with intercourse or association with women during menstruation. 881 842

Then follows a test of manhood. The women guardians put little pieces of stick (*lukwi* = sticks or firewood) on their heads and sing: [533 539]

"*Ngempe mkwempe lukwi lwa msuku'chamano lisi!*"
"I must give my wife (when sick) firewood of the *msuku* although it gives lots of ashes!"

What is meant is that when his wife is ill, the husband should fetch the firewood even though he does not know which woods give least ash; the *msuku* tree gives many ashes. The little piece of wood a few inches long with a notch in the middle is then handed to the young man by his guardian. He places it on the ground in front of him, kneels down, and with a small axe he attempts to divide the stick at the notch. If he is successful, he is greeted with cheers, clapping, and much rejoicing. By proving his power to hit straight, he has also established his manhood; it is prophesied that he will soon have children. Should he miss through nervousness, shouts of derision welcome him and his guardian shows her disgust with his performance. If he is a young fellow well-liked in his village, he may be allowed to make a second attempt. After this ceremony, each couple bathes each other in their shelters by pouring water over the head and body without removing the clothes, thus making brotherhood. Forever after the man must treat this woman with great respect, must not address her for some time, and then only after making her a small present.

The woman guardian picks up the two pieces of the broken *lukwi* and on the morning before they all leave *Chiputu*, the mother or sister of the young man gives her a string of red or white beads saying, "These are to bind up the bundle of wood." The man's guardian binds up the pieces of wood with the beads and gives it to her man. When they have returned to the village, they go to the young man's wife and he presents them to her. The guardian, however, steps in and slips off the beads which she keeps, while the wife, pleased at her husband's success, drops the two pieces of wood into the fire.

During the weeks that the girl *wali* remain under instruction in the village, those young men who have been *ku-lukwi* sleep in one big enclosure away from their wives and do not cohabit until after the second return from *Chiputu* is made.

Another *ku-lukwi* test sometimes, I believe, introduced into Yao ceremonies but really one practised by the Mpotola people and not proper to the Yao, is as follows: [177]

The guardian lies on the ground, wearing a small loin-cloth, and holding beads in her clenched hands, red in one, white in the other. Her man standing at her feet, bends over her and projects saliva on to her abdomen through a rolled up leaf held between his lips, at the same time choosing one of her hands. If he chooses the hand containing the white beads, he is hailed with delight as a man indeed, but should he choose the hand containing

the other women joining in the refrain. A number of these songs are here given but each nahanga has her own favorites which she sings. They are only sung at *Litiwa*. 843

Alitete, lisinjemi: alitete lisinjemi; Chorus *Mbirunjirumi.* 843

Now you are clucking before laying an egg. Be content then, you must not be running about any more: (Chorus) Call her back for me. 533 539

Ku-tatera, "to cluck as a hen" comes from *te! te!* the sound of the hen. Another song is:

Atatereje atale te. Chorus *Atatereje.*
You must cluck, cluck, cluck, little mouse.

A set of songs sung by Kuliati are as follows:

1. *Mtwe ngukwala, kumalamba; amao!*
   I have a headache, surely; oh dear me!
2. *Japale, japale, chamanli, kuutuka mwanyama!*
   Startled (like a rabbit), little girl running like a wild animal.
3. *Asungula'wa walapire ulamba!*
   The rabbit they praise for its cleverness!
   Kumbawala ngalakotete kumlemba ilemba!
   He caught (the name of a little bird) and cut his hair in the *ilemba* fashion!
4. *Unaji ndiri jua mtima; ndigamile, Chenjerero apite!*
   I have a good heart; I am contented, Chenjerero has gone!
   Ajigaru mabwangwa, amao! achamao!
   He has taken away all his dancing things, dear me! oh dear me!
5. *Wakwambaga'wala, lawe! nawe atulanjire twalala!*
   Those who are speaking (an exclamation) show us that we may see!
   Mlasi ngatile mbanga, tatemera, chikata, ngalakwe, wajaja; ngalangalakwe wajaja!
   The bamboo has fallen with the wind, they shivered with fear (an alluvial plain), (a thing which is stuck) (well-dressed).

In native songs, full poetical license is indulged in and it is often difficult to give exact translations of them. The first has reference to the woman making a fuss because she feels ill with her pregnancy; this she is not supposed to do. Number 2 refers to the fact that she has a new experience which may cause her to be startled, but she need not fear. In number 3, *ngalakotete* is a bird which has a mark running back on either side of the mid-line of the crown of its head, resembling a method of hair dressing wherein two bands are shaved from front to back parallel to the mid-line. *Chenjerero* (number 4) is the name of a man but this reference is apparently now without point. Number 5 is sung by the nahanga when she hears murmurs of others in the crowd starting to sing other songs; she intimates, "Here are we singing, let us hear you others who wanted to sing; you are probably afraid now." In the latter part of this song, words are made use of which have a slang meaning known only to women. *Chikata* is a woman's slang word for the female pudenda; *ngalako*, 843 539

3: Stanzus D-5 (ca. 1912) 1922 FT7 Yao FT7

843 538 when in child-birth there is delay in delivery it is said of the woman "*Abelelewa*," "she is stuck," from *ku-belelewa* "to be suspended, to be caught by a thorn"; *wajaja*, well dressed, is a slang exclamation meaning "everything, everything is out!" The verse refers, of course, as all obstetricians will recognize, to the moment of crowning of the oncoming head during parturition when it appears to be stuck; then suddenly it slips over the perineum and "everything, everything is out."

843 533 The *nakanga* now gives way to the songs of the other women. In different districts different versions of the songs are sung, but the other women will quickly pick up the refrain of the song sung by a woman who has come in from some distance.

843 After these songs, the *nakanga* instructs the woman and her husband in the care they must take until after the child is born. Macdonald says, speaking of the instructions "but of the quality, we prefer to be silent."[1] What a pity he allows no one else to judge!

The woman is especially cautioned against sitting with her legs crossed; they must be kept apart lest the child in her womb be suffocated. She is also told many useful things concerning her pregnancy and confinement. The husband is cautioned to cease intercourse with his wife or if he has intercourse, his wife may not lie on her back, lest the child be injured.

While this instruction is going on, all the assembled women cook and eat the feast [751] which has been made for them. When all has been said, the *nakanga* anoints the man with castor oil, which has in the meantime been warmed, and ties round the neck of the woman the *litiwe*, a cord made of plaited bark-cloth with a tassel in front; at the base of the tassel white beads are strung for good luck, and at the end of the tassel, red beads are affixed, having symbolic reference to the haemorrhage at the time of childbirth. The woman wears only a strip of calico of two hands breadth called *mletu*. She is anointed on the head, body, and limbs.

The tying of the *litiwe* is the sign for dancing to begin. It is a dance in which women try to excel one another. They come with all their tattoo marks on buttocks, thighs, and abdomen renovated; they wear diaper-fashion a narrow strip of cloth, always black in color, and round their bodies numerous strings of beads. With the beginning of the dancing, their other clothes are thrown off and practically naked, they vie with one other in exhibiting their charms and skill in dancing, which afterwards becomes the subject of much discussion among the women onlookers. "So and so is really too old and skinny for such exhibition," and "So and so has buttocks as flat as a wall," while "Such and such a one is fat and beautiful and dances wonderfully, with such *ebondon*," etc. In front of the woman [431] is set a wooden plate, in front of the man a mat, and on these are thrown donations by the dancers and onlookers, consisting of beads etc., or nowadays pennies and small silver coins to help to pay the expenses of the entertainment and, in the woman's case, to buy medicine which may be necessary should the baby fall ill. When the wedded couple are

[1] *Africana*, op. cit., vol. 1, p. 128.

535 *Ching'wengeng'wenge:* A soloist dances about, playing a single-string viol with a bow as he sings. His songs are all about people, village episodes full of personalities and many witticisms. Kondoni of Malemya's was a well known performer (Pl. I).

533 539 **Songs.** The following are some of the *Chindimba* songs:

1

1st voice. *Kutumbila ayuse nyumba achalende ayuse kunpi?*
To be angry the owner of the house strangers they sleep where?
2d voice. *Kutumbila ayuse nyumba Che Nkoleka tinjiwa.*
To be angry the owner of the house (Mr.) Nkoleka I shall die.
1st voice. *Kumbuya unami wulakwe,*
To ask me to answer lies you.
2d voice. *Kumbuya unami Che Mwenge,*
To ask me to answer lies master,
1st voice. *Alawu tingende ipepo,*
Brother-in-law I will go thus,
2d voice. *Alawu tingende ipepo.*
1st voice. *Awala wanache apile mchikuwa,*
There (go) the children they go on all fours.
2d voice. *Oh lele'jo tinjiwa.*
Oh today I shall die.
Chorus. *Kutumbila ayuse nyumba!*

The burden of the song is: We see we are not wanted here; better we went away!

2

1st voice. *Ah lijuni'we kale kale kupaka takapachaje lele'jo!*
Ah baboon those jumping jumping to enjoy he is going to enjoy today!
2d voice. *Ah lijuni'wewe! kupaka takapachaje wawanache!*
Ah the baboon these to enjoy he is going to enjoy child!
Chorus. *Kulpa mbanda ya nyumu!*
to eat (seed) pods of dryness!

"Seed pods of dryness" is also referred to in a story of the baboon. When he is dozing at night sitting on a tree, he hears a seed-pod in the neighborhood crack, and wishing to mark the spot, so that he may go and eat the seed in the morning, he stretches out one arm in this direction and goes to sleep again, to be awakened by the sound of another cracking pod; whereupon he puts out another limb to mark that spot. Presently, he has all but one limb including his tail set out as sign-posts. Half awake he starts to put out the one remaining limb, and falls off the tree.

533
539

3

1st voice. *Atindili ulututa ngunga pilele ejo wuhuhuwe,*
potatoes guinea fowl oh! thank you you,
2d voice. *Atindili ulututa akundunda atiyuna'we mwanja.*
potatoes they are calling me Atiyuna there is going away home;
Chorus. *Kwunda, ulubulile!*
Remove the hoe from its handle!

The name of any person may be introduced into these songs, sometimes the name of a member of the village or of some person well known in the district. To introduce a name thus is *ku-hupha*. *Eja!* is an exclamation of thanks; when receiving anything, both hands are held out, and the words *eja, eja, eja!* or *nanga, nanga!* are uttered.

4

1st voice. *Mahulowele 'pahle ambo apulapula ngunapunda ngiwambe.*
The millet have eaten locusts you place did not plant not.
2d voice. *'Ohile ambo apulapula ngunapunda mpunga, ahati, ngwambe!*
Have eaten locust you place did not plant rice, father, not!
2d voice. *Apulapula ngunapunda mpunga, ahati, ngwambe!*
1st voice. *Apulapula ngunapunda mpunga, ahati, ngwambe!*
Chorus. *Mahulowele, pahle ambo!*

Mahulowele: after the first crop of millet has been taken in, the stalks are cut off near the ground and the roots allowed to remain in the soil. Next season, they again sprout and yield a second crop. This second year growth is mahulowele. [241]

5

1st voice. *Mazimba w'chinguwumbo chilo chilo chilwe chilo chilo!*
Lions in the palm-trees at night, etc.
2d voice. *Mazimba w'chinguwumbo, kwimba likwale Atiguna! Tinjiwe chilo chilo etc.*
Lions in the palm-trees to sing likwale Atiguna! I shall die tonight, tonight, etc.
Chorus. *Mazimba w'chinguwumbo!*

Likwale is the name of a dance, *Atiguna* is a woman's name. Cf. "Let us eat, drink, and be merry, for tomorrow we die."

6

1st voice. *Ndundu, ndundu, ndundu!* Repeat.
Teasing, teasing, teasing!
2d voice. *Nahulaga chilunda lundu, undundu'we, ngunda!*
If you have teasing teasing, me tease me, I am going away!
Chorus. *Ndundu!*

7

533
539

1st voice. *Wakwambaga'wula* [illegible] *chakakatunda*
The one whom we were talking about, have he lo! that thing which happened some-[illegible]
time ago, the day after tomorrow!

2d voice. *Ahipana* [illegible] *chakakatunda,* [illegible]
(a name) is going that thing which happened some time ago, I am off!

Chorus. *Kanpa* [illegible] [illegible] [illegible]
You give milk who has lies (lied to) you!

The meaning of this is: "If a man comes along who has done you an ill in the past and is just as likely to do so again, should you be inclined to reward his lies by giving him hospitality? Better to go away and leave him alone."

8

1st voice (male). *Kapakala'ko* [illegible] *ahajanpana!*
The little lip ring that, come and wash it! Repeat.

2d voice. *Kapakala'ko,* [illegible], [illegible] *ahajanpa* [illegible]
The little lip ring that, you folk over there, come and wash them today!

1st refrain. *Katakatunda* [illegible]
Lest it turn into bumble-bee honey!

1st voice (female). *Awbi* [illegible]
What about heard your? Refrain.

2d voice. *Awbi* [illegible]
What about heard your father? Refrain.

2d refrain. *Sitakatunda* [illegible]
Lest it turn into [illegible] (part of a maize ash).

9

1st voice. *Achimbakila* [illegible]
Why are you crying [illegible] the cause?

2d voice. *Tingawinka* [illegible]
I will take her to her own home there!

Chorus. *Kamajinla* [illegible]
I am going to look for home!

This refers to a troublesome wife. "Let her go back to her mother and the husband will go about his own business."

10

1st voice (woman). *Ukwakwalaga* [illegible] *ni* [illegible] [illegible]
If I were not discouraged then I would have been still trusting! Repeat.

2d voice (man). *Ukwakwalaga* [illegible] *ni* [illegible] *hatahata! hatahata!*
If I were not discouraged then I should have been saying hear! hear!
Hatahata hatahata hatahata [illegible]
Hear, hear, hear, dear me!

765 to fire off his gun as long as his powder lasted. During the period of mourning, drumming
[534] went on continuously, *chindimba* being played on the three small drums called *ichoma*.

With the exception of the flexed attitude of the body, the foregoing description is a correct account of what happens today. The body is now fully extended.

The *ewile* are two or four in number, although other friends may assist in all their services. On about the third day, the *ewile* sew up the body in bark cloth, completely envelop-
767 764 ing it; a bamboo needle is used and left sticking in the cloth at the last stitch. The body is then enclosed in a mat slung on a pole, and carried from the hut to the grave. First, the procession makes a round of the village, passing by all the houses which the dead man used to visit, and over all the paths he used to cross. His children and those of his relatives under seven or eight years old gather in the village, and throw pieces of charcoal toward the body as it passes, "so that they shall forget the dead man," or run after the corpse, while some one sprinkles medicine over them.

764 As the procession leaves the village, it is headed by the drums playing *chindimba*, but after a few hundred yards, only the *ching'anga* drum, now called *chitanda*, beats time for a
[534] short distance; the procession then goes on quietly. Following the drums, walks the mother or another relative carrying flour with which the grave will be marked out. Behind this mourner, the body is borne by the *ewile*. The *ewile* are always the first to carry the body, but are later relieved by other friends of the deceased; no one would ever ask to be relieved.
[114] After the chief mourner, follow the other relatives and friends, the men first, the women behind. Boys just back from their *unyago* attend to learn the customs. All the relatives of the deceased go to the burial, contrary to Macdonald's account.[1]

In this order, the procession reaches some tree thirty or forty yards from the place of burial where the corpse is put down in the shade, *mtala*, "resting place", and while the women and part of the men watch beside it, the *ewile* proceed to the burial place. They cut branches from a sacred tree, and strew them on the path. On approaching the appointed spot, they clap their hands in salutation, asking that the burial ground be opened to them.

The head *mbile* chooses the site where the grave shall be dug, after which the mourner marks out the limits with the flour she has brought. In the days when the body was buried in contracted posture, a circular grave was dug just big enough to allow two men to work in it. Eight feet was the usual depth but this was decided by the deceased's spouse, if he were living, otherwise, by his near relatives. In the east side of this circular well, a cave was excavated, just large enough to admit the contracted corpse. When all was prepared, the body accompanied by all the mourners, was brought from *mtala* to the graveside. The chief *mbile* with a friend of the man's family and one of his wife's, standing in the grave received the body and placed it in the cave, resting on a mat and covered with bark cloth. The body lay on its side with its back toward the well, and its face looking

[1] Op. cit., vol. I, p. 168.

3: Stanmus D-5 (ca. 1912) 1922 FT7 Yao FT7

that she is tattooed more profusely on the buttocks and legs. The circlet of beads was formerly made like *mapundu* with a bark-cloth core, called *mbumbo* or *mbulo* (*bu-ombo*, to slip off), referring to the *mbulo* being slipped off over the legs. The fashion now is to wear single strings of beads; each string is of one color but all the strings are different and perhaps number a dozen or more.

Lipumba: a bead belt three-inches wide, worn by Yao women near Lake Nyasa. A bead apron, *lisajwa*, is also worn by them but not near Zomba (Pl. VI, fig. 2).

A woman removes her beads when she is "unclean," that is: (a) during the menstrual period, (b) during the period of mourning for a near relative when coitus is forbidden, (c) before the birth of a child and afterwards until such time as she may resume intercourse with her husband.

A large variety of beads has long been used by the Yao. There are some rarely seen now which were much prized in years gone by, while others are of quite recent introduction. There is no evidence that they themselves made beads and there are few which are probably not of European manufacture.

Clothing. The Yao used bark-cloth before the introduction of woven materials. The older people may still be seen in it and it is used in most of the ceremonies. At one time, they also used to weave a cloth called *likwumbo* from a native cotton plant. This has been given up since the introduction of imported materials.

For the method of wearing cloth, see Pl. II, fig. 2. The very poorest people wear only a strip of calico round the pudenda, held in position by a string round the waist hanging long behind and in front; this is called *mbetha*. Yao women, when menstruating, wear under this a little piece of cloth called *likumbi;* it is only worn at this time and not always as in certain other tribes.

Warfare. Fighting has naturally played a large part in the life of the Yao as among other African tribes, but at no time were these people a trained fighting race. Warfare was of a desultory character consisting mostly of raids by one feudal chief upon another. A party of men belonging to a chief at enmity with another, meeting some of his followers would challenge them, "*Abumbe*, who are you for?" The name of the rival chief in answer was the sign for battle to begin. A false answer would never be given to gain an advantage. When about to throw a spear, the thrower calls to his adversary.

The Yao have possessed guns for a long time. Going out to fight, the Yao used to leap from one foot to the other, and spin their guns around in their hands. They made their own stocks for the rifles. They also used to make a small, cast-iron cannon about three feet long, called *kambuda*, "a little nose." It was carried in the arms and was touched off by a torch. Drums called *ngoje* were taken into battle. There is an old war drum at Malenya's village, taken in 1896 by the old Malenya from a Mang'anja chief called Mkubumbo who lived near Lake Chiuta. Since then, this drum has always gone into battle with Malenya. Around it his men would dance and anyone who had killed a man in battle would run up to it and spit upon it in salutation.

857 To the index:

524 "*Lukungulo lwa ng'ombe lwa kumdala mwilombo!*"

539 "(This one is) the leg of an ox which walks on the *plain!*"

To the thumb:

"*Chamuno*"

"The fish"

857 *Cat's Cradles* are known as *chinguru*, "the spider's web" (Pl. XXIII). The position
524 of the string on the hands is as in Position I of Miss Haddon's book and this is followed by Opening A, given by the same author.[1] (Pl. XXIII, figs. 1, 2.) Three methods of arriving at the same figure, which is called "the net," are shown here (Pl. XXIII). Variety C is followed by the making of a knot, figured in C 13, known as "the child." There are probably a number of other forms made by natives, but these, which I saw one of my women patients make, will serve as an example.

534 **Musical Instruments.** The number of instruments proper to the Yao appears to be small, indeed probably only two in number, the *mangolongondo* and the *chilipupu*, with perhaps the three holed flute, *chilolo*.

The former is constructed on the principle of a xylophone; it consists of two trunks of banana trees laid on the ground and held in position by stakes. They are not quite parallel but approach each other somewhat at one end, being from one to two feet apart; on these rest cross-wise a number of pieces of wood of varying thickness and length, kept in position by pegs driven into the banana trunks on each side of each billet. These are struck with sticks by a single player, or by two persons sitting on opposite sides of the instrument. Another variety is found in which the pieces of wood, which may have holes bored in them to effect differences in sound, are arranged over a hole scooped in the ground (Pl. V, fig. 1).

The *chilipupu* consists of a piece of plank hollowed out to form a resonator on which are fixed a number of keys of bamboo or metal of different lengths. These are arranged across a bridge, and the free ends are set in vibration by twanging with the fingers.

[FT7] The instrument now most commonly seen is the same which was introduced, I think, from the coast about 1890 to 1900. It is a type of guitar.

An instrument played by women — and this again is of recent introduction among the Yao — is the *mkungulu*, which consists simply of a stick of wood about a yard long to which is affixed a single string. One end is held between the teeth, the other in the hand; it is twanged by being struck with the thumb and finger of the other hand close to the mouth, which is opened to different degrees, and gives a variety of notes resembling those of a jews' harp.

The *ching'wengeng'wenge* and drums are referred to under *Dancing*.

[1] Kathleen Haddon, Cat's cradles from many lands, New York, 1929.

3:Stanmus D-5 (ca. 1912) 1922 FT? Yao FT?

Women stick on a small spit a pretty green and white beetle, one of the *Cetoniidae*. The free end of the spit is then held between the teeth. At different positions on the stick, the humming of the impaled insect gives rise to different notes. The beetle is named *chingwanyanga* or *chinwanwa* (*wanpaive*, Chin.). The wing-covers of another beetle, *mutetebwabo*, a *Lamellicorn*, are used by women for the making of a musical instrument. The wing-covers of some twenty of these insects are threaded on a string arranged round the shoulders and foot of the player as she sits on the ground. The string on each side, as it passes from the shoulder to the foot of the same side, is plucked by the fingers of the opposite hand, different notes being obtained by different degrees of tension put on the string by pressure with the foot. The wing-covers give a buzzing quality to the notes which all natives like. 534 237

Mention should also be made of the horn, *lipenga*, commonly made of a long piece of reed or bamboo with a trumpet-shaped end, made out of a portion of a gourd. Antelope horns are also used. The horn is blown on journeys. [484]

Dancing. Dancing among the Yao, as among many other peoples, is the outcome of the pleasure experienced in rhythmical movements. The first accompaniment was probably the clapping of hands to mark time, followed by some exclamatory sounds more or less prolonged and occurring at regular intervals. Later, there was probably some refrain and, later still, drums were added to mark time, and songs formed an additional accompaniment. I believe that, here, dancing has always been an expression of pleasure and happiness and has been secondarily introduced at many ceremonies. In the majority of cases, such ceremonies were occasions of joy, the only exception being at funerals, but there I think their introduction was rather as a means of passing the time and avoiding silent brooding than as any real part of the rite. 535

The names given to various dances indicate their time or rhythm, and are, therefore, comparable to our own words, waltz, two-step, etc. There may be a number of airs for each time, and many sets of words to each air. The time may be given by clapping only, or by the addition of drums. Anyone acquainted with these dances, hearing drumming in the distance, can at once recognize the dance that is going on.

The drums which are used at dances (Pl. XXII), are made of a hollowed-out log of wood with a skin tambour stretched over the mouth of the drum and fixed by wooden pegs. On the tambour is smeared a layer of beeswax. The tambour is tightened by warming over a fire, so that the correct note is obtained; a fire is always kept burning close to the spot where drums are being played. 534 535

Lilondi: a drum shaped somewhat like a native flour mortar, three to six feet high with the tambour one to two feet in diameter. The drum usually lies on the ground, the player sitting on the barrel of the drum, or he may have it suspended from him by a cord, the body of the drum dragging on the ground between his legs. It is played with both hands and gives a deep, resonant note, "*ki, ki, ki*" (Pl. XXII, figs. 12, 13). 534

3:Stanzas D-5 (ca. 1912) 1922 FT7 Yao FT7

534 *Ntapiipe:* like *likuti*, but played in a different way, giving the sound "*tpu tpu tpu!*"

Mahose: the same as *likuti*, but with a higher pitched note. This can be produced by heating the *likuti* drum over a fire.

Chichoma or *linpuhe:* a small drum eight to ten inches high, held in the hands by strings on either side, in the same way as a concertina, and pressed against the chest while being played with the fingers. It may be alternately pressed firmly and lightly against the chest, giving variety in timbre. The base which rests against the body is cut down into a kind of foot-piece (Pl. XXII, fig. 13).

Chinpunpu: a small drum eight to ten inches high, rather goblet-shaped with stem and base, the circumference about equal to the height. It is beaten with two sticks, "*npunpunpu npunpu!*" (Pl. XXII, fig. 17).

Chimininge: the same drum played with two sticks, "*mini, mini, mini!*"

Ndimbe: a small three legged drum about the same size as *chinpunpu*. It can be carried in one hand and played with the other. It is used with one stick or more, in place of *chinpunpu* and *chimininge* (Pl. XXII, fig. 16).

Maiwu: an old drum not now used. It varied in size from one to four feet long, was suspended from the neck, and played at both ends (Pl. XXII, fig. 14).

It is very difficult to give any idea of the time and different sounds the drums give. People learn them by repeating the sounds the drums make thus: *Ndii din dii nilpdii ndii din dii nini nini nfipd nfipd*, etc. Several drums, often six or more, are played together, each contributing its element of sound. They are often played very fast, but the time kept is most exact.

535 Dances are ordinarily performed by everyone in a village, but there is always a leader. Or again, there are trained bands of dancers who earn their living by attending ceremonies or any festive occasion. In a few cases, the dances are only danced by professional dancers. A short account is given below of many of the Yao dances.

Likwata: (*ku-kwata*, to clap the hands). No drums are employed, but the time is kept by clapping. In some villages, drums have lately been introduced. It is a common dance in a village on any moonlight night, just for amusement. Women and girls take part. Standing in a circle, they sing and clap, while any who wish, go into the circle, perhaps a dozen at a time, and dance their shuffling steps. A song which is included under *likwata*, is a representation of the dung-beetles (scarab) rolling the little balls of dung to their nesting places. The women shuffle backwards or forwards, like the beetles, one pushing and one going backwards pulling. As they dance, they sing:

[531] "*Likwa, hili hili!*"
"(oh little) dung-beetle, push push!"

Refrain:

"*Likwata mwapi!*"
"It is rolling dung!"

Women stick on a small spit a pretty green and white beetle, one of the *Cetoniidae*. The free end of the spit is then held between the teeth. At different positions on the stick, the humming of the impaled insect gives rise to different notes. The beetle is named *chingwungwungu* or *chiwunwun* (*wungulire*, Chin.). The wing-covers of another beetle, *watchetache*, a *Lamellicorn*, are used by women for the making of a musical instrument. The wing-covers of some twenty of these insects are threaded on a string arranged round the shoulders and feet of the player as she sits on the ground. The string on each side, as it passes from the shoulder to the foot of the same side, is plucked by the fingers of the opposite hand, different notes being obtained by different degrees of tension put on the string by pressure with the feet. The wing-covers give a buzzing quality to the notes which all natives like. 534 237

Mention should also be made of the horn, *lipenga*, commonly made of a long piece of reed or bamboo with a trumpet-shaped end, made out of a portion of a gourd. Antelope horns are also used. The horn is blown on journeys. [484]

Dancing. Dancing among the Yao, as among many other peoples, is the outcome of the pleasure experienced in rhythmical movements. The first accompaniment was probably the clapping of hands to mark time, followed by some exclamatory sounds more or less prolonged and occurring at regular intervals. Later, there was probably some refrain and, later still, drums were added to mark time, and songs formed an additional accompaniment. I believe that, here, dancing has always been an expression of pleasure and happiness and has been secondarily introduced at many ceremonies. In the majority of cases, such ceremonies were occasions of joy, the only exception being at funerals, but there I think their introduction was rather as a means of passing the time and avoiding silent brooding than as any real part of the rite. 535

The names given to various dances indicate their time or rhythm, and are, therefore, comparable to our own words, waltz, two-step, etc. There may be a number of airs for each time, and many sets of words to each air. The time may be given by clapping only, or by the addition of drums. Anyone acquainted with these dances, hearing drumming in the distance, can at once recognise the dance that is going on.

The drums which are used at dances (Pl. XXII), are made of a hollowed-out log of wood with a skin tambour stretched over the mouth of the drum and fixed by wooden pegs. On the tambour is smeared a layer of beeswax. The tambour is tightened by warming over a fire, so that the correct note is obtained; a fire is always kept burning close to the spot where drums are being played. 534 535

Libuti: a drum shaped somewhat like a native flour mortar, three to six feet high with the tambour one to two feet in diameter. The drum usually lies on the ground, the player sitting on the barrel of the drum, or he may have it suspended from him by a cord, the body of the drum dragging on the ground between his legs. It is played with both hands and gives a deep, resonant note, "*ti, ti, ti!*" (Pl. XXII, figs. 12, 15). 534

534 *Nhgutiqa:* like *likuti*, but played in a different way, giving the sound "*tye tye tye!*"

Mchose: the same as *likuti*, but with a higher pitched note. This can be produced by heating the *likuti* drum over a fire.

Chichoma or lingoba: a small drum eight to ten inches high, held in the hands by strings on either side, in the same way as a concertina, and pressed against the chest while being played with the fingers. It may be alternately pressed firmly and lightly against the chest, giving variety in timbre. The base which rests against the body is cut down into a kind of foot-piece (Pl. XXII, fig. 13).

Chinganga: a small drum eight to ten inches high, rather goblet-shaped with stem and base, the circumference about equal to the height. It is beaten with two sticks, "*ngangaga ngangal*" (Pl. XXII, fig. 17).

Chimininga: the same drum played with two sticks, "*mini, mini, mini!*"

Ndimbe: a small three legged drum about the same size as *chinganga*. It can be carried in one hand and played with the other. It is used with one stick or more, in place of *chinganga* and *chimininga* (Pl. XXII, fig. 16).

Mivu: an old drum not now used. It varied in size from one to four feet long, was suspended from the neck, and played at both ends (Pl. XXII, fig. 14).

It is very difficult to give any idea of the time and different sounds the drums give. People learn them by repeating the sounds the drums make thus: *Ndā dīn dā nīēpīlī ndā dīn dā mīnī mīnī nīlyē nīlyē, etc.* Several drums, often six or more, are played together, each contributing its element of sound. They are often played very fast, but the time kept is most exact.

●535 Dances are ordinarily performed by everyone in a village, but there is always a leader. Or again, there are trained bands of dancers who earn their living by attending ceremonies or any festive occasion. In a few cases, the dances are only danced by professional dancers. A short account is given below of many of the Yao dances.

Likwata: (*ku-kwata*, to clap the hands). No drums are employed, but the time is kept by clapping. In some villages, drums have lately been introduced. It is a common dance in a village on any moonlight night, just for amusement. Women and girls take part. Standing in a circle, they sing and clap, while any who wish, go into the circle, perhaps a dozen at a time, and dance their shuffling steps. A song which is included under *likwata*, is a representation of the dung-beetles (scarab) rolling the little balls of dung to their nesting places. The women shuffle backwards or forwards, like the beetles, one pushing and one going backwards pulling. As they dance, they sing:

[539] "*Lilowa, tuti tuti!*"
"(oh little) dung-beetle, push push!"

Refrain:

"*Lilubuda mungil!*"
"It is rolling dung!"

Chindimba: the *chindimba* songs are the favorites among all the older people. They have been in late years partly replaced by others, but, at the present time, there is a tendency to return to them; they are staid in tone and the dance is sedate. *Chindimba* is always played at mournings. While the whole company sits around in a circle with the drums at one side, a couple of people do the dancing in the middle. The drums used are a *chingonga*, two *ichoma*, and a *likuti*. With the commencement of drumming, a man well known for his songs steps out into the middle and begins singing; he is followed by another man or maybe a woman who sings a second part; the two singers are generally people who have found that they sing well together. Two such people will be welcomed, and they may sing many songs, while any young upstarts who do not sing well together, will be given to understand that their performance does not meet with approval. People have their favorite songs, and there may be much heart-burning if an old man finds some one else singing a song that he considers especially his own. As they sing, they dance their peculiar shuffling steps. (The words of some of these songs are given later.) 535

Salapa: an Anguru dance sometimes danced by the Yao. It resembles *chindimba* in that all sit singing and clapping while, one at a time, men dance in the open space to time given by bamboo sticks knocked together. The songs are all hunting songs.

It is impossible to describe the steps used in all the dances; for each dance, they differ, of course, and except by a cinematograph film, they cannot be reproduced. The movements of the feet are ordinary stepping motions or patting of the ground with the feet, the actual excursions being very small, so that in most cases it is impossible to devise any means of making out the steps. To enable them to perform these steps, they commonly dance with the knees bent, the buttocks protruded behind, and the back arched. In some cases, this attitude is extreme. [516]

There is a larger series of dances which, to the uninitiated spectator, appear to resemble each other very closely. The general plan of the dance is as follows. The drums are placed in the middle; around them in a circle are the dancers and outside these, the onlookers. The circle may be thirty or forty strong, composed of men only or of men and women as the case may be. Commonly, the ring of dancers is divided into two halves, each half being headed by a leader who sings the song, all joining in the refrain, while the onlookers do the clapping. When the drums begin, they all walk round in a circle, but at a given signal, one of the drums gives out a new time, and the whole circle starts dancing with short, shuffling movements already described, usually progressing in the circle, sometimes going backwards, sometimes facing the drums or turning right around in the line.

Mkomaula is a dance of, I believe, recent introduction which has replaced to some extent *chindimba*, much to the disgust of the older people who dislike the innovation. They shake their heads and say, "*Chilambo chimasile!*" "The world is finished." The drums used are *likuti*, *ntipatipa*, *mchose*, and *chingonga*. It is danced by men and youths only. [177]

Njauka or, as it was known some years ago, *mpumbuli*, is danced like *mkomaula*, but the

3:Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

535 steps are accompanied by movements of the shoulders which form the feature of the dance. Performers may go into the middle and do *ku-punila* (see *mkonde*).

Mlewanda resembled *njeula;* it is an old dance not seen now.

Chibonde is a dance for youths, the characteristic feature being that, at intervals, they squat down on their heels and spin round very fast, with frog-like movements (Pl. III, fig. 1).

Mkonde is a favorite dance for men and women; drums, *likuti*, *ntiputiya*, *mchoso*, *chimisinjo*, and several *lingoma*. The dancers commence by going round in a circle, and then, facing the drums, they all continue their steps without moving from their places, while a few go out into the circle and dance in the open space about the drums. Two men go out from one side and are met by two women from the other side. Men love to carry their knives in their hands on these occasions, properly the large knife with an ivory handle called *mwinjo;* a man would go miles to borrow such a knife from a friend, for the dance. The women often carry rattles in their hands. After dancing in the middle for a time, they will severally withdraw to the circle, to be followed by others. A man dancing out into the middle, may go up to any woman in the circle or among the onlookers, and by touching her on the shoulder with his knife, invite her to come out and dance. In the middle of the ring, he may embrace her, after which each retires to his place. To make this embrace is called *ku-punila;* the man folds the woman to his breast. It is very gently done with a certain air of gallantry, and there was formerly no objectionable element in it. A man does not extend this embrace to his wife or to any near relatives. *Ku-punila* occurs in other dances: *chibonde*, *chileuw*, *mlenjeas*, *njeula*, *mbarula*, *masambala*, *chibilo*, *lichipi*, and *liyaya*, and in *sekwe*.

Chileuw: the drums used are *chimisinjo* and *mchoso*. It is danced by young men and women; as in other dances, a ring is formed, the men on one side, the women on the other. The song is usually started by two men on one side and answered by two women on the opposite side. When the song is well under way, the drums are signalled and all start dancing in a circle. Movement in all dances is counter-clockwise. After circling round, the dancers come to a stand-still, while men and women go out into the middle and dance a kind of quick heel-and-toe step, followed by *ku-punila*.

In the intervals of dancing, the girls and boys often play at *sekwe*. They may stand or
535 sit in a ring. One of the boys standing in the middle sings, "*Sekwe sekwe, sekwe sewke,*
857 *sekwe!*" with an accompaniment of clapping by the ring of youths, but no drums. He then goes up to any girl sitting in the ring and asks her whom she wants; she names some one who is then called out, and the girl and boy dance up and down together, embrace (*ku-punila*), and return to their places. Another girl is then asked. Sometimes the girls will take up the song, and ask the boys to choose. It is like a kind of "kiss in the ring."

There is another kind of dance for boys and girls. They are arranged in rows opposite one another, some paces apart. The boys grasp a long pole and bending forward, dance up

3: Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

to the row of girls, singing, "*Anamberuka mberuka!*" refrain, "*Maperuka!*" (*ku-peruka*, to give). Leaving the pole at the girls' feet, they retreat, after which the girls take it up and advance to the boys in the same way. 535 857

Chibiro is danced rather like *mkomasula*. A group of men dancers go round in a circle, and within this circle may be a line of women dancing to the same time but with rather different steps than the men. This I have seen danced by a trained band of dancers, but onlookers join in. A man may lead a woman into the middle and embrace her. There is a tendency among these trained dancers to forsake the old time stately embrace for something which is not so unobjectionable. 535

Lichipi is a new dance, but one that is well-liked. The drums are as in *mkomasula*. Men, women, and young people dance in a circle followed by entry into the middle, and *ku-punila*.

Mbasula is danced by men on one side and women on the other side of a circle, to drums *mchoso*, *ndimbe* and *mangala*. Any of them may dance out into the middle after going round in a circle.

Liyaya is an old dance for the older men and women. Like *mbasula*, the steps are slower and are characterised by side-to-side movements.

Mtukunga: drums, *likuti*, *chinganga*, and a *mchoso* drum called *mbitiku*, because it is so played as to give the sound "*mbitiku!*" It is danced by men in a crowd. While the feet do little, shuffling steps, the buttocks are jerked out backwards and forwards.

Chandamali: a dance of recent introduction resembles *utuli*.[1]

There are three dances which are danced by special dancers.

Mlenjesa: the same as the *mtsecha* of the Anyanja,[2] generally danced by four men who wear a kind of kilt made of strips of palm-leaf, and rattles, *masewe*, on their legs. They may also wear the *liungu*, a headdress made of the tail-feathers, *unga*, of the *chiunga* bird: it is like a broad hat-brim without a crown, the feathers projecting radially. The *mbande*, a piece of a shell which comes from the Zanzibar coast is also often worn (Pl. III, fig. 2). The drums which give the time are *chimininga*, played very rapidly indeed. The steps are incredibly fast, with greater excursions than in the other dances, and usually end up with a jump into the air and a pose with grimacing. A circle is formed round them by the young people who, in the intervals, walk round singing and clapping. The dancers may call out any girl for the embrace. [292]

Masanja: danced by two or three pairs of men who wear the palm-leaf kilt, *matambua*, and a broad, bark-cloth belt called *chamba*. When the drums start, these dancers walk round the circle of onlookers, and get the song going, and the clapping to time; then with a signal to the drummers, they start dancing alternately an extremely rapid dance with rattles in the hands, *masanja*, and a kind of *dance-du-ventre*, *chamba*. The drums employed are *mchoso*, *ntiyatiya*, and *chimininga*. The rapid dancing is too exhausting to last more than a few seconds. This is always danced at *Lupanda*. [292]

[1] Cf. Stannus, "Notes on some tribes of British Central Africa," op. cit., p. 334. [2] Ibid.

535 *Ching'ungung'ungu:* A soloist dances about, playing a single-string viol with a bow as he sings. His songs are all about people, village episodes full of personalities and many witticisms. Kondosi of Malamya's was a well known performer (Pl. I).

533 **Songs.** The following are some of the *Chindimba* songs:

539

1

1st voice. *Kutumbila anyma nyumba achalanda ayuwa hunpi?*
To be angry the owner of the house strangers they sleep where?
2d voice. *Kutumbila anyma nyumba Cha Nkuleka tinjiwa.*
To be angry the owner of the house (Mr.) Nkuleka I shall die.
1st voice. *Kumbunya unami uniluwa,*
To ask me to answer lies you.
2d voice. *Kumbunya unami Cha M'wenye,*
To ask me to answer lies master,
1st voice. *Alamu tinpenda ipuye,*
Brother-in-law I will go thus,
2d voice. *Alamu tinpenda ipuye.*
1st voice. *Awala wonache apila nchikuwa.*
There (go) the children they go on all fours.
2d voice. *Oh lelo'jo tinjiwa.*
Oh today I shall die.
Chorus. *Kutumbila anyma nyumba!*

The burden of the song is: We see we are not wanted here; better we want away!

2

1st voice. *Ah lijani'wo hola hola kupuka tukapuchaja lelo'ja!*
Ah baboon these jumping jumping to enjoy he is going to enjoy today!
2d voice. *Ah lijani'wo! kupuka tukapuchaja wunnache!*
Ah the baboon these to enjoy he is going to enjoy child!
Chorus. *Kulya mbunda ayu nyunu!*
to eat (seed) pods of dryness!

"Seed pods of dryness" is also referred to in a story of the baboon. When he is dozing at night sitting on a tree, he hears a seed-pod in the neighborhood crack, and wishing to mark the spot, so that he may go and eat the seed in the morning, he stretches out one arm in this direction and goes to sleep again, to be awakened by the sound of another cracking pod; whereupon he puts out another limb to mark that spot. Presently, he has all but one limb including his tail set out as sign-posts. Half awake he starts to put out the one remaining limb, and falls off the tree.

wrestle thus: each man passes his right arm round his opponent's waist and grips his opponent's left wrist. When one has thrown the other, the victor spits on his hand, dips it in the dust and then smites his victim on the forehead. M Y 526

The boys practise long jumping. Small boys make miniature bows and arrows, spears, etc., to play with; in their ways and frolics small children resemble European children exactly. Little girls play at dolls—they cut cucumbers into shape and dress them in calico cloth, carrying them on their backs and making *jectsmes* to suckle them. M Y 527 524

The first words spoken by an infant are *ma* (*amai*=mother) and *ta* (*atata*=father); at two years *mama* and *tata* are words used; a word soon learnt is *tatawa* "No! I don't want to." M Y 527 528

The only acting I ever heard of occurred when my own Mathila men once acted a village scene, in which a woman (a man dressed up) while pounding corn was assaulted and raped by another man. At the right moment her husband and others rushed in and collared the man, who was condemned to have his head cut off; the execution followed. M Y 536

DANCES.

The following is a list of dances; opposite each is the name of the tribe who dance it:— M Y 535

1. *Chindimba*, Yao.	13. *Lilimo*, Yao.
2. *Libwala*, Yao.	14. *Njwala*, Yao.
3. *Utala*, Yao.	15. *Sukuma*, Yao.
4. *Bhitowi*, Matanja.	16. *Nwanja*, Yao.
5. *Kwaja*, Matanja.	17. *Nlomda*, Yao.
6. *Tinbandowa*, Matanja.	18. *Chikwada*, Yao.
7. *Nhwawa*, Matanja.	19. *Mhowa*, Yao.
8. *Kwanapwa*, Matanja.	20. *Mangwaji*.
9. *Mhada*, Matanja.	21. *Sanji*.
10. *Chilisi*.	22. *Chimwinisiwi*.
11. *Vinpwa*, Matanja.	23. *Mawa*, Matanja and Yao.
12. *Nhala*, Matanja.	24. *Mang'ambala*, Yao.

1. *Chindimba.*—Danced at the *malwie* (mourning ceremony) generally inside the house unless a very large number of people are present. Y 535

All sit round and clap while one after the other men and women get up and dance in a rocking motion from one foot to the other, a small drum held against the chest; in former times a large one lying on the ground used also to be used—now two or three, standing on legs, are employed. When danced in the dead man's house, the body lies at one end of the room with the *Adembula* sitting by it. On one side are the wailers, and on the other the dancers, the dance being sometimes started immediately after death, sometimes the following morning and continued for three days.

This dance is also performed at almost any beer drinking.

4: Stannus D-5 (ca. 1909)1910 FT7 Yao FT7 Mbravi FR4

Y 535 2. *Likwata.*—A woman's dance (Scott's Dictionary states for men and women). The women dance in a ring, clapping their hands; no drums are played; each woman in turn advances into the middle, where there are usually four at a time. Here they turn round several times from left to right. When she has finished, she rejoins the ring passing in and out the others in the middle, a fresh woman taking 4's place and becoming No. 1 (Fig. 16). It is danced at any time after the burial ceremony is completed.

FIG. 16.

3. *Utala.*—A woman's dance of recent introduction; danced any time. A carpenter from Blantyre staying in Majawa's village January, 1907 (Lake Nyasa), was found to be playing *chindimba* in a manner different from the usual fashion; his own variation he called *utala*. About the same time a new dance had been invented by the women, and for want of a name they called it *utala*, though danced to the same music as *likwata*, but with *chindimba* drums. The dance resembles *likwata* somewhat, but all movements are hopping, preceded by a few steps called *chandamalai*.

M 535 4. *Mitewni.*—Danced by men only to the beating of four drums including *chimbanga* and *mbalala*; one man dances at a time, shaking the loins while men and women sit on opposite sides in a row.

It is danced before and after burial sometimes, and at other times.

Y 535 *Mang'ambala.*—An old Yao dance seen at Fort Johnson, 25.6.07. Four or five men attired in kilts made of dried palm-leaves with about twenty *mawu* on each leg. The four men do a continual kind of shuffling in line, the fifth, the *mpitda*, from time to time telling the drummers to play quickly, does a very fast *pas seul* with jumpings and kickings, and then assumes some idiotic pose.

M 535 5. *Kwaja.*—A woman's dance; the men look on.

6. *Tinbundwa.*—Circumcision dance.

7. *Nkwere.*—Danced by men and women, sometimes in the funeral procession behind the mourners; big drums are used.

8. *Kwangwa.*—A small basket with stones and pumpkin seeds inside used to mark time with.

9. *Mtenka.*—Drum as in *mangambala*, may be danced in the funeral procession at the head of the procession. *Nkwere* following the mourners.

10. *Chilwi.*—Old men's dance started immediately after the death of anyone, and continued for two or three days while the body lies in the house.

11. *Chiepwa, Ziepwa.* ? *Viepwa.*—"A big dance" held after the death of some person. Only the initiated are allowed to be present, and "women who are foolish and would know nothing." Children are carefully excluded, and intruders guarded against by posting men in the neighbourhood, anyone not being able to give the password was liable to be knocked on the head. Those taking part were said to constitute a society with a secret language, etc., and were only admitted after giving proof of bravery, endurance, etc.

The dance took place always on a dark moonless night usually quite late

4: Stanmus D-5 (ca. 1909) 1910 FT7 Yao FT7
Marau FR Y

M
535

and the feature of it was the introduction of life-size representations of animals made of bamboo and grass with men inside.

I once saw these at a *nawunli* ceremony among the Awisa (q.v.).

12. *Nkula.*—Women only present; danced on the occasion of a girl's first menstruation.

13. *Lotiwa.*—Women only, on the occasion of the quickening with first child.

Y
535

14. *Njwala.*—Men and women, a quick shuffling step while standing in a circle.

15. *Sukuma.*—The body shaking (shoulders) dance of boys, they walk round in a ring, some fifty of them, the drums in the middle; when the bass drum breaks into a quicker time they all start shaking shoulders and bodies with intervals for two or three steps.

16. *Nawaja.*—Danced in a circle, men and women alternately.

17. *Nkwada.*—A big dance with *sesji* rattles.

18. *Chikinda.*—Dancing boys dance.

19. *Mlerwa.*—(1907) men and women; each carries a bango reed filled with pebbles—no drums.

20. *Mwaguwji.*—A coast dance; palm leaf bags filled with pebbles are tied on the legs.

21. *Sunja.*—A *pas-de-deux*, each man with a rattle and head-dress; for a few moments they wander round each other picking up the time and tune, and then jump into a very fast step dancing and jumping into the air shaking the rattles.

22. *Chimwiniwini.*—A *pas-seul* by a man carrying a viol and bow with anklets of small sticks.

Y
M
535

23. *Mwawa.*—Danced no longer. At Mpunda's village a big crowd used to dance with skins round the loins and wooden anklets; in their hands they carried live snakes which had been rendered harmless by putting medicine over their holes before digging them out. Four drums as in *chindimba* were used. The women all fled away.

with the dead. He approaches the shrine, opens the gate of the fence, takes a 769
pinch of beer and pours it into the pot at the head of the grave. Next he places the basket of porridge and the plate of meat on the mound beside it and retires. Kneeling down outside the gate facing the shrine and a few yards in front of the people he chants his prayer in a monotone, each petition commencing with "Chonde, chonde," "Please, please." All the while the people clap their hands in unison with him and sing the responses as they do in a native case in the chief's court.

When the offering has been made at the grave, the rest of the beer or other food is consumed by the worshippers. Gifts are food as a token of respect to the [535] dead, and the rest of the day is spent in dancing.

Such shrines are to be seen in almost every Yao village where the inhabitants 778
have been located for any length of time. They are regarded with awe—the little 769
boys as they pass whisper to each other in a warning tone, "mzimba." Should the village be moved to any other district, the old shrine is not forgotten. Periodical visits are made to it with the usual offerings. In cases where the old home has been occupied by a people hostile to the old inhabitants, such visits are usually made during the night, and the people awake in the morning to find that the old chief's grave in their midst has been newly repaired, and a fresh offering of food placed at its head.

Sometimes such shrines are found on the summits of hills which once may have been a refuge from the enemy in time of war, but which now lie bare and deserted. Thither in their need the people make their way with their offering of food and beer, and their prayer for rain or suitable weather for the crops. Near Mlantyre such shrines are to be seen on the tops of Mount Sochi and Mount Michiru. The former is the abode of the spirit of Kankhomba, and the latter of Mpalale, both old Mawri or Mang'anja chiefs who doubtless fled there seeking safety from the war of the invading Yaos, and died leaving their wounds to be the mulungu or spirit of the mountain. Some years ago, during the fear of an Angoni invasion, the Yaos of Mount Sochi fled to the hill-top for refuge, and there the old chief Kapeni died. He was buried close to the grave of the old Kankhomba, and now, when the Yaos on Sochi make an offering, it is to the spirit of Kapeni that the homage is paid, and the shrine of Kankhomba lies neglected.

Only the graves of chiefs or headmen are thus treated as shrines of worship 554
The burying place of slaves and the common people lies away in the thick bush, 764
where only the rank grass or the thicket of old trees marks the spot. No offerings 769
are ever taken there, for such as are buried there can have no influence in the 778
spirit world. The dead are buried, the broken pot or basket is left on the grave to mark the spot, and none ever seek to go there save to lay another in the same neglected ground.

II. But the word mulungu is used by the Yao with a wider application. 776
Etymologically the word is connected with the root *kulungwa*, which in so many 197
of the other branches of the Bantu tongue appears as *kula* or *kuru*, and signifies "great" or "old." It is the same root which appears in the Kafir word for God, 192

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

vomited human flesh.[1] They said that they had a strong headman and that they could trust him; he was a good headman without witchcraft. If he had been a sorcerer they would have kept scolding him until the next morning.

About two hours after sunrise the people gathered and started dancing. At about this time Cimombo was brought out of the hut and put in the grass shed which had been built for the occasion. This was the climax of the ceremony.[2] He sat on a chair in the grass shed with one of his two wives on either side. Makoka then started a chant, exhorting the visitors to come to throw pennies at Cimombo's feet. Some of the people there made speeches about the type of behaviour they would expect from him. Then Nyambi arrived from the court village in a ricksha. When the noise had subsided he told the people that if they disobeyed Cimombo it meant that they disobeyed the chief. He emphasized the importance of the rank of the new headman. After the speech he presented 12*s.* to Cimombo which was received on his behalf by Ncimbo. Nyambi then left and the ceremony was over, but the people remained to dance and drink beer.

This description of the procedure following the 'coming out of the hut' is somewhat sketchy. The interaction of the headman and his villagers on this formal and ceremonial occasion is of great interest and importance. During the entire ceremony the headman adopts the pose which is appropriate for any Yao initiand. His hands are on his lap or on the arms of the chair and his head is bowed forward with eyes downcast. He neither speaks nor moves. His attendants, when necessary, wipe the sweat off his face or chase away the flies. The other occupants of the mat, who may be his wives, and sometimes his heir, adopt similar postures. In contrast to this, is the behaviour of the villagers who run about shouting wildly, the men discharging muzzle-loading guns, and women ululating in the typical Central African way.

Before the new headman comes out of the hut his mentors

[1] This is a test based on the witchlore of the Yao, who believe that sorcerers kill relatives with magic and then share out the flesh of their victims with fellow sorcerers in ghoulish feasts.

[2] Called the 'coming out from the hut' (*kubopoka nyumba*). It is of course the first public appearance of the headman in his newly assumed status.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

622 impress on him the difficulty of his position, and when he is taken outside some of this is repeated in public. At Nkacelenga's installation ceremony in December 1946, which I attended, the following incidents took place. Shortly after he was taken out
622 of the hut, Cigunda, one of the officiating headmen, said:
● 537 'Younger brothers of Nkacelenga, are you happy that Kambiri [1] has an elder brother? You women, have you cooked beer so that you can have your village headman?' In reply the men and women clapped their hands and a few came forward to throw some coppers into a cloth at Nkacelenga's feet. Cigunda went on to say, 'From to-day no woman will be impudent to the chief, because you are all of the same womb. All you men listen, only this man is your village headman!' Cigunda now turned to Nkacelenga who did not change his posture in the least. 'You village headman Nkacelenga, don't listen to what your wife says, because she will fight with your sisters and tell you that they have been cursing you. You should make enquiries when you have heard these things because you are a big man [i.e. important headman]. From to-day onwards you are a big man. Every person will be trying to spoil your name by saying that you are a bad man. You need to be patient and easy-going.' Turning to the public, Cigunda said, 'Even you husbands [*akamwini*] do not listen to what your wives say if they try to traduce the village headman, because some husbands can break the village.' Thereupon one husband got up feeling around for a penny, found he did not have one, and with much ostentation borrowed one from a fellow-husband sitting next to him. He then came forward to where Nkacelenga was sitting and said, 'You say some husbands can break a village. Is that true? But husbands build the villages? They can't break the villages.' Then very deliberately he threw the penny into the cloth at the headman's feet and went back to his seat. His speech was greeted with acclamation from the husbands. Cigunda said nothing after that and the ceremony was over.

In September 1948, during the installation ceremony of Mapata,
622 one of Kawinga's less important headmen in the northern
633 part of his area, the significance of the relationship of the headman to his relatives for the continuation of the village as a whole, was brought out more clearly. After the headman was

[1] A perpetual brother of Nkacelenga.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

brought out of the hut, as always, songs were sung and speeches were made. One of the songs was : 'A tree when it grows, grows with its branches.'[1] This is a reference to the dependence of the village headman upon the increase of his relatives for an increase in his rank. The Yao compare kinship with a tree, the component segments of the maximal lineage (the tree) being the branches. Then one of the officiating headmen mentioned that there were many sisters' sons of the old Mapata but that Kawinga and Chiwalo had selected the one on the chair to be the headman. He then exhorted the others neither to be jealous nor to resort to sorcery, but to exalt the name[2] that it might live long. This was followed by a song which introduced a second theme, 'A husband however rich he becomes here, cannot climb high.'[3] This song emphasizes that the uxorilocal husbands of the village can never achieve rank outside their own matrilineal villages however rich they are. The officiating headman then went on to say that some women rebuke their husbands when they speak subversively, but others side with them against the village headman. He told the husbands and women that they were wrong to do this and that they must desist. After this followed a public rebuke of the village as a whole. One of the younger brothers of the new headman pointed out that when the mother of the previous Mapata had died she had been buried in the graveyard and not in the village. He rebuked the villagers and told them that, when the present chief died, he should be buried in the village. A man who had been charged with neglect by his wife (his cross-cousin) paid the headman the compensation which he had refused to pay to her. One of the headmen then exhorted the villagers to respect their headman; to send someone to accompany him on his journeys to see to his wants; never to allow the headman to carry a gift he had been given, and so on. The ceremony ended when Kapaloma, who was representing the chief, hinted that Mapata might be allowed to wear a scarlet headband in the near future.

Village headmen, represented the chief at Nkacelenga's and

[1] *Mtere pankulule ukuwo ilamanyambi.*

[2] *Kuwya lina*—to cause the name to climb.

[3] *Tonde, tonde, mkamwini nanilile mano ngakuwela lai.* Tonde is the word for billy goat and its use here emphasizes the procreative functions of the husband in the village.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

622 Mapata's installation ceremonies. When an important headman succeeds, however, the chief himself usually makes a short appearance and talks to the people. When Nyenje was installed in July 1947, Kawinga attended. Nyenje has the same clan-name as Kawinga and is an Invader. In 1947, he had 109 tax-payers under him; he held rights to both initiation ceremonies, but he did not have the right to wear the scarlet headband. Kawinga arrived at 11.18 a.m. before Nyenje had come out of the hut and he went straight to it and entered. He emerged at 11.45 and sat on a chair under a drying stand. Kangomba, his head *ndona*, came and sat with him. In the meantime the new headman was brought outside and seated on a chair. Sitting on either side of him on the mat on which his chair was placed, were his two wives. Nsanama,[1] a minor village headman of the same clan-name as Nyenje, officiated. The penny-giving now started. 622 At 12.10 Kawinga got up and walked over to the crowd, and silenced them with a sharp whistle. They gathered round to 527 hear his speech. He pointed out that the dispute about the succession to their headmanship had been going on for three or four years and that there had been two candidates, one of whom he had selected as successor because he knew he would be sensible and wise, and would look after his people in the village and in the smaller villages under him. He said that he had recommended this man to the District Commissioner who, with the Governor's sanction, had supported him. He did not therefore want to hear that the man had fallen ill; he dealt strictly with sorcerers. He said that respect started with the relatives: brothers and sisters, the husbands and the boys and girls must [551] also respect 'the chief'. They must not mention his name but refer to him as 'the chief'. Kawinga went on to say that some husbands were evil and could split a village like this one, by telling lies to the headman and falsely advising the headman that his sisters were talking behind his back and insulting him. When he hears this he may break the village by ill-treating his relatives, thereby causing them to migrate and leave him all alone. Kawinga told the people not to go talking in other villages about the man who was in the chair; that sort of behaviour only led to sorcery. Finally, he warned them to help the headman in obeying the instructions of the White people who

[1] Not Kawinga's relative of the same name.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

came to the village and in accommodating strangers while he was away. He told them that disputes were to be referred to the headman immediately. Turning to the new headman he said he had to report anything unusual that occurred in the village, and that he was authorized to arbitrate in small cases in his and surrounding villages. 622 537

Kawinga then left the centre of the crowd and went back to where he had been sitting. Then an officiating headman, addressing particularly the women, said, 'Only a few months ago there was a quarrel between the present chief and his elder sisters. These women ran away to Malemia's area in Zomba district without reporting the matter to anyone. This must stop. With effect from to-day any troubles must be brought to the headman without delay: he will settle them. A tree cannot grow without branches and a headman or a chief cannot be known without his people's respect. Do not behave as children. This man cannot do things alone: he must have your help. We leave him in your hands and we do not want to hear about any more trouble. Follow all the instructions the chief has given you.' He took his leave and Nyenje was taken back inside the hut. The people now dispersed to where there was beer and dancing.

The Structural Reincarnation of Village Headmen and Perpetual Relationships

There appear to be a number of significant aspects of the installation ceremonies. First, there is the ritual death and rebirth of the village headman. The heir is 'killed' by a blow with the fist on the forehead, but is reborn the headman. The Yao do not believe that the spirit of the headman is inherited by the heir;[1] he has only eaten the name.[2] But socially he is born again and, logically consistent with this idea, he takes the wives of his predecessor without further marriage negotiation. He also takes over the property of the dead man, his clothes and his huts. 622 829 [587 428]

But this structural reincarnation of the headman has the important implication that the headman is immortal. He shares this characteristic with the group of which he is the leader. When 622 829 601

[2] *Kulya lina* is a synonym for succeeding to headmanship.

843 when in child-birth there is delay in delivery it is said of the woman "*Ahalelewe*," "she
● 538 is stuck," from *ku-halelwa* "to be suspended, to be caught by a thorn"; *wajeje*, well dressed, is a slang exclamation meaning "everything, everything is out!" The verse refers, of course, as all obstetricians will recognise, to the moment of crowning of the oncoming head during parturition when it appears to be stuck; then suddenly it slips over the perineum and "everything, everything is out."

843 The *nakanga* now gives way to the songs of the other women. In different districts
533 different versions of the songs are sung, but the other women will quickly pick up the refrain of the song sung by a woman who has come in from some distance.

843 After these songs, the *nakanga* instructs the woman and her husband in the care they must take until after the child is born. Macdonald says, speaking of the instructions "but of the quality, we prefer to be silent."[1] What a pity he allows no one else to judge!

The woman is especially cautioned against sitting with her legs crossed; they must be kept apart lest the child in her womb be suffocated. She is also told many useful things concerning her pregnancy and confinement. The husband is cautioned to cease intercourse with his wife or if he has intercourse, his wife may not lie on her back, lest the child be injured.

While this instruction is going on, all the assembled women cook and eat the feast
[751] which has been made for them. When all has been said, the *nakanga* anoints the man with castor oil, which has in the meantime been warmed, and ties round the neck of the woman the *litiwe*, a cord made of plaited bark-cloth with a tassel in front; at the base of the tassel white beads are strung for good luck, and at the end of the tassel, red beads are affixed, having symbolic reference to the haemorrhage at the time of childbirth. The woman wears only a strip of calico of two hands breadth called *mleta*. She is anointed on the head, body, and limbs.

The tying of the *litiwe* is the sign for dancing to begin. It is a dance in which women try to excel one another. They come with all their tattoo marks on buttocks, thighs, and abdomen renovated; they wear diaper-fashion a narrow strip of cloth, always black in color, and round their bodies numerous strings of beads. With the beginning of the dancing, their other clothes are thrown off and practically naked, they vie with one other in exhibiting their charms and skill in dancing, which afterwards becomes the subject of much discussion among the women onlookers. "So and so is really too old and skinny for such exhibition," and "So and so has buttocks as flat as a wall," while "Such and such a one is fat and beautiful and dances wonderfully, with such *ubundu*," etc. In front of the woman
[431] is set a wooden plate, in front of the man a mat, and on these are thrown donations by the dancers and onlookers, consisting of beads etc., or nowadays pennies and small silver coins to help to pay the expenses of the entertainment and, in the woman's case, to buy medicine which may be necessary should the baby fall ill. When the wedded couple are

3: Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

643 ivory by his own hunting parties or as a kind of tithe on other hunting expeditions. The ground tusk, i.e. the tusk on the side on which the elephant falls when killed, was the chief's share. In the same way, the hind leg on the ground side of any game animal killed was sent to the chief. He took a share of the spoils of war and most of his people yearly gave him either service in building houses, etc., or kind in the form of food-stuffs, but he enforced no service and levied no tax, except for the making of a new burial place.[1] New settlers in his village were expected to invite him to drink beer made with their first crops.

In return, he always provided cloth to invest the body of the dead. He also made presents at the time of *Unyago*.[2]

A chief's life, therefore, may not be "all beer and skittles," though he consumes a good deal of the former and a kind of skittles[3] was a favorite pastime of one of the Malemyas. A saying embodying this idea was used when pleading for a man who had [538] committed adultery with his chief's wife "one who carries a tortoise (on a string over his back) is likely to get his clothes soiled"; a man has to put up with the troubles his belongings bring him. So a chief must bear with his own people who do wrong.

643 Ample opportunity for exercising such forbearance was provided, since the chief was formerly the adjudicator of all disputes and dispenser of justice in all crimes. The headman 692 did the same in a smaller way but appeal could always be made to the chief. Cases were heard by the chief sitting in council. He and his headmen and elders would assemble in the village open space and here cases were stated, often at great length.

Each party to the case would employ some man well known for his powers of oratory as leading counsel. The speaker for the plaintiff would start proceedings by a recital of all the evidence he could collect. After him would follow innumerable speakers, whether actual witnesses or not, each telling as good a story as he could, and the defendant's case would then be put by his representatives. There was no cross-examination but at the end, a summary was made and judgment given. A chief often took the advice of some one of his old men whom he trusted.[4] The chief received no payment for his services, except in the case of murder; neither did the "counsel" receive anything for their efforts.

674 **Crimes.** Causing the death of a person by witch medicine, *usawi*, was the most heinous [754] crime; a *mwavi* ordeal might be held, but if the offense was proved, burning was the punishment which usually followed.

[684] The offense second in gravity was adultery. This might be expiated by payment or by death, according to the circumstances under which it occurred; mutilation was often [696] performed in the case of a chief's wife. All death sentences with the exception of those

[1] Vide supra, p. 244. [2] Vide supra, pp. 248, 264. [3] Vide infra, p. 360.

[4] The old Malemyas (Nakutumbo) has some very fine men among his counsilors. Kumtupa and Chimpila, the latter renowned for his oratory, were his chief advisers in legal matters. Ndaleka, a slave, was his mentor in all personal and family affairs, while Chekazongo was in charge of all ceremonies and served with his assistant, Mpanje, as high priest on all occasions of intercession. Others acted as his emissaries, such as Mkopiti who always went on any missions to the Angoni, among whom he was known as Ndonjira.

881 The chief, having appointed a day on which the ceremonies shall begin, sends a messenger with a fowl to a medicine-man whom he asks to conduct the ceremonies. The medi-
[791] cine-man is called *m'michila* " he of the tails." He carries his medicines stuffed in the tail-skin of a gnu or sabra and we shall see that his tail or tails play a very important part. Having sent word back to the chief of his acceptance of the invitation, he gets his wife to prepare some fresh castor-oil with which he will remake his medicines, and sends out the boys of the village to collect firewood. A big bonfire is made and dancing goes on all that night in his village. Early next morning he returns to the door of his hut where his wife hands him his " tails." He then immediately departs for the village of the chief. His wife
[301] trills with her tongue, this being the sign of his departure, and dancing men, some friend (often his brother) who acts as his chief assistant, his wife, and others will go with him.

[539] He signals his approach to the chief's village by singing:

" *Ku*	*mun'ho*	*nguion,*	*nguion'nal*	*Tinguichal* "
" You	at the	village!		I shan't be long! "

As he enters the village, all the women hail his arrival by trilling the tongue (*ku-lulula*). He goes straight to the open space in front of the chief's house where the chief meets him. The chief immediately goes into his house and producing a cloth, gives it to the *m'michila* who then places his " tail " on the ground, (*sdulila*, "things put down"); these are the signs of the compact. A house is given to the *m'michila* wherein he may rest and sleep.

That night, all the mothers of the boys who are to undergo their initiation, now called *wali* (sing. *wauli*), pound flour for the morrow. Early the next morning, the *m'michila* visits the place where the pounding is going on and collects a little flour from each woman's basket into a small basket he himself carries.

The chief then gives him a cock and a hen, an axe and a hoe; with these he goes off accompanied by the fathers of the *wali* to the spot where *Lupanda* will be made. Arrived there, he first points out the spot where his own hut is to be erected. This is quickly built, followed by the shelters for the *wali*.

The cock and hen are then killed and cooked, also some porridge; the entire fowl is cooked; the liver is not cooked separately. When it is ready, the *m'michila* takes a piece of the liver from the pot and some porridge from the other pot together in one hand and then throws them into a little hole where his " tail " has been resting. At this spot, *Lupanda* is made. The *m'michila* then partakes of both again and eats; after he has finished, the other men eat.

[531] After the building of the shelters is finished, fire-wood is collected. On the roofs of the grass shelters figures of animals in grass may be strung up on posts, but they have no definite significance.

In the meantime in the village, the chief has had *mbepasi* (ceremonial flour) prepared. It is made from millet by his head wife, who must not be near a menstrual period.

When the sun sets, all the boys to undergo the ceremonies (*uali*) together with their sponsors or guardians, *akamusi*, (*mkamusi* sing.) are called together to the village open-space (*pang'anga*). The *mkamusi* attends his ward throughout the ceremony; he may be an elder brother, an uncle, or someone else who volunteers for the service. 881

The *uali* are lined up and headed by a "leader," *nachilongola*, who is usually the most important boy, perhaps a relative of the chief; thus they pass one by one in front of the chief who anoints each on the forehead with *mkepesi* from a small basket. As each boy passes, his mother runs up and throws into the basket a string of beads or nowadays small silver coins. When all have passed, the chief sends some near relative with the basket still containing some flour and the beads or money to the *m'michila* who is waiting at *Lupanda*.

This is his signal to prepare to receive the *uali*; he dresses, and accompanied by drummers goes to meet the file of *uali*. The *uali* accompanied by their *akamusi*, their mothers and sisters, sing as they approach: 881 539 533

"*Tunje kanga (unpapo) ukakuli tunje!*"
"Let us go back, perhaps there is no ceremony!"

The *m'michila* as he meets them sings:

"*Anachichi pakwiza nawo wanache'wa kulaka hilombe kwiza nalyo!*"
"Why to come with them these children to leave (a small drum) to come with it?"

and follows this in answer to the song of the *uali* with:

"*Ku nkuli mkanja,* (Repeat) *Kwa kwa!* (Chorus) *Mkanja wose!*"
"To the village don't go back. Don't go back all!"

The *uali* now on the outskirts of *Lupanda* are formed into a ring, behind them their *akamusi* and behind these their mothers and sisters. Then the *m'michila* leads the way to *Lupanda* singing:

"*Lilumbo lya ndembo!*"
"Spoor of an elephant!"

Next, he calls all the mothers to form in two lines resting at right angles on *Lupanda* and sings to them:

"*Kapungu tula pasi kwin'ansi kwangali ulonga!*"
"The eagle lighted on the ground as in the air there is not near relationship!"

The *m'michila* and his chief assistant each provided with a "tail" strike lightly on the basket which each woman has on her head; then each with a hand on the basket, they lift it down to the ground. Starting with the mother of the "leader," they go round to each mother in turn. The *m'michila* then to the sound of drums and clapping by the women dances and runs round peeping into each basket exclaiming, "I see so and so in this basket!" saying noses, penes, medicine, women's pudenda and so on, after which the women take the baskets of food away to the boys' shelters. The *m'michila* next sings: 881

881 533 539

"Tingumbile mwanangu ku Lupunda, pingu uje'pa kundanda mungunga!"
"I will go and bring my child to *Lupunda*, when I am going home I feel nervous!"

and running round he seizes hold of one of the *wali* and makes him sit down at *Lupunda*, continuing this until he has placed them all in a circle round *Lupunda*. He then sings a song about the little basket which the chief sent him containing the remains of the *mbepesi* flour:

"Kasala angwe akwalikiya, nepula mbwemunda, amai!"
"Little basket the owner asks for it back, give me beans, mother!"

His wife who has been waiting in his hut nearby brings him the basket. Holding it in his hands, he prays to the spirits of his ancestors and all the previous medicine-men to whom his medicine-tails have belonged, invoking their aid that the ceremonies may go well.

Still holding the basket he begins to dance, singing:

"Apakale mbepesi jaai!"
"Let them (us) smear flour their (Let us baptise them!)"

and dipping his right elbow into the basket he smears each *mwali* on the forehead with the *mbepesi* flour. He then goes into his hut and fetches a bundle of powdered roots (which no woman may touch), medicine called *mtibula*, that is, a medicine used for its aphrodisiac properties. Holding the medicine between the palms of his uplifted hands, he starts singing:

"Kukwaimanga kuchipopola, twatuwanga mlomu!"
"I cannot find out how to untie this, we tied (with) my brother-in-law!"

He is immediately surrounded by his assistants and the drummers, who dance round him, all holding their hands about his own, after which he unfastens the bundle of medicine and puts a little on the tongue of each *mwali*, beginning with the leader. He then takes some sweet-beer made by the chief's wife and pouring it into his old medicine-gourd, he mixes in some *mtibula* and gives some to each *mwali* to drink after which he sings:

"Amwela,[1] *amwela mwanje wa imanga, chakulya mandanda*
"You have drunk a mixture of water and maize flour, of eating eggs
achilecha panapano, Amwela, amwela ndundile mahesu;
you stop now, you have drunk (but) I have passed water (in it);
wali(ji) halamuka!"
you thought to be clever!"

[302] Next he goes into his hut with the small basket containing the *mbepesi* and paints his assistant with the flour, a semicircle round the forehead, a line down the middle of the face, a band across the chest, a line down each arm with rings round the arms and forearms, and a line down the middle of the back. They go out again into the ring and while the *m'michila* sings:

[1] This may be a reference to *amwela*, the sacrificial cup.

881
533
539

"*Nampepe*	*kondola*	*chiongo*	*anwali*	*ku malombe*	*kwendela*	*kwafa!*"
"The lizard	casts	lots	boys	to graves	as to going	to die!"

his assistant with the basket held in his mouth acts the part of the *nampepe*, a medium-sized lizard with brilliant blue body and orange head which bobs its head up and down. The assistant lies on his belly and bobs his head and shoulders up and down, lifting himself on his hands. (Children often clap their hands as they watch the *nampepe* bobbing up and down "like a lot-caster" and call out to it to cast lots for them.) The assistant then crawls up to the leader and puts the basket on his head. Bowing his face to the ground for a moment, he again takes the basket and places it on the head of the next *wuali* and so on all around.

After this the *wali* go and sit near the bonfire which is not yet lighted, while the *m'wichila* sings to the women:

"*Ngand(a)*	*atalache!*	*kajuala!*"
"The beans!	Let him cook	a cricket."

and the women give him a basket of beans with which he makes sifting movements, singing: "Shall I throw them away, shall I put them in the cooking pot?" while the women clap.

His assistants are then told to go and light the bonfire. He himself goes to his hut and places his "tails" in the *nkepesi* basket, and carrying it to the bonfire, he throws some of the flour on the fire, "to regulate its heat." This is the sign to begin the dancing which goes on all night while the *wali* lie round the fire, each lying with his head on the waist of the next, the leader in front.

In the early morning of the second day, the *m'wichila* holding his "tails" in his hands runs astraddle over all the reclining *wali* and facing the same way, runs back, after which the boys are called.

He sings a song:

"*Masalau*	(a) 'go	*kundumaga!*"
"The red ants	those	bite!"

and he pretends to pick them off the boys. After this, he sings:

"*Nahdumi*	*hongo*	*mhakuligwe!*	(*mhakuluguwe*)!"
"Push	clitoris	little mother!"	

as he goes to each *wuali* and throws his "tail" into the boy's hands, receives it back and then puts it on his head till the mother places a coin on his head which is the payment made to the assistant. *Ku-luguwe* = to occur; *ngaluguwe* = not at home; *mhakuligwe* = is it not at home, is it not present? The meaning of the phrase in the song is, "Is your mother not here to pay the fee?" *Mhakuligwe* is a pun on *mhakuluguwe*, "little mother." This is followed by another song:

"*Kapindi'gwe,*	*ugwe*	*ungwa*	*mtela!*"
"The little lemur,	you	jump from	tree to tree!"

881 as he climbs a tree with his back to the trunk; at the top he hangs by his legs and looks
533 down on the crowd, his assistants doing the same. Coming down he runs to his hut; throw-
ing his "tail" into the air and catching it again, he enters.

539 This is about nine A.M.; all rest till about eleven o'clock, the *wali* meanwhile eating food cooked by their mothers in the shelters. About eleven o'clock, the *m'wichila* takes a big gourd and putting his "tails" into it covered with a calico cloth, gives it to his assistant who carries it on his head and follows him to a pool of water, accompanied by all the women except any young ones who have not borne children. He invites them to go "crab hunting."

At the pool he enters the water with his assistants round him, except the assistant with the gourd, who stands on the bank. The *m'wichila* makes movements as of hunting for crabs in the water singing:

"*Chisasapula* *upuli* *upuli wungu* *usuma!*"
"There must be hunting otherwise I should have had to eat porridge *my without relish!*"

He pretends to catch a crab and his hands are immediately grasped by his assistants in the water who all help him to convey it to the gourd as the "tail" is taken out of it.

881 The crowd then returns to *Lupanda* to enact the *nambunda* ceremony. *Nambunda* is a representation of an animal made of bark on a frame-work covered with mud and painted with flour in spiral markings, hence the name (*nbunda* is a part of a spiral shell from the Zanzibar coast much prised by natives as an ornament). The animal is really the sable antelope with horns and the *m'wichila's* "tails" in place; there is a man inside it. It is made perhaps a mile away and then brought near to *Lupanda* and placed in a cleared area.

The *m'wichila* on his return from crab-hunting has gone into his hut and put on his full regalia; then, accompanied by his drummers, he comes out and is immediately followed by the *wali* and the rest of the crowd; knowing where the *nambunda* will be put, he leads the people in the opposite direction calling out to them to look out for the antelope. They, of course, all look in the wrong direction, so when he knows *nambunda* is in place, he wheels around and sings, "There is the animal!"

In the old days the chief was present for this, a platform being built for him. When the *nambunda* appeared, he gave his hunters much powder (no bullets) and they shot at the animal. The animal would fall as if hit and the *m'wichila* would approach to claim it as his beast, but it would promptly get up and charge, to be driven off by the crowd, whereupon it would run away into the bush.

Lots are then cast by the *m'wichila*, using a tortoise shell stuffed with medicine. The *wali* all stand in a circle with their mothers behind them, while the *m'wichila* goes to the
[779] leader and throws the tortoise at the boy's chest. If it sticks there, all is well and he proceeds to each boy. Should the shell not stick on the boy's chest, it portends ill-luck to that individual and he has to be dealt with further. The *m'wichila*, holding his "tail," and his assistant holding a horn of medicine, stand back to back, with the boy between

them. They then rub the boy up and down with their backs, after which the assistant throws the horn at the boy's chest. If it sticks, the bad-luck is overcome and the women will trill joyfully with their tongues; if it drops to the ground, evil is foretold and forebodings as to the boy's fate at *Ndapula* are whispered round. He is given further medicine against the predicted evil, but lots will not again be cast about him. 881

881
533
539

Next the *w'mikhila* sings:

"*Nanchachove* *nanumbo,* *wanjako* *apanana,* *jina* *apanaje*
"The one who scrapes hairs, (your) father is still living, come that I may shave thee,
nanchachove *nanumbo,* *wanjako* *apanana!*"
the one who scrapes hairs, (your) father is still living! (Chorus) "*Jandi, jandi!*"

Jandi is a word meaning "sticking up in all directions" and refers to the hair.

One assistant holds a pot of water, a second, a leaf of the *mpondo* tree, and the *w'mikhila* a razor. They approach the leader; water is rubbed on the forehead by the first assistant, the second smears the place with the leaf. The *w'mikhila* then removes a little tuft of hair from the boy's forehead and puts it in the boy's left palm, followed by the nail parings from the left hand, and a tuft of hair from the back of the head. This is done to each *wanli* in turn after which he sings:

"*Tanaaje* *kipalamandala!*"
"Let us shave them" (*ku-palamandala,* to trim by shaving)

as he walks round them, after which the boys go to their mothers who are allowed to trim the hair on the forehead in any way they like. This may take ten minutes, after which they return, still holding their hair and nails in their hands. As they return, the *w'mikhila,* thrusting his "tail" under the left arm, starts off, all the *wali* falling in behind him, and thus he leads the way into the bush accompanied only by the *wali,* singing:

"*Kapili* *ka* *mnale!* *ananili!*"
"The Kapili make the mnale tree *ananili!*"

He searches through the forest until he finds *chilude,* a small dome-shaped ant hill about a foot high. He carries his "tail" under his arm and a reed-buck's horn of medicine in his hand. Arrived at the *chilude,* he chips the top off the ant hill with the horn and his "tail," scoops a hole in the exposed surface with the horn, and then smears this hollow with medicine from the horn. The leader then approaches and drops his hair and nail parings little by little into the hole, followed by each *wanli* in turn; each immediately turns about and never looks back on the ant hill. When all have done so, the *w'mikhila* sets the top of the ant hill back into its place, having the "tail" and medicine horn in his axilla; he then turns about and becomes the last of the file as they march back to *Lupanda* while he sings the same song as before.

This particular ceremony is the most sacred of the *Unyago* as it is known only to the *wali.* It is the sign of burying the past of childhood. If another *w'mikhila* could find such

881 a piece, he would take part of it and its contents and add to his own medicine " to make him a more powerful *m'michila*."

533 On the way back, the *m'michila* takes a piece of bamboo in his right hand and when he
539 comes to a *mjombo* sapling, the boys all surround him in a ring; with the " tail" in his left hand he strikes the *mjombo* sapling, and as it rebounds, he strikes it with the bamboo; while the sapling swings backwards and forwards, he sings:

> " *Ngama* *ngamama* *mlasi* *ni* *mjombo!*
> " Striking I have struck together the bamboo and the mjombo tree!
> *hakinolela!* *omuli* *hakinolela!* "
> *sharpen for yourself* "

The *m'michila* takes both his " tails." Holding them in his left hand against the *mjombo* sapling, the bushy part of the tails uppermost, and in the other hand a stick smeared with beeswax, he rubs the sapling at a point just below the " tails," still singing the song given above. The stick is said to represent an axe. After this, he takes a real axe and cuts off the top of the sapling. Then all the boys seize the sapling and work the bark off without cutting it anywhere, while the *m'michila* continues to sing. The bark he puts in his armpit and sings as he jumps about:

> " *Tinjipwila* *pepenje,* (*hichenje*) *chipulubu* *pulubu!* "
> " I shall fall into the pit, jumping about here and there! "

When they arrive at *Lupanda*, the *m'michila* unseen goes to his own hut to make string from the bark, the boys to the place where *Lupanda* is made. This is at about three in the afternoon.

When the string is ready, the *m'michila* takes it to cross-roads, plaits it into necklaces, and anoints them with medicine for the *usili*. On his return to his own house, the mothers have cooked porridge for the boys, and the baskets of food are put ready at *Lupanda*. The *m'michila* then steps in and sings:

> " *Tulo* (*uji*) *winji* *wuna* *amao, wumpe unkwapamilupa!* "
> " (A) little mouse (has) many children, mother, all are to be fed! "

As he does so, he takes some food in his hand and puts it into the mouth of the leader, and so on all round, while all the people keep at a distance. Then with a hoe he makes a small mound where *ching'undo-ng'undo* will be erected and puts on it a little of the *nkupusi* from his house. Here he seats the leader and round him sit all the other *usili*. The *m'michila* then sings:

> " *Tinowuda* *chuma* *chanyu* *lelo hunkujin'ko* *ahwanupula* *ngwunjila!* "
> " I will take off heads my today where they go to it seems they will never come back! "

[1] *Ku-wula*, to what a hole.

He collects from the boys' necks the beads they are wearing, lifting them off with his mnfhelwa horn; these are all his perquisites, to be sent off to his house. He then starts singing: 881 533 539

"*Nwhilimpala Lupunda upuwa upulumpwa pelele julumunupa, mahile!*"
"The leader (of) *Lupunda* (is) an animal big worth killing with a spear, tail!"

This means to the leader's relatives that the boy is worth a spear; one is promptly brought and leaned against the leader; the *w'michila* steps up and taking it, bends the spearhead and sends it towards his house. He then sings:

"*Njojoka* *nati* *kalungu kwejoka* *nati*
"Things which are put to lean up against even little sugar cane to lean things up against even
kupunda kwejoka!"
little arrow!"

The relatives then bring all kinds of presents and lean them against the boys; these are the perquisites of the dancing men. The *wali* go away to eat now with their *akawusi* behind the shelters. The *akawusi* tie up any food that is left in leaves, for later use. They then return to the roughly-made *ching'undung'unda* where the *w'michila* meets them. The *wali* stand in a circle round him and outside them in a ring, the parents, while the leader is set on the *ching'undung'unda* mound.

The *w'michila* sings:

"*Anunjati ulunga pa mtu'pa tupusi* *uinuli, ulunga, umbiwunjai!*"
"You of the buffalo hair (lit. feathers) on the head you put four *ulunga* call me."

as he then goes around and touches each *wanli* with his "tail." The idea here is that the *wali* with four on their foreheads resemble buffaloes which have white patches on their horns, and they will therefore be as strong as these beasts in the bush whither they are about to go.

The *w'michila* then runs away to his hut and breaking a hole through the back, makes for the bush. The assistants know this disappearance is the signal of his departure for *Ndapula*. This happens about four o'clock. All exclaim "*Aoosh!*"; (to exclaim thus is *kusowiva*, "to exclaim with apprehension.") The assistants head off in the same direction, followed by the *akawusi* and their *wali*, while the mothers of the boys who may never see them again, throw sticks on the path as they run away as the sign of forgetting their sons for the time being. 881

All the men will also accompany the *wali* until they find the *w'michila*. He having left the chief's basket at *Lupunda* has brought some of the *ulupusi* with him in his own basket. One of the men brings a gourd full of water; the *w'michila* pours some of the water into his basket of flour and gives a drink of this first to the leader and then to each *wanli*

881 in turn. After drinking, they sit down while the n'mikhilo gives instructions that here they sleep tonight. He takes his basket and starts to run back to *Lupanda*, singing:

[533 539] "*Ee* *hwajile* *pilelaje* *ukumalaje* *hulanajive* *ku M'unde!*"
"Where we want to *mustare* to *M'unde!*"

Then going to the back of his hut, he enters and takes a piece of bark left there hent up into a dish containing medicine which has been put in by an assistant. This assistant holds in his hand the neck of one of the fowls which was killed at *Lupanda*. The n'mikhilo washes his face and chest with medicine to cleanse his eyes and then leans forward to the assistant and bites a piece off the neck of the fowl which the assistant holds out, and eats it. This is *ku-lumiza*, "to taste a small piece," often the liver, before starting to eat the flesh; this is generally done by the most important person. The n'mikhilo has been followed by his assistants who do as he has done. They all follow him next round the cooking place for the boys at *Lupanda*, each standing for a moment on the stones which have supported the cooking pots, while the women sit looking on sadly. He begins to dance and the women join in, singing *Ikwete*. He then calls the parents of the *unli* and leads them to where the bonfire was. There assembled, he tells them they must not bathe, and that tomorrow morning early, porridge is to be sent to the *unli* which must be prepared by a woman who has had connection with her husband and who has not washed her hands; this is supposed to make the boys strong. Early in the morning, the husband, who likewise has not washed his hands, carries the food to the *unli* and personally gives portions to each boy to eat.

881 304 When they have partaken of the food, the circumcision is performed by the n'mikhilo who has returned the same morning early. The *unli* one by one, commencing with the leader, go forward a little to the place where the n'mikhilo awaits them. Each *unli* is accompanied by his *nkomwai* who commonly says, "Come along and you shall eat of the honey made by the bumblebee." Such honey is very sweet and called *mawa*. This refers in sarcastic terms to the pain the boy is about to undergo. The boy squats down, leaning back on his *nkomwai* who supports him, while the medicine-man, having warned the lad not to cry out, performs the circumcision with a small knife called *chiwanda*. It is a triangular knife with one cutting edge and a handle produced from the opposite corner. Properly the Yao method is, I believe, only to nick the free margin of the prepuce just to the right of the middle line near the frenum, but complete circumcision is now commonly practiced, possibly as the result of Swahili influence. In this case, the prepuce is seized and held by the fingers, and division made by a circular incision without using a clamp or forked stick. A dressing of charcoal and oil may be applied or medicine is chewed in the mouth and the saliva spat on the wound and the boy sent on to rest under some convenient tree.

[412]

[752]

When all the *unli* have been circumcised, they are gathered together in one place and the n'mikhilo dividing them into groups, puts on the neck of the leader of each group a necklace made of plaited bark from the *mpondo* tree;[1] these necklaces contain medicine against all evils - witchcraft, attack by lions, etc.

881 [751]

3:Stanner D-5 (cn. 1912) 1922 FT7 Yao FT7

some sweetener into a big gourd. Then his assistants will carry away, together with a hen, to *Luyenda*, whither the *n'wichilo* now goes to remain while brewing goes on for four days. 881 273

During their stay at *Luyenda*, the *n'wichilo* and his assistants live on flour and chickens begged from the mothers of the *wali*. On the first day nothing is done; on the second day they begin making the *Inyapo* or figures in relief of animals, etc., to be described later; *Nwenyanni* is made this day. On the third day the other figures are made and on the fourth day *shing'wedong'wede*. Into the ground where *shing'wedong'wede* is made, some of the strong beer, known as *ngungu*, which is added to the flour and water mixture on the fourth day as signified by *Ba-lokojolo*, is poured by the *n'wichilo*.

When the work at *Luyenda* is finished, the *n'wichilo* carrying his "tail" leads his assistants wearing their feather headdresses back to the chief's village singing:

"*Ninguhlo ukuwa kwaya ukulojolo ka wani, wulungu ukwanani* [533
"I must go and see beer perhaps they have mixed at the village, ancestors oh dear! 534
Chikwale ukwanjani ngulya ewa ninguwale mlo!"
The going out of a day or two ago if I had not taken relishes I would have died of hunger!"

Arriving at the village where the brewing is going on, the *n'wichilo* takes a cup and putting his "tails" on the ground, he dips into the pot of beer belonging to the leader's mother, pours some on his "tail," and then drinks some. Then he puts some into a gourd, together with some medicine, and going up to the chief who sits in his verandah overlooking the brewing place, he kneels, and first drinking a little himself, he presents the drinking gourd of beer to the chief who drinks and then returns the cup to the *n'wichilo* who finishes it. Picking up his "tail," he then goes straight back to *Luyenda* while his assistants with some men nominated by the chief go round circuing pots of beer in turn. The assistants choose by striking a pot with a medicine-tail. These pots of beer are then put aside to cool, while moderate drinking begins in the chief's house. This takes place in the morning of the day on which the *wali* will return from *Nilapale* to *Luyenda*, and in the afternoon, the people from the villages will go out to *Luyenda* to take part in the return. The return is made about sunset.

The *wali* at *Nilapale* are put into their shelters and the doorways barricaded. At sunset or just after, the place is set on fire and the *wali* have to charge their way through the bark of the shelters. They then form in line, wearing a slip of bark cloth round their loins and over this, a kind of kilt called *nwapiawa* if made of frilled-cut bark-cloth, or *nwiyaya* if made of palm leaves. Accompanied by the chanent, they proceed towards *Luyenda*, each carrying a stick of smouldering wood and an unlit torch of bark-cloth. 881 [292]

The blowing of the horn at *Nilapale* has been the sign to the *n'wichilo* that the *wali* have left; he puts round his waist a bark cloth belt, *chambe*, and a calico sash round his chest with the ends hanging down behind and on his head he wears the *lisuga* headdress made of the feathers of *chinyapa*, the widow-bird. In each hand he carries the tail of gnu or zebra, hold right end up, with the hollow end filled with "medicine." Thus arrayed, he goes out 881 533 534

3:Swanson D-5 (ca. 1912) 1922 FT7 Yao FT7

961
S33
S39

along the path towards *Ndapula*, to meet the wali, accompanied by the drummers and all the women, singing:

> "*Mdawala* *kwinyuda* *wala!*"
> "The lemon down the stream!"

When he meets the wali, they all throw their lighted torches at him and he flees back to *Luyanda*. The wali continue their procession and are brought round to the still unlit bonfire known as *chilungali*.

At the order of the w'mishile, the fire is now lighted and the wali lie around it. The w'mishile again appears with the drummers, and all the women and other villagers form a big circle round about. He sings:

> "*Chondola* *chilungu* *ulaja,* *wanda'wa* *chilungajaga!*"
> "The (lord) fire is now flaring up people there it is afraid of them!"

Dancing and singing then go on all night while the wali lie round the fire where they are allowed to sleep. As dawn approaches, the w'mishile again sings:

> "*Chonde!* *Mwalwa,* *wanali,* *Anawa* *wamunda,* *ulala*
> "Please! it is crying, you girl, arouse the child, the girdle of beads round its waist
> *wamunda* *chiyagawa!*"
> has been in separate of the parents!"

Anawa: a woman carries her child bound to her back by a piece of cloth passing under her own arms and tied in front. If the cloth gets loose, she jogs the child up higher on her back as she rearranges the cloth; this is what is meant by *anawa*.

The *chawusi* wakes the wali as the w'mishile sings:

> "*Kwandulwa* *wala!*"
> "To wake after the wali!"

That is, he is looking about for the *ingaga*. He then leads them off to *nahumpawi*, the whale, the first of the *ingaga*.

I shall first go on with an account of Mlenzale's practice to the end of the ceremony and then discuss the *ingaga* in greater detail.

Arrived at *nahumpawi*, the w'mishile sings;

> "*Nahumpawi* *nalimola,* *nahumpawi* *nalali* *kwikika!*"
> "The whale is the pool, the whale has blocked the land!"

after which he straddles the head of the whale while one of his assistants does the same at the tail and thus sitting, they do a kind of wriggling dance, singing to the time marked by clapping of hands:

> "*Nahumpawi* *akwikwinda, ah! ah!* (Repeat) *Ayakupula* *wala kwiliwa;* *ayakupula*
> "The whale showed his back above the water, ah! There it did fall me; there
> *wala kwiwaliwa;* *Eee, ee, ee, ee!*"
> it did fall beside;"

3:Stanana D-5 (ca. 1912) 1922 FT7 Yao FT7

The n'widdle then gets off on the left side, his assistant on the right and they stand in the shallow depressions. The n'widdle starts asking riddles; he says, "*Ndawi* (riddle)!" and is answered by his assistant "*Jiche* (let it come)!" Here is one: 881 533 539

"*Kwapere, hapile pwel!*"
"The little mouse it has defecated, it has gone into the ground!"
Answer: "*Midziphi* (roots)!"

He then goes round the crowd for the answer—if they cannot guess, they say, "*Ali ungwe,*" "it is yourself (to answer)." There are hundreds of such riddles.

The n'widdle points to the tusks depicted in the *chinyago* and tells the people, "Long ago this used to be an elephant; look at the tusks." The hump at its back he tells them is the same as *ching'wadang'wada* which they will find farther along.

They pass next to *ndwanda*, the zebra; a pair, male and female, is always figured.

"*Ajiji ngati ndwanda ja ndwajo Ndzilimwalo! Yawaya pakalo!*"
"This one is it not the zebra of Mister Mkumalo! everything (is) beautiful!"

Sometimes a story is told to show that the zebra used to go to the sea to drink but swing the whale, he ran away and came to the country of the python.

Then to *nsin*, the python; he sings:

"*Anasin hanjingili pawa, ejo! Yawaya pakalo!*"
"You python come and answer! all (is) beautiful!"

At the crocodile, *ngwena*, he sings:

"*Chingwena ndwalo, pawa! ejo! chingwena wanyakapale mwal!*"
"Mr Crocodile devourer, he sleeps at the side of the water!"

At *mwezi*, the moon:

"*Amwezi ndwalo, pawa! ejo, mwezi!*"
"You moon devourer, !"

Next, they come to *nchidzi ndwalo*, the people drunk with beer. Two men lie on the ground, feet to feet with nothing on; the pudenda are covered with bark-cloth and the whole of their bodies painted with earth and flour to look like two female figures in earth. The song is:

"*N'chidzi ndwalo: hanchidzi mwanali, nchidzi ndwalo!*"
"Drunk with beer: come and see the women, drunk with beer!"

A mzuni is painted: the disguise is a woman who gets drunk, lies on the ground, and exposes her person. As the n'widdle makes these remarks, the figures breathe stertorously as a drunken woman would. He conducts the wali and all the other people post many of the other images such as *chiwi*, *ngoko*, *ndwanda*, *nduzi*, etc., and only stops at those he considers his own special *ingago*. The seven specially dealt with by Mkumalo were as above together with *ndzilwyi*, the noble antelope: 534 649

681
533
539

"*Asandabaya* *ahunda, pempe* *pakata!*"
"Two mide *death, everything* (is) *lonely!*"

Next comes *shandada*, the fairy. There is no image but two posts represent the fairy; the *n'mishila* stands on one side of the two posts with his two assistants opposite him, one holding a bunch of leaves, the other a burning log: the first fans the log of the second, using leaves as bellows, while the *n'mishila* sings:

"*Hyanda,* *nyanda,* *hajikatata, nyanda!*"
"The female pushada, where it pushes itself!"

after which the serf one by one are pushed through between the two assistants. *Chandada* signifies the passage from one part of the ceremony to another; here, from the *tapage* to *ching'undung'unda*. *Ku-jandada* = to cross a stream.

As they reach *ching'undung'unda* the *n'mishila* sings:

"*Ching'undung'unda* *undimbidila* *pingaya* *ngua* *jakuyandala* *undimbu!*"
"Ching'undung'unda I have marked out if it were ashes distinctive of *chiefs!*"

One of his assistants is told to go and get a pot of beer. When it is brought he sings:

"*Asandi,* *kamunda,* *nawila* *kanyama!*"
"You girl, little fly, wash your hands behind you!"

681
533
539
608

This is the sign for the woman who volunteers for the service to the leader, to come forward, followed in turn, as each *mundi* is dealt with, by other women. The woman stands back to back with her *mundi* and they hold hands, while the *n'mishila* comes and pours a little beer on their hands; they make movements as of washing the hands and then separate, the woman rejoining the crowd, the boy standing to one side until all have performed the rite. This woman ever afterwards is treated by the *mundi* as his adopted sister. After this, each *nkomwai* takes his *mundi* into the bush near by and holding the boy's cloth over the lad's head, he waits there for the boy's relatives to come and redeem him with beer. It is a point of honor that as many relatives as possible shall turn out to show that the boy is much liked, this being, of course, so much the better for the *nkomwai* who gets a present from each. The *nkomwai* then uncovers the boys' faces and hand over the lads to their mothers who take them away to rest in the shelters.

The *n'mishila*, meanwhile, has withdrawn to his hut, where all the relatives later collect; he then comes out holding his "tail," singing:

"*Kwenda* *ahujuje* *ahwanagwa* *fuga!*"
"Come and bathe those who love to bathe!"

Each adopted sister or woman guardian takes her *mundi* brother on her back and carries him off to the stream to bathe. The woman sets her *mundi* down on the bank and then leans across his back while the *n'mishila* comes along and dipping his "tail" into the

3:Stanner D-5 (ca. 1912) 1922 FT7 Yao FT7

881
539
539
608

stream, sprinkles the boy on the chest with the water. Then the positions are reversed and the woman receives the "tail" on her chest, after which they plunge into the water and bathe, each pouring water over the other. The woman rubs the boy's back and he in turn shyly rubs the back of his woman guardian. Clothes are not removed. Everyone looks on.

While this is going on, the n'uinkila and his assistants build a kind of fence across the return road; as the people start back, he sings:

"*Mate mungu* *ahawaa* *nanapawa* *wakwaka nanaka!*"
"*Five my* *they are buying* *I myself* *they give me the spirits!*"

that is "everyone has got to buy from me the gifts I myself have from the spirits." As each woman comes up carrying her *nsuali*, the mother runs out and makes a payment to the n'uinkila so that her son may be allowed to pass. The boys are carried back to the *shalimo* where they rest. The mother of the leader cooks food into which the n'uinkila puts medicine; he then gives some to each *nsuali* to eat, after which they partake of the food prepared by their mothers, while the n'uinkila goes to the village for the beer drinking, returning in the afternoon. In the interval the dancing men dance *chawala*, etc.

881

Oil standing in separate basins on the ground has previously been prepared for anointing the *nsuli*. The n'uinkila takes each basin and passes it across the palm of his hand on which he has smeared medicine, each basin being set down on the ground again. Taking a stick, he smears it with medicine from his "tail," and he dips it into each basin. He then comes with his "tail" to detect any woman who may have had any sexual intercourse instead of remaining continent during the stay at *Ndapala*. He dips his "tail" into each basin of oil in turn and holds it up for the oil to run off. If the oil runs off in a stream, the mother as she stands behind her basin of oil is welcomed as a good mother; if the oil runs off drop by drop, "*ndidi*," the woman is laughed to scorn. Her basin is changed for that of another woman or her oil is thrown away and some from another basin is put in its place so that no harm shall result to the boy.

The *ahawaa* then take the boys into the bush near by. The *mapajawiza* dress is removed, the body anointed with the oil, and fresh bark-cloth dyed black is put on. Little bows and arrows are made of small branches and grass and with these the *nsuli* shoot as they again enter *Lapanda*, putting the bows down on *ching'undang'unda* to the trilling of all the women present.

Immediately after this, the return is made to the village, just after sunset, the women having been busy gathering up all their belongings, while the boys were being anointed.

Some of the assistants lead the procession, the *nsuli* following in single file, all naked and walking very slowly, dressed in the new bark-cloth round the loins, with many ropes of beads round the neck and body, a headband of bark, and down the back a string of beads to which is attached a tassel. Each carries in his hand a wand about five feet long, *ngungu*, with a pattern burned in the shaft and two rattles, *masuwa*, affixed at the upper end.

301

253

88 While the unli then march solemnly along shaking their wands, the assistants begin singing:

"*Ku* *mlango* *amatwa!*"
"To the gate they have shot!"

[53] [534] to which the unli reply:

"*Kusowa* *kwakupita!*"
"There is no place where to pass!"

The *m'mikhilo* remains at *Lupunda* till everyone else has left; he then runs fire to the shelters and leaving without looking back, runs to overtake the procession and then leads it on towards the village still at a slow pace, while all around is a yelling crowd of delighted mothers and other relatives and the assistants and drummers, all singing and shouting.

When the outskirts of the village are reached, the *m'mikhilo* halts and waits for the *chief* to come out and give them permission to enter. The *chief* brings calico which unrolled on the ground measures the length of the procession of unli. Headed now by their leader, the unli walk over this calico, while the assistants roll it up behind them for the *m'mikhilo*, as it is part of his payment. Flour may be brought him at the same time, carried by the chief's wives.

At an *Unyago* I witnessed at Kumisama's, the halt was called on the bank of a stream at the edge of the village where a bamboo arch had been erected. The arrival of Chief Malenya at this point with calico and flour was the sign for a demonstration by his young men who ran forward as if in battle, firing off blank rounds from old Tower muskets and executing a kind of war dance.

After the calico has been handed over, the *chief* returns to his kraal and the procession continues into the village, across the village open space to the fence round the chief's house. There, the unli enter by a gateway and disperse over the courtyard where they find their sleeping-mats laid out ready for them by their mothers. The *m'mikhilo* lays his "tail" on the leader's mat to bring good luck thenceforth. With *Mlenula*, there is no further part for the unli, but in some cases they are called upon by the *chief* to give an exhibition of their dancing and drumming. The unli sleep that night in the kraal and disperse the following day.

[77]

In the morning, the *m'mikhilo* takes his "tail" and a stirring stick made from a millet stalk with the roots on it, and strikes the ground at points in a row in front of the chief's house. Here the pots of beer which have been prepared are placed in rows, those chosen by the *chief* and those chosen by the *m'mikhilo*, and drinking commences. The *m'mikhilo*, before he joins in, takes the unli to an ash-heap in the village and there sprinkles them with medicine from a grain-mortar after which they go with their *shamwi* behind a house and change into new clothes. They then go and salute the *chief* by clapping their hands and depart to their villages, duly initiated and somewhat subdued by what they have been through. Their new names as "men" may be given them by the *shamwi* either at *Lupunda* or after the return to the village.

[273] [54] [555]

778 gives an excellent idea of the average figure; it is circular in plan, often with a little hillock in the centre known as *kabundi kampopoli*, "the hill of debt," and disposed in the quadrants are four depressions.

881 When the wali are introduced to *Chinyanu*, they stand round in a circle while the
778 *m'mishile* stands in one of the depressions with perhaps two of his assistants in others. The *m'mishile* sings:

533 "*Ngwa kampopoli chimpopoli mumpoto ningwelile kwilombo, ammi*
539 "The lake mountain was I born child I would have died on the plain, mother!"
Ningwelile ningwelile"

or

"I have lived by the great lake all my life; I should have died in the plain."

while all three make movements as of paddling a canoe. The depressions are said to represent canoes. I believe this is the recognized form but I have also seen an oblong figure with two outlines of unmistakable canoes. *Chinyanu* is usually found near *nakumpumi*.

Chiuta, when represented, stands beyond *nkunda*. It consists of two trenches at right angles forming a cross, which are covered over with logs and earth and the whole outlined with flour in a decorative pattern. The end of one limb of the cross is left open and round this opening a screen of grass is made. As the wali approach *Chiuta*, some of the assistants or *akamai* descend into the trenches for the ceremony. The *m'mishile* takes up his stand at the centre of the cross and sings:

"*Chiuta, amai, kwilola chiuta!*"
"*Chiuta, mother, come see chiuta!*"

881 Then as everyone says "Listen, listen!" crying is heard "coming out of the bowels of the
778 earth," followed by drumming and the singing of the *chindimba* songs (sometimes *nkunda* or *nsanka*); a horn is sometimes heard as well as *kululula*, trilling with the tongue against
[775] the lips. *Chiuta* is called "the resting place of all departed spirits" and the sounds are said to be the echoes of their doings. The word is not met with elsewhere among the Yao, although it occurs in the Chinyanja and in other languages of this country with the meaning "the heavens."

Chiwuta is said by Hetherwick[1] to be "a large fish that forms one of the pictures at the *Unyago*," but I have never seen it or heard of it, and I am doubtful of the correctness of the statement.

778 *Ching'undang'undu*: Dr. Davey's photograph[2] is an excellent reproduction of this figure, which consists of a mound of earth flattened on the top, and decorated with geometric
[531] patterns in flour which extend to the ground. In the centre and at the four corners, so to speak, are implanted billets of wood with decorative lines and dots in black and red on the white wood (Pl. X, figs. 1, 2). The billets are three inches in diameter and project twelve to fifteen inches above the ground.

[1] *Handbook of the Yao language*, op. cit., p. 141. [2] Op. cit., Pl. III, fig. 2.

[88] The evening of the first day is called *lyuwa lya makunowi*, or "the day of singing," as singing is kept up far into the night, but the exact significance of the word *likunowi* I have been unable to find out.

[515] The second day is spoken of as *lyuwa lya mamaza*, "the day of washing of hands," (*kumaza*, "to wash the hands") when the *wali* are specially instructed as to the necessities of washing hands before preparing food, etc.; precept is followed by practice. The night is spent quietly; for this day's proceedings few people probably will have remained.

On the third day, however, they come back again from their villages in crowds to witness the performance of *usuwa*, *lyuwa lya usuwa*, "the day of house moving" (*kusuwa*, "to change one's abode, carrying goods and chattels with one"). A representation is given of an onslaught on a village by enemies and all pretend to run away carrying their worldly goods with them. The part of the attackers is played by a number of women who, armed with guns and having donned belts and powder horns, rush in on the crowd from the bush and make prisoners of all they can catch. The men are put in miniature slave-sticks; women who are seen trying to run off with a child on the back, one round the neck and one on each hip, are driven as prisoners into a group. When all the noise and fun are over, the prisoners are released. This is often followed by a mock trial. Two women dressed up to impersonate chiefs of rival tribes, argue an old, imaginary quarrel, usually pretending that there has been a raid by one party on an ivory caravan going to the coast, with stealing of the ivory, while the other party in revenge has caught and killed some of the people belonging to the first mentioned. The thing may be kept up for an hour with much talking and great zest, all those taking part being women. Finally each party agrees to give compensation for the damage done; each presents the other with bundles of sugar cane, and friendship is reestablished. That night, everyone again rests quietly.

The fourth day is known as *lyuwa lya kusyunga* (*kusyunga*, "to go round about," referring to the dancing which goes on). Dancing takes place during the day and also the ceremony of *Lakwi* to be referred to later. One of the favorite songs sung this day runs as follows:

[533] [534] *"Ndumba'ji mkamba'pniye ontinde mnuma mkungwe'pu, omao! ambacungo ugunjunona!"*
"(Took this) a present don't give me free wait for me little girl, dear me! and we'll have some fun together!"

On the fifth day, return is made to the villages. The girl *wali* attended constantly by their *shamani* then live together for the period of instruction in huts in a special enclosure in the chief's village or in similar enclosures in a number of villages. The *wali* may go out into the village but must go about with bowed head and look no man in the face; they wear bark-cloth called *liwike* and should they meet anyone, they must pull over their faces the [753] kind of hood with which their garments are provided. They may not share food with outsiders. If they did so, the latter would sicken with a disease called *chiumbelu*.

3: Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

woman guardian shows to her man red and white beads in her hand and tells him that white indicates health while red means sickness, thereby pointing out to him their deep-rooted beliefs in the diseases associated with intercourse or association with women during menstruation. 881 842

Then follows a test of manhood. The women guardians put little pieces of stick (*lukwi* = sticks or firewood) on their heads and sing: [533 539]

"*Ngempe*	*nkwempe*	*lukwi kwa*	*mauku'chumuno liu!*"
"I must give	my wife	(when sick) firewood	of the *mauku* although it gives lots of ashes!"

What is meant is that when his wife is ill, the husband should fetch the firewood even though he does not know which woods give least ash; the *mauku* tree gives many ashes. The little piece of wood a few inches long with a notch in the middle is then handed to the young man by his guardian. He places it on the ground in front of him, kneels down, and with a small axe he attempts to divide the stick at the notch. If he is successful, he is greeted with cheers, clapping, and much rejoicing. By proving his power to hit straight, he has also established his manhood; it is prophesied that he will soon have children. Should he miss through nervousness, shouts of derision welcome him and his guardian shows her disgust with his performance. If he is a young fellow well-liked in his village, he may be allowed to make a second attempt. After this ceremony, each couple bathes each other in their shelters by pouring water over the head and body without removing the clothes, thus making brotherhood. Forever after the man must treat this woman with great respect, must not address her for some time, and then only after making her a small present.

The woman guardian picks up the two pieces of the broken *lukwi* and on the morning before they all leave *Chiputu*, the mother or sister of the young man gives her a string of red or white beads saying, "These are to bind up the bundle of wood." The man's guardian binds up the pieces of wood with the beads and gives it to her man. When they have returned to the village, they go to the young man's wife and he presents them to her. The guardian, however, steps in and slips off the beads which she keeps, while the wife, pleased at her husband's success, drops the two pieces of wood into the fire.

During the weeks that the girl *usili* remain under instruction in the village, those young men who have been *ku-lukwi* sleep in one big enclosure away from their wives and do not cohabit until after the second return from *Chiputu* is made.

Another *ku-lukwi* test sometimes, I believe, introduced into Yao ceremonies but really one practised by the Mpotola people and not proper to the Yao, is as follows: [177]

The guardian lies on the ground, wearing a small loin-cloth, and holding beads in her clenched hands, red in one, white in the other. Her man standing at her feet, bends over her and projects saliva on to her abdomen through a rolled up leaf held between his lips, at the same time choosing one of her hands. If he chooses the hand containing the white beads, he is hailed with delight as a man indeed, but should he choose the hand containing

the other women joining in the refrain. A number of these songs are here given but each *nahanga* has her own favorites which she sings. They are only sung at *Litiwa*. 843 843 533 539

Alitete, kainjani: ahitete kainjani; Chorus *Mbirunjirani.*

Now you are clucking before laying an egg. Be content then, you must not be running about say more: (Chorus) Call her back for me.

Ku-tetera, " to cluck as a hen " comes from *te! te!* the sound of the hen. Another song is:

Atetereje atele te. Chorus *Atetereje.*

You must cluck, cluck, cluck, little mouse.

A set of songs sung by Kuliati are as follows:

1. *Mtwe ngulwala, kumalembe; amasi!*
   I have a headache, surely; oh dear me!
2. *Jagala, jagala, chemwali, kwutuka mwanyama!*
   Startled (like a rabbit), little girl running like a wild animal.
3. *Asungula'wa walapire ulamba!*
   The rabbit they praise for its cleverness!
   Kumkamula ngalakatete kumlemba ilemba!
   He caught (the name of a little bird) and cut his hair in the *ilemba* fashion!
4. *Unaji ndiri jua mtima; ndigonile, Chenjerere apita!*
   I have a good heart; I am contented, Chenjerere has gone!
   Ajigere mahwangwa, amasi achamasi!
   He has taken away all his dancing things, dear me! oh dear me!
5. *Wahwambaga'wala, lawi! nawe atulanjire twalala!*
   Those who are speaking (an exclamation) show us that we may sec!
   Mlasi ngwile mbunga, tatemera, chikata, ngalakwe, wajaja; ngalangalakwe wajaja!
   The bamboo has fallen with the wind, they shivered with fear (an alluvial plain), (a thing which is stuck) (well-drained).

In native songs, full poetical license is indulged in and it is often difficult to give exact translations of them. The first has reference to the woman making a fuss because she feels ill with her pregnancy; this she is not supposed to do. Number 2 refers to the fact that she has a new experience which may cause her to be startled, but she need not fear. In number 3, *ngalakatete* is a bird which has a mark running back on either side of the mid-line of the crown of its head, resembling a method of hair dressing wherein two bands are shaved from front to back parallel to the mid-line. *Chenjerere* (number 4) is the name of a man but this reference is apparently now without point. Number 5 is sung by the *nahanga* when she hears murmurs of others in the crowd starting to sing other songs; she intimates, " Here are we singing, let us hear you others who wanted to sing; you are probably afraid now." In the latter part of this song, words are made use of which have a slang meaning known only to women. *Chikata* is a woman's slang word for the female pudenda; *ngalakwe*, 843 539

for witchcraft were carried out by strangling with a piece of calico at a place appointed for the purpose some miles from the chief's village. 674 696

There was no case against a man who seduced an unbetrothed girl, the latter being considered entirely at fault. 684

After divorce, the children always remained with the mother. The man left his wife after the case, saying, "I will take my spear and some of the goats and chickens, but the children will always know their father." 586

Murder was a question of compensation to the deceased's relatives and was not punished by death. 682

Stealing was a serious offence but many who were found guilty were rather despised than punished. The thief with the stolen goods tied about his body but otherwise stripped naked would be driven through the village and prodded with sticks to the sound of drums and hoots of derision. Most crimes, however, might be punished by exacting compensation. Payment took the form of goods or slaves. In the case of murder, the accused might have to pay several slaves to the deceased's relatives, and in addition, a fine to the chief for spilling blood, consisting perhaps of one slave. The amount of compensation expected was mentioned by the plaintiff in the case. One of the expressions used was, "My compensation must cover an ant hill," meaning enough slaves, standing hand in hand, to surround an ant hill; ant hills in this country are sometimes very big. If a man had no slaves, he would send his relatives or he himself might be forced to become the slave of the plaintiff. There is a saying anent this practice: 685 681

Chitumbili wachitowile nchila wakwe!
The monkey they tied (with) tail his (own). 539

Slaves passed over to a man in payment for crime became free men; they were an addition to the village and might even be adopted in place of a murdered individual. 567

When compensation was made by the defendant to the plaintiff, the latter always returned some part of it as a sign that friendship was again established.

Goods or money received in compensation for murder, i.e. blood money, might not go for the purchase of food or clothing. Detection of a guilty party by means of magic and proof of guilt or otherwise by ordeal poison are dealt with elsewhere.

Bluffing anyone into giving something for nothing, obtaining goods by false pretence, was not considered a crime, as anyone was "fair game." For instance, a party of youths would waylay a man with a load of fish, saying they had been ordered by their headman to commandeer it. If the man parted with his fish, so much the worse for him; if he showed fight, he was respected and friendship made with a give-and-take of fish and snuff. Such bluffing is called *kulya nawo*, "to eat with them." To add to their appearance of *bona fides*, the party might have secretly borrowed some well-known article belonging to their headman. 674

771 784 6. It is believed that signs of guilt are visible in the eye of a murderer; medicine is procured in the hope of getting rid of these signs.

7. The possession of the hair of another person is supposed to give the possessor power over that person, hence a medicine man, when the patient he has been treating is cured, shaves the patient and keeps the hair until payment is made.

[826] 8. A native with light greenish-grey eyes is not to be trusted. He is said to have eyes like a cat and is called *majwijwi;* these eyes are rare among natives.

9. It is unlucky for a child to get into a basket; he may be burned.

10. Should a woman turn the porridge pot upside down, every one who has eaten will become constipated. For the same reason, a woman, after turning out the porridge from the pot, just touches the top of the mass of porridge with the bottom of the pot.

11. A woman will never leave the pounding stick in the grain-mortar. Should she do so, the heavens would fall.

12. When a zebra is killed, a knot is tied in its tail so that eating of the meat shall not cause indigestion.

13. It is unlucky to sit upon a headrest, the *mawile.* The person would surely be bitten by a snake.

[843] 14. If a man commits murder, and his wife is pregnant at the time, she must sleep on the spear used.

15. Children are told that they must not eat at night; that if they are hungry, they must lie quiet and try to go to sleep again. If they don't obey and sit up eating porridge, a long hairy arm will come through the fastened door and beg for some, the voice of the unseen saying:

[539]

> "*Nyao chimkuti'chosi nuaga ni mjasi!*"
> "Give me that which you put to your nose to smell and throw away,"

the repeated movements of the hand to the mouth (nose) and back to the pot being supposed to make the "bogey" think that they are not really eating but merely smelling and throwing away the food.

16. A male should not scrape the porridge off the porridge stick; this is only allowed to the woman. Should a man do so, it is supposed that when he goes hunting, he will hit anything he shoots at, only in the tail.

17. There is a saying that the men and boys may eat little pieces of porridge which fall out of the pot, while cooking, on to the supporting stones and it will give them power to escape unhurt from battle. These fragments are called *nguhupuke,* (from *ku-lupuka* "to escape").

18. Children are instructed to take their food sitting down instead of being in a hurry and standing to take it. They are told that if they do not obey, their porridge will not go into their stomachs but into their legs and swell out their knee-joints.

3: Stanmus D-5 (ca. 1912) 1922 FT7 Yao FT7

771 784 30. If a chameleon is found holding on to the grass at both sides of the path, the path is "closed" and a man will turn back to his home and not proceed on his journey. It would be unlucky to continue.

789 31. Snakes seen in coils are a bad omen.

771 784 32. The slow-worm known as *khumbula mongulu* ("the cutter open of ant hills"), and the scaly anteater, if seen on the path, are of bad import.

33. To knock the toes against a stone on a journey is bad luck; if blood flows from the big toe, it points to good luck.

34. A man knocking the sole of his foot against a stone knows that some one is speaking ill of him.

35. A person whose hands itch knows he will receive a present.

36. Tremor of the circumorbital muscles of the right eye indicates that something good will be seen. When the left eye is affected, the outcome is less sure.

37. The cry of the bird *ngulukulu* (the green turaco), indicates to the hearer that he is about to meet some one, either friend or enemy.

771 784 38. Anyone who kills one of the large stick-insects (*Phasmidae*) known as *chikuse chiwipa*, will always be breaking the cooking pots afterwards.

825 39. The natives believe that the caterpillar of the *Hippotion osiris* moth will jump at the breast. It is called *chiwumbile mawula*, "that which jumps at the breasts," and children seeing it will cover up their nipples with their hands.

40. Of *Linulu*, the Mongoose, there is a saying:

[539] "*Linulu gupuchilangana nihila!*"
"The banded mongooses relieve each other (at) the rascal"

It is said that mongooses assist one another when being hunted. When one is tired, a fresh one runs in so close to the pursuer that he goes after this one and leaves the tired one, and so they keep it up till the pursuer is exhausted.

41. *Chiula*, the frog. Children are told they must never kill a frog, or its spirit will come at night with porridge made of excrement and make them eat it. If a small child playing with a frog kills it by mischance, he will tear off a small piece of his calico cloth and place it by the frog as an offering.

42. *Chindindi* (*Ikhengwe*, Chin.) the weasel. It is said that the weasel hides its body and leaves exposed its anus, so that a chicken seeing it, goes up to peck at it, whereupon the weasel turns round quickly and catches the chicken with its mouth.

43. *Chingwe*, the skunk (from *ku-ngwa*, to go to stool), so named on account of its odor, is said to apply the anus to a rat-hole and make wind. This will render insensible all the rats in the burrow and he can then dig them out at leisure.

44. *Mikuli*, the honey badger, when hunted is always said to attack a man by attempting to seize the testicles. Natives when they hunt this animal, tie stones in their loin cloths so that they hang down between the legs to defeat the badger.

3: Stanmus D-5 (ca. 1912) 1922 FT7 Yao FT7

 771 784 826 539

48. A child, when one of its milk teeth drops out, stands some five yards away facing the door of the hut and throws the tooth over the roof of the hut, saying:

"Al likungulu line lyanu alyo, mbani lyangu lyambone 'lya!"
"Oh! crow tooth your there is, give me my of good one!"

Religion. The matter of the religious beliefs professed by natives of East Central Africa is one beset with many difficulties to the student of today. It has been the subject of many essays by workers in the missionary field, but the wide contact of the natives of Nyasaland with missionary effort during the past thirty years has done much to confuse the problem, and one feels that many missionaries in their writings rather color the picture with their own feelings. 771

I think probably the Yao with whom I am now concerned have a truer conception of their own beliefs than many of the subject tribes among whom mission teaching has more easily taken root. The religious beliefs of a people are to a large extent the reflection of the circumstances under which that people lives. The outstanding event to all natives is death. At death, something is lost to the body, without which life is impossible. This is the *maimu* which may be translated "soul" or "spirit." The *maimu* is said to leave the body of the dying man when he becomes moribund or unconscious. It appears that this same *maimu* may leave the body during unconscious states unassociated with death, as when a man faints, in epilepsy, and during sleep. 771 761 774

Apart from this evidence of the dissociation of the *maimu* from the living body, the Yao believe that a man's shadow is an objective manifestation of the soul and they will say "the shadow is the *maimu*." Fear is experienced if a man jumps on the shadow of his fellow. Light is also thrown on the constitution of the *maimu* by the belief in a certain evil-spirit which dwells in deep pools. It is called *chimala-mesi*, which means "one who may finish (drink up) all the water." The superstition regarding this evil spirit is that it can suck the blood from your shadow as you stand at the edge of the pool, till you become so weak that you fall in and are drowned. 774 774 776

After leaving the body at death, the *maimu* goes to take up its place in the spirit-world, occupying a position corresponding to that held by the man during his life. With a truly materialistic conception, the soul is supposed to have all the attributes of the dead man, to be wealthy in proportion as the man was so on earth, and its relative position will be identical with that which he held among the living. The tribal chief becomes a paramount chief in the spirit world, the lesser chief holds sway in his lesser capacity, etc. We shall see that in intercession, when the tribe is threatened with calamities, it is the late paramount chief who is appealed to for help, and when one feudal chief is at war with another, the chief's dead predecessor will be called upon for aid. When a village is moved, it is from the spirit of the dead headman of the village that success in the enterprise is sought. Similarly, in family trouble, some dead ancestor is entreated to set things right, while a native 775

769 A man leaving his village on some expedition and wishing to be assured of safe conduct
484 will procure some millet flour. Going quietly into his house, he squats down in one corner
787 and gently sifts the flour through his hand so that it falls on the floor in the form of a little cone, repeating as he does so, his prayer for safe conduct beginning and ending with the word *chonde!* please!

[539] *"Chonde! chonde! wo-ku-mulungu ambuje malanguzye maso gangu nilisons*
"Please, please! those at above ancestor clear eyes mine that I may see
litola, ngaicha 'chenene kungaja, chonde! chonde! chooooonde!"
the path, may I arrive well where I go, please, please, please!"

He then covers the cone of flour with a basket. On the morrow, he will uncover it to see what has happened. According as the cone has remained intact or has fallen to one side or the other, the omen indicates whether or not the journey should be undertaken, the reaction being caused by the spirits to whom his supplication was addressed.

769 Again, there may have occurred much sickness in a village and the people conclude that the post has come to remind them that they have not been attentive to their deceased chief. "His grave-house in the village has been allowed to fall into decay," and so on. They will decide that his spirit must be propitiated. The grave-house is rebuilt, a pot is sunk in the ground, and beer is poured in, and round about heaps of flour are placed. Prayer is made to the chief at whose grave they are worshipping, supplicating him in person and "all others who are with you at *Mlungu*," asking that he will no longer cause ill to befall the village.

When a village is moved, the beer-pot from the grave of the old chief is taken to the new village and a ceremony similar to that just described takes place, with the prayer that he will come to the new village and continue to exercise his benevolent care over its people.

731 In 1880 when there was a threatened famine on account of long drought in Zomba dis-
769 trict, Malemya decided that supplication for rain must be made to the spirits of his illustrious predecessors. Kasonga, one of Malemya's wise men, acted as high priest. A large amount of beer was brewed and the night before the ceremony, twenty sheep and fifty goats were slaughtered. Plates of the meat, of rice and porridge were then placed on the ground round the grave-house of the old Malemya, and pots of beer set into the ground at intervals. At the head of the grave, little heaps of *mbepesi* flour were arranged. This flour had been prepared by such of Malemya's wives as were not near a menstrual period. The following morning, a fence was built round the grave, outside which all the people collected, while beyond them again was a second fence. Kasonga, accompanied by an assistant then appeared, and amid absolute silence entered the inner enclosure. He addressed to the old Malemya, at whose grave they were all assembled, a prayer for rain. He then repeated the prayer, invoking the aid of all the past line of chiefs down to the reigning Malemya, re-
[516] peating their names. Returning to the outer enclosure, he again uttered the prayers, all the assembled multitude repeating them after him while lying face down, resting on their

3: Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

Luumbe Mtanga is the prophet of famine, a man of great height who stalks the round of the country, stepping from hill-top to hill-top along "the fairy way," the "*Mhira wa Luumbe Mtanga*," which is supposed to run right around Nyasaland and never to cross a river, starting and ending somewhere near the junction of the Shiré with the Zambesi river. As he goes, he can be seen from a hundred miles away. He carries the *kalimba* instrument and plays as he walks, singing: 776

"*Kuliva naye imuyuyu kutipa sonje matendere namisha sala!*" [539]
"You cry out (in trouble) with the midges therefore I must call up the wasps, this season of famine!"

which might be rendered, "You people grumble about small troubles, so I will teach you to know better by inflicting great ones." When he is seen, there will be famine.

It will be convenient here to allude briefly to some of the beliefs connected with meteorological phenomena, as some of them have a bearing on native religious beliefs. The remarks made under this heading for the Anyanja hold good for the Yao. The morning and evening stars are called *Nanteleka* and *Nanapalaya*, the good cook and the bad cook. They are looked upon as the two wives of the moon, one of whom feeds him so well that he grows fat, the other who does not, so he wastes away. The constellation of the Pleiades is called *Jhinula;* the Milky Way, *Lichinga usiku*, "the watcher of the night," when high in the heavens, dawn is near. When shooting stars are seen, natives exclaim "*mapala ubujal*" *Mapala* is a many-pointed arrow. Eclipses are recognised but no explanation is vouchsafed. Thunder is supposed to be the noise of rain falling in the heavens before it reaches the earth. The rain is sometimes supposed to be the condensing steam from an enormous pot of water boiling over a furnace fire in heaven. The lightning is conceived as a lizard-like animal which dwells in the clouds and darts out from behind them and comes to earth and breaks up trees and may kill a man. Mica is supposed by the Yao to be its excrement. The animal is called *Njasi*, and is the same as *Mpamba* of the Achipeta who consider the mica to be the broken egg-shell of the lightning dragons' eggs. There is a large red compound lily, a species of *Haemanthus* also called *Njasi*, which is in some way connected with the lightning. No Yao child would ever touch this flower. Children are always advised never to seek shelter under a big tree but always to make for a bamboo thicket, for if the lightning strikes the bamboo and splits it, it will get caught inside the hollow stem. 821 [824]

Gales of wind are said to emanate from a plant called *Changula*. It is described as having one process like an elephant's trunk and others like two fingers. It is found on the tops of very high mountains, growing alone and surrounded by bare rock. This plant is used by medicine men to gain supernatural powers. *Changula* is also the name of a parasitic plant on the charcoal trees in Nyasaland. [824]

The world is taken by the natives as they find it; to them no explanation for its being is necessary. So far as I can find out, there is no idea among the Yao of a Creator. The 776 773

3: Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

776 origin of mankind is explained in a story given elsewhere; *M'ulungu* takes no part, nor is
773 the supernatural even invoked in explanation.

The religion of the Yao may then be summed up as ancestor worship plus an ill-defined,
791 uncertain belief in a supreme being. Their religion is not animistic. There are certain spirits of evil, demons, fairies and supernatural beings and animals which, however, do not play any *real* part in their religious beliefs.

● 539 **Native Sayings.** Natives are very fond of sayings, many of which are of the same nature as our own proverbs. The meaning of many of them is, however, not always self-evident but depends on some little story with a moral.

The following are some of those which I have collected among the Yao near Zomba:

1. *Akwanile lihambale!* (or *lipuku!*)
   He caught a fish, (a mouse!)

An expression meaning "He slipped down." The variations being used when wet or when dry under foot.

2. *Ulamba uli m'mesi!*
   Cunning is in the eyes (evident).

An expression meaning "Look out; some one is after us!"

Kabulu chanjewa!
Rabbit be clever!

This is a Mang'anja equivalent to the above.

3. *Chanpupikana unchitelechele mwipanda!*
   A thing that did not listen they cooked in among the herbs!

An insect which had not listened to advice about the dangers of sitting on herbs used as vegetables, was gathered up by a woman and cooked with them.
An expression used with the sense "If you do not take advice and anything happens to you, it will be your own fault."

4. *Mtele uli m'mapikanile!*
   Medicine is in the ears!

Meaning "You are forewarned; it is your own look out!"

5. *Nanpalamuche unnichele chikalakasi!*
   Mr Would-Be-Clever they left with the skull!

Ku-halamuka, to be clever (to show off); an expression made to a newcomer who unbidden joins in a discussion. It has reference to the following story and means that anyone joining a party unbidden may find himself in an awkward situation. Some strangers came to a village, and after being given food and quarters, all retired for the night. One of them, however, Mr. Would-Be-Clever, hearing something going on outside crept out of the house to find out what was happening. Seeing some people playing at catch-ball, he

3:Stanmus D-5 (ca. 1912) 1922 FT7 Yao FT7

joined in the game, unasked. Next moment, the ball came in his direction and catching it in the moonlight, he suddenly found himself grasping a bleached human skull, while everyone else had vanished. There he had to stand frightened as he was till the morning, when he was found in this ridiculous predicament. 539

6. *Tungawe untiziye majani gapyuu!*
   Mr. If-We-Were-You let escape the baboons of the owner (himself).

Ninguwe, meaning "if I were you" is also used.

This expression signifies "A man cannot serve two masters" or "He who tries to please everybody will please none," as is explained in the following story: Mr. Tungawe and another man had their gardens adjacent to one another but the latter's was next to the forest and the baboons used to come and ravage his crops. He therefore consulted a medicine man who gave him medicine to put all over the garden, which would cause all the baboons who came to the garden to die. "But," said the medicine man, "you must promise to bring me the *Mtulya!*" (the little baboon which acts as sentinel and guide). The man did as he was told with the medicine and in the morning found all the baboons dead in the garden; so picking up the body of the *Mtulya*, he was just going off with it to the medicine man, when Mr. Tungawe in the next garden who had been a witness of the good wrought by the medicine, said, "If I were you I should not take the little *Mtulya*, but the biggest baboon to give to the medicine man," so after hesitating, he picked up the biggest baboon to take instead of the little one. Immediately, it and its fellows came to life again and ran away into the forest!

7. *Mkalaga wo wanile wanache ujusi!*
   While they delayed, the children singed the serval cat!

This expression has the meaning, "If you do not do a thing at once, you may be too late!" and has reference to another story. Some youths out hunting killed an animal which they did not recognize, so one of them went back to the village where he found the old men all chatting and told them they had killed an animal they did not know. The old men said, "We will come and see it", but they went on chatting until a second message came. Still they said, "Yes, we are just coming," but they did not go; so the boys not knowing any better, instead of removing the skin, which is of value, with the hair on, singed all the hair off which was their custom with some animals, so that eventually, when the old men arrived they found they had lost a valuable skin. Another saying with the same meaning is: *Mkalaga wamdakala wanache pa upuu*, "By delaying she gave birth to a child on the mat."

8. *Angalala lipuu wamkumukala!*
   (He who said), "I look at the sun", he went astray! [Cf. Johnny-head-in-the-air.]
   Che ngunuga wanche ku nsui!
   Mr. The-One-Who-Asks arrived at the village!

●531 An expression intimating that a man who is cockeye about doing a thing may come to grief, whereas the man who takes the trouble to get information gains his object.

9. *M'lomi mwangalangala mwiwa!*
In the moonlight you cannot cut out a thorn!

A free English translation of this saying would be, "There is a proper time for doing everything." It involves the implication that doing a thing at the wrong time may result in evil.

10. *Apakanwa wawlaqa ambaja wwa!*
Mr Mouth hurt master him!

An expression intimating that careless speech may bring a man into trouble: the mouth is looked upon as the slave of the body. The expression has reference to a story which points a moral against smoking hemp. There was once upon a time a big chief who had a headman (Apakanwa) to whom he entrusted all his messages. One day, the chief brewed beer for hoeing and the big drum was beaten to call all the people together, and thus, the chief leading, they all went to the gardens, but the headman who used to smoke hemp lingered behind and in coming later, while crossing an open glade between the village and the gardens, he saw a human skull beside the path. Half intoxicated with the hemp, he kicked it, saying "Who killed you?" The skull answered, "Apakanwa!" The man was frightened and so kicked it again; then going off to the chief, he related what had happened. The chief and all the people returned with the headman to the place where the skull was and the headman, kicking the skull, asked again who had killed him, but no answer came, and so with a second interrogation. Then the chief had the headman bound and said, "What you say cannot be trusted. You waste our time with your untruths," and he had him killed.

11. *Kolo halasi ugwaiaqa hawuba!*
Having baldness you must not hide the razor!

An expression meaning "If you have no further use for a thing yourself, do not throw it away; it may be useful to others!"

12. *Lolo lolo ulawuba uwpilili!*
Today today the ulawuba was blackened!

A saying meaning "he who hurries will not do best!" *Lolo*, today; *lololo* here has the meaning "in a hurry." *Mlawuba* is the name of a small jet black bird. The story goes that when all the birds were being painted, the ulawuba bird was very impatient and coming up to the painter, said, "I must be done today; I am in a hurry." The painter said it would take longer but acting on ulawuba's persistent cries to be done quickly, he just took up a brush and painted him black all over. The following is sometimes added:

Kwambalaqa uwuda uwpulila uwuda (or dwuda)!
Being patient the uwuda bird came by spots (or marks on its head).

539

13. *Chambuge, wakila ngunga mkisi!*
Chambuge, they ate guinea-fowl raw!

An expression depending for its meaning on the story given below, used by a husband to his wife or by one woman to another, intimating that the woman has delegated her work to some one else and is not looking after things properly. A man killed a guinea-fowl and gave it to his wife to cook. She, however, gave it to her servant, Chambuge, to cook in the house while she sat doing nothing on the veranda, calling from time to time to know whether it was cooking well, to which always came answer in the affirmative, "eh." When the meal of porridge was ready in the evening, and she went to get the guinea-fowl from the pot in the kitchen, she found that it lay in the pot in cold water as her servant had only put one handful of grass to make the fire under the pot and then left it.

14. *Ku-w'mahika nungula akwangwa!*
By holding a torch shift (to see if the hare was asleep) before it had lain down!

An expression used to a man who by precipitate action without due caution loses that which he seeks to gain as in the following case: If a man seeks a girl in marriage whom he wants to take to live with him far away in his own village, instead of himself settling in her village according to custom, he must not let this be known or he would be refused.

15. *Wakwinga nikha!*
(Your wife) she is showing the porridge stick!

An expression used to a man who is homesick.

16. *Mwa wa kakombola!*
(He has or you have) the perseverance of a mitar!

An expression used to anyone who keeps on asking for something and is a nuisance.

17. *Mbepani kapakalaga ku mwa ni ku ndunga kwakwa!*
The flour (ought) to be painted on the forehead and on the back of the head also!

Mbepani is the offering of millet flour to the departed spirits, or as here, the sacrificial flour used by the chief to smear the front and back of the head of each boy at the end of the initiation ceremonies. The meaning of the expression is that "one should not only look forward to the good things of the future but also remember all the help that has been given one in the past." [769]

18. *Mbwajingle wam'wamile wapumbe pa tukwi!*
He who comes and goes and comes again they shot him with an arrow in the buttocks!

Of which the sense is "a man may do wrong once but if he continues to do so, he will suffer for it."

19. *Lipakwa kpamikile ukuhi!*
The pig was made a scapegoat (on account of) the gleanings!

A pig who was found picking up the remnants of a crop in a field which had been reaped, was thought to be the thief and killed.

●539 30. *Wandile pilanga ukusi!*
He was "let in" badly over the fish-sticks!

A man had put a lot of fish on spits to roast round the fire. While he went to get some more firewood, a thief came and took all the fish. A stranger then approached and was examining one of the sticks, saying, "There must have been a very nice fat fish on this stick," when the owner returned and immediately accused the innocent stranger of stealing his fish. A native coming across a corpse will run away, using the above expression, for if he reports the matter, he may be the first to be accused.

31. *Sompolo we wolohlolo (wamusuka) wa ewila!*
The impotent man had been to him a child in a joke!

[842 558] A native man who is impotent is very much looked down on and he is the laughing stock of the village. He is constantly made fun of by the women. The story goes that such a man when being chaffed, said, "All right, let me have the prettiest girl in the village," and they said, "All right, old sompolo, you can do her no harm." But it came to pass that she became pregnant and the women were disgraced. The meaning of the expression is: what is done as a joke may become a reality.

32. *Mawo winji ng'ombe ayo ngawa ewondi!*
Days many, hairs of an animal few!

There are more days than there are hairs in an animal's coat! If A has done a good turn to B, and B behaves badly to A, A will remonstrate, using the above expression, meaning, "You may want my help again some day, but I shall then refuse and you will suffer."

33. *Chilondo changilinge mukowo!*
The (country) earth cannot (be) measured in cubits!

Meaning, "You never know when you may want return for your good deeds.

34. *Kumenda kwalinga, kwanda kulijwingi! or kupanga pa mata!*
To be generous (is) to save up, to be stingy (is) to deep consell! or to throw in the fire!

Kinhawa returns to the door.

35. *Uwili ukwa, ujiko wangalikwanda kungawa!*
Two-arms (is) good, because he cannot rub the back!

Ku-kwanda = to rub the back of another person while bathing, a thing a native appreciates very much. An expression often used with the meaning, "There is safety in numbers," (*uwiji ukwa!*)

36. *Kulapapa ukwatikkwanikile!*
Being in a state of poverty, one must not hang (oneself)!

Ku-lapa = to be poor, to be in trouble. Do not give up hope.

37. *Kwinkilinga kujangalile kwinanga!*
Having become rich one must jump for joy in the dark corner of the house.

Meaning "Though you are prosperous at the moment, do not make a show; all these things may pass away quickly," or *Kwishila ulwanyipwishile pwani!* "One should not rejoice speedily."

30. *Wabile wamala pa mtwi!*
They have eaten wamala fruit on the head!

The intimate of a household who betrays the friendship of the husband by culpable intimacy with his wife is said "to eat wamala fruit with the wife over the head of the husband." (Cf. French, *faire cornes.*)

31. *Ilyamba na kwikala nangalawa kwikala n'mwa!*
The arrow he is watching, it does not take long to reach the eye!

A man who looks on and does not take steps to stop an ill at the beginning will suffer heavily in the end.

32. *Wamangamwiya kyenyu!*
You kept me holding a stone!

You are late in your appointment; you have kept me waiting.

33. *Likala pilikamala mkuyi (na ukwikamala) likalimba!*
The jackal when he swallows mkuyi fruit is swollen; (i.e. a jackal knows he can void the seeds of this fruit).

Likalimba has the sense of when jumping over a stream, the jumper is sure of landing on the opposite bank. The expression used of a man means that he feels pretty sure to get through with what he is doing. (Note: Some in contradistinction to jackals are said to eat wamala but always to expel the seeds from the mouth, as the seeds are sharp-pointed and very irritating. I have myself seen a man die from perforation of the bowel by these seeds.)

34. *(Ukwenti) mpanda mpanda wakilikuyi!*
(He has) measuring measuring of the bat!

Reference is made here to the habits of the bat which often makes a meal of figs and then flying to other trees, leaves its droppings under them also so that one might take them to be fig trees, too. The saying refers to a man who manages to involve a lot of others in his own trouble.

35. *Mapanza akalaya ngi!*
The mouth-weapons they (people) admire (his) footprints!

The *mapanza* is a small rodent whose footprints may be seen all over the gardens in the morning, but seldom the animal itself. The meaning of the saying is, "If you are going to steal, it does not matter if you leave your footprints, but do not hang about and get caught!"

36. *Kilinda ukwanza wamalukala wamwika!*
Mr I-Must-Do-Well they on him hanged the wamala!

● 535 Well-meaning people often get into trouble! This refers to a story of a man who had a great friend in another village who died. Hearing he was dead, he went to the village and found all the relatives mourning the dead man. To show his friendship, he commenced wailing and went into the house and lay down by the corpse among the chief mourners, though not one of them; later, he fell asleep. While asleep, evil spirits (*mwoni*) came and set upon the corpse and removing the liver, they took out the entrails and hung them about the sleeping man's neck, and smeared his hands with blood. In the morning, the mourners found the man in this condition and to avenge what they supposed to be his desecration of their dead, they killed him. The interpretation put upon this story and the meaning of the saying is that " however well intentioned you may be, you should not transgress customs."

36. *Kpobo* *ja chikwale* *ulwa chikwal!*
The foot of *strangeness* long tail!

A newcomer in the fowl-yard is pecked at by the other fowls and if it had a long tail, this would be noticed. In the same way, " If you are a stranger in a place, anything you do will be remarked; therefore your conduct should be exemplary."

38. *Ntumbuka* *mwaja* *ja* *Chikolo!*
Do not *scorn* me with the *contempt of Chikolo!*

This is a woman's saying, meaning, " I don't want to be dragged into your quarrel! " Chikolo is an interesting word. It is a girl's name used as Polly is used in English in speaking to any girl child whose name you do not know: " Come here, Polly, and show me the parent's house." For Tomony used in the same way, the Yao says *Mwanyaya*.

37. *Nakowa* *ahapinda* *ansoni!*
The beer basket he deals in a neighbour!

Nakowa is a small flat basket with ornamental rim. The meaning of the phrase is: " man's neighbours are not always disinterested."

38. *Ajinolo* *wandowola!*
He has stolen eggs!

This is an expression used of anyone who has blunder. It is said that he is so surprised at being thus accused that the blunder stops.

39. *Awanki,* *ukhwangwaga* *apile* *ukwali* *ku nyumba!*
You girl, (with) expectation he burst blundering to the back!

In a native house, the man and woman lie side by side on a mat between the fire and bed wall, the man next the fire, facing it when sleeping. When he wishes to enjoy marital relations, he turns towards the woman and lies on his side with his back to the fire. The saying refers to the unwelcome husband whose advances are refused by his wife, but he persists until his back is blistered by the heat of the fire. The saying intimates that it is no good going on wanting a thing refused you; you only suffer for it.

40. *Gwere kwale ndabuta!*
Lying on the rock, heat!

This is a slang expression which in full would read, "It is nice and warm lying on a rock in the sun, but it is not so comfortable as being in bed in company with your wife; you can go on waiting but you won't get anything." This might even be said to a dog, watching as a dog will, every morsel of food lifted to its master's mouth.

41. *Kalupilile mani pa mkina!*
To have hopes of water for maggots!

It is a custom before lying down to sleep on the floor mat, to take it up and pour boiling water on the earth floor to kill any blood-sucking maggots (Congo flour-maggot, *Anobium*[1]). If you see a pot cooking on the fire, you naturally think there is food being prepared but you may be disappointed; it may only be the pot for heating the water to kill the maggots. The saying is thus used to a man who has made an assignation and is disappointed but goes on waiting.

42. *Kuluma upwi!*
To bite cockroach-like!

The cockroach is described by natives as going up to what it will eat, remaining quiet for some moments, and then suddenly taking a bite. This is said of a man who comes up to you smiling and then hits you a hard blow.

Among the Yao as among other tribes that I have previously mentioned,[1] signs of salutation to a superior are made by clapping the hands or patting the breast or buttock with one hand, at the same time crouching down. A woman will go off the path and kneel, looking away from a superior passing along the roadway.

A person going by the door of a hut where others are sitting, will say "*Kwimapa kwao!* At the door here." Passing behind anyone, he will say "*Ku-upa 'nsa!* At the back!" Meeting anyone on a path, a man will simply say, "*Ichu*, here," adding perhaps, "*Ku-chalo!* all is well!" A chief or headman on returning to his village after a journey, is greeted by the women with trilling of the tongue (*Ku-lulula*).

Man and wife do not greet each other in the morning. The wife rises first and draws water and places it in the hut for the husband's use but nothing may be said.

When a visitor is entertained and a chicken cooked for a repast, the "pope's nose" is always for the visitor. The right hand only is used in dipping into the common pot. A man of small importance, though replete, will go on making pretence of eating at a common meal by taking very small amounts so that his superior shall finish first, and rise and go away before him.

I may here add the words used by the Yao for the sounds made by various animals; they are interesting to compare with those of other languages:

[1] 'Notes on some tribes of British Central Africa,' op. cit., p. [illegible].

H2

The dog.....*ene ene!* (as in bed).
The cat.....*ngwa!*
The cock.....*kokokiko!*
The hen.....*ko ko ko!*
The duck.....*kwa kwa kwa!*
The cow.....*ewe!*
The sheep.....*ko!* (as in hoko).
The goat.....*ewe!*
The dove.....*ene ene!*
The fowl.....*ng'wwang'a!*

H5 578 Among the Tao, clown and obscene language are rare; expressions which appear in other languages all the world over are only used on great provocation and commonly with dire results. This, too, is opposed to the ways of neighboring tribes, the Anyanja and Angoni, who freely make use of such expressions as "*Ngini ga wuka!*" and "*Ekuwa wa wuka!*" "The pudends of your mother! Clitoris of your mother!"

The following exclamations of abuse and expressions of obscenity will be seen to follow very closely upon those in other countries.

1. *Mwanakwa!* (to a girl or woman), *mkolola!* (to a boy or man) means you are a person who has not been to your Dzungu, and therefore "you are without manners!"

2. *Mwana mkungwa!* an expression to a child meaning "you little wretch," "you nasty little thing!"

3. *Ahubile kwa ligwa!* he wets with the back of his hand, he is uncircumcised, i.e. "he is a dirty person!"

4. A man with big ears is hailed "look at your ears like a lemur!" (*Likondo*, a lemur).

A Tao woman seldom, or never swears at or uses bad language to a man nor the contrary; the woman, however, is not behindhand in the art of bitter complaining and nagging.

[L 28] Pulling down the lower eyelid with the finger accompanying some exclamation has exactly the same significance as in European countries, "I am not as green as I look!"

Ku-ewpa is to make a sound like "*pish!*" with the mouth, and is a great insult, for which a man will fight.

Smacking of the lips to one side as in the action to get rid of the sour skin of a fruit, *ku-mwa 'p'wupa* is an expression of contemptuous disgust.

GH5 539 The similarity to European ways is again seen in swearing or taking oath. A Tao swears by the spirits of his ancestors or by a chief:

"*Christ cha Mdungu!*"
"(By) the graves of *Mdungu!*"

or he may indirectly name some ancestor:

"*Kyakwikila kyangu!*" or "*Kyakwikila kwakwa!*"
"I swear by the spear!" "I swear by the foot!"

3:Stanton D-5 (ca. 1912) 1922 FT7 Tao FT7

GAS 539

meaning I swear by the spirits of him who was killed with a spear (or by a lion), referring to some one well known to have in such wise met his end, or again:

"*Ngubombile kwenda kwa wendu!*"
"I swear by the finish of (all) men!"

an equivalent to swearing by the day of judgment; or again a man may swear by his own death:

"*Lifuko kwapitile n'mapikwendu!*"
"Death may it enter (my) nest!"

or he will intimate that his throat should be cut by drawing his finger across the neck, if he does not speak the truth.

There is a gibe around Zomba in swearing. A man saying, "I swear so and so," is asked, "By whose grave-house? *M'nali wa ziwa?*" The man who is in reality only bluffing will say, "Chokoma! By Chokoma's grave!" Chokoma a small headman near Zomba of whom much fun is made.

Native stories. The fables or stories found among the Zombe Yao are many of them variations of well known tales, and have been collected to some extent by others. I only propose to add here few translations of a few I do not remember to have read elsewhere.

539

The Hare and the Elephant

The elephant made a big garden and planted sugar-cane. When it had grown, he asked all the other animals to come and partake of it with him. When they had all assembled, the buffalo, the eland, and all the other antelopes, the zebra and all the smaller animals, the elephant invited them to eat. He made one condition, however, anyone who, having chewed the sugar-cane, made a sucking sound as he swallowed the juice before spitting out the fibrous part would be killed (*Iwejenje*, Chin. *Iwgwenda*, to suck, making the sound "ashiash").

So the animals all sat in a long line and the buffalo started chewing his piece of sugar-cane, but when he tried to get all the juice out of his piece, he went "ashiash!" so the elephant twisted his head till he was dead, and then picking him up, threw the carcass aside. The same fate followed for the eland, for all the antelopes and the lion, so that the other animals became afraid and would not volunteer to eat the sugar-cane but went away and the carcasses of the dead animals were buried. The elephant then appointed another day and invited the animals to come again and try.

That day, the hare came and made salutation by clapping to the elephant who demanded what he wanted, so the hare replied, "I have come to eat sugar-cane." "You know my rule," said the elephant. "Yes," said the hare, "I know *your* rule but I want some sugar-cane." So he was given some while all the other animals looked on to see what would happen. "Please," said the hare to the elephant, "may I have the outside part stripped

3:Stanzas D-5 (ca. 1912) 1922 FT7 Tao FT7

539

off, so I have not got strong teeth?" This was done for him and he started munching some pieces of sugar-cane as he sat on a stone with the rest of the cane beside him, while the elephant watched. "Did you kill the buffalo just for saying 'ehkeh'?" said the hare, as he sucked the juice from the fibre. "Yes," answered the elephant. The hare pondered awhile as he chewed up some more cane. "Did you kill the eland for saying 'ehkeh'?" again asked the hare. "Yes," answered the elephant, as the hare each time spat out the sucked-dry fibre. With each mouthful the hare asked about another animal until he had finished all his sugar-cane.

Then the elephant, seeing that the hare had finished and had not cane made a sucking noise as he swallowed the juice, said, "You are a wonderful animal" and he gave him half his garden and they have been friends ever since.

This is one of the many stories illustrating the hare's supposed cleverness and cunning.

The Hawk and the Cock

How the birds of prey came to escape the fowls

At one time, all the eagles and hawks used to be afraid of fowls. The cock inspired them with awe; they thought with his crest of red horns, he must be very dangerous. One day after talking it over, they decided to send their little brother, the Kaiotola (the smallest of the hawks) to investigate matters. So Kaiotola flew down to the earth as an ambassador of peace to interview the cock who was strutting about with his family. He explained to the cock that the eagle, Kapungu, their king, wished to be on friendly terms with the cock but that they were afraid of his crown of red horns. The cock answered that it was not made of horn but was quite soft; "Come and feel it," said he, "it is nothing to be afraid of." Kaiotola was frightened, but when the cock repeated the invitation, Kaiotola did so. He was surprised to find it soft and evidently nothing to be afraid of. The cock accepted the eagle's message of friendliness, so Kaiotola said good-bye and prepared to fly away. Just then, he spied one of the cock's daughters and no longer being afraid, he darted down and picked her up and bore her away to the presence of the eagle to whom he related how the cock was nobody to be frightened of, saying, "See here, I have carried off one of his daughters." So all the eagles and hawks saw that the fowls and their cock were a weak tribe and they could easily make war on them and carry off their children.

The Pig and the Baboon

How once friends, they parted, the baboon staying on the tops of the hills, the pig going down into the plains

Long ago, the pig and the baboon used to live together on the hill-sides. One day, it was very cold and a cutting wind was blowing. As the pig and the baboon sat on a rock in the sun trying to get warm, the baboon turned to the pig and said, "This wind is enough

3:Stanner D-5 (ca. 1912) 1922 FT7 Yao FT7

to wear the end of one's nose to a blunt point." "Yes," answered the pig, "it's really enough to blow the hairs off one's buttocks and leave a bare, dry patch." "Look here," said the baboon getting cross, "you are not to make personal remarks"! "I did nothing of the kind," retorted the pig, "but you were rude to me first." This started a quarrel and they came to the conclusion that neither cared for the other's company. So they parted and the baboon went up on to the rocky top of the hill, while the pig went down to the plains. 539

The Cock and the Crocodile

"Kokokikwi! Cha Kpoma ambuangwi!"
"Cock-a-doodle-do, the crocodile is my friend!"

When the reptiles heard the cock giving voice, one morning, they were much annoyed, saying, "What is the cock that he takes in vain the name of our King!" and they made a case about it, and all the birds and reptiles came to attend the case, and the crocodile and the cock were also present.

After the reptiles had made their charge against the cock, the eagle Kapungu, king of the birds, spoke, saying, "This is a matter of clan relationship. Can the cock claim the crocodile as his ambuangwi? What is the crocodile? What is the cock? We must get to the bottom of the question. Is it not from an egg that each comes?" To which the crocodile answered, "You speak truly but we had never thought of it before; we are friends," and then he swore that inasmuch as men killed his brother the cock, he would kill men, and from that day to this, he is man's enemy.

Note: This is an interesting story with its reference to clan relationship. The native seems to forget, however, that a crocodile will devour fowls along with most other things, including his own brother.

The Tortoise and the Baboon

Why the baboon has no tail

Once upon a time, the tortoise made friends with the eagle and invited him to come and pay a visit. So one day the eagle alighted at the tortoise's home and was there entertained and fed. When leaving, he asked the tortoise to return the call but the tortoise having explained that he could never walk to the eagle's place of abode, it was decided that the eagle should then and there carry him. So the tortoise asked the eagle to wait for a few minutes and he went into his house and got a bag. Into the bag the tortoise crept, asking the eagle to fasten up the bag and tie it to his leg and thus fly with him to his home. Arrived there, the eagle gave his guest fish to eat and the next day when the tortoise wished to leave, he received some fish to take with him. This was put in the bag fastened up with a long piece of string, the other end of which the tortoise tied round his neck. Saying good-

3:Stanmus D-5 (ca. 1912) 1922 FT7 Yao FT7

539 kye to the eagle he asked him to toss him down from the tree so that he could reach the ground and walk home. On reaching the ground, he started off for home with the bag trailing by the string behind him. On the way, he met some baboons, one of whom seeing the bag ran and took it, saying it was his find and belonged to him. The tortoise naturally argued the point and they decided to go to the elephant to have the dispute settled. After hearing the evidence of both sides, the elephant gave his verdict in favor of the baboon. "The baboon had found the bag and therefore it must belong to him. If it had belonged to the tortoise, he would have been carrying it on his shoulders." So the tortoise had to go home without his bag of fish. After a few days, he thought out a plan of revenge. Going to a place where he knew the baboons often met, he dug a hole under a stone and getting into the hole, he lay in wait. Presently the baboons arrived and one came to sit on the stone. Creeping out of his hole, the tortoise laid hold of the baboon's tail, calling out, "I have found a *chikoti* (whip)." The baboon immediately replied that it was his tail. "No," said the tortoise, "I have found it trailing on the ground. Finding is keeping; anyway we will go to the elephant about it." So they went again to the elephant who upheld the tortoise, and ordered the baboon to cut off his tail and so the baboon lost his tail.

The Snake and the Partridge

Once upon a time, there was a partridge who lived in the grass on the plain. One day a bush fire spread towards the place where he was feeding and he decided that he must fly to a place of safety. As he was taking his little run preparing to fly, a snake called to him, saying, "I can find no hole to get into and I am afraid I shall be burnt. Let me coil myself about your neck and you could thus carry me to a spot which is already burnt." The partridge agreed and with the snake wound round his neck, he flew away and alighted on a place over which the fire had already passed. "Now," said he, "would you mind unwinding yourself from my neck?" But the snake answered, "What am I going to eat here in this burnt place?" and tightening his coils, he strangled the partridge.

There is a saying apropos of this story:

"*Ndende*	*'chenene*	*wenkeje*	*enpunde!*"
"I may do	well	killed	partridge!"

and one in Chinyanja:

"*Ubwino*	*unapa*	*nkunde!*"
"Kindness	killed	the partridge!"

Ndende 'chenene and *ubwino* have the meaning "the wish to do a kindness; Misplaced kindness is fraught with danger!"

The Hare, the Leopard, and the Bushbuck

Once upon a time, a man hoed his garden and planted it with beans. When the crop grew, he was much troubled by the animals from the forest which came and damaged his

beans, so he set a snare to catch them by the leg. One day, a leopard came that way and 539
got caught in the trap. After a time as he lay there unable to move, he spied a bushbuck with his mate and four young ones and called to him to come and help him. The bushbuck, when he saw the leopard in the trap, took pity on him and undoing the rope, set him free. Said the leopard, "I have been here three days and am famished. You have been very kind to me. Will you extend your kindness and take me to your home and give me food? I am very much indebted to you, and to show my gratitude, I will remain with you." So the bushbuck assented and led the leopard to his home where beans were cooked and put before the leopard to satisfy his hunger. But the leopard refused them, saying that he did not eat beans. So some fowls were killed and cooked and given to him to eat. Every day he was given fowls to eat until none were left and the same thing happened with the goats. So when there was no more flesh for the leopard's food, they cooked some beans for him. Then the leopard again explained how greatly he was indebted to his benefactor, the bushbuck, and that he would like to show his gratitude by staying with him but that he really could not eat beans and asked the bushbuck to give him one of his children. The bushbuck did not like to refuse, so one of his little ones was killed and given to the leopard who ate him. Next day, the leopard asked for and received another child and so on until all had been sacrificed and only the bushbuck and his wife remained. The leopard demanded the wife and the poor bushbuck, not knowing how to get out of it, had to give the leopard his own wife to be eaten. When the leopard again felt hunger, he said to the bushbuck, "Well, now you have been very kind to me and given me all you have but you still remain. I think I will have to eat you, too." But the bushbuck being now really frightened, made off into the forest chased by the leopard. After running for three days, the bushbuck met a buffalo who asked him, "Why are you running so fast with a leopard running after you?" So the whole story was told and the buffalo's advice asked in the matter, to which he answered, "Well I don't think that you can do anything except continue your kindness and give yourself up to the leopard." But the bushbuck ran on again and meeting the elephant the same question was put to the bushbuck and in answer to the story, he received the same advice as the buffalo had given. So with nearly all the animals of the forest until he met the hare who, after listening to the bushbuck's story, offered to act as judge in the case. So when the leopard came up, the hare told him he would like to see how the whole thing had come about from the moment he got caught in the trap. All then repaired to the place where the snare was. "Now," said the hare setting the trap, "will you just show me how you got caught? Of course if you are trapped, I will free you again." So the leopard stepped on the trap and was immediately caught by the leg. "Ah," said the hare, "that is the way it happened, is it?" with which he went off, taking the bushbuck with him, leaving the leopard now to die of hunger. Later, some one came along and finding the leopard in the snare, killed him.

3: Stanzas D-5 (ca. 1912) 1922 FT7 Yao FT7

The Hare and the Hyaenas

539 Once upon a time, a hare went to seek work with a lion and agreed to attend to the drying of the meat the lion killed. One day, when the lion was away hunting and the hare was busy attending to his work of drying the meat, some hyaenas came by and seeing the meat asked the hare to give them some, but the hare refused, saying it was not his own but belonged to the lion his master. So the hyaenas just went and took and ate of the meat, and made off. This went on every day and the hare becoming much distressed about it, decided to try and trap the hyaenas, so he dug a game-pit and having put pointed stakes in the bottom, he covered it up with grass. In the afternoon, he went out for the daily supply of firewood, and on his return he was dismayed to find that the lion, his master, had fallen into the game-pit and been killed. After this, he abandoned the pit and thought of another idea to defeat the hyaenas and avenge the death of his master. He got the lion out of the pit and carefully removing the skin, he dried it and stuffed it with grass and fixed up the stuffed body in the forest close by, and attaching one end of a rope about its neck, he carried the other end to the place near by, where he went on with his work of drying meat. Presently the hyaenas came along and as usual asked for meat. The hare this day invited them to come and take what they wanted. Pretending to be friendly, the hare remarked how well one of them would look with a nice piece of rope tied round his neck, like a necklace, and the hyaena's vanity being touched, he allowed the hare to fasten the rope round his neck. Now this was the rope to the other end of which was attached the stuffed lion, and when the next moment, the hare called out that the lion was coming back and the hyaenas started to run away, they found that the lion followed them. Wherever they stopped to get breath, there he was still on their tracks, so they decided to run for a hole they knew where they could hide from the lion. After they had been in the hole sometime, one of them peeped out, but there was the lion waiting at the mouth of the hole. Day by day they got more hungry but every time they peeped out, they always saw the lion waiting for them, and so it happened that they grew weaker and weaker and eventually died of starvation.

The Hare, the Elephant, and the Hippopotamus

The hare challenged the elephant to a tug-of-war, the understanding being that if the elephant pulled the hare over, the hare would pay, but that if he did not succeed in pulling the hare over, then the hare should receive the wager. To this the elephant agreed, and away went the hare to the hippopotamus and made a similar proposal to which the hippo in turn assented. On the day appointed for the contest, the hare handed one end of a long rope to the elephant and arranged with him that he, the hare, should signal a blast on a horn when they were to begin pulling, the second blast to be the signal for the end of the contest. The hare then trotted off with the other end of the rope and found the hippo,

3:Stanaus D-5 , (ca. 1912) 1922 FT7 Yao FT7

with whom he made a similar arrangement. Then, taking up a position midway, he blew on the horn and the elephant and the hippo started pulling against each other, each ignorant of his opponent. Neither could pull the other over, for they were both equally strong. So the hare blew a second blast on his horn, and going to the elephant received the acknowledgment of his defeat and the wager, after which he went to the hippo who was also defeated, and so received his second wager. 539

The Story of the Dzimwe

Once upon a time there was a woman and she was with child. One day she wanted some meat to eat and asked the Dzimwe to give her some. The Dzimwe agreed to give her some meat if she would give him her child when it was born. To this the woman assented and received the meat. In due course the child was born but the woman thought no more about the Dzimwe until one day she met him and was reminded of her promise. So the woman arranged with Dzimwe to send her child to the garden to gather pumpkins so that he could catch him. The child's name was Kalikalanje which means "he who frys himself in a pan." The Dzimwe went down to the garden, changed himself into a pumpkin, and waited for the boy's coming. Presently Kalikalanje arrived and looking at the pumpkins, said, "I only gather one that dances," so the Dzimwe in the form of a pumpkin started dancing about and the boy ran away calling out, "No! really I don't gather pumpkins that dance." A few days later, the Dzimwe sought out the woman and related how he had been duped, so the woman proposed to tie the Dzimwe up in a bundle of grass in the forest which she would then send her son out to get. Kalikalanje, sent out by his mother for a bundle of grass, came across the bundle containing the Dzimwe, and remarked that he only took bundles of grass that danced. And when the bundle started dancing, the boy ran away, calling out that he did not really take bundles of grass that danced. So the Dzimwe a second time was frustrated. Again he went to the boy's mother and asked her, saying, "You promised me the child, you must make some other plan to deliver the boy into my hands." This time she hit upon the idea of sending the boy to another village to play *nimpe* (a kind of game of nine-pins), and told Dzimwe that he would be able to recognise her son as she would shave his head and give him a piece of red cloth to wear. So Kalikalanje went to play *nimpe* with the boys in another village, but arriving early, he got them all to shave their heads and tearing up his piece of red cloth, he gave each boy a piece to wear. When the Dzimwe arrived, he was again baffled as he did not know which was the boy he ought to have. Once more he met the woman and explained how her plan had miscarried, so she suggested that she should send her son out hunting in the forest and the Dzimwe could catch him there. So the youth went out hunting and he took his four dogs with him, including his dog, Mawalayenje. As he went through the forest, he suddenly came upon the Dzimwe, so he climbed up a tree. "Ah," said the Dzimwe, "I have got you at last!" and commenced to cut down the tree. Then Kalikalanje called to one of his

3:Stanous D-5 (ca. 1912) 1922 FT7 Yao FT7

539 dogs to attack the Dzimwe and the dog rushed in at him but fell dead, killed by the wind passed from the bowel of the Dzimwe. The same fate fell to two more dogs. Then Kalikalanje called his dog, Mawalanyunje to attack the Dzimwe. Mawalanyunje flew at the Dzimwe, making wind at the same time as his enemy, and was unhurt. He bit and bit at the Dzimwe till he killed him. Then Kalikalanje came down from the tree and got medicine and his three dead dogs were brought to life again, and he was not molested further.

[114] NOTE. This story is only an incomplete form is given by Hind in his *First Yao Reader* and I have therefore thought it worth while repeating it in extenso. Miss Werner[1] has referred to Dzimwe but seems very doubtful of the meaning of the word. It occurs only in the story given above, common to both Wayao and Anyanja, and simply refers to a fabulous personality, one of whose attributes was the ability to change into various forms. Scott in his dictionary,[2] mentions a Chinyanja word, *Dzimwe*, an elephant, so called because of its large belly filled with masses of unchewed food.

NALUMBALAPA, THE NIGHT-JAR

One day when the night-jar was strolling along, he met some guinea-fowls and approaching their leader, he said, "I envy you when I see you going along accompanied by many of your people. I should be very glad if you would help me by giving me medicine to make me also a chief among others." So the guinea-fowl said, "That is all right, but you must come at the proper time when I am at home." In the evening, the night-jar went to the guinea-fowl and the guinea-fowl gave him some medicine and told him, "Take this medicine. You must then get some animals' dung and mix the medicine with a basketful of it. Choose a nice site and sprinkle it all over with this. Then build your own hut there. The rules about this medicine are as follows: If any people come to stay with you and do any damage to your crops, don't abuse them; speak gently." "All right," said the night-jar, and went away to follow out the instructions. When this was all done, one evening some one came and clapping hands at the door, called to the owner. The night-jar went outside and found a man with his wife and children. They had come to settle down with him. (He was going to be a chief among men!) So he told them to come in. After a few minutes, others came, and then all night others arrived until the house was full and others camped outside. Within two days, there was a big village. Then the night-jar went back and reported to the guinea-fowl. The guinea-fowl again bade him keep to the rules. Then the people made a big garden for the night-jar and planted cassava and many other things and they were all quite happy. One day, all the people came together and said they were going to make a bigger garden for their chief, the night-jar. The children went too, and played in one of the cassava gardens. One of them dug up some roots and showed them and the night-jar passing and noticing this, was very cross and began abusing the children and their

[1] British Central Africa, p. 325. [2] Op. cit., p. 139.

3: Stanna D-5 (ca. 1912) 1922 FT7 Yao FT7

539

mothers. When they heard the abuse, everybody stopped hoeing, put their hoes on their shoulders and with their wives and children went away, till no one was left in the village, except the night-jar and his wife. "I don't know what I am going to do. I must run to the guinea-fowl and see if he can put this affair right," said he. He reported to the guinea-fowl all that had happened. Then the guinea-fowl said, "You have broken the rules. It is too late; it is finished and I cannot give you medicine to call them back. It is your own fault." The night-jar said, "I think you can help me. Give me medicine to make me invisible. If you do not, the people may come back and kill me." "For that I will give you medicine," said the guinea-fowl. "Now, after you and your wife rub yourselves with the medicine, as you sit together a man can walk past you and not see you." So they got the medicine and went home and used it. And that is why you cannot see the night-jar now as he sits on the road when you pass.

The Story of the Hornbill (Lipomombo)

Once upon a time, there was a man named Lipomombo. He lived in a village but would not conform to the customs of the people. This the people did not like. Especially did they take exception to his refusal to attend the last rites for the dead. Once again he was asked to pay homage to the dead and accompany the funeral procession of a fellow villager to the grave, but he refused as usual. Soon after, his own child died, but no one came to offer help in preparing the body or in carrying it to the burial ground. Not knowing what to do, he tied the body up and put it upon his head and so left the house to search for the burial place. "*Ku malembe kuse?* Where are the graves?" he asked the first man he met. "I don't know," was the reply. He wandered on, putting the same question "*Ku malembe kuse, kuse, kuse?*" to everyone he met but no one apparently knew. So he wandered on until the body became rotten and ran down his nose and dripped off the end. He has been wandering ever since with the last piece stuck on his nose, always searching for the graveyard and asking "*Ku malembe kuse, kuse, kuse?*" and all his descendants do the same.

Moral: Conform to the customs of your race. (Note the beak of the Hornbill and its call.)

The Story of the Young Man Thinking the Advice Given to Him by His Father

There was once an old man and he was dying, so he called his son to him and said, "I am dying, but before I go, there are three things I wish you to beware of doing: Firstly, do not tell your wife your private affairs; secondly, do not make friends with a policeman; thirdly, do not borrow money from a poor man but from a rich man." Having uttered these warnings, the old man died. No sooner was the burial over than the son thought over his father's words and decided to try and see whether there was wisdom in them, he went along to a poor man he knew and borrowed shpence and to a rich man and bor-

3: Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

539 rowed a sovereign and thence home. Saying nothing about the money, he left his house the following morning and bought a goat. Waiting in the bush till dark, he killed it and then bound up the carcass in some grass and carried it to his hut. Arrived there, he excitedly told his wife he had killed a man and wanted to bury the corpse which he had brought with him, under the floor of the hut. So the woman brought a hoe and together they dug a hole in the middle of the floor and having deposited the body in it, the earth was filled in and the woman replastered the floor with mud, and made her cooking fire over the spot. "Now," said the young man to himself, "my father told me not to tell my wife any of my private affairs and not to borrow money from a poor man. Both these I have done. One thing remains; I must find a policeman to make friends with." Going out, he met two policemen, so he said to one of them, "I should like to be friends with you, come to my house"; and the policeman agreed and went with the man to his house and a fowl was killed for them to eat. He introduced the policeman to his wife as his friend and she started cooking porridge. When it was ready, she brought it outside to the two men who were sitting on the veranda of the house with water to wash their hands and they commenced eating. Then the man called his wife back, saying the porridge was not well cooked — "It is only fit for dogs!" — and struck his wife a blow. The woman immediately appealed to the policeman to protect her, saying her husband would kill her as he had killed a man, a short time before. So the policeman arrested the man and took him away to the magistrate. The magistrate sent the police back with the man to the village to find the body of the murdered man. Its resting place was pointed out by the woman and after digging, they found the body tied up in the grass. All said, "It is just as the woman stated!" and they began striking the man and made him carry the body back to the magistrate. On the way, they met the poor man, who on seeing his debtor cried out, "Where are you going, where is my sixpence?" "I am going to the magistrate. I am supposed to have murdered a man," he replied. "Where is my sixpence? You will get hanged and I shall be the loser!" yelled the poor man. "Wait a bit, I may not be killed," said the man, "I may be able to pay you back presently." "No you won't, you will be hanged," was the reply and the poor man hit him as he passed. Later, the party met the rich man and the accused called to him, "I am in trouble and don't know when I may be able to repay you your loan"; but the rich man answered, saying, "Never mind about that now. I am sorry you are in trouble." When they came before the magistrate and the man put down his load, it was opened and the body of the goat disclosed. Then the magistrate asked the man what it was all about. So the man related his story, telling the magistrate how he had wanted to test his father's advice, and how it had all proved to be good advice.

Note: The story as given here is doubtless an adaptation of an older story to present day conditions. I have not been able to get any more original form.

3: Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

About the Greedy Man (Jua Mlume Juakuchukwa)

Once upon a time, there was a man and he went and set a trap and caught an *mbendu* (genet cat). So he brought it back to his home and singed the fur off and partly roasted it, and then hung it up from the roof inside his hut without telling his wife to cook it. It was in the summer time. One day his wife said, "I am tired of gathering herbs to cook for your relish. What about the animal hanging up there? Shall I not cook it?" The husband replied that not for anything would he have it cooked. "I am going to keep it till we get our new crops in," he said. So the woman said nothing and time passed and the little animal got as dry as a bone. One day when the man and the woman had gone to hoe in their garden, the *mbendu* came to life again and jumping down, found the basket where the woman kept her clothes and beads; opening it, he took them out and dressed up in them. Thus arrayed he went out of the hut and came to the place where some women were pounding grain; so he began to sing and danced to them. His song was:

"*Achambumba'we kutuse'ko misi jose lecko lecke, mbwi! jukutu! jukutu!*"
"The women (who were) pounding there pounding sticks all they have left!"

and he told the women to sing the chorus "*Nanchalamunda!*" (*Mbwi* is the word used to indicate the sound and action of a short hop on both feet like a bird or some steps in a dance. *Jukutu* similarly has reference to the movements of the buttocks in dancing. *Nanchalamunda* means "very dry," referring to the *mbendu* and the treatment he had suffered.) So they all danced together, but when he judged the people would be going back to the house, he escaped and ran back to the house and putting away the clothes and beads in the basket, he went back to his position hanging from the roof. This went on for several days and many of the boys and girls in the village used to go to the pounding place to see *mbendu* dance. One day the child of the man who had caught the *mbendu* recognised the cloth he was wearing as belonging to his mother and noticed him go back to their house. So he went and told his mother and father who, when they looked into the basket, noticed that the things inside had been disarranged and that the cloth was dirty. So they said they must find out what was going on, and next day, pretending to go to their garden, they hid themselves. Presently *mbendu* came down, put on the cloth and beads and went out of the house to dance as usual. When the man and his wife appeared, he ran away to the house, threw off the cloth and hung himself up to the roof, but he had not quite shrivelled up dry again when they came in and discovered him. When *mbendu* saw that he was found out, he jumped down and ran away, this time quite free into the fields, so the woman rowled her husband for saving up the animal in greedy fashion so long.

Note: When telling these and other stories, there is a regular formula with which the narrator prefaces his discourse. The story-teller begins:

539 *"Lakuta lakuta kuuda ka!"*
"Picking up picking up a little basket full!"

to which the listeners exclaim

"Lakutaa!"
"Overflows!"

At the completion of each sentence in the story, one of his listeners will exclaim, "Go!" When he has finished his story, he says,

"Ajakala katala katakuunga pantoo pakumaa, unko chipanji!"
"Take off the fire, the little mouse lest it be singed, by the head it is very hard, the hair (is) in a lump!"

During the intervals of a long story, one of the listeners may break in and sing some little song, such as the song of the *mbendu* in the story of the greedy man, thus giving the story-teller a rest.

342λ The house and household utensils. The Yao house does not differ greatly from the Nyanja habitation which I have already described elsewhere.[1] The accompanying figure (Pl. XIV, fig. 15) gives the circular plan of a hut with a veranda partly open and partly enclosed to form a room. The central pole of the hut is indicated, the hearth (H), the position of the sleeping mats (M), and the place where the water pots are kept (P). The 352λ bed may be a bamboo platform supported by forked sticks a foot above the ground (*usungwali*), or a dais of mud, over which is spread the sleeping-mat, *upasa*. (Pl. XIV, fig. 14.) Seats, *chitenga*, are made of logs of wood with conveniently placed branches acting as legs. I have seen a symmetrically carved log with shaped legs all in one piece, which suggested by its form and by the presence of a button on the midline of the under surface that it was made in the imitation of an animal. Plank seats with peg legs are now sometimes seen. Wooden pegs are driven into the wall and serve to hang odd articles upon.

[359] The hearth is simply a shallow depression in the mud floor, around which are placed three large stones to support the cooking pots. Sometimes a canopy is built over the hearth, consisting of four upright poles supporting a platform made of reeds and grass, upon which millet and other seed grains are often stored. From this platform *lipulu* (*tsanja*, [251] Chin.), the gourd containing the supply of salt is often hung. The seed grain tied up in little bundles is suspended from the *lipulu* where it becomes very dry and smoked, without any ill effect to the next year's crop. (Pl. XIV, fig. 16.) Four pronged branches of trees are often stuck in the ground with a string tied around the prongs, and used as holders for gourds, salt bottles, etc.; this device is called *lipanda* (*phanda*, Chin.). (Pl. XIV, fig. 10.) 415 The smaller utensils include the porridge stirring stick *mtiko* (Yao and Chin.) (Pl. XIV, fig. 12), several wooden spoons *chikowi* (*chipanda* or *nsmakwa*, Chin.), (Pl. XIV, figs. 11, 13), a number of gourds of various shapes and sizes used as ladles and drinking vessels,

[1] 'Notes on some tribes of British Central Africa,' op. cit., p. 330-333.

524 857 on a stone. They explode with a noise like the sound of a gun. The boys send them off, one after the other, imitating fighting, or sometimes bang them down on some one's head. They go off, making the sound *tpeuu!*

Small boys or girls among themselves play a clapping game called *ppujila*. One sings:

[539] "*Ppujila ppujila, ppujila ppujila, ppujila ppujila, jumpere mangi'je pa mlango pa' mau!*
"Swup swup swup swup swup swup the one who has passed excrement the at the door at his mother's,

Napumbe, hama, hamili!" etc.,
let him clap once, twice!" etc.

They all clap together at the word "once," "twice," and so on. No one knows how many times they are going to be called on to clap, and some one is sure to clap when no word is given and so is caught and made fun of, as the one who has misbehaved.

[152 80] *Likwata* (*ku-kwata*, to clap): simple clapping when pleased with anything is commonly indulged in, mostly by women and girls.

Little girls play at making little pots. This is called *gumbeiwipu*, (*ku-gumbe chiwipu*, to model a pot). They also play at pounding grain, called *chindichi*, "learning to keep time," the word itself being an imitation of the sounds. Five or six pound in one mortar; in between strokes, they throw the wooden pestles up in the air, catching them again to time.

[539] "*Jukupikula katuli jal ojo mauni jo akulogal!*"
"The one who upsets little mortar the! that one witch is bewitching!"

This is the song of a game played by little girls. One sits in the middle with a *singwa* on her head, to represent a grain mortar, while the others form a ring round her holding hands. As they sing, the circle at one point swings in, and one of the girls passes in front of the one sitting down, her back to her all the time, the hands passing over her head. This they do one after the other very quickly and anyone who touches the girl in the middle, "who knocks down the mortar," takes the place of the girl in the middle.

[539] "*Amwanangu Amwanangu ajokati wha!*"
"Our wives, our wives, cutting off (interjection)!"

is the song of a game played by a lot of boys together or a lot of girls together; they do not join with one another. Two opposing groups are formed of equal numbers. Each is led by one of the older children and behind him is the rest of the group, each holding on to the cloth of the one in front. The followers of each leader represent his wives. The two parties then sing and maneuver for the leader to get at the tail of the other group and "collar" a wife or two from his opponent. It becomes very exciting. As they go faster and faster, some of the tail may get swung off and captured by the other side before they can again join their own.

3:Stanner D-5 (ca. 1912) 1922 FT7 Too FT7

Trapping and catching of animals is pursued with great glee by small boys. They make many of the traps, particularly the two kinds of *kilimo*, *chipolo*, *chijumbo*, *chimwa*, *limomo*, and *upao*. *Lilimo* is set in rat runs and the rats are driven into them (Pl. XX, fig. 6). Digging-out rats is a favorite amusement for the boys and brings meat to the pot. May is the best month for this sport. They are adepts at recognizing burrows which have rats inside. Digging is commenced at one entry to the rat-warren, the escape holes being closed with tufts of grass. As they get nearer the rat chambers, they smell the earth and so know when they are quite close to the rats. A bunch of grass is then put in this hole, lighted, and kept aglow by blowing on it. One of the rats will try to bolt and is knocked on the head. His head is then squashed to kill him effectually, and the skin of the tail of the first rat is always pulled off for luck, "so that they may catch many." They will try to guess how many there are going to be, "ten and ten and five and two!" Each rat when caught is buried under some earth, so that the hawks will not swoop down and carry it off. When they have finished one warren, one of the party is appointed to carry all the rats. He ties a string round his waist, and the rats are slipped underneath it and so secured. They then go on to another; the carrier will bear the whole catch for the day and may, before they have finished, have several strings of rats round his body, one above the other. 224 857

Digging-out crabs, *ku-kepe upala*, is another favorite amusement for children; (*ku-kepe* is to dig up anything like mud which makes a squelching sound). Crabs are never eaten with flour, but always with *usanie*, the grain kanka, "crabs and brown-bread!" 226 857

Youths and girls fish with a rod, line, wire hook, and worm, *ku-lipunga ziwaba*, to pull up fish. They also catch fish, using the fish poison, *ntuto*. Birds are killed with a bow and a blunt-pointed wooden arrow. [223] [411]

A small boy, seeing a girl or a younger boy with a cob of maize and wanting it himself, will say, "Let me make a path to the coast!" He will then remove, say a couple of rows of maize grains for himself, much to the interest of the owner; or "Let me make *ilombe*" (*ilombe* is a shaved head on the scalp), or "Let me make the crab's eyes!" when two military grains are left, surrounded by a simple ring of other grains, as the girl's portion. 857

Children are taught a little saying about their fingers which reminds one of the "This little pig went to market" of one's infancy. Starting with the little [illegible] they say: 857 524 539

"*Akulu* *kanyinku* *kanyinku!*"
"This little one (is) the one which cannot draw water!"

Pointing to the ring finger,

"*Kambalagwe* *ujanyanda!*"
"This little one's brother (is) the one that picks the nose!"

To the middle finger,

"*Ujanyanda* *ananda* *ananda!*"
"(The brother of) the one that picks the nose (is) the one who finishes meat!"

3:Stanzus D-5 (ca. 1912) 1922 FT7 Yao FT7

857 To the index:

524 "*Lukungulo lwa ng'ombe lwa kumdala wangulumbe!*"

539 "(This one is) the leg of an ox which walks on the plain!"

To the thumb: "*Chamanso*"

"The fifth"

857 524 *Cat's Cradles* are known as *chitapu*, "the spider's web" (Pl. XXIII). The position of the string on the hands is as in Position I of Miss Haddon's book and this is followed by Opening A, given by the same author.[1] (Pl. XXIII, figs. 1, 2.) Three methods of arriving at the same figure, which is called "the net," are shown here (Pl. XXIII). Variety C is followed by the making of a knot, figured in C 13, known as "the child." There are probably a number of other forms made by natives, but these, which I saw one of my women patients make, will serve as an example.

534 **Musical Instruments.** The number of instruments proper to the Yao appears to be small, indeed probably only two in number, the *mangolongondo* and the *chitepu*, with perhaps the three holed flute, *chitolivo*.

The former is constructed on the principle of a xylophone; it consists of two trunks of banana trees laid on the ground and held in position by stakes. They are not quite parallel but approach each other somewhat at one end, being from one to two feet apart; on these rest cross-wise a number of pieces of wood of varying thickness and length, kept in position by pegs driven into the banana trunks on each side of each billet. These are struck with sticks by a single player, or by two persons sitting on opposite sides of the instrument. Another variety is found in which the pieces of wood, which may have holes bored in them to effect differences in sound, are arranged over a hole scooped in the ground (Pl. V, fig. 1).

The *chitepu* consists of a piece of plank hollowed out to form a resonator on which are fixed a number of keys of bamboo or metal of different lengths. These are arranged across a bridge, and the free ends are set in vibration by twanging with the fingers.

[171] The instrument now most commonly seen is the *asse* which was introduced, I think, from the coast about 1890 to 1900. It is a type of guitar.

An instrument played by women — and this again is of recent introduction among the Yao — is the *mbungulu*, which consists simply of a stick of wood about a yard long to which is affixed a single string. One end is held between the teeth, the other in the hand; it is twanged by being struck with the thumb and finger of the other hand close to the mouth, which is opened to different degrees, and gives a variety of notes resembling those of a jews' harp.

The *ching'ungung'ungu* and drums are referred to under *Dancing*.

[1] Kathleen Haddon, Cat's cradles from many lands, New York, 1911.

3: Stanton D-5 (ca. 1912) 1922 FT7 Yao FT7

534 *Ntapulipu:* like *kituti*, but played in a different way, giving the sound "*tpu tpu tpu!*"

Makuwe: the same as *kituti*, but with a higher pitched note. This can be produced by heating the *kituti* drum over a fire.

Chikwewa or lingoko: a small drum eight to ten inches high, held in the hands by strings on either side, in the same way as a concertina, and pressed against the chest while being played with the fingers. It may be alternately pressed firmly and lightly against the chest, giving variety in timbre. The base which rests against the body is cut down into a kind of foot-piece (Pl. XXII, fig. 13).

Chinyungu: a small drum eight to ten inches high, rather goblet-shaped with stem and base, the circumference about equal to the height. It is beaten with two sticks, "*nyungu nyungu!*" (Pl. XXII, fig. 17).

Chimisinga: the same drum played with two sticks, "*mini, mini, mini!*"

Ndimba: a small three legged drum about the same size as *chinyungu*. It can be carried in one hand and played with the other. It is used with one stick or more, in place of *chinyungu* and *chimisinga* (Pl. XXII, fig. 16).

Mwiwu: an old drum not now used. It varied in size from one to four feet long, was suspended from the neck, and played at both ends (Pl. XXII, fig. 14).

It is very difficult to give any idea of the time and different sounds the drums give. People learn them by repeating the sounds the drums make thus: *Ndi dhu di ndyidi ndi dhu di* mini mini ndyi ndyi, etc. Several drums, often six or more, are played together, each contributing its element of sound. They are often played very fast, but the time kept is most exact.

535 Dances are ordinarily performed by everyone in a village, but there is always a leader. Or again, there are trained bands of dancers who earn their living by attending ceremonies or any festive occasion. In a few cases, the dances are only danced by professional dancers. A short account is given below of many of the Yao dances.

Likwata: (*lu-kwata*, to clap the hands). No drums are employed, but the time is kept by clapping. In some villages, drums have lately been introduced. It is a common dance in a village on any moonlight night, just for amusement. Women and girls take part. Standing in a circle, they sing and clap, while any who wish, go into the circle, perhaps a dozen at a time, and dance their shuffling steps. A song which is included under *likwata*, is a representation of the dung-beetles (*mzuzi*) rolling the little balls of dung to their resting places. The women shuffle backwards or forwards, like the beetles, one pushing and one going backwards pulling. As they dance, they sing:

● [534] "*Likwata, tuti tuti!*"
"(oh little) dung-beetle, push push!"

Refrain:

"*Likwata mzuzi!*"
"It is rolling dung!"

535 **Ching'ungwe'y'ungu:** A soldier dance alone, playing a single-string vial with a bow as he sings. His songs are all about people, village splendor full of personalities and many whitlows. Kondwani of Malunya's was a well known performer (Pl. I).

533 **Songs.** The following are some of the Chindimba songs:

539

I

1st voice. *Kutumbila anyuwe nyumba ambilanda ayuwe kwaqu?*
To be angry the owner of the house strangers they sleep where?
2d voice. *Kutumbila anyuwe nyumba Che Hishiko ninjiwa.*
To be angry the owner of the house (Mr.) Hishiko I shall die.
1st voice. *Kundwaqu unami undishiye,*
To ask me to answer for you.
2d voice. *Kundwaqu unami Che Ki'ungu,*
To ask me to answer for master,
1st voice. *Alawa ningunda iyaqu,*
Brother-in-law I will go then,
2d voice. *Alawa ningunda iyaqu.*
1st voice. *Awala wawuche ayiie wuhilawuwa.*
There (go) the children they go on all fours.
2d voice. *Ok lelo'ja ninjiwa.*
Ok today I shall die.
Chorus. *Kutumbila anyuwe nyumba!*

The burden of the song is: We are we are not wanted here; better we want away!

II

1st voice. *Ah lijuwi'wa kale kale kapuka nakapuskaja lelo'ja!*
Ah balloon there jumping jumping to enjoy he is going to enjoy today!
2d voice. *Ah lijuwi'wami kapuka nakapuskaja wamunda!*
Ah the balloon there to enjoy he is going to enjoy child!
Chorus. *Kulya nakunda nya nyamu!*
to eat (seed) pods of dryanu!

"Seed pods of dryanu" is also referred to in a story of the balloon. When he is dozing at night sitting on a tree, he hears a seed-pod in the neighborhood crack, and wishing to mark the spot, so that he may go and eat the seed in the morning, he stretches out one arm in this direction and goes to sleep again, to be awakened by the sound of another cracking pod; whereupon he puts out another limb to mark that spot. Presently, he has all lost one limb including his tail set out as sign-posts. Half awake he starts to put out the one remaining limb, and falls off the tree.

5

1st voice. *Ahuhili* [illegible] *ngungu* *pitile ejo* [illegible],
[illegible] *ndi! Ihuili yoo* *yoo*,
2d voice. *Ahuhili* [illegible] *ahuendeula* *ahiyawa'ne* *nungu*.
[illegible] they are calling me *Ahiyawa* there is going away home;
Chorus. *Ewuuh, ahuhuhi!*
Remove the hoe from its handle!

The name of any person may be introduced into these songs, sometimes the name of a member of the village or of some person well known in the district. To introduce a name then is *ku-hunda*. *Ejo!* is an exclamation of thanks; when receiving anything, both hands are held out, and the words *ejo, ejo, ejo!* or *nungu, nungu!* are uttered.

6

1st voice. *Mululumula* 'pitile *nundu* [illegible] [illegible] [illegible].
The millet have eaten beneath you place did not plant *ooo*.
2d voice. *Ululile* *nundu* [illegible] [illegible] [illegible], *ahili*, [illegible]!
Have eaten beneath you place did not plant *ehee*, father, *ooo*!
2d voice. *A-pulupulu* [illegible] [illegible], *ahili*, [illegible]!
1st voice. *A-pulupulu* [illegible] [illegible], *ahili*, [illegible]!
Chorus. *Mululumula, pitile nundu!*

Mululumula: after the first crop of millet has been taken in, the stalks are not cut down [illegible] the ground and the roots allowed to remain in the soil. Next season, they again sprout and yield a second crop. This second year growth is *mululumula*.

8

1st voice. *Mwimbe w'ahiyawanda* *ahile ahile ahilee ahile ahile!*
Lions in the palm-trees at night, etc.
2d voice. *Mwimbe w'ahiyawanda*, *kuimba lihunda Ahiyawa! Pagiwa* *ahile* *ahile* etc.
Lions in the palm-trees to sing *lihunda Ahiyawa!* I shall die tonight, tonight, etc.
Chorus. *Mwimbe w'ahiyawanda!*

Lihunda is the name of a dance, *Ahiyawa* is a woman's name. Cf. "Let us eat, drink, and be merry, for tomorrow we die."

9

1st voice. *Ndundu, ndundu, ndundu!* Repeat.
Trading, trading, trading!
2d voice. *Ndulugu* *ndundu tendu*, *ndundu'ne*, *nyumba!*
If you have trading trading, *ndundu'ne*, I am going away!
Chorus. *Ndundu!*

533
539

7

1st voice. [illegible] [illegible]
The one whom we were talking about, here he is! that thing which happened some-[illegible]
three ago, the day after tomorrow!
3d voice. [illegible] [illegible], [illegible]
(a woman) is going that thing which happened some three ago, I am all!
Chorus. [illegible] [illegible] [illegible]
You give aid who has lies (lied to) you!

The meaning of this is: " If a man comes along who has done you an ill in the past and is just as likely to do so again, should you be inclined to reward his lies by giving him hospitality? Better to go away and leave him alone."

8

1st voice (male). [illegible] [illegible]
The little lip ring that, come and wash it! Repeat.
3d voice. [illegible], [illegible], [illegible]
The little lip ring that, you talk over there, come and wash (here today)!
1st refrain. [illegible] [illegible]
Lest it turn into trouble-[illegible]!
1st voice (female). [illegible] [illegible]
What about heard your? Refrain.
3d voice. [illegible] [illegible]
What about heard your father? Refrain.
3d refrain. [illegible] [illegible]
Lest it turn into [illegible] (part of a [illegible] refr).

9

1st voice. [illegible] [illegible]
Why are you crying [illegible] the [illegible]!
3d voice. [illegible] [illegible]
I will take her to her own house [illegible]
Chorus. [illegible] [illegible]
I am going to look for [illegible]

This refers to a troublesome wife. " Let her go back to her mother and the husband will go about his own business."

10

1st voice (woman). [illegible] [illegible] [illegible] [illegible]
If I were not discouraged then I would have been still [illegible]! Repeat.
3d voice (man). [illegible] [illegible] [illegible] [illegible] [illegible]
If I were not discouraged then I should have been [illegible] [illegible] [illegible]
[illegible] [illegible] [illegible] [illegible]
[illegible], [illegible], [illegible], [illegible]

1: Dunnage D-5 (on. 1912) 1922 FT7 Tao FT7

Taking advantage of the natural inquisitiveness of youth, a favorite trick for making money is for a man to appear in a village making pretence of having a peep-show, something mentioned in a covered basket or in a cloth. On payment of some small amount, the youth is allowed to peep in, maybe only to see a dead mouse; finding he had been "done," he of course bursts out laughing and, anxious that all his companions should also be "done," he does not "give it away" and so the peep-show man makes quite a good living.

Two girls play with dolls of two kinds, *Ndola*, made from little gourd-like fruits called *Mungu*, and others called *mamanda*, "a child," made from maize cobs. These dolls they carry about on their backs as mothers do their children. *Ndola* is made of three of these little spherical fruits glued together with beeswax; on the one which represents the head, wool, red and blue, of the *ulungwipe* tree are mounted in rows to represent hair, and often beads, as in the modern method of hair-dressing. One now similar doll made for the children of other tribes. Thus, among Mandawa's Angoni, a doll called *mamma*, "a child," is made in a dumb-bell form of two small spherical gourds joined by a bundle of sticks bound together with string and wax; on the head-piece string is mounted to represent hair. Their children also play with little clay images of cattle and men, a custom they have preserved from their old Zulu ancestors but foreign to the Yao. The *Ankonde* children have carved wooden dolls not seen in any other tribe. *Mamanda* is made from a maize cob by shredding the papery coverings of the cob; on these shreds are threaded white and red varieties of maize to represent beads, or the shreds are plaited into a number of tags to represent hair.

Latterly, the children have taken to making hoops and show considerable skill in driving them with a piece of bent wood (Pl. XXII, fig. 8), while the older boys make two-wheeled representations of bicycles with a very clever imitation of all the parts of the machine.

The whipping-top, *mangulipe* or *mangungu* (*ngoli*, Chin.), is found among the boys' toys. It is made of a conical piece of wood with a flat top and no metal peg. It is started spinning by pulling off the string wound round the top. The whip consists of a piece of string fastened to the end of a stick. Sometimes tops of large size are used, and two boys whip them from opposite sides (Pl. XXII, fig. 4).

A game called chipoto is played by youths. It takes the course from the-pots, to strike, and refers to the action of striking with a finger the head in which a bean is pressed to be. A spiral is drawn with the finger in the sand with a central point to represent a village, and a tail-piece prolonged on one side to a second point which represents a show-market on the coast. Along the line, a number of other points are demarcated to represent sleeping places on route. At the village, two white beans are put to represent the two players and with each is a smaller brown bean to represent his slave. At the show-market are placed a variety of beans to represent trade-goods, cattles, beads, etc. Each of the two players in turn shakes a single bean in his closed hands and then shows the hands, separating them at the

3:Stanna D-5 (m. 1912) 1922 FT7 Too FT7

Chipilipe: (*ku-pilipa*, to roll round), a bracelet made of beads wound on a bark-cloth cord. 301

Chipe: the same, but the beads never a double row so that the bracelet is wider.

Mudu: a slender hollow cylinder of beadwork which lies flat as a bracelet.

Necklaces are much prized by the women. All the children, too, if possible, are provided with some kind or another, even though it be only a piece of string. They are generally made of beads; charms and their ornamental imitations are also worn as necklaces. Some names refer to the pattern of the beadwork, others refer to the length or fashion of the necklace.

Chilupe is a necklace which hangs down in front to the level of the breasts; it does not go under the arm, as Hetherwick states.[1] It consists of three, four, or five strings of beads in rows, arranged in a pattern.

Angapajo: hangs down as far as the ankles. The word *Angapajo* means "chase me!"

Chingenge is made of a single string of beads, but hangs as low as *chilupe*. *Chilupe* is of more than one string and various coloured beads enter into its composition, often in lozenge patterns.

Chipete: consists of a single string of beads of one color tied tightly round the neck without tassel or beads.

Chikwendu is worn like *chingenge*, but beads of more than one color are used.

Chikwenge resembles *chilupe*, only more strings of beads are used.

Mapwendu: a solid cord of bark cloth covered with beads of one color, either dark blue or white, worn round the neck crossing on the chest and under the armpits; the cords are as thick as the finger. These are worn especially by girls after *Chipete*.

Chiwendu: a cord of beads as in *mapwendu*, but worn round the neck only. The necklace consists of perhaps six strings of beads, the first of which is worn close to the neck, while each succeeding string hangs lower and more loosely.

Chipet or *chilulijo:* made of three plaited strands of beads, generally white.

Kiskulilo: a necklace with a tassel, usually consisting of two large red beads.

Mbele ("a striped snake"): made of four strings of beads, each row being of one color.

Mbele nshwane ("the cat's tail"): *like mbele consisting of two, three or four strings* of beads.

Chowa cha mundu (*mundu*, "bag"): a hollow cylinder of bead work usually of blue and white, worn as a necklace. *Chowa* is the Chiyao word for beads; in Chinyanja, it means wealth.

Limunde is a word referring to the pattern of the beadwork, so called from the resemblance to the eyes of the *mono-mui*; in *limunde*, white beads are arranged in rosettes round a series of larger black beads in a band.

Most women and many children wear beads round the waist. They are supposed to be very attractive to men. The prostitute wears more than anyone else, for the same reason

[1] Op. cit., p. 111.

3:Swanson D-5 (ca. 1912) 1922 F77 Yao F77

30 that she is tattooed more profusely on the buttocks and legs. The student of beads was formerly made like waponde with a bark-cloth cord, called *ndumbo* or *mbale* (to-wrap, to slip off), referring to the mbale being slipped off over the legs. The fashion now is to wear single strings of beads; each string is of one color but all the strings are different and perhaps number a dozen or more.

Lipondo: a bead belt three-inches wide, worn by Yao women near Lake Nyasa. A bead apron, *Ilanjaw*, is also worn by them but not near Zomba (Pl. VI, fig. 2).

A woman removes her beads when she is "unclean," that is: (a) during the menstrual period, (b) during the period of mourning for a near relative when coitus is forbidden, (c) before the birth of a child and afterwards until such time as she may resume intercourse with her husband.

A large variety of beads has long been used by the Yao. There are some rarely seen now which were much prized in years gone by, while others are of quite recent introduction. There is no evidence that they themselves made beads and there are few which are probably not of European manufacture.

Clothing. The Yao used bark-cloth before the introduction of woven materials. The older people may still be seen in it and it is used in most of the mountains. At one time, they also used to weave a cloth called *likamondo* from a native cotton plant. This has been given up since the introduction of imported materials.

For the method of wearing cloth, see Pl. II, fig. 2. The very poorest people wear only a strip of calico round the pudendum, held in position by a string round the waist hanging long behind and in front; this is called *mbalu*. Yao women, when menstruating, wear under this a little piece of cloth called *likamba*; it is only worn at this time and not always so in certain other tribes.

Warfare. Fighting has naturally played a large part in the life of the Yao as among other African tribes, but at no time were these people a trained fighting race. Warfare was of a desultory character consisting mostly of raids by one local chief upon another. A party of men belonging to a chief at enmity with another, meeting some of his followers would challenge them, "*Ahombe, who are you for?*" The name of the rival chief in answer was the sign for battle to begin. A false answer would never be given to gain an advantage. When about to throw a spear, the thrower calls to his adversary.

The Yao have possessed guns for a long time. Going out to fight, the Yao used to leap from one foot to the other, and spin their guns around in their hands. They made their own stocks for the rifles. They also used to make a small, cast-iron cannon about three feet long, called *kombola*, "a little man." It was carried in the arms and was touched off by a torch. Drums called *ngoje* were taken into battle. There is an old war drum at Mdemeya's village, taken in 1886 by the old Mdemeya from a *Mang'anja chief* called Mkokombo who lived near Lake Chirwa. Since then, this drum has always gone into battle with Mdemeya. Around it his men would dance and anyone who had killed a man in battle would run up to it and spit upon it in admiration.

CHAPTER III

THE COMPOSITION OF MODERN CHIEFDOMS

Chiefdoms in the Administrative Mould

361 NO less than in MacDonald's time, modern chiefdoms are in the first place organizations of villages. Physically, the villages consist of solid pole and daub huts of varying sizes. [342] Some huts are rectangular, twenty feet long and fifteen feet wide, with glass windows, panelled doors, and thatched roofs. Others are small and round, about eight feet in diameter. There is also a considerable variation in the compactness of villages: often the huts are only a few yards apart, but sometimes at least a hundred yards or more. Most villages, however, could be circumscribed by a circle of a quarter-mile diameter, though, of course, there are many exceptions. There is a slight tendency for the village to spread itself along a path, in a way faintly suggesting ribbon development, but on the whole there is no particular physical pattern to the Yao village. In fact, though most villages have fairly distinct physical boundaries, and are definitely discrete clusters of huts, some are difficult to identify in this way. To the minds of the local people, however, the 62 village is quite clear and distinct. This is because they see the village primarily as a social unit, and tend to impute into physical boundaries more definition than actually exists. It is in the social sense that I use the word here: the 'village' is a spatial group which recognizes its identity against similar groups.

The importance of the village in Yao structure can hardly be over-emphasized. Membership of a village provides the first index whereby people determine a stranger's background. If, after village membership is fixed, no other links can be found with a stranger, such as distant kinship, the relationship will remain at that level. A gossip identifies the person about whom 62 he is speaking by giving his or her name and the name of his ● 55 or her village. He says, 'Be.[1] Mwana of Cigwaja village'.

[1] I use this abbreviation for the Arabic 'binti', 'daughter of'. Bini, pronounced 'bini' by the Yao, with Ali and Wali, 'son of', appear commonly in Yao names.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

The chief identifies a man who comes to see him in exactly the same way, and the Administration has adopted a similar system, except that it has its own definition of the village. During the initiation ceremonies, the initiands[1] are housed in long grass sheds which are subdivided into sections. Each section or room of the long shed houses the boys or girls from one village. If villages share a burial ground, they have allotted portions where they bury their dead separately. In these and many other ways the village is looked upon by the Yao as a distinct unit in the chiefdom.

The chiefdom in the old days was distinctly a territorial unit and all the villages within that area recognized the superiority of the chief. The boundaries of the old chiefdoms were marked by rivers and hills and fixed after conquest and agreement. They are still well remembered. Modern chiefdoms are defined in their limits partly by Government decree and partly by custom. When Principal Headmen were appointed, the districts under them were demarcated with 'due regard being given to the composition of the Native population'. The traditional areas under the various chiefs, therefore, were recognized by the Administration as districts, so that the districts or their sections almost coincided with the chiefdoms. Some disputes between chiefs over boundaries have occurred from time to time and the Administration has had to arbitrate. For example, the Provincial Commissioner of the Southern Province reported a difference between Liwonde and Kawinga in 1936,[2] but through time these differences have been eliminated.

Traditional and Administrative boundaries do not coincide in a few places, for two reasons. Firstly, the Administration has accepted an obvious and physical boundary in preference to an indistinct and social boundary. It has taken the Domasi River as the boundary between Ntumanje and Mposa, though in fact a few villages under Mbela, Kawinga III's son, live on the south side of the river, and fall for Administrative purposes in Ntumanje's area. Mbela is still very strongly associated with Kawinga in ritual and kinship matters. His dealings with the

[1] I am grateful to Prof. Schapera for suggesting this word for those who are undergoing initiation ceremonies. The parallel is with graduands, i.e. those who are undergoing graduation ceremonies.

[2] *Report of the Provincial Commissioner, Southern Province* (1936), 20.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

622 Mapata's installation ceremonies. When an important headman succeeds, however, the chief himself usually makes a short appearance and talks to the people. When Nyenje was installed in July 1947, Kawinga attended. Nyenje has the same clan-name as Kawinga and is an Invader. In 1947, he had 109 tax-payers under him; he held rights to both initiation ceremonies, but he did not have the right to wear the scarlet headband. Kawinga arrived at 11.18 a.m. before Nyenje had come out of the hut and he went straight to it and entered. He emerged at 11.45 and sat on a chair under a drying stand. Kangomba, his head *ndunu*, came and sat with him. In the meantime the new headman was brought outside and seated on a chair. Sitting on either side of him on the mat on which his chair was placed, were his two wives. Nsanama,[1] a minor village headman of the same clan-name as Nyenje, officiated. The penny-giving now started.
622 At 12.10 Kawinga got up and walked over to the crowd, and silenced them with a sharp whistle. They gathered round to
527 hear his speech. He pointed out that the dispute about the succession to their headmanship had been going on for three or four years and that there had been two candidates, one of whom he had selected as successor because he knew he would be sensible and wise, and would look after his people in the village and in the smaller villages under him. He said that he had recommended this man to the District Commissioner who, with the Governor's sanction, had supported him. He did not therefore want to hear that the man had fallen ill; he dealt strictly with sorcerers. He said that respect started with the relatives: brothers and sisters, the husbands and the boys and girls must
[551] also respect 'the chief'. They must not mention his name but refer to him as 'the chief'. Kawinga went on to say that some husbands were evil and could split a village like this one, by telling lies to the headman and falsely advising the headman that his sisters were talking behind his back and insulting him. When he hears this he may break the village by ill-treating his relatives, thereby causing them to migrate and leave him all alone. Kawinga told the people not to go talking in other villages about the man who was in the chair; that sort of behaviour only led to sorcery. Finally, he warned them to help the headman in obeying the instructions of the White people who

[1] Not Kawinga's relative of the same name.

3:Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

against all evils — witchcraft, attack by lions, etc. The *akwanyi* then set about building shelters in which the *wali* will remain during their term of instruction. According to the number of the *wali* or the number of places where shelters are built may vary from one, two, or three, to as many as eight. Each of these places is called *Ndapula*. They may be many miles apart and are so placed for the convenience of the mothers in various groups of villages who bring the food daily to the group of boys from these villages.

The boys when they originally left the village were wearing a large bark-cloth covering, with beads and collars, which latter articles have been taken by the *m'waisila* and his *akwanyi*. At *Ndapula* they wear simply a loin-cloth of bark.

During their stay at *Ndapula*, the *wali* are given animal names by the *akwanyi* who carry on the instruction of the boys until their return to *Lupunda*, the *m'waisila* having gone back to his village immediately after the circumcision. The names given to the boys are commonly names of beasts of prey such as *Alikula* (*likula* = the jackal), *Achimwi* (*chimwi* = the leopard), etc.

Certain restrictions as to diet are laid upon the *wali* by the *m'waisila*, e.g. no meat of an animal killed by a beast of prey, no *mwalilah*, *kimwalula*. He will not allow any villager to visit *Ndapula* after sunset, i.e. and visitors may only be men who have been through the ceremony. An uncircumcised man is called *mkalula*, one who has not been to his *Unyago*.

Other restrictions as to foodstuffs may be made by the *akwanyi*, generally in connection with the mythical origin of such food substances. A finger-shaped yam called *lyata* is taboo, as it is said to have first sprung from the grave of a leper, the inference being obvious. After the *Unyago*, the boys have to undergo a special doctoring before they may partake of them. Bananas and rice are similarly refused them, the latter on account of a story to the effect that rice grew from the scattle of a dead man, the idea doubtless having relation to the resemblance of rice grains to maggots. Fish is denied them by some members of some *mwalas*, as it is said to have originated from the finger of a woman which she threw away while bathing.

Each *m'waisila* may have special observances of his own. One near Zomba caused all cassava to be roasted in a certain way. Rows of pieces of cassava were placed in split bamboo splits and so roasted before the fire in the manner of fish. If roasted in the ordinary way, the cassava would split and show the white floury material inside, signified by the verb *ku-lapula*. If this is eaten by the *wali*, it is said that the prepuital wound reopens.

The length of time spent at *Ndapula* varies from four weeks to as long as three or four months. In the first place they must wait till the circumcision wounds of all are completely healed. Delay may be occasioned by complications having arisen in some cases. Again, permission to return may be withheld by the *akwanyi* for some reason or other. Should one of the *wali* die at *Ndapula*, the body is buried out in the bush and nothing is said to the parents until after the ceremonies are over and all have returned to the village.

3:Stanner D-5 (ca. 1912) 1922 FT7 Tao FT7

The well then remain for about a month under the care of their guardians, during which time they receive most valuable instruction as to their behavior to others, especially to their elders and to members of the opposite sex. Their faults are brought home to them and many little pieces of advice given. They are taught the household duties which will be their lot thenceforth and they are forewarned of approaching puberty and what it means to them. 881

During this period their child-names are not used and until their new names are assigned to them, they are called after birds and animals, generally some of the smaller animals, e.g. Anyingalowe (nyingalowe = the shrew rat), Alitawala (litawala = a big species of rat), Analyelya (nyelyelya = the shrew). I have been unable to ascertain whether these have any totemistic significance. 551

The girls are usually given a fright to impress on them the danger of lions; one night an imitation of a lion approaching their enclosure is made when all is dark; then all of a sudden one of the elements around with big thorns instead of claws will spring upon one of the girls, generally picking out the worst behaved.

When the term of instruction is completed, they again adjourn to Chiputo for two days where Dwapo is danced on the first night by women, on the second night by men. The first day is spent by a party of men and women in the bush, preparing figures of animals and their dress for the dance. The women wear a small garment of bark-cloth called nsinkapitala, a word which literally means "buttocks of a frog" but which is used with the meaning of trousers and refers in this case to the fact that the bark-cloth is sewn round the upper part of each thigh into a garment like a pair of knickerbockers. Round the abdomen and chest are worn bands made of short pieces of small, decorticated millet stalks; similar bands are worn on the legs and arms, two on each thigh, two on the leg, one at the wrist, below the elbow, and one round the upper arm. In the dark these give the body the appearance of being painted in alternate bands of black and white. They also wear a headdress of the same material. 292 301

On the first evening of the return to Chiputo, this party of women appears after dark; they dance in a row, advancing and retiring in step, swinging their arms and moving their bodies to endamatitsa of Bi-dil Bi-dil. Other women dress up as men, wearing long beards made of lihanga, a kind of lime plant.

The second night, the representations of animals made of grass and bamboo framework supported by men appear, the elephant, the chimpanza, and various antelopes being the common figures, also the zebra made of painted bark cloth. These animal figures are similar to the ungwe or ungwe of the Anyanja and to those of the Awisa,[1] but the zebra is unknown among the Yao. 171

During all these presentations at Chiputo, the well seated on mats are the chief spectators and are duly baptised by the performances of the last two days.

4: Stannus D-5 (ca. 1909)1910 FT7 Yao FT7 Marawi FR4

CIRCUMCISION AND INITIATION CEREMONIES.

Y 304 M [304]

Circumcision was not practised among *Anyanja*. Among *Amangoche*, *Mashinga* and *Yao*, the practice was known as *Isyuge wa lupanda*.

Ku-ambala lupanda:—the prepuce was drawn forward and a stick made on the right side of the median line near the frenum. An application mixed with oil was applied. At the present time the Mohammedan practice is common *Ku-ambala fanda*:—the prepuce is drawn forward through a split piece of bamboo and cut off with a sharp knife.

Circumcision is performed on boys usually at the age of nine to twelve years by a medicine man called *Mpelele*, an honourable calling, in a hut at the Isyuge camp. Both patient and operator stand, unless the former is young, when he sits. The ceremony is witnessed only by the boy's friend. Among Mohammedans clitoridectomy used to be performed by a woman operator (*nakenge*), but, it is said, was discontinued, on account of the heavy mortality, about seven years ago. At the time of the operation a woman was given medicine to make her vomit all unlawful things she might have eaten.

Y 304 981

Initiation ceremonies (including circumcision) take place at irregular intervals. The chief or headman settles the date at which the Isyuge shall be held, generally once a year in July, when there is no work and little else to do. Boys who are considered ready will then take part. The elder brother or a friend of a boy settles whether he is ready for circumcision. The mother then takes a present to the chief. The boys, their friends and the medicine man then depart for the bush, sometimes a couple of miles away from the village. The number may vary from three or four to as many as thirty or forty. In the bush grass huts (= *nsanu*) are erected for their shelter. Food is brought by the mothers and deposited a little way from the camp, and the friends who have accompanied the boys fetch and carry and act as sentinels to prevent approach of any "outsiders." Six months used to be spent in the bush, now four to eight weeks only, and all the circumcision wounds must be healed by the time of the candidates' return. If a boy die, the mother is not informed, she is allowed to bring food each day; at the end when the return is made rejoicing she is told by one of the men.

Y [367]

The exit from the village is accompanied by the friends dancing *Tawgi* or *Mawu*, the boys in old calico (formerly always in bark cloth) walk and sit down on arrival at the place appointed. The circumcision is performed the following day; during the time which follows instruction is given them on their duties in after life as men, in good behaviour in their married life, *re* coitus, eating of food, superstitious regarding salt, etc. When this is all over a message is sent to the village, and the youths, walking quietly dressed in new cloths, are met half-way by the women and girls, who dance and sing; after the return to the village there is drinking and dancing, the newly initiated refraining for one day. At the present time the youth probably has some "friend" of the opposite sex with whom he sleeps; until he has had coitus he may not eat food into which salt has been put. His

Y 551 981 [836]

4: Stannus D-5 (ca. 1909) 1910 FT7 Yao FT7
Bemba FQ5

mother is very careful about this in preparing his food lest he die in consequence. He henceforth bears his man's name, and it is an insult to use his child's name again.

Initiation of girls takes place in much the same way, instruction being given by the old women. After initiation most girls wear a string of big blue beads round the neck. In some cases, where it is not convenient to go far into the bush, a patch of bush near the village may be selected, the approaches are carefully guarded, and pieces of calico on bamboos are used as flags to mark the place.

Nawali ceremony witnessed at Kasanka's village (Awisa tribe) August 30th, 1907:—A girl about fourteen years of age, well developed. Among the Awisa the initiation ceremony takes place when the girl has reached puberty and is ready to be married. Four days are spent by the candidate in a small grass hut built in the middle of the *bwalo* (or village open space), when instruction is given her in all her future duties by a woman who is her "friend," in this case a woman of about twenty-six years of age.

About mid-day of the fourth day she was brought into the *bwalo* wearing old calico round the waist, and with two friends, one on either side, danced a kind of shuffling step backwards and forwards to the time of four drums; it was witnessed by the women of the village, who occasionally joined in the dance. After this she retired, and later in the afternoon reappeared with blue calico from waist as far as knees, white calico tied round waist as a sash, a rope of blue beads round neck and under arms. On the head she wore an erection made of flour and water with a

FIG. 1.

central crest into which were stuck little pieces of reed, lines of red were painted on the white ground as shown in sketch. Always supported by her "friend" or "spouse," she again danced for a few minutes and then departed.

This night about twelve midnight *Ziwere* was to be danced; all the evening and up till midnight a boy went round and round the village calling in a shrill voice warning none to approach. It was a very dark moonless night, and to the beating of seven drums (four small, two medium sized, one big) the *Ziwere* came into the *bwalo*. One was an elephant 8 feet high with a man in each pair of legs—made of grass, trunk and tusks complete; the other, called an *Nawale* (a small antelope) resembled a dwarf jack-in-the-green more than anything else. The elephant pranced, the *Nawale* spun round and round; each was attended by a man with a

6: Mitchell E-5 (1946-1947) 1949 FT7 Yao FT7

121 Often there is some cultural obstruction to the giving of information of certain types. The Yao, for example, will not readily mention the names of deceased persons. Often young children or people who themselves had no children are completely forgotten. Many polygynous men cannot remember the number of children that they have fathered.

114 121 Nevertheless, in spite of these and other similar difficulties, some investigators have been able to publish a certain amount of material bearing on the problem of the rate of increase of non-literate populations in Africa. All of them have been based on samples, though none of these could be considered statistically representative. Such studies in recent years include one in Southern Nigeria,[1] one from Tanganyika[2] based on a substantial sample of women, while M. Fortes has published some material on the Tallensi of the Gold Coast.[3] Schapera, incidentally to a larger study, has published some material on the Tswana of Bechuanaland Protectorate.[4]

The analysis of the Yakö by Enid Charles and C. Daryll Forde was mainly concerned with the calculation of the male net reproduction-rate, while the Culwicks and Schapera calculated female net reproduction-rates. Fortes considered both the male and female net reproduction-rates. The Culwicks have so far presented the most complete analysis of this type of material but were not able to classify their material into five- or ten-year age-groups, though they did use a wider age classification. The Culwicks, Fortes, and Schapera have all used the number of girls born to women now past child-bearing as an estimate of the female gross reproduction-rate. There are objections to this procedure which are outlined below.

121 In this paper an attempt is made to present in more detail some demographic material on an African non-literate people. The main object of the paper is to estimate the probable gross and net reproduction-rates prevailing at the moment 125 in the areas studied. The data on which this paper is based were collected incidentally to a study of the social organization of the Yao people living in the Liwonde District of Nyasaland in Central Africa.[5] In this study a number of typical hamlets, varying from 5 to 50 or more dwellings, were visited and genealogies of the residents recorded. In 20 of these hamlets further details were secured on points of demographic interest. Each census in a village took a day or two, and individual censuses were taken between November 1946 and March 1947. In this analysis of the material I have assumed that the survey was done at the end of 1946. The survey was conducted on a *de facto* and *de jure* basis in that the population who had slept in a hamlet the previous night was enumerated, but the mobility of the population is so high that usually it was necessary to consider a *de jure* count as constituting the true population of the village. The twenty hamlets studied were grouped in three areas, two in the area under N. A. Kawinga and one in N. A. Nyambi's area.

181 Amasinings in the Makanjila area of Fort John-
619 ston District, i.e. to the east of the south end of
175 the Lake near Fort Maguire. These two divisions
are insignificant when compared with the other
643 two divisions in Nyasaland. The third division
is the Mangoce Yao now settled around Blantyre,
while the last division, the Macings, are settled
between Fort Johnston district and Zomba.
These divisions arose from a breaking up of the
Yao tribe which originally occupied the territory
between the Rovuma and Lujende Rivers in what
is now Portuguese East Africa. These divisions
are not very significant to-day. Members of a
division recognize that they are more closely
related to each other than to the members of
another division, but this does not appear to
affect modern political life in any way.

619 The first Kawinga, Liwonde and Nkata[1]
175 all belonged to the Macings division which had
settled near the tip of Lake Amaramba where it
● 551 empties into the Lujende River. From this place
643 of origin, the groups associated with these early
leaders moved into Nyasaland. In addition to
belonging to the same division of the Yao tribe
the three leaders mentioned also had the same clan-
name, viz. *andewe*.[2] The term that I have trans-
lated as clan-name is the Yao word *fakeye*,
which may also be translated as "kind" or "sort".
Thus, if one asks a man the "kind" or "sort"
of Yao he is, his answer may refer to the major
divisions as above, i.e. Macings or Mangoce
or it may refer to the clan-name. Clan-names are
inherited matrilineally, but holders of the same
name are unable to trace their descent from
a common ancestor. People with the same clan-
[582] names formerly did not marry but this prohibi-
tion has fallen away. For the commoners the
clan-name seems to have lost most of its signi-
ficance but it is carefully remembered in the royal
lines and lines in which the rank of a village head-
man is passed down.

643 The present Kawinga and the present Liwonde
551 can trace their descent matrilineally from a com-
175

643 551 175 [601]

mon ancestress. The first Kawinga and the first Liwonde were maternal brothers and to this day Kawinga and Liwonde call each other "brother". Nyambi however was a sister's son of an early leader Mkumba who was the father of Nkata, and their clan-name was *amlomi*. Nkata therefore called Nyambi "father".[8] Nkata was the first to move into Nyamland and Mkumba and Nyambi followed afterwards. Later the Nkata name was dropped and an Arabic name Zaroli, corrupted to Jalasi, was substituted. Hence the present Jalasi calls the present Nyambi "father". Kawinga and Liwonde both call Nyambi *alomu*, or brother-in-law, it is said because one of the early Nyambi's married a woman who bore the clan-name of *amlomu*.

643 175 648

The groups under Kawinga and Nkata entered Nyamland and gradually expanded until Jalasi, as he became known, dominated the area around Mount Mangoce in the present Fort Johnston District, and Kawinga, safely ensconced on Mount Chiuta, dominated most of the area north of this point. Jalasi, Kawinga and Liwonde were heavily defeated by British forces in 1895-6 and driven out of British Territory. Later on they were allowed to return after they had been ordered to surrender and effectively disarmed. When they had returned, the chiefs were virtually ignored and so far as can be ascertained the effect of the British government was to destroy the power of the chiefs and substitute the system of British administration for theirs. Nevertheless, it is apparent from entries in the District Book that even though it were not the official policy, the administering officers considered it important that the chiefs should maintain some power. Thus when Kawinga III died in August 1905 the District Book[9] records: "There were two claimants to the succession, Kambombo and Chiwale. Their claims were really very equal and H. M. Commissioner (April 1906) called in Kambombo and the more important headmen and decided the succession by their vote." The

return to the *lupanda*, where the initiates are welcomed by their friends. An essential part of the ceremony which takes place at this stage is the exhibition of animal shapes made by the *m'mizira*, with mounds of earth outlined in flour. These animal shapes differ from lodge to lodge. On the last night before the return to the village the initiates undergo a ceremonial bathing, each boy being carried to the stream by a woman, who thereafter is addressed as 'elder sister'. Finally, with new names, and freshly oiled and decorated, they march to the chief's village to be redeemed by him from the *m'mizira* with gifts of cloth. After initiation it is a deadly insult to call a boy by his child-name. All who pass through initiation together consider themselves bound by mutual obligations of hospitality.[1]

Girls' initiation takes place in three stages. First, there is *cipute*, the general initiation before puberty, which corresponds to the boys' *lupanda*. It takes place at the same time of year, and though it lasts for less than a week, its conclusion is celebrated at *lupanda* jointly with the conclusion of the boys' initiation. A hut is built in the bush, like the long dormitory of the boys, and four days are spent in dancing and singing. Each girl (aged about eight years) is accompanied by a sponsor, a woman friend who continues to be her mentor during subsequent rites, and who assists in giving the girl instruction in her womanly duties. At the end the girls are bathed and anointed, dressed in new clothes, and each is carried to *lupanda* by her sponsor. Here they prove their skill in dancing and receive gifts from their friends. Ritual defloration follows the *cipute* initiation.[2] Among Mohammedans, clitoridectomy used to be performed by a woman operator, but, it is said, was discontinued in about 1923 on account of the heavy mortality.[3]

After this first general celebration, first pregnancy and first birth are the occasions of separate rites for each girl. According to some informants there were once two ceremonies connected with pregnancy. One, for the young married men whose wives had not yet conceived, used to take place at the same time as *cipute*; each man was attended by a woman sponsor not his wife, given good advice, and put through various tests of manhood. Mitchell does not confirm the present existence of this ceremony, but in the old days if a man was betrothed or married to a child going through her *cipute* he had to accompany her.

The *kitimo* ceremony takes place when a young married woman quickens with child for the first time.[4] The woman, with her sponsor and the married women of the neighbourhood, went out in procession for a ceremony of singing and dancing and instruction to the young couple, followed by a feast. Nowadays no men are allowed to attend *kitimo*. A child born of a woman who had not undergone this rite used to be buried alive; nowadays her *anyone ndumba* is charged by the chief.

Finally, six days after the first child is born, its naming ceremony forms a last initiation rite for its mother. The husband is formally led into her hut by her sponsor and the married women of the neighbourhood, and the child is taken out for the first time to the accompaniment of feasting and dancing.

Most Tao men and women act as sponsors of initiates at least once, and all parti-

Pregnancy and childbirth. An event of the first importance in the Tao world is the first conception or rather the "quickening" with the first child, *Lilion*; this is described below, together with the other ceremonies of the *Dagaga*.[1] After the ceremony of *Lilion*, the period of waiting until the birth of the child passes without further event. A point of medical interest is that native women suffer in many cases from "morning sickness" during pregnancy. That they may have perverted appetites is also recognized, grain beads and cowrie being among the things most commonly desired. As the *Anyanja*,[2] the Tao believe that the child develops from the semen of the male, although the growth of the child is in some way connected with the mother.

When labor commences, the woman retires to the bush a few hundred yards away from her house, attended by some friend, seldom a midwife, and never by her own people, though the mother and the mother-in-law will probably be near the spot. If labor is not completed by evening, they return to the house and the birth may take place actually within its walls. The attitude assumed in labor is the same as that adopted by the *Anyanja*,[3] the patient semi-reclining in the arms of another woman who sits behind, grasping her belly. The vulva is smeared with a decoction made from the bark of the *mpoma* tree as a lubricant, but no other help is given. *Kondwi* is the name given to the place of confinement, a hut or house the house where the woman remains for a period after the confinement. The Tao recognize the possibility that a stillbirth, child and cord to the "elegant" (= "[illegible] child" (The elegant, her is broken!)." They wait until the placenta is delivered before dividing the cord. This is done with the sharp edge of the outer covering of a maize stalk or sugar cane; a knife is never used. The section is made near the placenta or half way between it and the child, after tying the proximal end with a bark string.

The woman who receives the child at birth is the *mdwanga*, friend or godmother. If the infant is born in the bush, she carries it back to the house whither they go as soon as labor is completed. The mother herself, unless she is very ill, goes out shortly afterwards and buries the placenta in the ash-heap, using a stick to dig the hole, cover a hoe.

After the birth, the mother and child must remain in the house until the umbilical cord separates, during which time the husband does not enter, though he may come to the door to look in at the child.

The day on which exit from the house is made, the floor is entirely replastered with mud. The baby's head is shaved and a cross is made upon it with *ngoma*, a kind of red pigment. The husband may then receive the child and in the case of a first-born, it is he who gives it its name; other children may be named by the *mdwanga*, the mother, or the maid.

When the mother leaves the house to appear in public, the *mdwanga* who put her (then *ma*) removes it.

So long as the infant remains in the house, care must be taken as to persons allowed to handle it. A woman who has recently had a menstrual period or relies with her husband,

[1] Vide infra, p. [illegible] [2] Sharman, op. cit., p. [illegible] [3] Ibid. [4] Vide infra, p. [illegible]

against all evils — windstorm, attack by foes, etc. The elements then set about building 581
shelters in which the well will remain during their term of instruction. According to the
number of the well as the number of places where shelters are built may vary from one, two,
or three, to as many as eight. Each of these places is called *Ilikpale*. They may be many [34]
miles apart and are so placed for the convenience of the mothers in various groups of villages
who bring the food daily to the group of boys from those villages.

The boys when they originally left the village were wearing a large bark-cloth covering,
with beads and collars, which latter articles have been taken by the *n'wichile* and his as-
sistants. At *Ilikpale* they wear simply a loin-cloth of bark.

During their stay at *Ilikpale*, the well are given animal names by the elements who [553]
carry on the instruction of the boys until their return to *Lapende*, the *n'wichile* having
gone back to his village immediately after the circumcision. The names given to the boys [551]
are commonly names of beasts of prey such as *Alikale* (*Alikale* = the jackal), *Ashiwerik*
(*Ashiwerik* = the leopard), etc.

Certain restrictions as to diet are laid upon the well by the *n'wichile*, e.g. no meat of 88
an animal killed by a beast of prey, no mudfish, *Ilumbale*. He will not allow any villager
the whole *Ilikpale* affair [illegible] and visitors may only be men who have been through the
ceremony. An uninitiated man is called *ubulale*, one who has not been to his *Uyaya*.

Other restrictions as to foodstuffs may be made by the elements, generally in connection
with the mythical origin of such food substances. A finger-shaped yam called *Ipata* is
taboo, as it is said to have first sprung from the grave of a leper, the inference being obvious.
After the *Uyaya*, the boys have to undergo a special dressing before they may partake of
them. Bananas and rice are absolutely refused them, the latter on account of a story to the
effect that rice grew from the scattered of a dead man, the idea doubtless having relation to
the resemblance of rice grains to maggots. Fish is denied them by some members of com- [325]
munities, as it is said to have originated from the diaper of a woman which she threw away
while bathing.

Each *n'wichile* may have special observances of his own. One near Ilemba caused all
manners to be roasted in a certain way. Rows of pieces of manners were placed in split
bamboos split and so roasted before the fire in the manner of fish. If roasted in the ordinary [252]
way, the manners would split and show the white floury material inside, signified by the
n'wichile to *Ingala*. If this is seen by the well, it is said that the prospected wound would respire.

The length of time spent at *Ilikpale* varies from four weeks to as long as three or four 631
months. In the first place they must wait till the circumcision wounds of all are cole-
pletely healed. Delay may be occasioned by complications having arisen in some cases.
Again, permission to return may be withheld by the chief for some reason or other.
Should one of the well die at *Ilikpale*, the body is buried out in the bush and nothing [764]
is said to the parents until after the ceremonies are over and all have returned to the
village.

3:Stanner D-5 (on. 1912) 1952 F77 Yao F77

881 While the *wali* then march solemnly along shaking their wands, the *ambuzu* begin singing:

"Ee *wanaye* *ambiwe*"
"To the gate they have shut!"

[53] [534] to which the *wali* reply:

"*Ewowo* *kwakupita*"
"There is no place where to pass!"

The *m'wisikile* remains at *Lupanda* till everyone else has left; he then sets fire to the shelters and leaving without looking back, runs to overtake the procession and then leads it on towards the village still at a slow pace, while all around is a yelling crowd of delighted mothers and other relatives and the *ambuzu* and drummers, all singing and dancing.

When the outskirts of the village are reached, the *m'wisikile* halts and waits for the *chief* to come out and give them permission to enter. The *chief* brings *mlimo* which unrolled on the ground measures the length of the procession of *wali*. Headed now by their leader, the *wali* walk over this *mlimo*, while the *ambuzu* roll it up behind them for the *m'wisikile*, as it is part of his payment. Flour may be brought him at the same time, carried by the *chief's* wives.

At an *Unyago* I witnessed at *Kwimwanat'a*, the halt was called on the brink of a stream at the edge of the village where a bamboo arch had been erected. The arrival of Chief *Malenya* at this point with *mlimo* and flour was the sign for a demonstration by his young men who ran forward as if in battle, firing off blank rounds from old Tower muskets and executing a kind of war dance.

After the *mlimo* has been handed over, the *chief* returns to his *kraal* and the procession continues into the village, across the village open space to the huts round the *chief's* house. There, the *wali* enter by a gateway and disperse over the courtyard where they find [771] their sleeping-mats laid out ready for them by their mothers. The *m'wisikile* lays his "tail" on the leader's mat to bring good luck thereafterwards. With *Mlomale*, there is no further part for the *wali*, but in some cases they are called upon by the *chief* to give an exhibition of their dancing and drumming. The *wali* sleep that night in the *kraal* and disperse the following day.

In the morning, the *m'wisikile* takes his "tail" and a stirring stick made from a *mlimo* stalk with the roots on it, and strikes the ground at points in a row in front of the *chief's* house. Here the pots of beer which have been prepared are placed in rows, those shown [273] by the *chief* and those shown by the *m'wisikile*, and drinking commences. The *m'wisikile*, before he joins in, takes the *wali* to an *ash-heap* in the village and there sprinkles them with medicine from a grain-mortar after which they go with their shamed behind a house and [574] change into new clothes. They then go and salute the *chief* by clapping their hands and depart to their villages, duly initiated and somewhat subdued by what they have been through. Their new names as "*nsoy*" may be given them by the shamed *ulilwe* at *Lupanda* [553] or after the return to the village.

believe that she will die. The man's representatives are therefore able to establish the child's paternity from the birth-pang confessions of the woman.

The child is kept in the hut where it was born, for six or seven days, while the umbilical cord dries and falls off. During this time (but) the child is unnamed, and it is named only when it is taken out of the hut. Should it die during this period of seclusion it remains unnamed and is referred to by a special term (*ilopo*, pl. *matopo*). I have therefore been able to enumerate live births by means of the distinction made between miscarriages and still-births (*kwanga*) and children who lived long enough to be referred to as *matopo*. After the birth of the child the woman may not have intercourse for four or five months. To do so would be to endanger the life of the child with a disease called *mdoka*,* which is contracted by a sexually inactive person when he comes into contact with a sexually active person. The husband may have intercourse with a second wife, but must take care to medicate himself so that he does not endanger the life of his child. When the child is about 4 or 5 months of age the parents perform ritual intercourse and medicate the child against the mystical dangers of sexual activity; sexual relations are then resumed.

The Yao say that a second child should not be born while the first is still being suckled. Since lactation continues for about two years I am uncertain whether monogynists remain continent, as they say they do, or whether *coitus interruptus* is practised. It is quite usual for husbands to become labour migrants when their children are still very young. I have known women to write to their husbands who are away working and tell them to return because their children have 'grown', i.e. have been weaned. Labour recruiters had difficulty in recruiting men immediately after the soldiers had been demobilized at the end of the war, because the women objected, saying that they had remained childless long enough and the men must first wait until children were born. However, actual examination of birth-dates shows that children are sometimes born within a year of one another and sometimes there are quite big gaps. The two-year gap between children is probably an ideal which few attain.

5. The Estimation of Fertility

(a) *Sundberg's Age Divisions*

As a preliminary estimate of fertility, Sundberg's trichotomy of ages may be considered. The argument behind this division of the population into Youth, Middle Age, and Old Age is that those populations with a high proportion of youth have a greater tendency to increase. Table V shows this trichotomy for the Yao with the same material for some other populations shown for comparison. Where the gross reproduction-rate is known for the period shown in the table, this is included.

At any one time a certain proportion of the population is absent from the area, usually at some labour centre. Hence the proportions of the population are distributed abnormally. In all there appeared to be a total of sixty-three men, women, and children absent from the hamlets, who would otherwise have been living there. Hence in Table V these have been included in the totals in the 'Yao with absentees' proportions.

* A disease of this sort is believed to by many Central African tribes. Among the Nyanja-speaking peoples it is known as *ciwalo*.

1: Tew E-4 (no date) 1950 FT7 Yao FT7

appointed also in the question by the marriage witness. The couple are referred to 585
elder disputes to the matter, and to consult the diviner in case of sickness.[1] After the
rite these two matrons have special responsibilities towards the couple; grievances
are referred to them, and they must be present when adultery cases are heard in
court. If the marriage witness ceremony has not been performed, the relationship is
not regarded as legal and no adultery compensation can be claimed by the husband.

Divorce used to be a private affair, which was merely signalled by one party giving 586
to the other an arrow as a token of separation.[2] Nowadays all divorce cases go to court.
The woman is usually asked to choose between her husband and the adulterer, and
the compensation paid to the former, if she decides to leave him, is higher—amounting
to about ten. A man can be sent away from the village by his wife's kin, but if he
has given no grounds for divorce he can claim compensation and will also take back
any gifts made to his wife. A few small gifts to his mother-in-law are not reclaimed.
Divorces are easily obtained and frequent. Grounds for the divorce of a man may
include failure to pay hut tax, one of the specific duties of the husband.

The custom of making a marriage payment is recorded by Johnston[3] (on the east 583
coast of Lake Nyasa) as a relatively new adoption. When given it is divided between 177
the bride's father, mother, and mother's brother and brother.[4]

Slavery

Domestic slavery was an important institution in the Yao social system. Slaves were 587
obtained by capture, purchase, or in compensation for injury.[5] A man would pay a
debt by giving slaves (wives or members of his matrilineal kin group) to his creditors.[6]
A man might voluntarily enslave himself to a man having charge of many women, as
a means of obtaining a wife.[7] The children of a free man and a slave woman were not
emancipated, as their father could not take them from the village of their mother's
master, who had the right to sell them.[8] Slaves took part in the ordinary life of the
village; women slaves ranked as junior wives of their masters and shared the usual
work of women. Men might be supplied with guns for hunting or might accompany
their masters to war, trade for them, spin, weave, sew, make baskets.[9] The institution
of domestic slavery was an expression of a dominant motif in Yao culture—the association 589
of status with a large number of dependents. Its abolition by the British was in
itself a major blow to the prestige and authority of the chiefs.

Information about the social organization of the Yao in Portuguese East Africa is 184
scanty, but it is in agreement with what is known of the Nyasaland Yao; Heckel, who 602
knew the Yao in Lindi district, Tanganyika Territory, confirms the correctness of
Stannus's account of the South Nyasa Yao.

The Yao came into Nyasaland in small parties of kinsmen. Their experience and 175
their superior weapons were enabled them to dominate the Nyanja among whom they
settled, and today they dominate the population of the Southern Province. They are
organized into loose groups of villages, under petty, independent chiefs. They were

never to have had any large-scale central political organization, and their history is full of occasions when one group of Yao has attacked another. Even within his own area the authority of the chief was not, apparently, sufficiently strong to prevent one village breakaway from raiding his neighbours; the chief maintained no standing army.[1] The chief held certain rights and privileges. He was entitled to the ground tusk of any elephant found in his territory (the finder was rewarded after it had been sold, with a cloth); he received tribute in food,[2] with which he entertained visitors. He took a share of the spoils of war and was also entitled to annual labour service and to a gift when he made a new burial place. Apart from his military and judicial responsibilities, he had authority to settle when and where initiation ceremonies should be held.[3] The right to hold these ceremonies was sought after by the village headmen as a mark of honour.[4] The chiefs or headmen of certain families had the right to wear a white cloth bound round their temples as insignia of rank.[5]

In addition the chief had a certain ritual status. He was thought to incur mystical danger by contact with death, and so was not allowed to attend a funeral nor to eat a chicken brought by a messenger announcing a death, nor to accompany his military expeditions. He was supposed to have great power through special medicines. He had to make offerings to the ancestors, especially in affairs concerning the whole people, such as drought or epidemic. He was expected to give a burial cloth at the death of an important man. At his death a period of social disorganization was recognized, members of his village were allowed to pillage and rape, until he was buried.

Succession to the chiefly office was matrilineal. The chief's position was based partly on his status as the senior male of his own matrilineal kin group, partly on his wealth. His command over slaves, guns, and carriers to the coast was greater than that of others, and from these his military strength was derived, for a chief was powerless without his following of dependants. The chief of the area was also headman of his own village. In fact, the position and duties of a village headman (except that he could not exact tribute)[6] reproduced in small scale those of the chief. The headmen also were in mystical danger through contact with death and were the channel through which the ancestors were approached in affairs concerning the village. They, too, built up their prestige and wealth by slaving activities. They seem to have been largely independent of the chief, carrying on slave raids of their own, and if they could gain a sufficient following, they might break away from the chief, and set up their own chieftaincy.[7]

The chief ruled through a hierarchy of headmen. His councillors were superior headmen, placed over a number of village headmen. Commoners could approach the chief only through the councillor in whose area their village belonged. The councillor's special duties were to report daily to the chief on the affairs of his district, to advise, and to adjudicate in the chief's own domestic affairs, e.g. in conflicts between the chief and his brothers and nephews. The councillors were not necessarily relatives of the chief,[8] but were chosen on account of their general status in the community, and their

Birth

Birth takes place in the bush, some distance from the hamlet, in the presence of female relatives of the woman and of her husband. If the child is stillborn, or miscarried, it is buried in the bush. The husband and wife must abstain from sexual intercourse for some months, until a special ritual intercourse is performed. A man who breaks this taboo is liable to contract a fatal disease, *kamanaya*. Difficult births are attributed to: (a) a curse spoken by a sacrificial relative—this is made effective by the intervention of the ancestors, and to remove it it is necessary to perform a rite making clear that no malice is borne; (b) the adultery of the woman or her husband, in which case confession will save the woman from dying; and (c) sorcery.

If a child is born alive it is brought to the hut of the mother or one of her female relatives, where it is secluded until its naming ceremony, about six days later. Only after the naming is the child considered to be a member of society. A second child should not be born while the first is still suckling, i.e. for about two years. When the child is about four or five months old it is ritually immunized against the dangers of sexual activity, and the parents may resume relations. Elaborate magical precautions are taken to ensure the child's survival. Children sleep with their mother, the boys until they are old enough to go to the boys' dormitory, and the girls until marriage.[1]

Initiation

The yearly initiation ceremonies, *unyago*, are the principal cultural institution of the Yao. That for the boys, *lipondo*, is the more important, and may only take place under a chief or superior village headman, whereas a girls' initiation ceremony may take place under an ordinary headman. The right to hold a boys' initiation ceremony therefore becomes a mark of status which is jealously disputed.[2] The right is expressed as 'having a *ciuli*'. A *ciuli* is the small basket in which the special sacrificial flour is carried.

Yao carry out initiation between the ages of seven and eleven, whereas generally in East Africa it is postponed until puberty.[3] In response to requests from the headmen the chief appoints the time and place of the boys' initiation ceremony for a group of villages. It is held at the end of the dry season, before the bush is burned. Each initiate is accompanied by a sponsor, *alumwai*, who may be a brother, uncle, or friend. Before they set out for the place appointed to be *lipondo*, they all assemble before the chief to be anointed with sulfur-flour specially prepared by his head wife. The word *lipondo* refers to a forked stick over which the sacrificial flour is poured. This stick is placed at the place of assembly, the *mandwa*. The boys, their sponsors, and the master of ceremonies, *ni'mwiru*, are accompanied with dancing so far as *mandwa* by their friends. The next day the initiates go to a spot in the bush, where the circumcision (formerly only an incision) is performed, and remain in the bush school, *uligula*, for about two months, until the wounds are completely healed. The Yao circumcision rite is said not to have been introduced by the Arabs.[4]

During these weeks the boys are subjected to rigorous discipline and instructed in various skills and tribal lore. They sleep in long dormitory huts, with partitions dividing the boys of different villages from each other. The chief appoints the day for

175 622 641 643 whatsoever. But a man often decamps by night taking with him many slaves belonging to his fellow-citizens; he then goes to some influential chief who may be only too glad to give the fugitive ground and to establish him as a sub-chief. Freemen who thus leave are deemed by their former chief, who welcomes every opportunity of shooting or capturing them.[1]

175 594 622 643 648 In this way village headmen, by increasing their following, increased their power against the chief. MacDonald records:

> When a person has acquired several villages, he becomes a higher headman, intermediate between the chief and the owner of a single village. Each headman lives in the village he likes best, and leaves his 'brothers' to manage his other villages. But a headman of great ambition often places his 'brothers' all around him, decides their cases, and practically governs a small kingdom of his own. If he lives far from his chief, one might suppose that he was quite independent. When a quarrel arises between the chief of the country and an important headman, the latter may rebel, and found a new kingdom, thus depriving the old chief perhaps of one-third of the villages in his dominion.[2]

MacDonald cites the case of Mkanda of Chiwalulu, who was at first a headman of Kubtpuma's but rebelled, and went to live on the southern side of the mountain.[3] He also observes that on the other hand, 'a headman may keep up his chief's authority in a district that the latter could not otherwise hold'.[4] Elsewhere he says:

> In and around his own village the chief of the country is a terrible power, and his government is supported by the most prompt and severe punishments. But in distant parts of his dominions, where influential headmen live, he may be little known, although as a matter of theory he is supposed to settle all graver disputes even in remote villages.[5]

175 643 The history of the Yao chieftaincies in MacDonald's time, and as told to me by my informants, is that of constant division into independent chieftaincies. In the Zulu and Bemba polities a strong state structure included a pattern of civil war and the main-

crop failures. Also I was told that important village headmen are buried with their heads pointing to the east.

The Yao concept of the past is reflected in the principles of political organization of these Machinga chiefdoms. The invasion is the datum point from which rank mainly stems. We may classify modern headmen into: those who were in the area before the Yao invasion, i.e. the Aborigines; the Invaders; and those who have come in since the invasion and have had to submit themselves to the Machinga chief, i.e. the Newcomers. The principle behind this classification of headmen is fundamental to Yao political structure. Stated most simply it is the rule that MacDonald quoted in describing the development of local organization: 'However large the settlement may become the man that is first in is the chief or headman.'[1] This is, of course, somewhat of a simplification, but the rule contains the essence of the principle. It was reversed for the Aboriginal Nyanja because the Yao subjugated them. But the claims of the Nyanja chiefs to rank because they had occupied the land first were recognized by the Yao who absorbed them into the social structure in positions of high rank.

But the principle holds among the Yao themselves, and for the Ngoni in their movements after the White conquest. The operation of the principle is clearest in the structure of small local areas such as Chiwalo's. When Chiwalo's area was first settled, just after World War I, there were large tracts of unoccupied land. The first headmen to move into this region were Cigwaja, Kapakoma, Nyanja, Makata and Mumbwa. The local chief Chiwalo followed Cigwaja, but as Cigwaja was one of the Invader headmen under Chiwalo during the period of invasion, he now recognized Chiwalo as the chief. The area that is now Chiwalo's chiefdom was divided out among these five headmen. As other headmen came into the area they had to approach one of these five for land rights. These, when granted, were granted irrevocably in a block to the new village headman who then had sole rights to distribute the land afterwards. If he had the land to spare, he may have granted a portion of it to yet another village headman, and this action was also irrevocable. The land occupation pattern in any particular area is therefore extremely complex, because in addition to the village garden areas, indivi-

[1] MacDonald, *Africana*, i, 147. See p. 23 above.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

dials may hold garden plots in other village areas which they have temporarily borrowed in a private arrangement with the individual owner. But when the system is seen in relation to the pattern of occupation of the area, it is greatly simplified. Each garden may be traced back to the original owner through three or four village headmen. The pattern of the reversion of rights follows the same system. The garden land of a village which has recently moved in and is moving out again reverts directly to the village headman who granted it. If he has moved out it reverts back to the village headman from whom it was in turn acquired.[1] These original landholders form the central points of locally organized areas to-day. For example, in Chiwalo's area there is Chiwalo at the top of the scale, then there are Kapalema, Cigwija, Mumbwa, Makata and Nyanje as the most important village headmen, and they take precedence over any of the other village headmen. All the others who have come into the area since then, of whom many are Ngoni, rank very much lower.

From the smallest village to the chiefdom as a whole, therefore, there is a series of overlapping areas of organization. In any particular area chosen at random in a chiefdom as large as, say, Kawinga's, there will probably be two or three small villages which recognize the primacy of one of their number. The headman of this village may be called in to arbitrate in disputes over land or personal quarrels or even in the private consultations held after the death of a village member (*mapete*). But the superior headman in turn recognizes *his* superior who was in the area before him. This system is extended over larger and larger areas, each headman in turn recognizing some other headman who was in the area before him, until ultimately the primacy of the invader chief over all his headmen is established by the same principle. There is no clear-cut district organization as among the Zulu and Bemba.[2]

[1] See also "Preliminary Notes on Land Tenure and Agriculture among the Machinga Yao", *Human Problems*, 2 (1950), 1–13. This system of land-holding has been called "secure of holding" by Gluckman. See his *Essays on Lozi Land and Royal Property*, Rhodes-Livingstone Paper, No. 10 (Livingstone, 1943), p. 19 ff.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

These headmen who are the centres of local social structure are the higher headmen that MacDonald mentions.[1] Many of them to-day are the descendants of the traditional councillors (*ndona*) who were sent out to the extremities of the chiefdoms to be the outer governors in these areas.[2] Their villages are social centres in that many disputes are taken to these important headmen before they are taken to the Native Authority's court. For example, the dispute between the women of Nampeya and Cikuwira was taken to Ntilwilibwi.[3] The chief usually orders headmen to assemble at the villages of important headmen when he has directions to issue to them. Very frequently the Administrative officers camp there for the night on their tours and call the headmen in to them for conference. The placing of mosques at the villages of these important headmen also indicates their significance as social centres. Most Moslem villages have small mosques which the more devout use for the morning and evening prayers during Ramadan only. At the villages of important headmen larger mosques have been built and these are used for the midday prayers on Fridays (*jumu*), when most of the Moslems in each area assemble in their best clothes for communal prayers. Large brick mosques have been built at the court villages of Jalasi, Liwonde and Kawinga. There are other large mosques at the villages of chiefdoms such as Chiwalo, Chambo, Mpeta, and of important headmen such as Kangombo, Nyonje and many others. These chiefs and headmen were all lowaders and are, as I shall show later, almost by definition Moslems. They are also headmen of high rank so that the placing of the mosque, and the other features of local social structure, are largely derivatives of the system of ranking.

Rank therefore underlies the structure of local areas as well as the structure of the chiefdoms as whole. It is, as I show later, closely associated with the historical origin of the headmen. Yet the correlation is not perfect and I shall show that other factors tend to militate against the fixed historical ranking of headmen. Nevertheless, the principle of primacy is the most important single factor.

[1] See Chap. II, p. 56.
[2] See Chap. IV, pp. 90-5.
[3] See Chap. V, p. 130.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

their councillors at the courts. If they were relatives of the chief it is almost certain that he would have mentioned them. We may assume then that the true proportion of unrelated headmen among the Newcomers is, as we would expect, very much greater than among the Invaders. 622 643

Of the total of 424 Administrative villages there were ten in which I did not record the formal relationship to the chief. In Table IX I set out the proportions in these categories among the Administrative village headmen, and there is no radical difference between these proportions and those for all village headmen. 622 643 602

TABLE IX

PROPORTIONS OF RELATIVES AND NON-RELATIVES AMONG ADMINISTRATIVE HEADMEN*

	Chief's Relatives						Non-Relatives	Total
	Direct			Clan				
	Mat.	Pat.	Aff.	Mat.	Pat.	Aff.		
Invaders . .	18 (13·0)	23 (16·6)	6 (4·3)	24 (17·4)	12 (8·7)	9 (6·5)	46 (33·1)	138 (99·7%)
Newcomers .	6 (2·6)	8 (3·5)	12 (5·3)	40 (17·8)	22 (9·8)	18 (8·0)	95 (42·1)	225† (100·1%)
Total . .	38	31	18	64	34	27	141	363

$\alpha = 6$; $\phi = 30{\cdot}1$; $p = 0{\cdot}0001$.

* This table includes the 10 Aboriginals.

† Excludes 10 villages for which I have not recorded this information.

To summarize, we may characterize the Invaders as Yao, Moslems, and members of their chiefs by historical connections and kinship ties. The Newcomers and the Aboriginals on the other hand are of different tribes. They have more diverse religions, are not connected to the chiefs by kinship ties as closely as the Invaders are, and do not share with them the strong bond of being co-Invaders. It is in the struggle for prestige and rank that these bonds with the chiefs assume significance. 622 643 602 553 554

CHAPTER IV

PRESTIGE AND RANK AMONG THE VILLAGE HEADMEN

The Political Process as the Struggle of Headmen for Rank

622
S59

THUS far I have been describing the composition of the three categories of headmen: the Aborigines, the Invaders and the Newcomers. This classification is fundamental to the system of ranking among them, and is the most important single factor. But rank among village headmen is determined by other factors as well. We may summarize the most important of these thus:

A. *Rank from association with the chief.*
   1. Accompanied the chief during the Invasion.
   2. Kinship with the chief.
B. *Rank from opposition to the chief.*
   1. Prestige from another area.
   2. Large following.

The struggle of the headmen for power and prestige, both among themselves and against the chief, constitutes the political process. This is expressed mainly in the competition for various symbols of prestige. In this process, village headmen may use whatever connection with the chief they can, in order to gain his favour. They may use their direct kinship or clanship with him, or some more nebulous connection, such as the friendship of their fathers with him, or they may play upon the history of the association of their village with his ancestors in the invasion of the country. If they cannot exploit some link with the chief in their struggle for prestige, they may press their claims on the basis that their villages are large, and that if they are frustrated they may move their allegiance to another chief.

The historical fact of being of Invader stock is clearly a major determinant of rank. Invaders always have the advantage over the Newcomers because of their historical association with the chief. They are more closely bound to him: they participate

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

in the ritual of the chieftaincy more than Newcomers do; provide the chief's councillors; pay rain-levies and in other ways express their closer tie with him. But there is no rigid class structure based on tradition. All villages are liable to break up. If for any reason the village's internal cohesion begins to weaken, its members scatter and it disappears as a political entity. Invader as well as Newcomer villages may thus disintegrate. The smaller sections of an invader village which now set up villages of their own have to compete with the larger and more united villages of Newcomer origin. Another facet of the political process, therefore, is the continual competition of village headmen who are trying to maintain the unity of the villages under them, and to increase their following, so that their power against the chief and the other village headmen may be enhanced. 622 559

Marks of Rank

In the vernacular it is the *name* of the village which is said to be important.[1] This name is usually taken from the founder of the village and is assumed by a new village headman when he succeeds to the position: when a new village is founded the headman gives it his name to distinguish it from the parent village. But the importance that is ascribed to a name is clearly the importance of the corporate group which it represents. The headman is an incumbent of a social status, the prestige of which is drawn from the corporate group which he represents in his public dealings. 103 622 559

The prestige of village headmen is shown particularly in the degree of deference accorded to them by other village headmen. The headman with the highest prestige is of course the chief: the original leader of the Invaders. Below him may be ranked the rest of the village headmen in a relatively fixed pyramidal hierarchy, determined by a number of factors which I shall outline later. 559 622 643

The dress of important headmen is often an indicator of prestige but this criterion is not infallible nowadays when labour migrants, craftsmen and tobacco growers can afford to buy better clothes than many headmen. But it is usually a fairly safe guess that when a man carries a long stick and is dressed in long flowing 292 559 622

[1] *Lina lya Indungwa*—lit. "the name is great".

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

robes (a gown not unlike a woman's dressing-gown), wears a bright-coloured turban, and has one or two men walking behind him, he is a rather important village headman. One particular item of clothing in the Kawinga, Liwonde and Nyambi areas, is the scarlet headband which some village headmen may wear. I shall discuss this later in the context of the competition of village headmen for rank.

Another external characteristic of rank, which seems to have disappeared with the changing economic structure of Nyasaland, was the carrying of knives (*mbejo*) by important village headmen. Previously, status was indicated by the type and size of knife carried in public. The chief usually carried the largest and most ornate. The knife taken from Kawinga on his surrender in Portuguese East Africa was about 18 inches long and had a decorated ivory handle. Smaller knives of similar pattern belonged to his headmen.[1] Nowadays, many young commoners carry knives two or even three feet long, made from the broken blades of motor-car springs.

The right of important village headmen to build fences[2] at the back of their huts is also a mark of prestige which seems to have lost its significance. About 50 years ago only important headmen had the right to erect a fence at the back of their huts. This fence, made of tall grass about six feet high, enclosed the grain stores and other food supplies of the household and formed a private compound in which the headman's wife and slaves carried on their daily tasks.[3] It seems likely that private compounds and slavery were positively associated, so that only the important village headmen who had many slaves found it necessary to build fences. All chiefs and most important headmen to-day still erect these fences. Those who hold initiation rights are obliged to build them because, when the initiands return from the seclusion phase of the initiation ceremony, they are supposed to spend one night in the headman's private compound before going back to their villages. But nowadays, minor village headmen and commoners also frequently build these

[1] See fn. 4, Chap. II, p. 38.

[2] *Lamula*, pl. *malamula*. The enclosed space or 'compound' is *chalamula*. Typical hut compounds are depicted on Plate IX (*a*) and (*b*), facing p. 108.

[3] MacDonald suggests that the common term *bwanu* for woman is derived from the *ubwanu bwapa*—on the other side (of the fence).

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

compounds, especially in areas where there are man-eating lions,[1] so that it is no longer an infallible indicator of the hut-owner's rank.

Minor village headmen always allow their superiors to sit on a chair. If village headmen of commensurate status are present, chairs may be sought for them all. But a minor village headman never occupies a chair, even if one is available, in the presence of his superior. At a meeting, for example, a chief occupies a chair and so may his most important *ndona* or councillor. The more important headmen sit alone on separate mats, for a man only shares a mat with his equals, and then only rarely. Junior headmen, however many there are, have to try to squeeze themselves on to one mat or squat on the ground.

Important headmen also have the right of walking in front of their juniors. If there are three or four headmen returning from, say, a court case, they arrange themselves in the pathway in an order which reflects their rank. As they file down the narrow field path the leader is the most senior among the group. After him come the other headmen and last of all the commoners. This order of precedence is also followed when initiands pass through the tribal initiation ceremonies. The sisters' sons and other matrilineal descendants of important headmen precede those of the less important headmen. At Chiwaulo's hut also, I have noticed that the more important headmen sit under the verandah while listening to private cases. The less important headmen sit with the commoners under a shelter or out in the sun.

I have been discussing the visible marks of prestige. But high rank also tends to carry with it some other privileges which are not immediately observable. The most obvious is Government recognition. I have already mentioned that under the 1912 Ordinance, village headmen were recognized by the Administration. These Administrative village headmen, who had certain duties to perform, were paid a small salary and were in earlier days given a "book" in which the tax payments could be recorded. To-day, the Yao still describe Government recognition as "having a book". Administrative village headmen derived more benefit from Government recognition than merely an

[1] The lions in Plate IX (*a*) and (*b*) are in Nsanowa area where there are man-eating lions. Most huts have compounds. A large proportion of huts in areas where there are no lions also have compounds.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

(22, 559, 69) ancestry. This recognition publicly announced their superior status, because not all headmen could be Administrative headmen. We do not know exactly how the Administrative headmen were appointed when the Ordinance was introduced. The observable results, however, are that no headman, so far as I am aware, who was of superior status in the indigenous ranking system, is not an Administrative headman to-day. Being an Administrative headman is then in itself an indicator of rank.

(22, 559, 69, 95, 71, 88) Rather more important than this is the right to hold initiation ceremonies. MacDonald says that these rights were held by the chief only, but it is not clear whether the word "chief" used here refers to the village headman or the "chief of the land". Nowadays, the rights are held by village headmen as well as the chief. The right to hold initiation ceremonies is signified by the possession of a small flat basket (*ziele*) in which the ceremonial flour for the ceremonies is carried. When a chief grants a *ziele* or ceremonial basket to a village headman, what in fact he does is to grant him permission to approach the spirits of his ancestors. The headman uses the basket on three occasions during the initiation ceremonies. First, before the ceremony is announced he pours a little cone of sorghum meal at the root of a special tree in or near the village. This tree is known as the *mala*, or the divine-tree where all offerings to the ancestors are made. While he works the flour through his fingers to allow it to fall in a cone, he calls on his ancestral spirits and asks them to intercede on his behalf with the spirits of the chief's ancestors. He then formally requests permission to hold the initiation ceremony. This cone is left intact through the night. Should it collapse the interpretation is that the spirits are not willing that the ceremony should take place and it is postponed for some days. Offerings are made until eventually the cone, by remaining intact through the night, indicates that all is propitious for the ceremony to be conducted. The second occasion when the ceremonial (22, 559, 69, 95, 81) basket is used is when the village headman or chief goes down to the grass shade where the rites of segregation and aggregation take place. Here he pours flour over a twig and begs the safe conduct of the initiands through this physically and mystically dangerous period. Third, each individual initiand, and his or her mother, is touched on the forehead and forearm with the flour on the evening that the initiands leave for the grass shade. During

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

the last rite the owner of the oblational basket exacts a payment of threepence or so from each parent. The headman does gain financially from the initiation ceremony, but it would be wrong to imagine that this is the only reason why he should want to have the right to hold it. The competition for the rights, which are limited to a few, is part of the general political process whereby village headmen compete for privileges and advantages over their fellows.

Village headmen may hold either the boys' or the girls' initiation ceremonies, or both. Sometimes, when they hold both, they delegate the girls' ceremony to a younger brother or some other relative without referring to the chief. For example, Kawinga's clan relative and important retainer, Ngalawanga, had the rights to both initiation ceremonies, and he allowed his perpetual 'son' Isa' to hold the girls'. Also in Nyambi area, Mpaja, who had both initiation rights, allowed his perpetual 'son' Nantanga to have the girls' ceremony. It is generally conceded that the right to hold the boys' initiation ceremonies is more valuable than the right to hold the girls'. H. L. Duff, writing in 1906, had also noticed this when he wrote:

> The respective ceremonies seem to be considered as on a somewhat different footing, for the boys' *isyapo* can properly be held only in the village and under the patronage of, so to say, the paramount chief of the neighbourhood, whereas the girls' initiation may take place under the auspices of an inferior headman. This distinction is still jealously observed and any breach of the chief's privileges is apt to lead to bitter dispute.[2]

The sanction the chief holds over the headmen in this respect is mystical. A village headman believes that the initiation will be a success (that is, that the initiands will be free from the harm of wild beasts and illness, or the circumcision wounds of the boys will heal quickly and well), only if the approval of the chief's ancestors is obtained. He cannot hold the initiation ceremonies, unless he has obtained the basket from the chief.

Most people still follow tribal initiation customs, but in the extremes of the area in which I worked, religious ideas are bringing about a change. In the north in Jalasi's area where Islam

[1] The first his was the son of Ngalawanga and this relationship is preserved by the modern incumbents of the headmanship. See Chap. V, p. 110.

[2] Duff, H. L., *Nyasaland under the Foreign Office* (London, 1906), 310.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

961 178 795 633 594 is most powerful, there is a tendency for the Islamic initiation ceremony for boys, *jando*, and the Islamic initiation ceremony for girls, *unyago*, to displace the tribal equivalents, *lupande* and *ciputu*. These Moslem initiations are conducted by Moslem teachers (*mwalimu*) and are not controlled by the chief. Though it also involves the circumcision of the boys, *jando* is very much shorter and the boys are secluded for only a week. Some say it is becoming more popular because it is less expensive for the boys' parents. In Chiwale's area the two ceremonies are run concurrently. The boys and girls go through the normal segregation rites at the beginning of the ceremony, but an *mwalimu* circumcises the boys according to Islamic practice. At the aggregation rites at the end of the period of seclusion, the star and crescent appears as one of the symbols along with the whale (*nyangumi*), antelope (*nkalapi*), leopard (*ziwawi*), and the other tribal effigies which are shown to the boys. Christianity in the south has had a similar effect. The Missions actively discouraged initiation ceremonies in the past. Many of the people in Mpona's and Malemia's area have dropped the custom, or have integrated prayers and other parts of Christian ritual into the ceremonies, though circumcision is steadfastly retained. The effect of these changes is that the important ritual control the chief had over the ceremony has been undermined, and so the prestige attached to it has also begun to fade in these areas. What I describe about the prestige of village headmen and the rights they have to initiation ceremonies is only partially true, and is falling away daily. The correlation I seek to establish is also disturbed by the fact that among the Ngoni there is a slightly different initiation ceremony (*chinkolo*) for boys. Most Ngoni send their boys to the Yao initiations but there are still some who hold their own traditional ceremonies. These are not within the mystical control of the chief so that some Ngoni headmen are outside the competition for the initiation rights. I should say, however, that most compete with the Yao for Yao initiation rights so that this factor is not as disturbing as appears at first sight. In addition, village headmen who move into a new area usually must obtain the permission of the chief before they may use the initiation rights they hold before coming into the area.

622 999 576 There are other indicators of the general high rank of village headmen. Junior headmen, like commoners, must give a special

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

Arabic greeting to their seniors. This is done by placing the left hand on the chest and bending slightly forward to the village headman, saying, '*Sokoye*'. The senior should then respond '*Aloye*'. Also, important headmen are usually buried in the centre of the village, not in the common graveyard. The tomb of an important headman or personage, usually built of stones, concrete or brick, is called *nsat*. The right to bury in the village must be obtained from the chief 'because the land is his', and in Kawinga's area a fee of 6s. must be paid to him.

The Struggle for Government Recognition

Thus far, I have been discussing the ways in which the rank of village headmen may be expressed. I now describe the way in which these marks of prestige are associated in the three categories of headmen we have distinguished, and in what way the competition between them is phrased. I have already described how all the chiefs in the area to which I am referring are all successors of the original leaders of the invasions, and are usually the present Government representatives as Native Authorities.

The people must recognize the rank of chief because mystical beliefs prescribe activities in one direction, and because the limiting structure of the White Administration does so in another. A village headman cannot hold initiation ceremonies without the permission of the chief because of the mystical sanction, but the chief also has legal authority over his subject headmen. He as Native Authority is recognized by the Government and is its representative to his people. The Native Authority Ordinance (1951) specifically imposes penalties on those who do not recognize the authority of the chief. Under Section 12 of the Ordinance, the Native Authority may arrest without warrant any person who is accused of failing to obey his order or direction, interfere with his lawful duties, pretends to be a chief or assumes the duties of a chief without Government approval. Under Section 13(1) severe penalties are imposed on any person who conspires against or in any way attempts to undermine the lawful power and authority of any chief or Native Authority. His position is therefore greatly strengthened against the village headmen and I have been told of one or two prosecutions by chiefs under this section. Nowadays, the mere threat of

2: Mitchell E-5 (1946-1949) 1956 F77 Yao F77

632 643 ●539 698 action under this Ordinance is sufficient to cow his opponents. Therefore, the chief may also control the rise to power of his headmen because he is a Government official. At the same time a village headman may not move away to form a chieftaincy of his own: should he migrate with his followers nowadays, he will always find himself under a White system of Administration which upholds some other chief against him. The rank system must operate within a circumscribed framework and in reference to the chiefs.

632 539 698 I have already mentioned that being an Administrative village headman is a mark of prestige. Most of the struggle for rank revolves around this axis. Under the 1912 Ordinance, village headmen were only recognized if they had at least 20 taxable huts under them and they were paid a small annuity proportionate to the number of their taxable huts.[1] Before a headman could be recognized, therefore, he had to gather around him at least 20 tax-payers. After a headman had been recognized, the more villagers he could attract the higher his annuity. This situation is one with which the Yao headmen were long familiar. It is indeed the same process that went on before the Whites came, and that was outlined so clearly by Duff MacDonald, except that it is now cast in slightly different form. In consonance with the new money economy, superior status, marked by more dependants, brings a higher financial reward. But it would be false to imagine that the prospect of financial gain is the only spur to a village headman's attempts to enlarge his following. A headman of a large village as such, is still a 'big' village headman.

632 643 539 698 A headman who has sufficient followers to enable him to press a claim for a 'book' goes to the chief for it. The chief considers the merits of the case, but is unwilling to grant too many 'books' in his area. If he supports the claim the matter is referred to the District Commissioner, who considers the application, not in terms of the indigenous struggle for rank, but in terms of general Administrative considerations, such as finance,

[1] A definite rate of remuneration was fixed in 1918: it was computed at 10s. for every 300 taxes. See Murray, *Handbook*, 140. Under the 1923 Ordinance the remuneration was fixed at 2d. per Government tax of 6s. to a village headman and 3d. per 6s. to a Native Authority. *Report on Native Affairs for the Year Ended 31st December 1932*, Government Printer (Zomba, 1934), p. 5.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

and the case of administering groups with centralized authority. If he agrees, the necessary alteration is made in the tax-registers, and the new Administrative headman is paid his annuity and is called up by the District Commissioner whenever he holds a meeting. To the District Commissioner the chiefdom is made up of the villages on the tax-register, and in a situation of political importance he calls on the headmen of those villages for decisions. For example, when a chief was being installed, the District Commissioner called each Administrative headman forward and asked him whether he agreed to the succession. When the District Commissioner wishes to discuss any matter with a villager he calls forward the Administrative headman. The position of village headmen in the political structure becomes more effective after they have been recognized by Government. 622 643 554 648

I have no accurate measure of the proportion of all village headmen who are recognized by Government. From my records the percentage of Administrative village headmen out of the total of recognized village headmen is: 622 648 554

	No. Admin. Villages	% of Total recognized
Kawinga	160	84
Liwonde	104	71
Mpona	30	48
Chikweo	48	41
Ngokwe	22	40
Chambo	62	39

I have full records for the smaller chiefdoms, Mpona, Chikweo, Ngokwe and Chambo, but I know for certain that the figures for Kawinga and Liwonde are incomplete. My fullest and most reliable records are for Ngokwe and Chikweo, so that we may estimate roughly that less than half of the village headmen are Administrative village headmen.

Naturally the village headman, whose taxable population will be reduced by the granting of a new 'book', opposes this in the same way as his ancestor opposed the emigration of his village members in pre-White days. In 1947, in Jalasi's area for example, there was an argument hinging on this. 622 554 691

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

622 554 691 Mlima was a village headman of long standing and had been recognized as an Administrative headman. Ngwaya was a headman who had come to settle under Mlima.[1] After some years Ngwaya felt that because he had his own village he should be given a 'book' and receive money from the Government. Mlima however resisted the claim, saying that his 'book' had been given to him by Jalasi. Both went to Jalasi's court so that the difference could be resolved. Jalasi rejected Ngwaya's claim and upbraided him for being recalcitrant. Ngwaya was fined 9s. and ordered to pay £1 to Mlima in compensation.

622 554 643 691 A rather more complex case brings out the position of the chief, the Administration and the conflict of the prestige-giving principles of historical primacy and White recognition.

In 1948, an Administrative village headman, Kalonga, from Nyambi's area, decided to migrate down to the more fertile land along the banks of the Shire River. This land was in Jalasi's area, and it was partially occupied by a minor village headman called Malilo. Kalonga had already selected his site for the village when Malilo came up to him and told him that he was the first in that area and that Kalonga should have asked him to indicate a building site. Kalonga, on the other hand, pointed out that he was an Administrative headman and that Malilo was not, and there the matter rested. In time Kalonga, because of his official position, became better known than Malilo. Malilo was jealous of this prestige and in due course went to Jalasi and complained that Kalonga was 'getting too big for his boots'[2] and that he was only a Newcomer into that area. Jalasi sent for Kalonga.

At the dispute in front of the chief, Malilo reiterated his complaint. Kalonga merely pointed out that Malilo was jealous of his 'book'. Jalasi dismissed the case reminding the two headmen that it was he who was chief of the country. Shortly after this, Kalonga went to Jalasi alone and told him that Malilo had told him that he, Jalasi, was no chief because he should have taken the 'book' and given it to Malilo. Jalasi said, 'It is impossible to change over the "books" which are written by the Whites', and then sent a messenger to bring Malilo to court. When he came he denied the tale and said that as far as he knew the only reason for Kalonga's animosity could be that he had refused to give him the *mbaye* greeting. Jalasi informed both headmen that they were to be independent of each other. Malilo

[1] *Kwakulipatika*—lit. one who had made himself a slave.

[2] *Kalikwerya*—reflexive causative of the verb *kukwela*, to climb, i.e. to cause oneself to climb or to exalt one's status.

2: Mitchell E-5 (1946-1949) 1956 FT7 Tao FT7

was to report strangers coming into his village area independently of Kalonga. Nowadays, there is much tension between the two headmen and they summon each other to court on the slightest pretext. The peace is kept only by order of Jalasi. On the whole, however, it is Kalonga who has the higher status and superior prestige.

Unfortunately I have no figures to show how large a village becomes before its headman applies for Government recognition. The average number of tax-payers under village headmen who have just been granted 'books' might have provided this information, but I was unable to collect it. Formerly, they could become Administrative headmen only if they had more than 20 tax-payers under them. Nowadays, however, owing to differential fertility and the reduction in size of villages because of internal dissension, many of the Administrative villages (22 per cent) are smaller than the 20 tax-payer limit. They, however, retain their 'books'. I know that often within the Administrative villages of important headmen or chiefs, there are contained some minor villages bigger than some Administrative villages which are farther away. For example, in Chiwalo's own Administrative village, I know that the villages of Selemani, Ali Kasoka and Ntapasia are larger than many Administrative villages. It is not only the size of the village which allows a headman to apply for a 'book'. It is his relative status in the community. Men of higher rank than Selemani, Ali Kasoka and Ntapasia could probably approach Chiwalo and ask him for a 'book'. But these three are Newcomers. Selemani was a refugee from the Portuguese wars and went to live in Mlumbe area in Zomba district. He came to Chiwalo's area in about 1930. Ali Kasoka moved in about 1940. Ntapasia came about 1921. But they dare not approach Chiwalo himself to ask for a 'book'. Here Chiwalo's rôle of chief is compounded with his rôle of Administrative village headman so that they would be asking Chiwalo voluntarily to reduce the size of his Administrative village. It is only when their villages become conspicuously large that headmen may begin to force the chief's hand. They have always one sanction they can bring to bear on the chief—they can threaten to move out of his area into another chiefdom. The chief may not retain any of his subjects by force. If they express a wish to live in another chiefdom he cannot stop them. On the other hand, useful as this weapon

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

is when it is used by an Administrative village headman, as I shall illustrate later, it will not serve a minor village headman much to move out of one chiefdom to another if his object is to become recognized as an Administrative village headman. If he goes to another chiefdom he is automatically regarded as one of the most junior of the headmen. If he goes to another chiefdom as an Administrative village headman already, he takes with him his 'book' and to some extent the rank associated with it.

The size of Administrative villages as measured by the number of tax-payers in them is about equal in all three categories of village headmen. Table X sets out the distribution. The

Administrative villages of the Aborigines, mostly Nyanja, appear to be rather smaller than those of the Invaders and Newcomers.

2: Mitchell E-5 (1946-1949) 1956 FT7 Tao FT7

Administrative headmen than either Christian or Pagan. The chiefs, of course, are all Moslem.

Lastly, the same trend is seen among those headmen who are of the same tribe as the chief, against those who are of other tribes (Table XIV). Here, however, the difference is so small

TABLE XIV

PROPORTION OF ADMINISTRATIVE HEADMEN AMONG ALL VILLAGE HEADMEN OF THE SAME TRIBE AS, OR DIFFERENT TRIBE FROM, THE CHIEF IN CHEWEO, NDEWEO, CHAMBA AND MOMBA AREAS

that it may easily have arisen by chance. These factors, however, do not operate independently. There are more co-tribesmen, co-religionists and relatives of the chief among the headmen than among the other categories. In other words, the factors are all intercorrelated and it is possible to consider any particular factor as the independent variable. From the point of view of the people themselves, to be an headman is to have one of the best claims on the chief to become an Administrative headman.

THE SIGNIFICANCE OF THE SCARLET HEADBAND

Government recognition therefore provides the means whereby headmen are ranked in two major categories. But Administrative village headmen themselves are ranked by a number of prestige-indicating characteristics. The most important of these are the right to wear a plain scarlet headband and the right to hold boys' and girls' initiation ceremonies.

Of these two additional marks of rank the more important is the right to wear the scarlet headband. This headband is wrapped round the head, turban fashion. Most village headmen wear a headband of some sort, either of white or coloured cloth,

2: Mitchell E-5 (1946-1949) 1956 FTT Two FTT

(22) SSN 262. while most commoners do not. In Kawinga-Liwonde area, village headmen of high rank are entitled to wear a plain scarlet headband (*ulangali*). One informant suggested to me that the plain scarlet stands for blood, i.e. it indicates one of the most important elements in rank to-day—warrior ancestry. I do not know that this opinion is well supported. Among the 424 village headmen I enquired about, 24 or 5·7 per cent were entitled to this mark of honour. Of these, three were Aboriginal Nyanja headmen, 17 were Invaders, and only four were Newcomers. Of the four Newcomers, one had the right to hold it before he had come to the area from Portuguese East Africa and that was before the White conquest; one living in Chandie's area had brought it from Liwonde's area where he had been given the right to wear it; and the other two were in Chikwero's area and were given the right by the present Chikwero. The three Aborigines who wear the scarlet headbands are Kanombe in Kawinga's area, and Mbera and Mbunde in Mpone's area. All these are settled around the shores of Lake Shirwa and they are said to have been the original Nyanja chiefs in this area when the Yao invaded. These chiefs also have boys' and girls' initiation rights. The rank they hold in their own tribal communities is recognized by the Yao, who in any case ascribe superior status to the first-comers into an area. With the Nyanja chiefs the position became ambiguous. They had superior rank in that they were in occupation of the land before the Yao moved in. At the same time when they subjugated themselves to the Yao they accepted servility. Nowadays, the Nyanja are well integrated into the political life of the area and carry on their existence along the lake shores, still going to their traditional chief for the settlement of most of the cases not involving heavy compensation.

All Invader chieftains have scarlet headbands. Some of their direct relatives such as Sowa, their clan relatives such as Nanisma and Mapundu, or their patrilateral relatives such as Cibwana Liwonde; the son of the first Liwonde, also have them. After these the next important group who are entitled to wear them are the *ndunas*. Examples are Kangomba, Masinde and Cindambu in Kawinga's area and Makaca in Ngokwe area. The *ndunas* are village headmen, usually unrelated to the chief, but who have been long associated with him, and who are his

2: Mitchell E-3 (1946-1949) 1956 FT7 Yao FT7

councillors. Long ago they held a most important position within the chieftdom. They were the loyal headmen and intimates of the chief, who could therefore be entrusted with the government of outer areas. They were posted to various parts of the chieftdom; kept the chief advised of war and attacks; maintained the peace among the village headmen in their areas; and collected the ivory to which the chief was entitled and sent it to him. Nowadays, the *ndonas* find themselves in competition with other officials who have arisen from the White Administrative system. The chief also finds advisers and councillors in his court clerks and his court sergeants, but the *ndonas* still have much prestige and advise and assist the chief in his administration of the area. Earlier, I mentioned that a senior headman was allowed to have a mat to himself, and only his own friends and people of his rank could occupy it with him. The only people in the chieftdom who could share the chief's mat, were the *ndonas*, and they called him *ungwaga* (my friend). Because the *ndonas* were not related to the chief they were in the peculiar position of being able to settle quarrels between the chief and his family; they were the arbitrators in arguments between the chief and his 'younger brothers' (junior male matrilineal relatives), or the chief and his wives. By Yao custom, rank is inherited by a village headman's successor, so that the relationship between the chief and his *ndonas* is perpetuated through successive incumbents. In Kawinga's area, for example, the *ndonas* to-day have the same name and the same relationship and relative position with regard to the chief as the *ndonas* who invaded the country nearly 100 years ago. This traditional ranking of village headmen emerges as soon as the Government alters its policy. Recently, when the idea of group headmen was reintroduced, the chief nominated the *ndonas* to become group headmen—a position not unlike that they held before the White conquest.

There is considerable difference between the size of Administrative villages under those headmen who have the right to wear the scarlet headband and those who have not. Table XV shows this clearly. The mean number of tax-payers under the former headmen is 80, while under the latter it is only 38. Among the village headmen with the rights to wear the scarlet headband 62·5 per cent had villages of more than 60 tax-payers, while among other headmen only 25·0 per cent of the villages were in

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

TABLE XV

SIZE OF ADMINISTRATIVE VILLAGES UNDER HEADMEN WITH SCARLET HEADBANDS AND UNDER WITHOUT

* Excludes 4 villages in which the number of tax-payers were unknown.

this category.[1] The village headmen who are entitled to wear the scarlet headband are mainly founders and people of high rank. Their villages are large because of their rank as well as vice versa.

I have never heard of a village headman's wearing a scarlet headband without the chief's permission, and I am not sure what sanctions the chief would apply to prevent it. I have heard men say that village headmen who are not entitled to wear it do so if they live far away, but take it off when they come near the chief's court. However, this was only in casual conversation and I did not have an opportunity to check it. From the point of view of the people the right is so bound up with traditional status that it is almost inconceivable that the custom should be flouted. As we have seen, among the Newcomers only two have been given the right within the last 30 years.

Yet the significance of the scarlet headband differs considerably from area to area. In Malemia and in Jalasi areas the custom seems either to have fallen away or never to have existed. In Jalasi area Islam may have some effect. In Malemia area the majority are Christians and most headmen have taken to

[1] Diff. of per cent = 37·5; S.E. of diff. = 9·77; C.R. = 3·83; $p = 0·0001$.

2: Mitchell E-5 (1946-1949) 1956 FTT Yao FTT

European-type clothing. In Nyambi area, abutting on Kawinga-Liwonde area in the north, there are 12 Administrative village headmen out of 37 who are entitled to the scarlet headband (32 per cent). For the Kawinga-Liwonde area the percentage is 37. An informant explained why a large proportion of headmen in Nyambi area had the right to wear the headband: 'The old Nyambi and the present one do not care. If a man has many hens, and if he says that his uncle had a scarlet headband, then he is given one too.' Even within the Kawinga-Liwonde area there is some variation in the number of headmen who are entitled to the scarlet headband. The following table sets this out.

Chieftaincy	Total Admin. Headmen	% Scarlet Headbands
Kawinga	160	37
Liwonde	114	48
Mpona	30	100
Chikwewo	48	84
Ngokwe	21	142
Chambo	61	49

Mpona area near Lake Chirwa shows such a high proportion because of the Nyanja ex-chiefs who are entitled to the scarlet headband. Chikwewo and Ngokwe on the other hand are the Mpondo chiefs and seem to have taken the same attitude as Nyambi and his predecessors. In contrast to the statement about Nyambi, one Administrative headman in Mpona's area said: 'The chief's scarlet band is good enough for us all. If each had one it would be too gaudy!'

The Struggle for Initiation Rights

Village headmen are generally outside competition for the right to wear the scarlet headband. These rights have been established largely by ancient custom and are almost confined to the Invaders or to those who have had them before they came into the area. The competition for initiation rights, however, goes on steadily. H. L. Duff had noticed this as early as 1906.[1] Newcomers may approach the chief and agitate for the rights,

[1] See p. 81.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

(22) pressing their claims on many grounds. They may stress that
559 they have a large village under them and that they have many
(1) children to initiate, and argue that their villages are far away
from the nearest headman who has these rights. Or they may
use their rank and connection with the chief. If all else fails
they may threaten to move to another chiefdom. Punya
threatened to do this.

(23) In 1947, Punya, an Administrative village headman in Chiwalo area,
559 had 43 tax-payers under him and thought that he should have initiation
(1) rights. He had come to Chiwalo's in 1933 after the village had split
574 in Chikowi's area near Zomba. He had relatives in Kapalowa's
village in Chiwalo's area. He argued with Chiwalo that his uncle
had had initiation rights. Chiwalo on the other hand, argued that
Punya village was so close to his own—a matter of under a mile—
that he could not consider it. This argument went on for some
months. Eventually Punya told the chief that he was going to leave
his area. Chiwalo then retreated to some extent and offered Punya
the permission to use the *dipate* basket, that is, the right to conduct
girls' initiation ceremonies. Punya, after consulting his elders, took
this and was satisfied.

But the chief is not always cowed by the threat to leave his area. He is sometimes able to draw on his official position to control his headmen. The argument between Makata and Ntimbuka illustrates this very well.

Makata was an Administrative headman of some standing in Chiwalo's area. He had been one of the invading headmen and was entitled to wear the scarlet headband. In 1947, he had 101 tax-payers under him and had been given the right to hold boys' and girls' initiation ceremonies at least 30 years ago. Ntimbuka on the other hand was a comparative newcomer. He came from Kawinga's area in about 1930. He is of Nyanja stock but has adopted the Yao language and customs. His village in 1947 had 23 tax-payers and was about 300 yards from Makata's. Early in 1947, Ntimbuka started quarrelling with Makata about the right to boys' initiation ceremonies. He felt that he ought to have rights as well as Makata. Eventually he told Makata that he would refuse to take the boys to his initiation ceremonies. Seething with discontent Ntimbuka went to complain about Makata to Chiwalo, and told him that he had had an argument with Makata and that he was going to leave the area because of it. Chiwalo called Makata and asked him what the trouble was. Makata told Chiwalo that Ntimbuka was jealous of the basket. Chiwalo

2: Mitchell E-5 (1945-1949) 1956 FT7 Tao FT7

then told Ntimbuka that he could not give a sacrifice basket to him because his village was so close to Makata's. Ntimbuka was not satisfied with this and continued quarrying. Chiwalo, at last exasperated, threatened Ntimbuka that if he had any more trouble he would send him to Kawinga to be dealt with. Kawinga of course is the Native Authority in the area and holds the power of arresting headmen under Section 12 of the Ordinance. Ntimbuka was duly cowed by this threat and meekly agreed to send his boys to Makata's initiation ceremonies.

Chiwalo had to support Makata against Ntimbuka. Makata was a powerful headman: he had rank from his descent and a large village under him. Ntimbuka was a Newcomer and he had only a fifth of the followers that Makata had. If it meant losing followers it was better to lose the smaller village. As it was Chiwalo could use the power of the White Administration to keep Ntimbuka within his area and yet keep him subservient.

A Newcomer is unlikely to be given both boys' and girls' initiation rights. He is more likely to be able to get only one of the rights. Table XVI sets out the number of headmen in

TABLE XVI

NUMBERS OF HEADMEN HOLDING BOYS' AND GIRLS' INITIATION RIGHTS AMONG ABORIGINAL, INVADER AND NEWCOMER HEADMEN

Type of Initiation Right	Aboriginal	Invader	Newcomer	Total

(32) ● 539 (1) only one is roughly the same.[1] A Newcomer may approach the chief and ask for initiation rights in certain circumstances only. In general, these are that his village is a very large one, that he had the rights in the area from which he has just come, and/or that he is living in so isolated a part that it would be a hardship for his children to go to the nearest other headman who holds the rights; but he may press his claim if he is related to the chief and can approach him as a kinsman.

There is little doubt that the rights are closely associated with the size of the villages:

TABLE XVIIa

Initiation Rights among Invaders and Newcomer Headmen who have Villages with and the rights to Tax-payers

TABLE XVIIa

INITIATION RIGHTS AMONG INVADER AND NEWCOMER HEADMEN WHO HAVE VILLAGES WITH MORE AND THAN 60 TAX-PAYERS
(Arranged to hold the influence of village size fixed)

Type of Headmen	Over 60		Under 60		Total
	Init.	No Init.	Init.	No Init.	
Invaders . .	14 (11·8)	9 (7·6)	21 (17·6)	75 (63·0)	119 (100·0)
Newcomers .	27 (10·8)	26 (10·4)	27 (10·8)	170 (68·0)	250 (100·0)
Total . .	41 (11·1)	35 (9·5)	48 (13·0)	245 (66·4)	369 (100·0)

$n = 3$; $\chi^2 = 3{\cdot}96$; $p = 0{\cdot}26$.

Among all headmen (Table XVIIa):

19 of 31 headmen who hold both initiation rights have villages with more than 60 tax-payers . . . . . = 61·3%
7 of 16 headmen who hold only the boys' initiation rights have villages with more than 60 tax-payers . . . . . = 43·7%
13 of 42 headmen who hold only the girls' initiation rights have villages of more than 60 tax-payers . . . . . = 31·7%
35 of 280 headmen who hold no initiation rights have villages with more than 60 tax-payers . . . . . = 12·5%

When the influence of village-size is held constant the advantages of Invaders over Newcomers in the competition for initiation rights is discernible, but the differences are so small that they are of doubtful significance (Table XVIIb).

14 of 23 Invader headmen with villages over 60 tax-payers have initiation rights . . . . . = 60·9%
27 of 53 non-Invader headmen with villages over 60 tax-payers have initiation rights . . . . . = 50·9%
21 of 96 Invader headmen with villages less than 60 tax-payers have initiation rights . . . . . = 21·9%
27 of 197 non-Invader headmen with villages less than 60 tax-payers have initiation rights . . . . . = 13·7%

As we may anticipate, relationship with the chief is an important factor in the competition for initiation rights. Among the chief's direct and clan relatives for example, 36·4 per cent (51 of 140) hold initiation rights, but only 16·8 per cent (39 of

231) of his non-relatives hold them[1] (Table XVIII). There is a slightly greater proportion of the clan relatives holding initiation rights than direct kinsmen, but the difference is insignificant.[2] Slightly more of the chief's relatives among the Newcomers hold initiation rights than those among the Invaders,[3] but once again the difference is so small that it might easily have arisen by chance. A much greater proportion of Invaders is related to the chief than of Newcomers,[4] so that among the Invaders the relative advantage of their kinship with the chief, as against the unrelated, is somewhat reduced. There are very many Invaders who can claim kinship with the chief in their struggle for initiation rights. Among the Newcomers, conversely, because there

[1] Diff. of per cent = 19·6; S.E. of diff. = 4·58; C.R. = 4·28; $p = 0{\cdot}00001$.

[2] Direct relatives (20 of 59) = 33·9 per cent; Clan relatives (31 of 81) = 38·2 per cent; Diff. of per cent = 4·3; S.E. of diff. = 8·2; C.R. = 0·52; $p = 0{\cdot}6030$.

[3] Newcomers (24 of 62) = 38·7 per cent; Invaders (27 of 78) = 34·6 per cent; Diff. of per cent = 4·1; S.E. of diff. = 8·2; C.R. = 0·5; $p = 0{\cdot}6170$.

[4] Excluding those entitled to wear the scarlet headband. Invaders (78 of 119) = 65·6 per cent; Newcomers (62 of 253) = 24·5 per cent.

2: Mitchell E-5 (1946-1949) 1956 FT7 Tao FT7

are so few of the chief's kinsmen among them, to be related to the chief is a distinct advantage in this struggle.

I recorded the origin of the initiation rights of only 38 of the 55 Newcomer headmen who hold them, excluding those who also have the right to wear the scarlet headband. Table XIX sets out these data. We cannot put too much reliance on these

TABLE XIX

THE ORIGIN OF INITIATION RIGHTS OF SOME NEWCOMER HEADMEN

Type of Initiation Rights	Given by Chief of present residential chieftaincy	Brought from elsewhere	Total	% Brought in
Both init. rights . .	8	5	13	38

Total	32	6	38	16

figures because they cover only about three-quarters of the village headmen in this category, and these, moreover, were not randomly selected. As they stand, the figures support my earlier conclusion that Newcomers are more likely to obtain rights for only one initiation ceremony, than for both together. While 38·5 per cent (5 of 13) of the village headmen who hold both initiation ceremonies had brought in their rights with them from outside, only 4·0 per cent (1 of 25) of those who hold only one of the rights had done so.[1] An analysis of the periods when headmen were given their rights reveals consistent results.

From Table XX we see that:

Of 11 headmen who hold rights to both initiation ceremonies, recent chiefs granted 3 . . . . . = 27·3%

Of 8 Newcomers who hold rights to both initiation ceremonies, recent chiefs granted 2 . . . . . = 25·0%

Of 12 headmen who hold rights to only one of the initiation ceremonies, recent chiefs granted 3 . . . . . = 25·0%

Of 24 Newcomers who hold rights to only one of the initiation ceremonies, recent chiefs granted 14 . . . . . = 58·3%

[1] Diff. of per cent = 34·5; S.E. of diff. = 12·47; C.R. = 2·77; $p = 0·0056$.

TABLE XX

Where Initiation Rights were Granted to Newcomers and Invaders

Type of Initiation Rights	By early Chiefs		By recent Chiefs*		Total
	Invaders	Newcomers	Invaders	Newcomers	
Both inits. . .	8	6	3	2	19
One init. only .	9	10	3	14	36
Total . . .	17	16	6	16	55

* This is obviously a crude classification. I have taken roughly 11 years as the dividing line. As the early chiefs I have classified all the Kwengas before and including Kwenga V who died in 1913; all the Liwandes before and including Liwande III who died in 1901; all the Ngukwens before and including Ngukwen IV who died in 1913; all the Mpemes before and including Mpeme II who died in 1913; and all the Chikwens before and including Chikwen II who died in 1914.

In other words, recent chiefs have been granting single initiation rights to Invaders in the same proportion as they have been granting both rights, but they have been granting Newcomer headmen the right to hold only one ceremony more often than the right to hold both. Of the six sets of rights to initiation ceremonies granted by recent chiefs to Invader headmen, three were rights to hold only one ceremony, while 14 of the 16 initiation rights granted to Newcomer headmen were for one ceremony only.[1]

Headmen do not make use of their bonds of common religion or tribe with the chief in their competition for initiation rights. Table XXI sets out the numbers of headmen of different religion. There is a substantially smaller proportion of Pagan headmen (9·7 per cent) holding initiation ceremonies than either Christians (25·5 per cent) or Moslems (24·4 per cent).[2] Most Pagans, however, are also Newcomers so that this difference is actually a reflex of the generally lower rank of Newcomers. Table XXII sets out the number of headmen of the chief's tribe and of other

[1] i.e. 50·0 per cent against 87·5 per cent; diff. of per cent = 37·5; S.E. of diff. = 20·08; C.R. = 1·87; p = 0·0614.

tribes who hold initiation rights. Once again the proportion of headmen of the same tribe as the chief who hold initiation rights is the same as that of headmen of different tribes from the chief. We may say, therefore, that membership of tribe is not an operative factor in the granting of initiation rights.[1]

[1] The factors contributing to the granting of initiation rights are obviously all intercorrelated.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

622. The right to hold initiation ceremonies may be held concurrently with the right to wear a scarlet headband. For purposes of analysis thus far, I have treated the holding of initiation ceremonies separately. By common consensus, the wearing of this headband is an indicator of much greater rank than the holding of initiation ceremonies. The highest ranking headmen, like the chiefs, usually have the right to wear the scarlet headband together with the rights to both initiation ceremonies. In order to show how rank varies among the main categories of village headmen I have devised a numerical

TABLE XXIII

MEASURE OF RANK AMONG ADMINISTRATIVE VILLAGE HEADMEN

Type of Headman	With Headband				Without Headband				Total
	Both	Boys only	Girls only	No rights	Both	Boys only	Girls only	No rights	
Aborigines:									
Direct rel.	—	—	—	—	—	—	—	2	2
Clan rel.	1	—	—	—	—	—	—	1	2
No rel. .	2	—	—	—	—	1	1	13	17
Total .	3	—	—	—	—	1	1	16	21
Invaders:									
Direct rel.	8	1	—	—	5	2	3	26	47
Clan rel.	4	—	—	—	8	2	3	23	44
No rel. .	3	—	—	1	4	2	2	33	45
Total .	15	1	—	1	17	6	11	84	136
Newcomers:

2: Mitchell E-5 (1946-1949) 1956 F'27 Tao F'27

system of ranking. I have assumed that the rarer the mark of rank the higher the rank it indicates. Table XXIII sets out the incidence of marks of rank among the 414 Administrative village headmen for whom I have recorded the data. In all, there were 24 headmen with scarlet headbands, 69 with boys' initiation ceremonies and 95 with girls' initiation ceremonies. I have given the holding of a scarlet headband the value of the reciprocal of the proportion of village headmen who hold that right, i.e. 414/24 = 17·3.

The value of holding a boys' initiation ceremony by the same procedure is: 414/69 = 6·0.

The value of holding a girls' initiation ceremony is: 414/95 = 4·4.

DIAGRAM 2. PARADIGM OF THE POLITICAL STRUCTURE.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

622 The value of holding the various combinations of rights then
554 are these:

881 Scarlet headband and both initiation ceremonies . . . . = 27·7
292 Scarlet headband and boys' initiation ceremony . . . . = 23·3
Scarlet headband and girls' initiation ceremony . . . . = 21·7
Scarlet headband alone . . . . . = 17·3
Both initiation ceremonies . . . . . = 10·4
Boys' initiation ceremony only . . . . . = 6·0
Girls' initiation ceremony only . . . . . = 4·4

We may now score the rank of headmen within any particular category by estimating the percentage score from a possible. For example, the score of the rank among Aboriginal headmen would be:

3 × 27·7 = 83·1
1 × 6·0 = 6·0
1 × 4·4 = 4·4
93·5 (expressed as a percentage of 21 × 27·7 = 16·1)

622 Using this method I have set out in Table XXIV the rank
554 scores for headmen in the categories in Table XXIII. Table XXIV shows that on the whole ranking among the Invader

TABLE XXIV

RANK SCORES FOR ADMINISTRATIVE VILLAGE HEADMEN OF DIFFERENT CATEGORIES

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

headmen is higher than among the Aborigines or the New-comers. It also shows quite clearly that the chief's direct relatives hold more of the privileges associated with rank than his clan relatives do, and they in turn hold more than his non-relatives. 622 554

The Political Process as a Struggle of Headmen Against the Chief

Modern chiefdoms appear to be organized on essentially the same principles as those described by Duff MacDonald. A chiefdom is headed by a chief and under him his subjects are organized in villages. Each village is represented by a headman, who stands in a relationship to the chief and to other village headmen, according to the prestige of the group he represents. This prestige is determined partly by his historical association with the chief in his past military exploits, partly by the size of his village, and partly by the prestige he has had in other areas. These elements were significant in Yao polity before the advent of the Whites, as we have seen from Duff MacDonald's description. Village headmen then were continually involved in a struggle for power among themselves and against the chief.[1] The struggle for power among village headmen continues to-day though in a changed context. Military power is no longer the object of the competition between them: the struggle for followers has become transmuted into a struggle for tax-payers. In harmony with the new political and economic situation a successful headman is not rewarded by military superiority, but by Government recognition and an official emolument. 643 622 554 178

At the same time, the chief whose power in the pre-White days resided in his armed forces, nowadays draws on the power of the White Administration to exercise his authority over his village headmen. His position is strengthened by Government decree and he does not hesitate to threaten to use it if necessary. Although the prestige of chiefs is higher than that of any of the village headmen, the difference in prestige between any chief and his most important headman is not very great. They are treated with almost the same deference by the minor village headmen and commoners, and they are referred to by the same term (*mwenye* = chief). The chief or an important village headman

[1] See Chap. II, p. 34.

The chief or an important village headman

[601] is usually addressed by a kinship term, either *baba* (father) or
643 *ambuje* (master or grandparent). When he is referred to, his
622 name is not used. Village headmen are owners or wardens of
554 villages (*aryene misi*) but only those headmen of some standing
178 are referred to as *mwenye*.

Important village headmen, like the chief, are in mystical
643 danger from pollution by death. They cannot come to the hut in
622 which a corpse is lying ; and they cannot eat the chicken which
554 has been brought to them by relatives of the deceased to announce
761 the death. Like the chief too, an important headman may be buried in a tomb in his village and not in the graveyard.

But an important element in their relationship nowadays is
643 that the Administration will support the chief against a village
622 headman when it comes to a trial of strength, and that a headman
554 these days is precluded by modern conditions from setting up
578 chiefdoms as he did in the old days. Village headmen therefore
691 must struggle for power against their fellows and the chief within the modern Administrative framework. Some attempts are made to resist the power of the chief but these are rarely successful. The dispute between Liwonde and Ndenda illustrates this.

Ndenda was an Nguru headman, who in 1947 had 284 tax-payers under him (Liwonde, the chief, had 186 in his village). Ndenda had come into Liwonde's area before the White invasion and had surrendered with his relative Mlelemba, to Liwonde. The second Liwonde had given him both initiation rights but, unlike his relative, he did not have the right to wear a scarlet headband.

In 1938 or thereabouts, Liwonde decided to move his village site from the Shire River to its present site about half-way up the Great Rift scarp. He sent two of his young men to look for a suitable site, and to plant some mango trees there when they had found one. Ndenda heard of this and sent one of his men to take Liwonde's men into custody. He took their hoes away and then told them to go back to tell the chief they were planting in his (Ndenda's) land. In due course Liwonde moved up to his new site, and asked Ndenda why he had taken the hoes away and whether he owned the country, i.e. was the chief. Ndenda now argued that Mlelemba's ancestors had been given the rights of chieftainship over this area and that the first Mlelemba in the area had given Liwonde some elephant tusks for these rights. Liwonde replied that the chief has a right to tusks and that many had given tusks to him but were not entitled for that reason to rights of chieftainship. Liwonde handled this situation by calling a meeting of the village headmen in the area. They assembled

and the claims of Ndenda were debated. The headmen supported Liwonde in his claim that the tusks were part of the chief's rights and that when Mlelemba had come he had come 'to get fire from the chief'. Liwonde then upbraided Ndenda for imagining that because he had so many followers he was a chief, and fined him 10*s.* for being insolent. 643 622 554 578 691

The struggle between Liwonde and Ndenda did not end however. Some years afterwards a man came to Liwonde and said that he wanted to live in his area. This man was a complete stranger and had no relatives there. Liwonde sent him to Ndenda's village. Later while living in the village, this man stole some cloth. He was arrested and Ndenda brought him to the chief saying that the chief was responsible for him. Liwonde told Ndenda that he was being insolent again and that the responsibility must rest with him because the man had married into his village. He ordered Ndenda to pay £1 to compensate the victims of the theft. This Ndenda did but in his view this was tantamount to being chased out of the chief's area. He therefore moved with his children across the boundary northwards into Jalasi's area, and told his unrelated villagers to follow him. They refused to leave Liwonde's area. He was helpless and could do nothing about it. He returned to Liwonde's area a broken man and died shortly afterwards. His eldest son took charge of the village affairs, but so far no successor has been found.

The struggle between Ndenda and Liwonde has some interesting features about it. The strength of the chief in his Government position is not as evident as it has been in other struggles, as, for example, between Jalasi and Kalonga, or between Chiwalo and Ntimbuka, in the cases I cited earlier.[1] It appears only indirectly. Ndenda did not appeal to the District Commissioner against the fine as he might have done if he had felt his position to be more secure. The case history also shows how Liwonde ranged his other important headmen, 47 per cent of whom were kinsmen or co-Invaders, around him against Ndenda who was neither. It shows also that Ndenda's reaction to what he felt to be an injustice, typically enough, was to emigrate and to try to injure the chief by reducing his followers. When this failed he was defeated and it was his downfall, for, like a chief, 'a headman without people is nothing'.[2] 643 622 554 578

[2] *Mcilambo nayo nganakhala ilunda ngawo mcilambo*: 'A chief who has no people is not a chief'—a saying frequently quoted to emphasize the dependence of the chief on his subjects.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

who are sexually inactive from contracting *ndaka*.[1] At the same time the headman gives each household a piece of the fire which has been newly kindled in the traditional way by rubbing two sticks together.

The mystical danger inherent in the act of setting up a new village is well brought out in the propitiatory prayer and the abstinence from sexual intercourse. Once again it is the village headman who must make the offering to his ancestors; and it is the village headman who has intercourse with his wife so that the effluvium from his sexual activity may permeate the medicine in the hut and so protect the villagers from *ndaka*. Lastly, it is very important that the whole village cooks and is warmed by one fire. 'We are of one fire' expresses the common origin of two villages; though in fact every time a new village is founded a new fire should be kindled. To bring fire from the village of origin is to bring sorcery, since the Yao believe that sorcery can operate between persons closely linked by kinship only. To have one's own fire is to be autonomous from other groups.

The Burdens and Rewards of Headmanship

MacDonald had the perspicuity to see not only that the village headman was the representative of a corporate group and that he represented this group to outsiders, but also that he represented external authority to his villagers. The village headman who in his person stood for the unity of the group, performed certain ritual acts which emphasized this, such as praying to the village ancestors. In spite of the decline of the ritual his position is still regarded as exceptional. Much, however, depends on the rank of the village headman. There may not be much difference in ritual observances and mystical dangers between a headman who has in his charge a meagre three or four huts, and a commoner. In the larger and more important

[1] This is one of the most important mystical concepts of the Yao. I have described this condition and its implications more fully in *Marriage among the Machinga Yao of Southern Nyasaland* (R.-L.I. Paper), forthcoming. Briefly it is a disease characterized by œdema which affects those who are sexually inactive when they are suddenly brought into contact with a person, or an object which he has touched, after having intercourse. The people most affected are the young and the old, i.e. those who cannot have sexual intercourse. Those who are capable of intercourse are expected to have ritual intercourse with a stranger, and so fortify themselves against this dread disease.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

villages, however, the headman's activities may be as circumscribed by ritual prohibitions as the chief's are. 622 554

The village headman is subject not only to mystical dangers but also to other dangers deriving from his position of authority. It is significant that villagers never go to a diviner to find out the cause of a village headman's death. When I asked informants why this was so, they said, 'Well, what's the use of it? He has enemies on all sides in the village who are trying to kill him with their magic.' In harmony with this view of village headmanship, the symbolic object which represents the village headman in the diviners' gourds I have seen, is a small ring of grass (*singwa*), a copy of the grass cushion women place on their heads when they are carrying loads. This symbolizes the ring of enemies which surrounds the village headman. The saying 'the tortoise defecates on the one who carries it',[1] usually applied to chieftainship, applies equally well to a village headman. 622 787 578 [482]

A village headman may expect little material benefit from his position of authority. If he is an Administrative village headman he may be paid a small annuity of 5*s*. or 10*s*.[2] Returning labour migrants may give him a blanket or a military overcoat, or perhaps a few shillings, but this is not usual. If he is not a strict Moslem he will almost certainly be given a pot of beer from every brewing made for sale in the local 'club house'. On the other hand, if an important stranger, particularly a White official, arrives in the village he feels he must give his guest a chicken. It is mannerly to reciprocate with another gift, but not all Whites know this, or, if they do, do not observe it. In particular if the chief comes to his village, he will be expected to entertain him and here can expect no recompense—the chief 'eats from his country'. 622 651 431

The Yao know that the position of headman is no sinecure. Frequently the one chosen to succeed refuses to accept the position, especially if he is well placed in employment. It is significant that the word for an heir is *litegwa*[3]—the one who is trapped. An 622 554

[1] *Ngonjo jikunyela msyene iwajigele.*

[2] Until recently this was true. As I was leaving the field in 1949, I heard that the Administration had decided to abandon this system in favour of one in which only group headmen would be remunerated.

[3] Substantive form of the passive of the verb *kutega*—to set a trap as for animals. This word is not widely known, especially among the younger Yao.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

622 heir has to balance up the difficulties inherent in his position of
554 leadership, including his fear of sorcery, with its honour and rank.

Commoners respect village headmen in the same way as minor headmen respect their superiors. Headmen of important villages are given a special greeting by the commoners; they usually wear a distinguishing headdress; they sit on a mat alone or on a chair, while the commoners sit on the floor; they walk in front of commoners on the road; they sit under the chief's verandah while the commoners sit in the sun; and they are buried in the village, while the unimportant commoners are buried in the graveyard.

Outside their villages too they are accorded deference. It is not only their own villagers who must treat them in this way: all commoners must do so. They are accepted by the chief as important men and are treated as such.

The Headman's Installation Ceremony

622 The peculiar position of the village headman is brought out particularly in the installation ceremonies. When a headman dies his heir should not assume the name until he has been formally installed. This is expressed as 'to enter the name' (*kwinjila lina*). All installation ceremonies are similar and there are only minor variations from one ceremony to another. The following is a description of a succession ceremony recounted to me by an informant. It concerns the succession to headmanship of Cimombo, a headman of some rank in Nyambi's area. Cimombo had a village of 30 tax-payers, wore a scarlet headband, and had the right to hold a girls' but not a boys' initiation ceremony.

Some time had passed since the death of Cimombo, and his heir, though commonly known by that name, had not been officially installed. Eventually he grew impatient and went to his perpetual [1] elder brother Kaukutu of Nyambi's area, who also wore a scarlet headband, and told him that he was going to Cholo to find work. Kaukutu told him that he might visit the men at Cholo but he himself must not enter employment there. The heir left for Cholo. As soon as he had gone Kaukutu collected his relatives and discussed the succession. They decided to get

[1] The relationship between some personalities in the social structure, originally kinsmen, becomes fixed and is perpetuated by their successors. See p. 122.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

613 he cannot escape the fact that in his wife's village he is only
593 a 'billy goat' and that his 'true home' is in his matrilineal
606 village. The pull of the matrilineal village on him, therefore,
591 is always very strong and he is constantly trying to return there.
621 His wife's responsible relatives are constantly trying to avoid this because they know that in time they are likely to lose the children who will probably settle in their father's village if they grow up there. In general, therefore, a husband must have a very good reason before he can get his wife's kinsmen's permission to take her and her children to his village. His wife's relatives do not easily yield. But a headman must live in his own village so that nearly all headmen bring at least one of their wives into their villages. Other men sometimes succeed in doing so especially if their wives are past child-bearing, but it is typically the headman's wife who lives virilocally.

621 The husband's interest in returning to his matrilineal village
591 is heightened by the fact that a man in his wife's village is looked
554 upon as the typical man without prestige: a stranger, whose duty is largely procreative. The theme song at the installation ceremony where the husband was compared with a billy goat, and the common epithet 'chicken rooster' for a husband, reflect the attitude of the Yao towards him. In the song I quoted, the husband was said to be unable to climb high in his village of marriage, however rich he may become.[1] He is, nevertheless, an essential member of the village and the Yao say that it can succeed neither economically nor physically without his aid.

A husband becomes more important when he stays in a village for a long time. He becomes known intimately to the villagers and is conversant with their affairs. He is, therefore, able to advise on many private intra-lineage and intra-village affairs and may even become a marriage surety if there is no more suitable person available. Also in time the husband's position in the village changes. As his children grow up and become active members in the matrilineage, his position of husband becomes supplanted by his position of father, which, in a matrilineal society like that of the Yao, is significant in the same way as that of the mother's brother is in patrilineal societies.

593 The Yao recognize the close bond between father and child.
842 This bond is conceived to be both social and physical and is

[1] See Chap. V, p. 119.

3: Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

567 **Slavery.** Slaves were acquired by capture or purchase, or were received as payment. Prisoners taken by the vasaala of one chief in a fight with the partisans of another chief became slaves. Slave raids were also made by the Wayao upon the weaker Anyanja or again expeditions were sent out hundreds of miles away into the Chipeta country to buy slaves.

[422] Slaves were a man's goods and chattels, to do with mainly as he pleased, but no man might kill a slave without bringing the case before his chief and obtaining consent. While some were bought and sold and sometimes found their way into a slave caravan bound for the coast, many, perhaps the majority, lived the life of ordinary individuals in the villages. A man who was unhappy in a village and wished to escape from his vasaakdom might run away to another village and there commit some act so that he might be claimed as a slave. The custom was to go to the village and sit by the site of a house which had been pulled down after the death of the occupant, and the saying is, "He has been called by the dead man's spirit."

[554] Many a slave has become an important man in the village and slaves were often the trusted advisers of their chiefs, but there was no means of becoming a freeman. Neither a slave himself nor a second party could purchase his freedom. A slave capturing another man in warfare, for instance, could not ask for his own freedom in exchange for his captive, but anyone so taken became, in a way, the slave of a slave, and the master could not sell the second slave without the permission of the slave captor. An old slave might often be allowed to do just as he pleased and to all intents and purposes was a free man, but he was never actually freed. A slave might earn a return for work done for others than his master; part of this he would probably give to his master, but there was no regular tax upon such earnings.

The idea in accumulating slaves seems to have been to increase the population of the villages and hence their power and progeny. This is borne out by the fact that marriage [582] between free men and slaves was allowed. Marriage between a free man and a slave woman was unaccompanied by any ceremony and was therefore rather in the nature of recognized concubinage. Such a wife, if unsatisfactory, could be sold out of the village, but generally she was well treated. The children of two slaves were of course born into slavery; the children of a slave woman by a freeman husband, were not quite emancipated, as the father could not remove the child from the village of the slave mother's master, and in very extreme cases, it might be sold by him.

Women might marry slave husbands and often a master married his daughters to his slave men whom he thought well of. This amounted to a guarantee to the slave that he [421] would never be parted with. A woman with a slave husband could not leave him informally; she could not sell him, inasmuch as women have no property.

648 423 **Land Ownership.** The ownership of all land was vested in the chief, but he appeared to hold it in surety for all the people over which he ruled. Headmen had no land rights.

4: Stannus D-5 (ca. 1909) 1910 FT7 Yao FT7 Marevi FR4

case *mwavi* might be administered; if adjudged guilty the accused would be burned on a pile of wood. M 695

Evidence is given without taking any oath; a false witness is not punished. M 696

Justice is occasionally summary. At Mponda's, after conviction of adultery with one of the chief's wives, a man's throat was cut on the spot. Drowning was the usual punishment with Mponda.

Punishments for all offences practically meant payment.

CUSTOMS, SALUTATIONS, ETC.

The correct salutation among Machinga Yao and Mañanja on meeting is clapping the hands, the hands in front of and at right angles to the body parallel to each other, thumbs against the fingers. The clapping should be continued for ten minutes after having passed; after passing a chief it should be continued for half-an-hour. M Y 576

Another form consists in slowly beating the breast with the right hand, the head slightly inclined forward. The lower in station makes salutation first to the higher, a man to a chief, a woman to a man; exception is made in the case of an old woman, who is saluted by the man. Scattered all over the country a raising of one or both arms is a common form of salutation, but is probably only a corruption of the military salute. M Y [554] [888]

Slapping of the nates or thigh with the right hand is also seen, among old men usually. In imploring mercy from, or on the first occasion of meeting, the chief, a man lies prone on the ground and catching the foot of the chief, puts it on his neck—a sign of absolute submission. Women kneel at the approach of a man. Words and expressions of salutation are few—*Moyo* (=heart) being the only old expression used. Now commonly one hears a word (sounding like *mōné*) probably a corruption of good morning, and the Swahili greeting *Sukuhri* with the double hand-shake of Mohammedans. M Y [201] [562] [177]

A man returned to his village after an absence rests awhile, then his wife comes to him and kneeling greets him, *moyo*, her husband returning *moyo*.

Years ago, a man of any importance was received with firing of guns and shouting. A headman is received now with *Ntungululu*, the women wobbling their tongues in their mouths. Ashes are put on the head as a sign of joy. M Y [152]

In the morning the husband and wife do not greet each other, but in the village friends "give each other good morning" (=*Moyo*). On waking in the morning, a woman cracks all her joints (=*Kulisu chala*). She then massages her husband and cracks the joints of his fingers. M Y [512] [576]

One man wishing to see another goes to his house, and squatting outside the door cries "*Icho!*" three times (=there), at the same time clapping his hands. If no answer be given he goes away, even though he knows the man is within, no answer meaning that the inmate does not wish to be seen. If invited to enter he does so, the man of the house rises and gives him salutation. He makes small M 574 576

4: Stannus D-5 (ca. 1909)1910 FT7 Yao FT7 Maravi FR4

M Y 614 [579] Men of the same clan must help each other. Two men of different clans fighting will be joined each by men of his clan; such two men may be interfered with and stopped fighting by someone of the same clan, but not by others. A fight between men of different clans is a lasting thing, not so a quarrel in the clan.

Every clan has a (king) *Karonga* and a (prince) *Chilembwe*, who is his son. These grades are only found among the Nyanja peoples.

M Y [264] [554] The Karonga may break bones when eating—this is significant of his power to break anything; the Chilembwe may not do so, being without land. Neither may eat while walking. These two are always chiefs.

Clan names.—In Machila men's songs one hears a number of clan names repeated sometimes.

After sneezing people sometimes exclaim, "*Mwana wa* . . .; *Mdzubulu wa* . . .; *Kubala kwa* . . ." (giving name of clan).

A man hearing another say this asks him, "Where do you come from?" He tells him, giving him names of his father and mother, etc.; if he does not know them he gives names of generations before.

The following are a few clan names:—

Achitolo, small rat.	*Achimaunde*, cloud.
Anamvula, rain.	*Amwali-mgosi*, hartebeeste.
Azimbiri, puff-adder.	*Anbiwi*, pig.
Achikalembo.	*Ang'oni*, birds.
Achikalélla.	*Achiwombe*, fish.
Achingumina, thunder.	*Achinawombe.*

MARRIAGE.

M 584 A man seeing a girl he would like to marry deputes his brother to go to the brother of the girl, who then calls the girl's maternal uncle, and he speaks to the mother on the subject. The mother consults the girl; if she refuse, nothing further is done. If she consents, the man calls his relations to come and be witness of his taking the girl as his wife; they meet in the *Bwalo*. A house is assigned to the M 585 man in the village of the girl and there they go to live.

After six months the mother of the girl prepares beer. The uncles of the young couple, mothers, fathers, sisters, and brothers are invited. The girl's maternal uncle then speaks, addressing himself to the maternal uncle of the husband, saying, "We have called you here to drink beer and to see the house of your brother that you may return when you like. Should anything arise between these two newly married ones in the nature of a dispute, let them come to their respective uncles about the matter."

Then five pots of beer are drunk in the village, two are reserved for the witnesses to drink in the evening, and one for the two fathers and the headman.

5: Mitchell E-5 (1946-1948) 1949 FT7 Yao FT7

COO authorities to-day: those of the British administration. Yet the headman is a key official, if usually unpaid, in that administration. For example, he has to report suspicious deaths and illnesses and strangers, and he has to see that his villagers keep the village clean, hoe paths, use latrines, follow agricultural and veterinary regulations, pay tax, &c. He is no more ready than they are to accept these as good, but he tries to enforce the rules for he is liable to be punished if he does not, by fining, imprisonment, and ultimately deposition. As he applies these unwelcome and unaccepted rules, his position becomes subject to still greater strains.

II. THE YAO OF SOUTHERN NYASALAND

J. C. MITCHELL

567 554 THE Yao people were notorious at the end of last century because of their reputation as slavers. Livingstone had noted their close association with the Arabs in this trade and much of the effort of the early administrators of Nyasaland was directed to suppressing the slaving activities of the Yao. While the slave trade has been fairly well studied, the associated but different phenomenon of domestic slavery has not been nearly so thoroughly investigated. It seems that domestic slavery was an important part of the Yao social structure in those days, before the coming of the white man abolished at one stroke this and many other social institutions. But, though the institution of domestic slavery ceased to exist, the system of values upon which it was built still survives and still affects the social structure of the modern Yao. We might summarize this system of values by saying that the status of a man depends on the number of people over whom he exercises certain rights and for whom, in turn, he is responsible. In the past, a man could increase his status in the community by acquiring slaves. This he did by buying them with calico obtained through the slave trade, or with ivory, beeswax, tobacco, and other natural products; by taking them in compensation for the death of a relative; or simply by kidnapping them. Slaves were often taken as spouses by the members of the group over which the man exercised his command, or by the man himself as wives, and thus the group was further enlarged by natural increase. Though these slaves and slave-children had fairly well-defined rights, they were not free to leave the command of their owner, and the group was from that point of view a stable one. The leader's command over his matrilineal and other relatives, however, was not so absolute and it is with this aspect of the social structure that I am here concerned. This system of values still persists and forms the basis for evaluating the status of men in the Yao community. [622] The high status of a village headman is usually expressed in such terms as: ' He is a big man—he has many people ', or ' he has many huts '. The village headman himself and the men under him are motivated by the same system of values so that in any village at any time there is a balance between the desire of certain members of that village to break away and establish units with their own dependants, and the desire of the headman to retain those people under his charge.

622 554 578 The tensions that exist in this situation are well recognized by the Yao and they always express them explicitly during the ceremonial succession to village headman-

ship. The difficulties of his position are brought home to the neophyte village headman in speeches made by old and experienced men. On one such occasion I heard a man say, 'Some men who marry into a village are bad and can split a village like this one by telling lies to the headman, saying that his sisters are talking behind his back and are insulting him. When a headman hears all this he might break his village by ill-treating his relatives, thus causing himself to be left all alone.' In this way the headman's responsibility for maintaining harmonious relations between the members of the village and himself is emphasized. His failure to do so results in what they call a break in the village—the departure of some of the members to live elsewhere—which is a severe blow to the status of the headman. In fact, he is dependent on his dependants for status, and the Yao are quick to point this out to neophyte headmen, saying, 'A tree cannot grow without branches.'

We can better understand the situation if we consider the social structure of the Yao village a little more closely. The Yao are a matrilineal people and are dominantly matrilocal. They live in small groups of huts scattered fairly evenly over the country and from a few hundred yards to possibly a mile or so apart. Such clusters may contain as few as five or as many as sixty or more huts, occupied by between 20 and 200 people.

These people are almost always kinsfolk, and in the smaller villages they are usually all either matrilineal descendants of a common ancestress or their spouses. In the larger groups there is a more complex situation which I shall analyse below. In the simpler groups there may be no male matrilineal descendant in the village and the leadership of the group is taken over by a senior female descendant of the founder of the village. Usually, however, if the group is large, one of the male matrilineal descendants lives patrilocally in the village and assumes leadership.

The relationship between a male matrilineal descendant and the female matrilineal descendants who are in his charge is signified by the word '*mbumba*'. The word particularly refers to the relationship between a man and his sisters and I have therefore translated it as 'sorority-group'. It includes a man's full sisters, matrilineal female collaterals (whom he calls sisters), their female children, and the female children of those female children, and so on. It is usually used in the sense of 'somebody's sorority-group'. A man belonging to the descent-group of the sorority-group may refer to these women as 'our sorority-group'. The man who is in charge of the sorority-group is referred to as the *ayeni mbumba*. This could be translated as 'owner of the sorority-group' but because of the property associations with the word 'owner' in our language, I have instead translated this as 'warden of the sorority-group' which expresses more accurately the relationship between a man and his female relatives. Even in those groups where there is a female in charge of the village and no male matrilineal descendant is resident in the group, there is usually some one man, possibly married in some other village, who is warden of the sorority-group. The warden of a sorority-group has certain precise duties to perform on behalf of his charges. First, he is concerned with the good relations between members of the sorority-group and with other such groups. He has to settle most of the domestic quarrels that take place between members of the sorority-groups. Second, and this is considered to be a most important function, he is the person who is the

marriage-surety for the marriages of the members of the group. Briefly this means that he must be approached before a marriage can be legally contracted by any member of his charge, he or his representative is present at the ceremony which formally announces the marriage, and he is responsible for the behaviour of his female relative in that marriage. Third, he is immediately concerned with the physical welfare and health of his sorority-group. He must track down the sorcerers causing their illnesses and supply the medicine to heal them. He has to arrange for the ritual purification of mourners after the death of one of the sorority-group's members. Fourth, he must be present in the court-house if one of his charges is involved in a case and he is usually looked to for the money for the fine. I have known a case not to begin because the warden of the sorority-group was not present. Frequently if the husbands of the female members of his charge default, he has to provide the hut-tax money.

Usually the warden of the sorority-group is the eldest brother of a group of adult full sisters. The younger brothers of the group of sisters, while concerned with their welfare, do not stand in this particular responsible position. They refer to the sorority-group as ' our sorority-group '. The elder brother refers to the sorority-group, be it noted, as ' my sorority-group ', and this sets him over and against his younger brothers. The position that the warden holds, however, is not rigidly fixed, for a younger brother may assume control of the sorority-group if for some reason he is dissatisfied with the way in which affairs are being conducted, and is able so to assert himself.

If we recall that the status of a man in a Yao community is determined by the number of dependants that he can command, it is easy to see that relationships between an elder brother and his younger brother are distinctive. The elder brother is responsible for the actions of his younger brother in much the same way as he is for one of his sorority-group, and the younger brothers have a great emotional attachment to their older brothers. Yet at the same time the elder brother stands in the way of the younger brother in his striving for status, in that while the elder brother is warden of the sorority-group the younger brother cannot be, and therefore cannot have dependants and status. It is not surprising to find that accusations of sorcery are frequently made between brothers and the result often is that the younger brother takes the sorority-group away from his sorcerer brother to some other place and sets up a new village with it. Therefore, one possible source of instability in a Yao village lies in the operation of the kinship system in a system of values which reckons status by adherents.

I have thus far been describing the simpler types of village. In the larger groups it is common for the warden of the sorority-group to live in the village where his sorority-group is. Then he usually brings one (or sometimes more) of his wives to the village, where she lives patrilocally. The daughters that are born to her do not return to the sorority-group from which the headman's wife came but marry and set up households near their mother in the village of their father. Thus there develops in time a second sorority-group in the village, alongside the first sorority-group, and related to it through the headman. At this point we may say that the man's position has changed from that of headman of a village containing a single sorority-group, to the more complicated and less secure one of village headman over a more hetero-

621 'In 1946 village A had about 30 huts in it. A certain man B was the son of the
622 previous headman called A_1 and hence mother's brother's son or cross-cousin of the
578 present headman called A_2. B had two wives living patrilocally and while B was
684 serving in the Army he had a letter from one of his sisters (i.e. his mother's brother's daughter or cross-cousin to the headman) to say that A_2 was sleeping with B's wives. When B returned he started making inquiries from his wives and he eventually secured a confession from them. B then went to a man called C, who stood in the relationship of mother's brother to the original A_1 and complained about the behaviour of the village headman. C also instituted inquiries and ascertained that it was true. C then approached a local headman of some standing (whom I shall call D) and asked him to arbitrate in the case. D pronounced A_2 guilty and awarded compensation of £6. 10*s*. to B. B, however, refused to take the money, and said that he wished to leave the village. D observed that he had every right to do this and that A_2 had no right to complain 'since he had broken the village himself'. B took his sorority-group, who occupied about twenty of the thirty huts, to a place about thirty miles away and set up a village of his own. The sorority-group of the village headman A_2 remained behind in the old village.'

This case illustrates the points that I have made. It shows how the two groups in this village stand opposed to each other in that B's sister wrote to tell him of A_2's conduct. Also when the village did break up it did so along certain very clear lines of genealogical relationship. Second, it illustrates the operation of the desire for dependants in that B refused what by Yao standards is a very large sum of money for compensation and preferred to move off and establish a village of his own. This attitude is also shown by the arbitrator who takes the point of view that regrettable as it is, the village must in the circumstances split, and while he appreciates the headman's feelings he makes it clear that the headman has no one to blame but himself. Third, it is interesting to note that this split took place after the death of the old village headman when the personal ties with both opposed groups were severed. Though the new village headman A_2 assumes the kinship terms of his predecessor and also calls the children of A_1 'children' yet in fact he is their cross-cousin while the old village headman was their father.

622 The position of the village headman in Yao social structure may be summarized
554 thus: the village headman is the leader of a group which may be a simple kin-group
621 or a composite group of two or more opposed matrilineages linked to each other through himself or one of his predecessors whom he represents to them. The numerical size of the village determines the status of the headman, but the size that it can reach is limited by an immanent instability in the kinship structure which is expressed, in terms of their status system, first, in the competition of brothers for the wardenship of the sorority-group, and second, in the competition between the headman and the wardens of the patrilineally linked sorority-groups, who wish to set up villages of their own.

621 The Yao see villages as units and this is clearly shown at the initiation ceremonies
881 of boys, when the initiates are kept in grass-sheds, each partition of which refers to a particular village. In the same way a person is identified as belonging to a particular village known by the name of the village headman. Thus a man might say: 'I come from Kumpumbe's village.'

Village headmen themselves are graded in importance and there are certain marks of rank which distinguish the more important headmen. We have already examined one of the most obvious ways in which the village headman's importance is judged, that is, by the number of people in his village. In addition there are other ways in which village headmen may be distinguished both from the common people and from less important headmen. Thus, for example, some of the more important village headmen have the right to conduct initiation ceremonies, this right being granted to them by the man who is in a way the most important village headman of all—the Chief. The right to hold a boys' initiation ceremony (*lupanda*) is of more importance than the right to hold a girls' initiation ceremony (*ciputa*). Yet another mark of rank is the right to wear a plain crimson band around the forehead (*mlangali*), this right also being granted by the Chief. 622 554 881

The Administration has recognized the more important village headmen and has entrusted to them certain duties. By no means all the people called 'village headmen' in this paper are recognized as such by the Administration, but I do not know of any person who has the right to wear a red band and is not also an Administrative village headman. 622 554

The status system has apparently been taken over from pre-European days, but it is uncertain to what extent these important village headmen had powers. Some to-day have all the marks of rank that the Chief has, i.e., they hold both boys' and girls' initiation ceremonies, are entitled to the special greeting accorded to important village headmen (*sukulu*), wear a red band, have the right to be buried in the village and not in the common cemeteries, and to have their bodies prepared for interment by people of similar rank. It appears that such people exercised a certain amount of power, by reason of their personal qualities, over less powerful neighbours, and some were able in the past to demonstrate their autonomy by moving off to establish petty chiefdoms of their own.

Nowadays the Administrative village headmen have certain statutory duties to perform towards other minor groups actually independent but considered, for the purposes of the Administration, to belong to the village. The relative importance of the headman is still the deciding factor in such questions as determining who is to be called in to arbitrate in a case. Thus, though for Administrative purposes a small village may be considered to be a part of a larger Administrative village under an Administrative village headman, yet when a case for arbitration occurs within that smaller village, some other person than the Administrative village headman may be called in as arbitrator. 622 554 631 692

Laws promulgated by the Administration are conveyed through the Chief to the Administrative village headman and in this way a hierarchy of power is being introduced. The small village headman now sees the Administrative village headman as a representative of the Chief and the Administration. The Administrative village headman in turn sees the Chief in this light. But in matters directly affecting the Administration, the small village headman also sees the Administrative village headman as his own representative *vis-à-vis* the Chief and the Administration. 622 631

In general the village is by far the most important corporate body in the social organization of the Yao, not only as a significant primary group but also as an element 621 622

6: Mitchell E-5 (1946-1947) 1949 FT7 Yao FT7

IT SHOULD

162 be noted that only 27—11 per cent. of the whole sample of 246 women—had never
589 married and that 23, 80 per cent., of these (or 10 per cent. of the total) were under the age of 20 and therefore stood a good chance of yet marrying. Furthermore, 2 of the 4 women over 20 who had not married were known definitely to be incapable of marrying (one is insane and the other has violent epileptic fits).

There were 53 women who were divorcees or widows (21·5 per cent.), but it should be noted that 27 (or 11 per cent. of the 246 women) were over the age of 45 and therefore were past, or nearly past, the child-bearing period. Those in the younger age-groups stood good chances of remarrying. Table IV shows that though
[586] the divorce rate is high[1] remarriage is common. By the time a woman's child-
[587] bearing period has ended she has been married on the average 1·7 times. Few marriages are contracted after child-bearing ceases.

TABLE IV. *Marriages and Dissolutions of Marriage experienced by all Women over the Age of 13*

162

587

Present age	*No. of women*	*No. of marriages contracted*	*No. of divorces experienced*	*No. widowed*	*No. still married*	*No. of marriages per woman*	*No. of divorces per woman*	*No. of marriages per woman ended by death of husband*	*No. of marriages per woman still existing*
13–20	45	22	1	..	21	0·49	0·02	0·00	0·46
20–30	79	104	36	4	64	1·32	0·45	0·05	0·81
30–45	70	122	50	16	55	1·73	0·71	0·23	0·79
Over 45	52	88	29	34	23	1·70	0·57	0·65	0·48
Total	246	333	116	54	163	1·36	0·47	0·22	0·67

842 These statistics, showing the early age of marriage, the early commencement of child-bearing, the high incidence of marriage among women, and the high rate of remarriage during the child-bearing period, all point to the high valuation of
[182] reproduction reflected in Yao culture. This is consistent with their social structure,
[61] where the major corporate groups are kinship groups and reproduction is the principal method of recruitment to the group. Furthermore, because the standard of living is almost at subsistence level, children do not entail the economic losses
[593] they do in Western society. On the other hand, they are expected to support their
[888] aged parents when they themselves are economically independent. In other words, there are few factors militating against reproduction and many in favour of it.

554 We may expect the beliefs and customs surrounding child-birth to reflect the value
884 of reproduction. For instance, the Yao distinguish clearly between women who have
[182] borne children and those who have not. When a girl becomes pregnant for the
[842] first time she undergoes a special ceremony (*litiśo*) attended only by women who
[843] have borne children. This ceremony has many of the features of a *rite de passage* and appears to mark the passing of the woman to a new social status. Furthermore, women are ascribed status according to the number of children they have borne. The word *anwali* signifies a young woman who has not yet borne a child; *anwali*

[1] Between a third and a half of the marriages contracted by women had been dissolved by divorce by the time that the child-bearing period had ended.

ndembo, a woman who is pregnant for the first time;[1] *kacembere*, a woman who has one or two children; *mjembere*, a woman who has three or four children, and lastly *ndolwa*, a woman who is past child-bearing age.

The information which I have been able to collect on abortifacients and contraceptives suggests that they are not used by married people merely to prevent their having more children, but that they are used by people who wish to avoid pregnancies which would be embarrassing, for example, by a woman whose husband is a labour migrant. To what extent the abortifacients and contraceptives are efficacious I cannot say; some, I know for certain, rely on a magical principle, for example, the medicated cord worn by a man during intercourse. On the other hand, the abortifacients taken orally may have some active ingredient.

A barren woman or an impotent man is regarded with some embarrassment and the marriage sureties (*ariusumangusipe*) of a childless couple will go to considerable trouble and expense consulting diviners and leeches in an attempt to make their wards productive. Childless couples are regarded as not fully adult and are treated in a patronizing way by those who have borne children. Since a man may marry other wives, barrenness in a woman is a cause of sorrow to her husband, but is not in itself a ground for divorce. Where the man is impotent, however, the woman may divorce him on this ground, though she usually takes a paramour and forces her husband to an action for damages which automatically leads to a divorce because it is the usual practice in these cases for the court to ask the woman if she wants to be divorced from her husband.

In contrast to the satisfaction shown at the birth of a child is the sense of awe evinced when a child is still-born or the woman miscarries. The Yao do not distinguish between still-births and abortions, both events being known by the word *kwasanga*. This is a verb and refers to the process of abortion; there is no term for the dead foetus itself. I made no attempt to enumerate miscarriages and still-births because they are supposed to be due to breaches of sexual taboos on the part of the husband and wife, and interviewees were naturally reluctant to mention them. Miscarriages and still-births are greatly feared, and the woman is considered to be in a very dangerous condition until she and her husband have carried out a ritual purification. Should a man have intercourse with a woman who has miscarried and not yet been purified he will contract a disease called *lwaso* which is believed to be invariably fatal. Still-born children or aborted foetuses are buried in a hole dug with sharpened sticks in the bush by the women, whereas children who are born alive and die afterwards are buried in the graveyard in graves dug by men with hoes. The burial spots of still-born babies or aborted foetuses are marked with a stone or broken pottery, since it is believed that to step on them will induce an illness.

The concern of the interested kin-groups is shown in the child-birth procedure. Birth normally takes place in a hut in the presence of the older female relatives of the woman and the female representatives of the man. The husband's representatives are necessary because the Yao, like many other Central African peoples, believe that an adulterine child will not be born to the woman unless she confesses (*kupara*) the name of the genitor. If she persists in concealing the identity of the genitor, they

[1] *ndembo* = elephant, hence ivory. The terms *ditibo* and *ndembo* here both refer to the ivory beads traditionally worn by the woman in the pregnancy initiation ceremony.

7: Hetherwick M-5 (ca.1900) 1902 FT7 Yao FT7

with the dead. He approaches the shrine, opens the gate of the fence, takes a pot'ful of beer and pours it into the pot at the head of the grave. Next he places the basket of porridge and the plate of meat on the mound beside it and retires. Kneeling down outside the gate facing the shrine and a few yards in front of the people he chants his prayer in a monotone, each petition commencing with "Chonde, chonde," "Please, please." All the while the people clap their hands in unison with him and sing the response as they do in a native case in the chief's court. 769

When the offering has been made at the grave, the rest of the beer or other food is consumed by the worshippers. Guns are fired as a token of respect to the dead, and the rest of the day is spent in dancing. [535]

Such shrines are to be seen in almost every Yao village where the inhabitants have been located for any length of time. They are regarded with awe—the little boys as they pass whisper to each other in a warning tone, "masoka." Should the village be moved to any other district, the old shrine is not forgotten. Periodical visits are made to it with the usual offerings. In cases where the old house has been occupied by a people hostile to the old inhabitants, such visits are usually made during the night, and the people awake in the morning to find that the old chief's grave in their midst has been newly repaired, and a fresh offering of food placed at its head. 778 769

Sometimes such shrines are found on the summits of hills which once may have been a refuge from the enemy in time of war, but which now lie lone and deserted. Thither in their need the people make their way with their offering of food and beer, and their prayer for rain or suitable weather for the crops. Near Blantyre such shrines are to be seen on the tops of Mount Sochi and Mount Michiru. The former is the abode of the spirit of Kankhomba, and the latter of Mpulale, both old Maravi or Mang'anja chiefs who doubtless fled there seeking safety from the war of the invading Yaos, and died leaving their souls to be the *mafungo* or spirit of the mountain. Some years ago, during the fear of an Angoni invasion, the Yaos of Mount Sochi fled to the hill-top for refuge, and there the old chief Kapeni died. He was buried close to the grave of the old Kankhomba, and now, when the Yaos on Sochi make an offering, it is to the spirit of Kapeno that the homage is paid, and the shrine of Kankhomba lies neglected.

Only the graves of chiefs or headmen are thus treated as shrines of worship. The burying place of slaves and the common people lies away in the thick bush, where only the rank grass or the thicket of old trees marks the spot. No offerings are ever taken there, for such as are buried there can have no influence in the spirit world. The dead are buried, the broken pot or basket is left on the grave to mark the spot, and none ever seek to go there save to lay another in the same neglected ground. 554 764 769 778

II. But the word *mafungo* is used by the Yao with a wider application. Etymologically the word is connected with the root *bafungwa*, which in so many of the other branches of the Bantu tongue appears as *bafu* or *bawa*, and signifies "great" or "old." It is the same root which appears in the Kafir word for God, 776 197 192

chief, his sister's sons and his younger brothers.

Besides the councillors, there were a number of officials known as *mapungu* (sing. *lipungu*), which term I translate as court assessor. These officials have often been confused with the councillors, though they were a completely different set of officials. They were not necessarily village headmen though councillors were always so. Also the position of the court assessors, unlike that of the councillors, was not hereditary. Court assessors were chosen because of their wisdom and debating ability and often slaves were appointed. Councillors were chosen because of their general status in the community and once chosen tended to be succeeded by the heir, who for all intents and purposes, socially replaced his predecessor. The court assessors lived at the court of the chief and they were the correct channel of approach to him. No one could approach the chief without at first approaching a court assessor and reporting his business. The assessor's more important duty, however, was the sifting of evidence in cases in which the chief was arbitrating. The court assessor then recounted this evidence to the chief who delivered his opinion and awarded compensation.

In general the picture that we have of the political organization of the Yao before the Whites came, is that of a number of leaders of kinship groups, who by acquiring sufficient dependants and slaves were able to maintain a certain level of power. Certain groups of them were under the power of more influential leaders (the chiefs) who usually had sufficient resources to send trading caravans down to the coast, which in turn maintained his power over his neighbours. In this loose po. tical organization the importance of being able to control dependants was cardinal and the adage "a chief without people is nothing" (*mcilambo nagu ngunakola ilunda, ngunamu mcilambo!*) sums up the situation pithily.

563 groups presents a problem to be considered but for the main purposes of this paper a brief comment is sufficient.

The Nyanja people who were allowed to remain in the areas continued to live in their village communities in much the same way as the Yao did. In fact the Nyanja and the Nguru are so similar in culture to the Yao, that it was possible for them to fit into the Yao social structure fairly easily. For example, in Mposa's area Mbande and Mbeta are recognized by the local Yao sub-chief as important personages since they were the indigenous chiefs in the area before the Yao came in as invaders. Both, for example, have adopted [554] the Yao practice of wearing a red band round the head to indicate rank. Both have the right to conduct the Yao indigenous initiation ceremonies. At one meeting I attended Mbande was allowed [554] to sit in a chair while the only other person to do so was Mposa himself. This is a mark of honour since no commoner is allowed to sit in a chair in the presence of the chief.

In the same way the Nguru immigrants have come in small groups of matrilineal kin and have settled either in hamlets alone or set up small hamlets in close vicinity to kinsmen. Their headmen in turn have been absorbed into the general political structure though they have their own language and distinguishing cultural traits. Thus some Nguru initiate their boys according to their own *cidototo*, though others will allow their boys

V. THE POLITICAL STRUCTURE

642 177 The accompanying diagram is designed to summarize the main types of interaction that take place in the political structure of the three areas. Interaction between the social personalities in the political structure can be said to take place in reference to certain sets of values. One set of values is that which the Yao recognize and believe to belong to the White people. Another set of values they recognize and subscribe to as their own. A chief may interact with a village headman because he has broken a regulation which

[Text continues bottom of P. 151B]

648
642 who are, to them, innocent. The diagram has been divided obliquely to represent these two
177 systems or fields of values. The division of the diagram into two parts depicts a major rift in local political relationships. While some political relationships, as say between village headmen, do not directly manifest this cleavage, in most, as say the chief with his subjects, though the Whites are not present in person, they are there in the context of the interaction. This will become evident as the analysis proceeds, but at this point it is sufficient to observe that the Whites and the White system of values are an integral part of the modern Yao political organization.

642 In addition to this, there is a hierarchy of status
177 roughly conforming to the placing of the social personalities in the diagram, i.e., the White
534 Administrator is of higher status than the African
648 Civil Service which is roughly on the same level as the chiefs, but both are on a higher status than the Native Authority's clerk and officials are. The lines represent the main direction of interaction.

648 1. *The White Administrator and the African*
563 *Civil Service*

By the White Administrator I mean the District Commissioners, Agricultural Officers and other Government officials who come into contact with the African populations, particularly in the rural areas. The social distance between a White person in general and the Africans is much larger than that between, say, an African chief and his meanest subject. Social interaction on an intimate basis cannot take place between chief and Administrator mainly because their relationship is dominated by the pattern of all South African territories, where White does not interact intimately with Black. I have already stated that not many Europeans come into the area. Those Whites that do come into the area are immediately accorded the status of an Administrative Officer and are apt to be thought of as such, though they may not be so. The Yao clearly recognizes that the Labour Recruiter is a different sort of person from the Missionary and both differ from District Commissioners, but

622 Administrative village. The N.A.'s bureaucracy considers him responsible for the collection of the taxes though, of course, the legal responsibility rests on the tax-payer. The village headman is generally responsible for the various regulations that the villagers must carry out. In practice the Administrative village headman may be in charge of a single kin-group and thus have a certain amount of control over the villagers because of his kinship with them. More frequently, however, the Administrative village headman is also in charge of a number of other hamlets, sometimes completely unrelated to him but who happen to have been assigned to his jurisdiction. He then delegates the responsibilities to the headmen in charge of the hamlets.

622 554 The Yao judge rank among the village headmen largely in terms of historical antecedents and by the number of dependants that a village headman has. While a certain village headman may be ranked fairly highly in the status system because his ancestors were closely associated with the ancestors of the chief, he may not now have many villagers around him. A newcomer to the area however, can only become notable by acquiring sufficient followers to make him a man of considerable power. Associated with rank are the various insignia that I have mentioned, i.e. the right to hold initiation ceremonies, the right to wear a red band round the head, etc. The competition among village headmen therefore, is phrased largely in terms of competition for these particular insignia of rank. They strive to be recognized as Administrative village headmen—"to have a book" as they say, since this at once means that they will receive a remuneration for work which they would have to do anyway, and it also means that they would be recognized as village headmen in the eyes of the White Administration. Village headmen also compete with each other to have the right to hold initiation ceremonies and use the threat to move out of the chief's area to bring pressure to bear on him to force him to grant the right.

692 While domestic quarrels are usually settled by the kin-group leaders and by the husband's and wife's parties conferring together, differences out-

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

439 that the Yao occupied in Central Africa as middlemen and traders. As far back as 1798 Laçerda described the Yao rôle as active traders. They bartered ivory, slaves, beeswax and tobacco with the Arabs along the East Coast of Africa for guns, gun-powder, cloth and beads. We cannot easily estimate what proportion of the population was engaged in whole-time slaving and trading. The larger proportion must have found it necessary to cultivate their gardens of finger-millet and sorghum in the rainy season to supply them with the major food crops. It seems likely that slave-raiding and trading were occupations mostly followed during the dry season.

The Yao therefore had become accustomed to a variation of activities and division of labour, at least a century before the Whites came to Nyasaland. Their wants at this time had already become sufficiently diversified to include cloth, beads, gun-powder and guns. All these trade goods are more durable than the foodstuffs which are the measure of wealth among a people who support themselves entirely by their own produce. But the individual want for these trade goods was limited, and the Yao used their surplus rather as capital for trading farther inland with other tribes.

436 There is considerable evidence, both from my informants and
439 the writings of early travellers, that these trade goods—ivory,
567 cloth and slaves—came to be used as currency, and most people recognized a fixed relationship between the three commodities. A female slave could be exchanged for an amount of calico or ivory that was constant over fairly large parts of Central Africa; the value of a tusk of ivory could be expressed in calico in the same way. By enterprise, therefore, in trading and raiding,
439 an individual could accumulate wealth in the form of calico, guns,
556 beads, ivory or slaves. But the personal consumption of trade
567 goods is of necessity limited, so that the Yao preferred to accumulate their wealth in the form of slaves. The reason for this lies in the general political structure of the early chiefdoms, which I describe later. Slaves were not only labourers and serfs; they also increased the military and political power of their masters. At the same time slaves could be sent to the coast in a caravan and bartered for cloth, or, since they were always prized, they could be used to settle claims for compensation from aggrieved neighbours. The slave trade therefore, although related to domestic

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

slavery in that a trader could at any moment send some of his own slaves to the coast, was actually quite a separate institution.

Although the advent of the White Administration stopped both domestic slavery and the slave-trade to the coast, both of which were vitally important elements in Yao economy, it did nothing to decrease or reduce the variety of the wants of the Africans. On the contrary, it obviously increased those wants. The missionaries, who were the first Whites to settle in Nyasaland, were forced to import large quantities of cloth and beads so that they could buy foodstuffs and pay their labourers. They quite unintentionally, therefore, became competitors with the Yao in this trade. By some accounts their goods were both superior and cheaper. As early as 1878 the African Lakes Company was sponsored by the Church of Scotland Mission, so that it could take over the trading part of their dealings with the Africans. The planters and traders who began to settle in the highlands after 1890 brought more and more cloth, beads and other trade goods into Nyasaland to pay wages and buy foodstuffs.

When the Protectorate was proclaimed in 1891 and the Administration started to put down domestic slavery and the trade in slaves to the coast, the monopoly of trade in goods fell directly into the hands of the Whites. After 1893, when coinage was introduced, the economy of the country rapidly changed from one based on barter with slaves and ivory as the main outgoing commodities, and slaves, calico, beads and brass rings as the incoming commodities, to an economy in which the wants had become even more diversified. In 1895, the *British Central African Gazette* could record:

> The wants of the people of this part of the world not long ago were limited to sufficient calico to clothe the family, but in one short year their wants now include boots, size and quality a minor point, turbans, coats, and in fact at a distance the half-naked native of yesterday has the appearance of Sikh soldiery.[1]

That the Yao took to the use of money is illustrated by the Acting Commissioner's statement in 1897: 'The Yao thoroughly appreciate having a currency. It has proved, in fact, a great step towards civilizing the native of this part of Africa. He is now able to accumulate his earnings, which formerly in the days of a

[1] Vol. i, 2 (Sept. 26th, 1894).

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

village headman and had to administer his slaves and relatives in his village in the same way as a village headman.[1] MacDonald shrewdly observes: 175 578 622 643

> Where the chief sees occasion to interfere with his subordinates he generally consults his own interest. He will say to a headman, 'I see that you have been behaving badly to that subject of yours. You cannot get on with him: he must leave you and come and dwell in my own village.' The chief thus secures another servant.[2]

Another writer observed, 'As a chief's power consists of the number of his subjects the loss of a man is a serious matter.'[3] 175 622 643

A village headman also tried to strengthen his position against the chief and against other village headmen by attracting to himself as many followers and dependants as he could. The process whereby a man might increase his status is described as follows: 556 567

> However large the settlement may become, the man that is first in the field is the chief or headman. In course of time he adorns his position by acquiring wealth. He may shoot some buck and get possession of their skins. With these he goes to the Mangoni country and buys slaves. An old person he obtains for a single skin, but a young slave costs two, and women cost much more than men. The female slaves thus bought are his junior wives and he keeps them busy in hoeing the farm, and all such female duties. The male slaves he employs in farming, building, making baskets, sewing garments and such masculine pursuits. He keeps all these persons strictly at their duties, and at the same time welcomes an opportunity of selling them at a profit. If his daughters were unmarried, he would give them slave-husbands. The natives aim at 'replenishing the earth and subduing it'. As it is no expense for them to rear families, they are all desirous to have many children.

Besides this increase of the village from the chief's own resources, there may be an accession of freemen. After the settlement is begun, a man may come to its founder and say, 'I wish to live with you.' The village chief gives him permission and calls him 'younger brother'. The newcomer brings his family, builds a house, and cultivates a farm in the same way as his chief. A freeman may leave his present chief and take up his abode with another, whose subject he becomes. His former chief has no longer any authority over him 175 622 641 643

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

amongst the Yao. The religious sanctions behind tribal initiation ceremonies were weakened when many of the village headmen adopted Islam, and the rights of holding the Islamic equivalents fell to commoners who were leading Moslems. Thus for many village headmen the significance of the holding of initiation rights fell away. The White Administration has introduced new political personalities into the field, such as the court clerk, the court sergeant and other members of the chief's bureaucracy. These persons have been able to acquire peculiar positions of power in competition with the chief's traditional advisers.[1] Some wealthy individuals are able to wear better clothes, build better houses, and have more personal attendants, than the chiefs. For example, there is a carpenter in Kawinga's area living near an Indian store,[2] who is wheeled about in a garetta (ricksha) as the chiefs are, and who dresses far better than any of the chiefs.

But these changes have not yet affected the pattern of social relationships appreciably. Up to the present as new elements were introduced into Yao social structure they have been absorbed in terms of the traditional structure. The traditional chiefs, therefore, became the Principal Headmen when White Administration was imposed on them. Village headmen, no longer able to compete with each other in terms of followers and slaves, now began to vie with each other for 'books'. Important village headmen became the Moslem leaders, and the larger mosques were built at their villages. The chiefs, by virtue of their annuity from the Government, are able to maintain a higher standard of living than most of their subjects: they build burnt-brick houses, they wear finer clothes, they are wheeled about in garettas or, latterly, are pillion passengers on bicycles pedalled by retainers. By using their annuities as capital, they have been able to grow more tobacco than most of their subjects and so still maintain economic ascendancy over them.

So that until 1949, at least, in spite of the introduction of

[1] cf. my 'The Political Organization of the Yao of Southern Nyasaland'.

[2] He does not live in a village as most people do; he is an Nguru, and has none of his relatives near him, which is significant. His relationships with his clients are formal and transitory and he is not bound by traditional kinship ties. He therefore attempts to achieve prestige through conspicuous expenditure.

3: Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

generous and popular, the donations may mount up to a useful sum. Dancing goes on late into the afternoon when all return to the village. 843

The man may not speak to his guardian again until after the birth of the child. The two women guardians, the *nkamusi* and the *nakanga*, as a rule cease sexual intercourse with their husbands during the same period or, at all events, during the last month before the birth of the child.

The child born of a woman who has not gone through *Lilivao* is buried alive. [847]

Chieftainship. The Yao when they migrated to their present country were headed by a number of their chiefs. These eventually settled in different areas adjacent to one another, each ruling over a considerable tract of country. The chief was supported by a number of headmen, each of whom looked after a village; the chiefs and headmen in turn being assisted by the village elders. 622 643

Often among a chief's counselors one found a number of his relatives, and sons and brothers were often made headmen. A man assuming chieftainship often had to dispose of a brother of whom he was afraid. 643

Chieftainship is hereditary, the chief's name being passed on to each successor. Succession is to eldest son of the eldest sister or a son of some other sister. Failing these, it passes to a grand-nephew. If there is no acceptable adult nephew, a full brother may succeed.

Macdonald's account of the Malemya's succession[1] is, I believe, incorrect. The old Malemya (Nalutumbo) was succeeded according to custom by his nephew, Kasabola who, as Malemya, was called Ndalama. Kumtaja was not a younger brother of Nalutumbo or Kasabola, but a cousin of the latter. Ndalama was succeeded by a nephew, not the eldest but the second son of a sister, the eldest having already succeeded to the chieftainship of Kumtaja was therefore ineligible. The present Malemya will be succeeded by a grand-nephew, the son of a daughter of his eldest sister, his sister having no sons. [114]

A successor inherited all the wives and slaves of the deceased chief and all his goods and chattels, guns, ivory and gardens. Any small possessions might be divided among the deceased's children and in the case of guns, those who had always used them often laid claims not to be separated from their weapons; these claims were often allowed by the new chief. 643 428

In the same way, any ordinary man's successor is his nephew, the son of a sister, who inherits all goods and chattels and slave wives, but not free-born wives, nor gardens, which go to the free wives. Stock is generally divided among the children.

Before 1891, when a British Protectorate was formally declared over Nyasaland, each chief ruled supreme. He was consulted as to the dates for *Unyago;* he directed the harvesting, etc.; he proclaimed war and generally was paramount among his people. It will be seen, therefore, that he was a busy man, but he received no direct remuneration. His wealth consisted of slaves and ivory. Slaves he obtained in warfare and as blood money, 643 [556]

4: Stannus D-5 (ca. 1909)1910 FT7 Yao FT7
Maravi FR4
Ngoni FR5
Bemba FR5

M 301 Necklaces, most commonly for children, are made of a number of little square pieces of hippo ivory strung together, ornamented with geometrical designs.

M 789 Medicine is often carried in a little packet suspended round the neck, as also charms of various kinds. The medicine may be some powdered charred roots or little twigs, leaves, etc., of some tree; these are sometimes now wrapped up in a Y [789] piece of paper on which is written some extract from the Koran (among Mohammedan Yao); this is then sewn in a little piece of calico and adorned with beads and suspended round the neck with a string.

Charms take various forms. Small pieces of wood or, to guard against attack M 301 by lion, teeth are worn. Armlets of the same kind are worn against sickness, and others are worn by Angoni, made of beads to which knives are attached. Bracelets of ivory, plaited grass and elephant tail hairs are also worn.

N 301 Metal and wirework bracelets are commonly worn by Angoni, also twisted wire finger rings and rings of lead and ivory. Heavy brass ankle rings and spiral brass leg and arm rings 6 inches and 8 inches wide are worn by some of the women (Atonga).

B 301 Bracelets cut from the nail of the elephant's foot are worn by Awemba hunters, and little finger rings cut from the scale of the ant-eater are worn as medicine against fever by headmen.

Belts made of wound copper wire are worn round the waists by Wankonde.

M 302 The use of pigments applied to the body is very limited. I have seen stripes of these, white and red, on the faces of young women, boys and dancers, generally M [439] after some ceremony. The significance I do not know. Pigments are now obtained from Indian traders, and I do not know how old the custom is. There is no beautification of face, body, nails, and eyes by pigments. The only application made to the skin is castor and ground-nut oils to keep it soft—no scents are used.

CLOTHING.

M Y N 291 Among tribes of Nyasaland the amount of clothing worn varies very considerably from nothing to European garments.

Of the large majority, however, including Maffanja people, Yao and Angoni, one may speak generally.

[855] The young children commonly run about naked, or have a strip of cloth covering the pudenda, supported by a string round the waist.

M Y N [556] Among the adult population the amount of clothing depends largely on the affluence of the individual, and those who cannot afford much have little clothing. A man wears a strip of calico supported in front and behind by a string round the waist, a woman a piece of calico 18 inches wide reaching from the middle of the thighs to the umbilicus.

Of the more prosperous, the men wear calico from a little below the knee to the waist, carefully wrapped round the body, and kept in position by some kind of belt; sometimes it is folded across the upper part of the chest or sometimes crossed over in front and two ends tied behind the neck.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

culties are settled by the marriage sureties [1] who only report to him after the affair is settled. In disputes of unusual gravity, the headman may call in unrelated persons [2] to arbitrate, but he himself must be present. 622 692

His own behaviour is expected to be exemplary. Any deviation from the norm is likely to be strictly censured, not only by his own villagers, but also by other village headmen, who may say, 'Important men do not behave in this way.' A man who had an argument with his sister's son was told this. He had taken the dispute to a neighbouring headman who decided against the village headman and rebuked him for behaving in a way not consonant with his position. Village headmen should be above squabbling with their villagers. A village headman who was also a leech had virtually raped a woman whom he was treating. He tried to maintain this was part of the treatment. Her matrilineal relatives reported the matter to the headman of her village and he brought the errant headman in front of the chief who said, 'You are wrong to do this when you are an important man. You are a big man and you act as a commoner does. You ought to be able to show the commoners how to behave.' He was made to pay a compensation of £2 10*s.* and fined 10*s.* Had he been a commoner he would have been made to pay a compensation of only 30*s.* 622 577 558 684

The ultimate sanction to which all headmen are subject, is that their people will leave them if they behave badly. This was the fate of Cikumba. 622 558 837

In 1944 Cikumba had a village of about 30 huts. The son of the first Cikumba, Meya, had two wives who were living virilocally in Cikumba's village. Meya had enlisted in the army. While he was away, Cikumba, the village headman who was Meya's father's sister's son (though he called him 'father' because of positional succession), started taking Meya's two wives to beer drinks. Meya's sister one day asked Cikumba about his behaviour, but he only said that Meya could not do anything as he was far away. Things had gone too far, however, when one morning he was seen coming out of the 166

[1] The representative of a spouse in all affairs arising from conjugal relationships. They are usually senior matrilineal relatives. See Chap. VI, pp. 176–7. Their rôle is discussed fully in *Marriage among the Machinga Yao of Southern Nyasaland.*

[2] *Mundu juampambali*, i.e. a person from outside.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

622 hut of one of Meya's wives. Meya's sister wrote a letter to tell him
558 of this and he replied that he could do nothing until he returned.
837 In 1946, Meya returned to be demobilized. The third night after his
166 return he questioned his wives about their fidelity during his absence. They at first held out against him but before long he intimidated them into admitting that they had slept with the village headman. Meya now went to complain to Mapata, who was Cikumba's perpetual mother's brother, and he said that he would come to the village the next day.

When Mapata came he confronted Cikumba with the accusation. Cikumba denied it until Mapata called the women. When they confessed Cikumba was forced to admit his guilt. Mapata now decided to call in an arbitrator, Isa, an important but unrelated headman who lived close at hand. Isa said he would come the following day when the matter could be thrashed out. When Isa and Mapata came they asked the women about the affair in public. They admitted the charge and Cikumba did not deny it. Isa then remonstrated with him for being a bad man and said that he was ashamed to hear about it. Cikumba had to pay £6 10s. to the injured man, Meya, who, however, refused to take it. He argued that Cikumba ought to have behaved as a father to him. But Cikumba had not. He, Meya, could not remain living in the village because his wives would be as Cikumba's wives. Isa said that he could not object because Cikumba had caused the trouble and had broken the village himself. How could he complain? Meya took two-thirds of the huts in the village away with him.

The Headman as a Representative of a Corporate Group

622 The headman is not only responsible for keeping the peace
689 between the members of his village, but he is also supposed to control his members in their relationships with other villages. If members take corporate action against other villages, even if they do so without the consent of the headman, the chief will consider the village headman responsible. This was brought out clearly in the relationships between Cikoja, Mapata and Masimbo in Chiwalo's section.

622 Cikoja and Mapata are two of the more important headmen in
689 Chiwalo's section. Masimbo is a minor village headman who lives
423 in Mapata's village area. The quarrel arose over the question of
226 fishing rights in a small pool lying between the two main villages. This pool was excavated by Cikoja and his villagers in 19[illegible]ng

3: Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

585 drum of her married life begins. The man and woman live together peaceably enough as a rule, each attending to his own sphere of work. The man builds the house, the woman
462 made the floors; she sweeps and cooks, she is the hewer of wood and drawer of water. The man hunts, fishes, makes mats, baskets, the grain store, game traps, and bark-cloth; he looks after the tobacco, and makes the snuff, while his wife brews the beer. He it is who fashions the gourd vessels and carves the spoons, while the woman is the potter (Pl. III, 4) and pipe-maker. Together they hoe and together they harvest, but to the woman falls the monotonous drudgery of pounding and sifting the corn for flour.

842 The Yao have a custom like that of the Anyanja. A sister brings to the house of the newly wedded pair a log of green wood from a *mbaqa* tree which is very hard; the log
[522] may be two feet in diameter and four feet long. Should the bride not become pregnant before it is burned away, the husband is laughed at and they may both be teased by having
[558] many logs brought to the house. A man who has no children is much despised and there is a saying, "He must have eaten some ground-nuts," punning on the word for a thick-skinned variety of ground-nut, *chimbuwila*, a word which also means sterility. An impotent
[837] man may, with the consent of his wife, introduce some male friend into the house, any children born in consequence being claimed as the husband's. He usually chooses some friend from a distance to obviate any attachment springing up between him and the wife. Two married couples may, all consenting, exchange consorts for the night, but they never live together like this for long periods.

582 There is one well-defined marriage taboo; a man may not marry a woman of his own clan. In the old days, he was also restricted to his own tribe, except in the case of slave
[611] wives and wives by capture. Since the clan is inherited from the mother,[1] a man may not marry the daughters of his maternal aunts, but he may marry his other female cousins.
[587] He may not marry two sisters nor a deceased wife's sister; neither do two brothers marry two sisters.

595 The number of wives is limited only by the husband's ability to provide for them. In addition to free wives, a man might formerly have a number of slave wives. The head wife is called *kusyeto*, the other wives, *mangumbo*. The word given by Macdonald, *akusyeto*,[2] meaning the junior wives, is a Chinyanja word and, I think, wrongly applied.

582 It has been said that a man always marries into the village of his wife. For this reason,
[842] female children are always prized as it means an increase in the number of able-bodied men added to the village. In rare cases, the wife might be taken to the husband's village,
[583] as is the Anyanja practice.[3] This, of course, is true in the case of chiefs and headmen. Here, we may also note that no payment is made for the wife and no dowry is received with her.

584 To revert to betrothal, occasionally the sponsors will not agree to the marriage and a
843 runaway match takes place, but in the end, the marriage is usually regularized by the sponsors coming to an agreement. If, however, the woman has in the meantime become

539

20. *Wanikile galanaya nkonsi!*
He was "let in" badly over the fish-sticks!

A man had put a lot of fish on spits to roast round the fire. While he went to get some more firewood, a thief came and took all the fish. A stranger then approached and was examining one of the sticks, saying, "There must have been a very nice fat fish on this stick," when the owner returned and immediately accused the innocent stranger of stealing his fish. A native coming across a corpse will run away, using the above expression; for if he reports the matter, he may be the first to be accused.

21. *Sungula wa udechele (mwanache) wa uwile!*
The impotent man had born to him a child in a joke!

[842 558]

A native man who is impotent is very much looked down on and he is the laughing stock of the village. He is constantly made fun of by the women. The story goes that such a man when being chaffed, said, "All right, let me have the prettiest girl in the village," and they said, "All right, old *sungula*, you can do her no harm." But it came to pass that she became pregnant and the women were disgraced. The meaning of the expression is: what is done as a joke may become a reality.

22. *Mwa winji ng'ombe nya nyama unondi!*
Days many, hairs of an animal few!

There are more days than there are hairs in an animal's coat! If A has done a good turn to B, and B behaves badly to A, A will remonstrate, using the above expression, meaning, "You may want my help again some day, but I shall then refuse and you will suffer."

23. *Chilombo changalinga mkono!*
The (country) earth cannot (be) measured in cubits!

Meaning, "You never know when you may want return for your good deeds.

24. *Kusowela kusilanya, kunuka kulijimiga!* or *kupunga pa moto!*
To be generous (is) to save up, to be stingy (is) to deny oneself! or to throw in the fire!

Kindness returns to the doer.

25. *Uwili ukato, ujika wangalikunda kunyuma!*
Two-ness (is) good, oneness he cannot rub the back!

Ku-kunda = to rub the back of another person while bathing, a thing a native appreciates very much. An expression often used with the meaning, "There is safety in numbers," (*winji ikoto!*)

26. *Kulanga ukunilikuwilile!*
Being in a state of poverty, one must not hang (oneself)!

Ku-langa = to be poor, to be in trouble. Do not give up hope.

27. *Kunichilanga kujangalile kwinunga!*
Having become rich one must jump for joy in the dark corner of the house.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

him will be other people, but for us the bush does not eat a person.'[1] Mbulaje was left with a few personal adherents. My informant assured me that 'He is a most unhappy man to-day because he is forever accused of being the sorcerer who is causing the deaths of his relatives. People are saying that Mbulaje had broken the village because he wanted to be a chief when the people did not want him. The one the people wanted was killed. Nowadays, no one visits him because of his sorcery and the people are frightened of him especially at beer drinks.' 613 622 562

Immaturity disqualifies many prospective village headmen. A headman must be a man of experience and wisdom to take charge of a village. Unfortunately I cannot present quantitative data on 622 613 561

Reference Genealogy. Cikoja Village.

the ages when village headmen succeeded to their title, but my impressions are that unless a man is older than about 30 years he will not be considered for the name. Difficulty arises when there is a conflict between the principles of seniority and age. The older women do not always bear sons before their younger sisters, so that sometimes a man from a junior lineage section (*lisŏelelyanandi*) may be older than a man from the senior. If the younger, but senior, is, say, over 35 it is likely that, other things being equal, he will take the name, but if not the man from the junior house stands the better chance. This is what has happened in Cikoja village. The position is as follows. When Cikoja IV (B2) died, quite regularly the elder sister's (B1) first-born son (C1) succeeded. But many years elapsed between the birth of

[1] *Litinji liyangalya mundu.* In other words, if we go to live in the bush somewhere Mbulaje will not bewitch us. Yao sorcerers are supposed to eat their victims. See p. 117, fn. 1.

622 the children of Ncilaga (C5) and Bt. Mkwinda (C6). There
613 was a big difference in the ages of these two women. Ncilaga
561 died nearly 30 years ago but Bt. Mkwinda died in 1948. When Cikoja V (C1) died in 1936, Salimu II (D3), who was born in about 1914, was very much younger than the present Cikoja VI (E7), who was born about 1895. Ncilaga (C5) had no sons, nor had Atabiya (D1), her eldest daughter, so the succession passed to the only son of Amaliama (D2) who was the senior male in that generation. Salimu II, genealogically senior to the present Cikoja, is to be the next headman. He has married a 'cross-cousin' (his mother's mother's brother's daughter's daughter's daughter) and lives in the village. He has already taken over the affairs in one section of the village. The other section has moved out and built about half a mile away with the present Cikoja VI. Note that the junior house—i.e. the descendants of Citeleka (A2)—are completely out of the succession. Wegami's (E1) eldest son, Cilimba (F1), is living virilocally with Cikoja VI in his section of the village and is already opposed to the prospective village headman Salimu. He is likely to be the village headman after Salimu dies and may even push his claim when the present Cikoja VI dies, because Salimu has been accused of sorcery on several occasions.

622 The conflict between sister's sons and mother's brothers at
578 successions has all but fallen away. The people oppose with
604 some vigour the idea that a younger brother should succeed. Frequently the chief or headman would rather his younger brother succeed, and sometimes indicates him as his successor. Kawinga, for example, has given his pre-succession name of Mlomba to his younger brother and many say this is tantamount to announcing Mlomba as the next Kawinga. This is violently repudiated by most people I have spoken to and they indicate a sister's son as the likely successor. Jalasi too, before he died in 1941, indicated Mbawa, his mother's younger sister's son as the successor, but when it came to the point a sister's son succeeded. The weight of custom is in favour of the sister's sons and usually the succession is fought out among uterine or collateral brothers in the first descending generation.

643 A matrilineal relative is always chosen to be chief in preference
662 to any other, but sometimes there is no heir. Other things being equal an unsuitable matrilineal relative will be chosen, or a

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

against Cikoja himself. It is important that not once is a member of the junior major segment, that is a descendant of Citileka (A2), involved in the dispute. Only the descendants of Atabiya (D1) and Amaliama (D2) are involved, with the exception of Salimu who appears as the representative of the villagers on the old village site.

The Opposition of the Generations

Segmentation arises as more and more sorority-groups, the daughters of women, reach adulthood, and as the sons of the same women become old enough to undertake responsibilities for the care of the women. There is, in this situation, a fundamental opposition of generations. A woman is bound to her own sisters and at the same time she is bound to her daughters. These bonds come into conflict when her daughters want to express their unity against their mother's sister's daughters. The mother must decide whether she will go with her daughters to their new village site, or whether she will stay with her sisters and possibly with her own brother. I found consistently that a mother seldom stayed in a village when her daughters were moving out of it. The bond with her children is stronger than that with her sisters. Yet the conflict is clearly present. It finds expression in the kinship terminology. A daughter is usually identified with her mother's mother. A woman's daughter's daughter inherits her name, her position and her property in much the same way as a man succeeds his mother's brother.[1] When this has taken place the terms of address of her parental generation are now reversed. In other words her mother's brother instead of calling her, 'sister's child' (*cipwa*), calls her 'mother' (*amao*). Sometimes the qualificative *wamauja* ('who has returned') is used to signify the difference. Her mother's mother's husband even before the succession has taken place calls her 'my wife', and I have recorded one or two marriages between a man and his wife's daughter's daughter. A man's daughter's daughter must also perform some of the funeral rites for her grandfather after his wife has died.[2]

We have among the Yao, therefore, the familiar principle of

[1] See Chap. V, p. 121.

[2] She cooks the ritual meal which he eats at the end of mourning to protect himself against *ndaka*. Here she ritually fills her mother's mother's place.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

593 the identification of alternate generations; and this is particularly
578 significant when we realize that the tension between the filial
561 and parental generations is most likely to find expression in the situation where a group of young adult women wish to leave a village, and their mother, if she is still alive, must make up her mind whether to stay or to follow them.

562 The existence of rules of succession for men, different from
613 those for women, presents an interesting analytical problem which
561 I have not yet fully explored. Clearly men must succeed to positions in the first ascending generation, for they are the active leaders in Yao society and those who are to succeed must be sufficiently mature to take over the responsibilities of leadership. Women, on the other hand, are usually not leaders so that succession to positions in the second ascending generation involves no difficulties. A young woman may take her mother's mother's name without involving any responsibilities of leadership. Yet the interaction of the two systems of succession presumably has some reaction on the social structure. A man's sister's daughter who succeeds to her mother's mother's position becomes the man's mother and the man's mother's brother's sister. The man's own sister becomes his mother's brother's mother.[1] The effect of this presumably is to achieve some balance of power between a man and his mother's brother. By the rule of succession for women, a man's sister to whom he is tied by the closest possible ties of kinship, and on whom he is dependent for political success, becomes his mother's brother's mother, so forming a common link between two potentially opposed persons. By the same reasoning a man's sister's daughter who is part of his sorority-group and who is likely to desert her mother's mother's brother to go with her mother's brother if there is a conflict, by succession becomes the sister of her mother's brother's mother's brother, so forming a unifying influence within the lineage. This problem emerged after my fieldwork was completed so that I have no evidence to support these suggestions.

613 Among the men, because of the struggle for political power,
561 the opposition of alternate generations is much stronger than
582 among women. This emerges most clearly in the institution of marriage sureties.

The duties of the marriage sureties towards their wards are

[1] I am grateful to Prof. Gluckman who pointed this out to me.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

part of the normal duties of a matrilineage leader to his kinsmen.[1] 613
But ideally each marriage is supposed to have two marriage
sureties. The first, or senior, surety is called *mkokuogona*, which 561
was described to me as 'the log that lies at the doorway'. The 582
picture here is of a wise old man who cannot move around too easily, but who sits at the doorway of his hut ready to give advice and information to his younger kinsmen. In contrast to this is the junior surety. He is called *mkupamame* or the 'beater down of dew'. He is pictured as a young man, who is vigorous about his daily tasks and who is waiting before the dew has evaporated in the morning, at the door of couples who have difficulties. He is essentially the 'one who walks about'.

The senior marriage surety is ideally supposed to be a mother's 613
brother, while the junior marriage surety is supposed to be a 561
brother. In fact, while the junior marriage surety is almost 582
always a brother, though not necessarily an elder brother, the 604
senior, for reasons which will emerge later, is frequently not a mother's brother. However, in the Yao mind the two are fixed in the relationship to each other as mother's brother and sister's son. The fundamental conflict of their positions is expressed by the opposition of the concepts of the 'recumbent log' and the 'active man'. This view is consistent with the segmentation and internal differentiation that must go on within a lineage. As the segments of the matrilineage become progressively independent of each other, the senior relatives, who formerly held them together, become less and less active in their affairs. In Yao idiom they become 'recumbent logs'.

The relationship between mother's brother and sister's son 604
therefore is fundamentally ambivalent. By the values surrounding the concepts of descent and relationship, a sister's son and 627
mother's brother are close kin and bound together in their attachment to a common ancestry and to a common set of living women who are in their joint care. At the same time the mother's brother, belonging as he does to the parental generation, must be respected by his sister's sons. Recalcitrant sister's sons may be made to toe the line by a number of different sanctions. A mother's brother, for example, may take his case to an arbitrator and bring the force of public opinion to bear upon his

[1] I have described the rôles of the marriage sureties more fully in *Marriage among the Machinga Yao*.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

621 making the oblation, pours the beer or sprinkles the flour at the
613 root (*lipata*) of a shrine-tree. As would be consistent with this
769 way of looking at the lineage, genealogically-distant ancestors are said to be 'below' (*pasi*), so that if a Yao wishes to say that a certain person was a matrilineal ancestor many generations back, he would say that he was 'very much below'.

The Concept of 'The Mother'

613 The matrilineal descendants of the founder look upon them-
562 selves as having been fed from the same breast and may express this by saying 'we are of one breast'.[1] Deep sentiment is
843 attached to the idea of the mother among the Yao. There is, for example, a sharp distinction drawn between those women who have had children and those who have not. When a woman becomes pregnant for the first time, she is given instruction in child welfare when she undergoes a special ceremony (*litiwo*). This is a ceremony which is publicly announced and attended by most of her matrilineal and other kinswomen and acquaintances. No woman may attend this ceremony if she has not herself had a baby. Thus her change in status in the community is clearly shown by the public recognition of her condition, and the fact that she is initiated into secrets which are shared by other mothers only. Her position in the lineage is much enhanced when she becomes a mother. It is the most important step towards becoming a village founder herself.

562 The concept of 'the mother', in general, also appears in the boys' initiation ceremonies. Certain phases of ceremonies may
601 be conducted only with the help of the women. They have to
881 clap the rhythm to which the 'tailmen'[2] do their dances. Here all women are classified as 'mothers' and without their co-operation the ceremonies could not be conducted. During the same ceremonies three women appear with baskets of food on their heads. The tailmen remove the baskets and sacralize the

[1] *Tuli pañele pamo.* The word *mlango*, a doorway, is also commonly used. The idea in essence is exactly the same. It is the concept of the children who come to settle around a woman's hut door. It is used as *ñundu pamlango pao*, the people of his lineage section.

[2] The *m'mchira*. These are the functionaries in the initiation ceremonies. They carry medicated zebra tails during these ceremonies, and this gives them their names. See especially Stannus, 'The Wayao of Nyasaland', 229 ff.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

contents. Here once again the women, though they may have no boys in the initiation ceremony, are called 'the mothers'. The ritual co-operation of the mothers in the initiation ceremonies is paralleled by that of mothers and sons in political affairs: here sons are in charge of the villages, while their mothers and sisters form the nucleus of the localized kinship group, which in turn is the core of the village. 562 601 881

The ritual importance of the mother is nowhere more clearly seen than in the curse. The Yao believe that a mother may curse her child if he or she is disobedient or otherwise beyond control. Not many mothers do curse their children; the threat to curse seems to be more often used. Informants have told me of some mothers who have cursed their children, and the procedure and the wording of the curse have always been very similar. It is usually not applied to young children who could be punished by other means, but to adults and particularly adolescents. Usually the mother lifts her breast and points the nipple upwards saying, 'If you have never sucked from this breast nothing dreadful will happen to you.' The consequences of this are greatly feared. Where I have been told of curses, each time the child has either died suddenly shortly after the curse, or at least it has gone mad. The curse is vaguely supposed to operate through the ancestor spirits, but I could get no clear statement on how this happens.[1] Whatever the cause, however, the symbolic action of lifting the breast and the dire effects which are supposed to follow from this, indicate the importance of the mother in the lineage. 562 861 789 [169]

The Yao attach this sentiment, in general, not only to the mother, but also to all senior matrilineal female relatives. In general speech all female members of the matrilineage in ascending generations are 'mothers', and all members in the descending generations are 'children'. This fundamental relation of mother and child extends throughout the lineage. The Yao term *acinangolo*, used for the senior female members of the matrilineage, embodies this idea of 'the mothers'. More specifically, as far as men are concerned, the matrilineage is classified into 562 601

[1] Further evidence that the ancestor spirits are involved in the curse may be that madness is called *masoko*—spirits—and that it may be said of a madman that the spirits are beating him (*gakumputa masoko*). A curse may be revoked by blowing water out of the mouth, an act which is also vaguely connected with the ancestor spirits.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

562 601 'sisters' and 'mothers' because alternate generations are merged in kinship terminology and in behaviour. A man's sister's daughter, for example, is called 'mother', and her daughter (his granddaughter) in turn becomes 'sister'. A woman calls her male matrilineal descendants 'children' (*mwanangu*), or 'grandchildren' (*yisikulu*); her matrilineal male progenitors 'mother's brother' (*akwelume*), or 'brother' (*alumbwangu*).[1] By extension, therefore, another way of expressing common matrilineal descent is to say that two people are the children of one person, *ŵanakajumo*, even though that person may be their great-grandmother. A term which is almost synonymous with this is *mucitumbu cimo*, 'in one womb', used as 'we were conceived in one womb', though once again the reference may be to a common grandmother. But the inclusiveness of these terms varies in different contexts. Any may refer to the matrilineage of maximal span within the village, or to a section of the matrilineage seen as a segmented organization of parts. It is only by reference to the particular ancestress that the range of the term may be determined.

The Unity of the Matrilineage

613 A person identifies himself most closely with the members of his matrilineage from whom he expects most help and whom he, in turn, is expected to help. If he is called upon to pay a heavy fine it will be the members of his own matrilineage who will club together to find sufficient money. They, more than others, [753] support him in his quarrels. They come to his aid when he is ill or injured, by consulting the diviner and trying to find the sorcerer who is causing his illness, and by finding medicines which will bring him back to good health. They send him money if he has left the country and needs it to return. The goods he brings home from the labour centres will be shared mostly [764] among his matrilineal relatives. They will find the food to be used at his funeral and also see that his burial is properly carried [438] out. He owes these duties in turn to them. His property will stay almost entirely within the matrilineage after his death.

613 753 Relationship, unless qualified, is looked upon as being entirely matrilineal. This is well illustrated by the beliefs about the

[1] She more commonly addresses them as *acimweni*. See p. 147.

DDS	1	4	2	7
Females	7	1	2	10
Males	2	4	2	8

In this hamlet Ali Kasunka is both village headman and the senior male member of the matrilineage. He brought the village into Chiwalo's area and he had the responsibility for the welfare of its members. He has to arbitrate in the disputes that arise within the village and he must at least appear at arbitrations where the members of his village have come into conflict with outsiders. 613 621 622

THE CONFLICT OF MALE AUTHORITY AND UXORILOCALITY

Although descent is matrilineal, authority still rests with the men. The senior man by generation and age is the leader of the matrilineage. It is true that there are a number of small hamlets under women. Biti Nkula village is one, Biti Cimeta is another. But even for these villages there is usually a man who can be called in to handle the affairs of the village. He may be a classificatory brother of the village headwoman, or he may be her own son if he is old enough. For example, in Biti Nkula's village, it is her own son Adam who goes to the divinations and finds the necessary medicine when people fall ill. He also attends the court cases involving a member of the village. Adam is married to a woman in Ndiwagani's village about three-quarters of a mile away from his home and he is therefore easily 562 591 613

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

562 available when needed. When he became a labour migrant in
591 1945, his younger uterine brother Lipepeje took over the responsi-
613 bilities. He is married in Ali Kasunka's village, which is about a mile from Biti Nkula's. In Biti Cimeta's village the minor disputes are settled by the headwoman herself. Her younger sister's son is married in a village ten miles away, and he would take over the duties if he could. He is married to his sister's husband's sister, and his sister's husband has threatened if he should try to take his wife home he will in turn take his wife to his home. Rather than stand the loss of a member from his matrilineal village he prefers to remain married uxorilocally. When more serious disputes occur he comes to Biti Cimeta's to settle them.

The principle of uxorilocal marriage is thus in conflict with the principle of male leadership of the lineage. If a man is living too far away he cannot attend to his numerous duties. The conflict can be solved in one of three ways. The first is that the man may marry in a village which is close at hand, and most marriages do take place between people who live near each other.[1] Second, he may marry a cross-cousin who is living in the village, albeit in another section of it. He need not then move out. Third, he may bring his wife into his village. The last two alternatives are from his point of view the best. He is then living with his matrilineal relatives, and among the group in which he has clearly defined rights and unequivocal status. But his wife's brothers will resist his attempts to take his wife from her village, especially if she is still capable of bearing children. He has to persuade her brothers to let her go with him and if they refuse, or if the woman herself refuses to go, he is helpless. Is he wishes to live virilocally now his only course is to divorce the woman and marry a woman who will live virilocally with him. If he does bring his wife to his village she is kept there by only loose ties of marriage, and on the slightest pretext her male relatives will take her back to her village or she herself will run away home.

562 The larger the group of relatives to be looked after, the more
591 urgent is the need for the senior matrilineal male to live with his
613 lineage. All the villages headed by females are small. Table

[1] 75 per cent of marriages are contracted by people who live within 10 miles
621 of each other. See *Marriage among the Machinga Yao.*

Matrilineage male resident . .	10	11	21
Total	23	13	36

less than 10 huts each, 13 or 56·6 per cent had no male matrilineage members living in them. Among the 13 villages which had more than 10 huts, only two or 15·4 per cent had no matrilineage male members living in them.[1] The largest village in which there was no matrilineal male had only 11 huts. When the size of the village increases, the senior male matrilineage member tends to move in to live with his wards.

THE SORORITY-GROUP (*mbumba*)

But as the village grows and the duties of a senior matrilineage male become more onerous, a form of organization appears within the lineage which lessens his burden. This takes the form of the differentiation of sibling groups, and is part of the normal process of segmentation which is inherent in any lineage system. Consistent with the Yao idea that men should take care of the affairs of the lineage, sisters look to their eldest brother when they are in trouble. This group of sisters in the care of their brother is called *mbumba*. In the plural *acambumba* the word refers to women in general, but in the singular it refers to a particular group of women in the way I have explained. The word is always used in the sense of 'so-and-so's *mbumba*', as *mbumba ja CeMayele*. The central concept here is the brother-sister link and I have accordingly translated the word *mbumba* as sorority-group.

613
593

The man who is in charge of the women, usually their eldest

593

[1] Diff. of per cent = 41·1 ; S.E. of diff. = 17·1 ; C.R. = 2·4 ; p = 0·0164.

The close link of brother and sister is also reflected in the kinship terminology. The common term used by both men and women to address sisters is *cemwali* and it is also applied to all women out of respect. But the term which is used descriptively and sometimes in address, cross-sexually, is *alumbwangu* (my sibling-of-opposite sex). It is self-reciprocal and thereby expresses the special relationship between the man and his sisters. Two sisters address each other in everyday conversation as *cemwali*. When it is necessary to be more specific an elder addresses the younger as *akuluwanga*. These are also descriptive terms. A man addresses his younger brothers as *apwanga* while they address him as *acimweni*. Women also address their elder or younger brothers as *acimweni*. This word is widely used as an honorific title but it is especially used for people who are in authority. The chief, for example, may be referred to as the *mcimweni*, and men frequently call their mother's brothers and other senior matrilineal male relatives by this term. An elder brother has the same duties towards his younger brothers as to his sisters, so that use of the term of address *acimweni* here indicates his position of authority over them.

From the point of view of a warden, his sorority-group is essentially made up of his sisters. We have seen that he is responsible for his younger brothers in exactly the same way as he is for his sisters, though technically they are not his sorority-group. He also has control over his sister's children so that ideally a warden sees his sorority-group as his sisters and their daughters and their daughter's daughters and so on. But a man's sister's daughters will probably have as their warden their own brother who stands in the same relationship to them as their mother's brother stands to their mother. The matrilineage is therefore organized internally in a system of inclusive sorority-groups extending from the eldest surviving member down to the youngest. However, a component sorority-group of a matrilineage does not begin to appear as a corporate group until the man who is to be its leader is old enough to take charge of the affairs of the women under him. Naturally, the age at which this happens is largely a matter of circumstance. Theoretically a man may not take charge until he has been initiated. But Yao boys nowadays are usually initiated at about 8 to 10 years of age. Obviously a child of this age cannot take over the affairs of his adult sisters, so that his mother's brother looks after

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

613 them until he grows up. It is only when the boy becomes
562 adolescent that he begins to take an active part in these affairs.
593 This may begin in a small way. He may, for example, accompany
604 his mother's brother when he goes to consult a diviner. Or he

DIAGRAM 3. THE SORORITY-GROUP.

A2 sees his sorority-group as being composed of A1 and A3 and by extension *their* children.

may be given the charge of the conjugal affairs of one of his newly-married sisters. Gradually he assumes more and more responsibility. His mother's brother on the other hand falls more and more into the background and becomes rather a consultant than an active participant.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

It is difficult to over-emphasize the importance of the sorority-group in everyday life. There is hardly a social situation in which the relationships of a man to his dependent female matrilineal kin are not involved. Probably marriage is the most frequent context in which his duties to and responsibilities for his sorority-group emerge. When a man wishes to marry a woman, he must get the consent of her brother. Ideally, it is a woman's brother who gives the consent, and if one asks a Yao how he gets married to any particular woman he will answer immediately, 'You go to ask her brother.' When consent has been obtained the woman's brother seeks out the man's brother and formally meets him, thereby setting the public seal on the relationships between the man and the woman. This gives the husband particular rights over his wife and her activities. After this, the difficulties of any of the marriage partners are the concern of the two sponsoring relatives (*acinamangoswe*) whom I have called 'marriage sureties'. They meet to discuss the illnesses of either of the marriage partners or their children and try to settle the differences that arise in the married life of their wards. They must be consulted before the marriage can end, and in fact they perform the act that ends the marriage, i.e. one pays a nominal sum of say 2*s*. to the other.

According to the Yao, women are quite helpless in their relationships with others, in illness or in any court cases, and must always have a man to look after them. They are seen to be as dependent on him as children are upon their parents. A statement made to me by old Naliwa, a man who has been looking after a sorority-group for years, reflects this attitude of the men towards the women in their care.

These dependent women (*mbumba*) are as annoying as children to look after. They are *miseci* [1] indeed. If a child is ill they go to tell their brother who says, 'Very well, I shall come to see the child.' If he is not very quick to do it they are likely to be backbiting. If he finds the child very ill he goes to tell the marriage sureties of its father, and they go to a diviner to look for medicine for the sick child. Then the sisters say that he is a good man because he gets on with the job when a person is ill.

Soon the child's mother becomes ill. Someone goes to tell her brother who says that he will come to see her. He visits her husband's

[1] Backbiting. See Chap. VI, pp. 137–8.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

562 marriage surety and together they consult diviners and find medicine
578 until she recovers. Then he goes back to his village.
593 He has no sooner got back when someone comes along to tell him that the child is ill again. He says, 'I am busy, I have some work to do. Tell someone else to go to the diviner.' The messenger goes back to his sisters and they say to each other: 'He is not a good man. He refuses to go to the diviner for the child.' Another says, 'Yes, it is so. Our brother is not diligent and when he comes here he will get no food from us. He eats our food but he does not work for us. Let us ask someone else to look after us. Our younger brother is a good man indeed.' Then everyone agrees that this should be so. The one that all said was a good man before, they all now say is bad. Then the sisters go along to tell the other brother who says, 'Go and tell my elder brother.' The sisters reply that he is not a good man and say, 'We want you to look after us.' He agrees and goes to the diviner to get medicine.

The next morning a husband goes off to his village without saying goodbye.[1] The wife now goes along to tell her younger brother who says that he can do nothing about it and that she will have to tell her older brother. She returns to her village crying, and tells her sisters that she told her brother about her husband's leaving and that he refused to have anything to do with it. Then one of the sisters says, 'Yes, the older one is a good man, not like that bad young one. If this one were the older one he would have already gone to get the man back.' Others say, 'Yes, that young one is not good at all. He is a sulky one. Is he not a sorcerer? Go to the big one and tell him.'

Then the woman goes to the hut of the older brother and tells him of her difficulties. He tells her to go and fetch her husband and if he refuses to come back, to tell him. This she does and he refuses to return. She reports this to his elder brother. He tells her that his younger brother will return and if he does not they will come to talk matters over. The woman goes back to her village and goes to see her elder brother to tell him what she has done. He says, 'Very well, my sister, if he does not come to-day I shall go there to-morrow. Now go home and give the children some food.' When she gets back to the village she says, 'That brother is a good one indeed. He is diligent. He is going to fetch my husband back, if he does not return to-day.' If the man has not come by the next morning the woman goes to tell her brother. He goes to the husband's

[1] *Kuunduke*—to go off in a huff, to go off without saying goodbye. This is a sure sign that there is something wrong and that some action needs to be taken.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

village and seeks out his marriage surety. They call him and tell him that the woman's brother has come to take him back to the village. He says that it is all right and that he will follow that evening. The brother goes back and tells his sister to cook porridge because her husband will be coming that evening, and then he goes home. The husband returns. 562 578 593

The woman now goes to tell her brother that her husband has returned and he says that he will come to visit him in the morning. Next morning her brother comes to the hut and asks her husband why he had left. 'You were cross about something and you did not come to tell me. Now tell me why you left.' The husband now tells him and they talk it over. If they fail to reach an understanding they go to tell the husband's sureties and discuss the case fully. If the woman is wrong her brother reprimands her and if the man is wrong his sureties reprimand him.

To live with a sorority-group needs courage.[1] You must not listen to backbiting. If you listen to the tales of others then you will not be able to live with your sorority-group because your heart has no fierceness. A sorority-group needs a man who has no fear. Then the women listen to what he says. He will say to his sister, 'Sister, hoe your gardens well. Do not have intercourse in the bush because it will finish your children with salt.[2] You must respect your husband and not tell him lies because he will not trust you and will be frightened of you. Listen to what I tell you. Things will be peaceful in your house if you come to tell us what is going on. If you do not tell us then there will be lots of friction.' Then the people say about a man whose sisters are not very happy, 'Who is that man who is not teaching[3] his sorority-group well?' Then the people will mention his name and they will laugh at him. If the sorority-group are living happily together he is a good man and he does not listen to the backbiting. His sorority-group are obeying him well and he lives happily with them.

In this account one cannot but be struck by the ambivalence of the relationship of brothers and sisters. Now they hate each other and now they love each other, depending largely on the fortunes of the moment. But the tie is the strongest in Yao social structure; while the relationships between the sorority-group and any particular brother may vary, the relationship between brothers and sisters in general is unassailable. When 593

[1] *Wakulimbika ntima*; perhaps more literally translated as 'a stout heart'.
[2] A reference to *ndaka*. See Chap. V, p. 112.
[3] In the sense of teaching them the right way to live, as their mentor.

While the succession rule may indicate someone as having the
613 best claim to a headmanship or chieftainship, it does not ensure
622 that he will succeed. Succession to headmanship is not merely
562 a matter of assuming control over the matrilineal relatives of the headman. It is also taking command of the whole village as an entity in a political structure and keeping it together as a functioning whole. The village as a whole, as well as the perpetual senior relatives, has a say in the selection of the new headman, and they select the man who is likely to be the most suitable for the position. Here, as in most affairs, the women have an important say. When they consider his suit the village members discuss in particular the ability of the prospective headman to hold the village together. If he is unsuitable they may cite occasions when he is believed to have used sorcery, or sometimes they merely say that he ' has no mouth '. This means that he is incapable of settling the disputes which arise in the village and therefore is unable to keep peace within it. The attitudes of the villagers to suitors for a name are well brought out in the statements when the Misi name was considered.

There were two uterine nephews, Wadi and Mbulaje, whose claims were about equal though Wadi was the elder. The chief Kawinga sent his representative Kasonga to call for a decision. At a general meeting he asked the villagers whom they wanted. Typically Kasonga's remarks were addressed particularly to the women. There was a division of loyalties. Some said that they wanted Mbulaje because ' he was of good heart, he gave gifts, he laughed and was not bad tempered, and he looked after the people when they were ill '. Kasonga, however, asked the opinion of the women under Mbulaje, and they were apparently dissatisfied with him and supported his opponent. Kasonga therefore announced that the new headman would be Wadi. Mbulaje was dissatisfied with this decision and gathered about him his followers and went off to found a village elsewhere. But the position for Wadi was an uneasy one. He lived in dread of Mbulaje's sorcery. When he was ill just before he died, he accused Mbulaje of putting poison in his beer. After he died Mbulaje brought back the women he had taken away and adopted the attire of the village headman. The people cynically accepted this, saying that he should perhaps take it because if any other should try to be headman he would not enjoy the fruits long before he too was killed. But the women were not satisfied with this arrangement and led by Cilo, the headman's sister's son, migrated. They said, ' We wonder that our chief should have died. The heart of the present chief is not good. Those who will stay with

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

him will be other people, but for us the bush does not eat a person.'[1] Mbulaje was left with a few personal adherents. My informant assured me that: 'He is a most unhappy man to-day because he is forever accused of being the sorcerer who is causing the deaths of his relatives. People are saying that Mbulaje had broken the village because he wanted to be a chief when the people did not want him. The one the people wanted was killed. Nowadays, no one visits him because of his sorcery and the people are frightened of him especially at beer drinks.' 613 622 562

Immaturity disqualifies many prospective village headmen. A headman must be a man of experience and wisdom to take charge of a village. Unfortunately I cannot present quantitative data on 622 613 561

REFERENCE GENEALOGY. CIKOJA VILLAGE.

the ages when village headmen succeeded to their title, but my impressions are that unless a man is older than about 30 years he will not be considered for the name. Difficulty arises when there is a conflict between the principles of seniority and age. The older women do not always bear sons before their younger sisters, so that sometimes a man from a junior lineage section (*liwelelyanandi*) may be older than a man from the senior. If the younger, but senior, is, say, over 35 it is likely that, other things being equal, he will take the name, but if not the man from the junior house stands the better chance. This is what has happened in Cikoja village. The position is as follows. When Cikoja IV (B2) died, quite regularly the elder sister's (B1) first-born son (C1) succeeded. But many years elapsed between the birth of

[1] *Litinji liyangalya mundu.* In other words, if we go to live in the bush somewhere Mbulaje will not bewitch us. Yao sorcerers are supposed to eat their victims. See p. 117, f.n. 1.

622 the children of Ncilaga (C5) and Bt. Mkwinda (C6). There
613 was a big difference in the ages of these two women. Ncilaga
561 died nearly 30 years ago but Bt. Mkwinda died in 1948. When Cikoja V (C1) died in 1936, Salimu II (D3), who was born in about 1914, was very much younger than the present Cikoja VI (E7), who was born about 1895. Ncilaga (C5) had no sons, nor had Atabiya (D1), her eldest daughter, so the succession passed to the only son of Amaliama (D2) who was the senior male in that generation. Salimu II, genealogically senior to the present Cikoja, is to be the next headman. He has married a 'cross-cousin' (his mother's mother's brother's daughter's daughter's daughter) and lives in the village. He has already taken over the affairs in one section of the village. The other section has moved out and built about half a mile away with the present Cikoja VI. Note that the junior house—i.e. the descendants of Citeleka (A2)—are completely out of the succession. Wegami's (E1) eldest son, Cilimba (F1), is living virilocally with Cikoja VI in his section of the village and is already opposed to the prospective village headman Salimu. He is likely to be the village headman after Salimu dies and may even push his claim when the present Cikoja VI dies, because Salimu has been accused of sorcery on several occasions.

622 The conflict between sister's sons and mother's brothers at
578 successions has all but fallen away. The people oppose with
604 some vigour the idea that a younger brother should succeed. Frequently the chief or headman would rather his younger brother succeed, and sometimes indicates him as his successor. Kawinga, for example, has given his pre-succession name of Mlomba to his younger brother and many say this is tantamount to announcing Mlomba as the next Kawinga. This is violently repudiated by most people I have spoken to and they indicate a sister's son as the likely successor. Jalasi too, before he died in 1941, indicated Mbawa, his mother's younger sister's son as the successor, but when it came to the point a sister's son succeeded. The weight of custom is in favour of the sister's sons and usually the succession is fought out among uterine or collateral brothers in the first descending generation.

643 A matrilineal relative is always chosen to be chief in preference
662 to any other, but sometimes there is no heir. Other things being equal an unsuitable matrilineal relative will be chosen, or a

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

woman will take the position, before the name will be allowed to pass to a non-matrilineal relative. While a matrilineal relative holds it there is always the chance that a suitable matrilineal heir will be born to a woman of the matrilineage, and will be able to take over the name. In Katuli's area the principle of primogeniture is so strong, I was told that rather than let a succession pass to a junior house, a woman is appointed to ' keep the name '. This happened before the succession of the present Katuli. Nkolojele was the present Katuli's mother, and when his mother's brother died Katuli was too young to become the chief. Instead Nkolojele took the name to prevent it from going to a junior lineage and held it from 1920 to 1936. Nkolojele was thus appointed Principal Headman under the 1912 Ordinance. In 1936, she retired in favour of her son who then took the name Katuli and became chief. 643 562

The name is kept within the matrilineage if it is at all possible. The history of the succession of Mpumbe's name is instructive in this context. 622

Rufumbwe Genealogy. Mpumbe Village.

Mpumbe, it will be remembered,[1] came from Jalasi's area to Kawinga's after the White attack on Jalasi in Mangoche. The genealogical summary sets out the relevant data.

[1] See p. 59.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

the identification of alternate generations; and this is particularly significant when we realize that the tension between the filial and parental generations is most likely to find expression in the situation where a group of young adult women wish to leave a village, and their mother, if she is still alive, must make up her mind whether to stay or to follow them.

The existence of rules of succession for men, different from those for women, presents an interesting analytical problem which I have not yet fully explored. Clearly men must succeed to positions in the first ascending generation, for they are the active leaders in Yao society and those who are to succeed must be sufficiently mature to take over the responsibilities of leadership. Women, on the other hand, are usually not leaders so that succession to positions in the second ascending generation involves no difficulties. A young woman may take her mother's mother's name without involving any responsibilities of leadership. Yet the interaction of the two systems of succession presumably has some reaction on the social structure. A man's sister's daughter who succeeds to her mother's mother's position becomes the man's mother and the man's mother's brother's sister. The man's own sister becomes his mother's brother's mother.[1] The effect of this presumably is to achieve some balance of power between a man and his mother's brother. By the rule of succession for women, a man's sister to whom he is tied by the closest possible ties of kinship, and on whom he is dependent for political success, becomes his mother's brother's mother, so forming a common link between two potentially opposed persons. By the same reasoning a man's sister's daughter who is part of his sorority-group and who is likely to desert her mother's mother's brother to go with her mother's brother if there is a conflict, by succession becomes the sister of her mother's brother's mother's brother, so forming a unifying influence within the lineage. This problem emerged after my fieldwork was completed so that I have no evidence to support these suggestions.

Among the men, because of the struggle for political power, the opposition of alternate generations is much stronger than among women. This emerges most clearly in the institution of marriage sureties.

The duties of the marriage sureties towards their wards are

[1] I am grateful to Prof. Gluckman who pointed this out to me.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

him. The woman in the meantime had run to Chiwalo's hut half a mile away. Here she complained to the chief that Mwanace wanted to kill her. Chiwalo refused to listen to her complaint and sent for Ali Kasunka. When he had come and explained the sequence of events, he continued saying that he would like to take the case to court. Chiwalo, who was Ali Kasunka's wife's father's sister's son (hence a classificatory younger brother) and whose henchman Ali Kasunka was, refused to arbitrate in the case but referred it to Kawinga. On the day of the case the woman's husband came back from the Army. The case was tried and eventually the court assessors awarded a damages claim of £3 to be paid by Mwanace to his sister. The husband, at the same time, said that he could not remain married to her because whenever he saw her he would think that she had slept with her brother and in court he gave Ali Kasunka a marriage termination payment. The tension between Ali Kasunka and his 'sister's son' did not end there however. When they got back to the village Ali Kasunka remonstrated with Mwanace saying, 'Are you not ashamed to have married your sister?' Mwanace said that he could not stand that sort of thing and went back to live uxorilocally.

A crucial point in this case history is that the women did not like Mwanace. Almost certainly there would have been a split in the village had the women had more confidence in Mwanace. The tension between Ali Kasunka and Mwanace, although the conflict is inter-generational, started, as it consistently does, from the relationships of a man to the women of his matrilineage. Without the support of the women, younger brothers or sister's sons are impotent against the power of their senior relatives. It is only when they can induce the women to follow them and to leave their rivals that they can found a new village and thereby begin to earn prestige. Therefore, although the men are the active agents in bringing about a physical act of fission, they are in fact only making manifest a situation which is latent within the lineage.

The position of the senior male matrilineal relative is of fundamental importance in questions involving segmentation. His position is seen most clearly in the dominant matrilineage, in which the name of the village is inherited. The Yao practise 'positional succession'. A man not only succeeds to his mother's brother's name but also to the position of the mother's brother in the social structure as a whole.[1] It follows that when the

4: Stannus D-5 (ca. 1909) 1910 FT7 Yao FT7 Marovi FR4

case *mwavi* might be administered; if adjudged guilty the accused would be burned on a pile of wood. M 695

Evidence is given without taking any oath; a false witness is not punished. M 696

Justice is occasionally summary. At Mponda's, after conviction of adultery with one of the chief's wives, a man's throat was cut on the spot. Drowning was the usual punishment with Mponda.

Punishments for all offences practically meant payment.

CUSTOMS, SALUTATIONS, ETC.

The correct salutation among Machinga Yao and Mdanja on meeting is clapping the hands, the hands in front of and at right angles to the body parallel to each other, thumbs against the fingers. The clapping should be continued for ten minutes after having passed; after passing a chief it should be continued for half-an-hour. M Y 576

Another form consists in slowly beating the breast with the right hand, the head slightly inclined forward. The lower in station makes salutation first to the higher, a man to a chief, a woman to a man; exception is made in the case of an old woman, who is saluted by the man. Scattered all over the country a raising of one or both arms is a common form of salutation, but is probably only a corruption of the military salute. M Y [559] [893]

Slapping of the nates or thigh with the right hand is also seen, among old men usually. In imploring mercy from, or on the first occasion of meeting, the chief, a man lies prone on the ground and catching the foot of the chief, puts it on his neck—a sign of absolute submission. Women kneel at the approach of a man. Words and expressions of salutation are few—*Mapo* (=heart) being the only old expression used. Now commonly one hears a word (sounding like *ndwi*) probably a corruption of good morning, and the Swahili greeting *Salaam* with the double hand-shake of Mohammedans. M Y [201] [562] [177]

A man returned to his village after an absence rests awhile, then his wife comes to him and kneeling greets him, *mapo*, her husband returning *mapo*.

Years ago, a man of any importance was received with firing of guns and shouting. A headman is received now with *Ntungulule*, the women wobbling their tongues in their mouths. Ashes are put on the head as a sign of *joy*. M Y [152]

In the morning the husband and wife do not greet each other, but in the village friends "give each other good morning" (=*Mapo*). On waking in the morning, a woman cracks all her joints (=*K'uliw' chala*). She then massages her husband and cracks the joints of his fingers. M Y [592] [596]

One man wishing to see another goes to his house, and squatting outside the door cries "*Ichu!*" three times (=there), at the same time clapping his hands. If no answer be given he goes away, even though he knows the man is within, no answer meaning that the inmate does not wish to be seen. If invited to enter he does so, the man of the house rises and gives him salutation. He makes small M 574 576

economic centre of Southern Nyasaland and much land has been alienated to Whites there. Liwonde area, which has only 30·7 to the square mile, has large parts that are unpopulated because of the lack of surface water on the escarpment of the Rift Valley.

This population is by no means homogeneous, tribally or linguistically, but culturally the tribes are all very similar. The Yao, Nguru and Nyanja, who comprise most of the population, live in villages under village headmen; marry uxorilocally; have similar practices and beliefs in sorcery and disease. Table II

TABLE II

TRIBAL COMPOSITION OF THE CHIEFDOMS: 1945

Chiefdom	Total Population	Percentages of Tribes			
		Yao	Nguru	Nyanja	Ngoni
Jalasi	40,287	81·3	12·4	5·9	0·2
Nyambi	7335	73·2	26·8	0·0	0·0
Kawinga	44,789	48·7	35·7	14·4	1·2
Liwonde	12,176	73·2	19·6	5·2	0·1
Malemia	12,448	73·1	9·6	13·7	1·6

Source: Nyasaland Census, 1945. Abstracted from the detailed returns at the District Commissioner's Offices at Zomba and Fort Johnston.

shows the tribal make-up of the five areas with which I am concerned. Three-quarters of the population in all these areas are Yao. In Kawinga area, in which non-Yao tribes are most numerous, only one-half of the people are Yao, but included in this area are the two Mpotola subordinate chieftains Ngokwe and Chikweo, whose followers are predominantly Nguru (42·7 and 55·7 per cent).[1] If we exclude these two chiefdoms, the proportion of Yao in the rest of Kawinga area is 55·6 per cent. Nyambi and Kawinga areas, lying as they do against the Portuguese East African boundary, have the greater proportion of Nguru. Within Kawinga area the concentration of the Nguru along the boundary is also shown. Chiwalo chiefdom, which lies to the west of Kawinga area, has only 15 per cent Nguru,

[1] It seems have that the Mpotola may have been enumerated as Nguru and Nyanja.

[text continues on p. 16]

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

K2 slightly more than the extreme southerly chiefdoms, Mposa and
S63 Chamba. As we have seen, half the population of the two most easterly chiefdoms is Nguru.

The Nyanja are concentrated mostly along the Shire River banks and around the Lake Shirwa shores. Most in Kawinga are at the north end of the Lake Shirwa or in Mposa at Lake Shirwa [1] and, according to the census, in Ngokwe in the extreme north-east. It is possible that in Ngokwe some of the Mpotola have been enumerated as Nyanja.

Although my study was of the Yao, I cannot exclude these other ethnic groups from it. The specific percentages must not be considered as exact reflections of the tribal make-up in the area. Though the villages of the three main tribal groups tend to be distinct, and intermarriage is not as great as might be expected, there are increasing numbers of children of mixed tribal parentage. There is some value in the figures, but we must take into consideration the general political situation in these chiefdoms. I enlarge upon this theme later. Generally speaking, however, the Yao have come in as invaders, while most Nguru have come in as immigrants. The Yao have greater prestige both in the eyes of the Whites and in the general structure of the chiefdoms. Many Nguru therefore, who have been in this area for some time, have come to call themselves Yao if they are asked, especially by a White man. This is especially true of the Mpotola people where they are living under Yao chiefs. The Mpotola are technically Nguru but most have lost their own language and speak only Yao. The Administration did not classify the Mpotola as a separate tribe in the Census and it is difficult to decide whether they were included as Yao or Nguru. Most of the Mpotola headmen I have met in Yao chiefdoms have called themselves Yao until they were prevailed upon to qualify their claim. Allowing for some discrepancies in the figures, the table shows nevertheless that numerically the Yao outnumber any other tribe in the area. In general, the other tribes are members of the chiefdoms and take part in most of the social activities which occur within them. I outline later the position of their headmen in the general political structure, but I wish to set out here some general notes on the tribal background of the non-Yao groups.

• S63 The term Nguru is applied to a large group of people who call

[1] 32 per cent of the population in Mposa's area is Nyanja.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

themselves Alomwe. These people came from that part of Portuguese East Africa immediately to the east of Nyasaland. They speak a group of dialects mutually intelligible and widely different from either Yao or Nyanja. Culturally and structurally they are similar to the Yao and Nyanja, practising matrilineal descent and uxorilocal marriage, and living in small groups of matrilineal kin. Their religious and mystical beliefs are also the same. Some of the linguistic groups that form this congeries are the Shirima, Kokhola, Metho, Thokwani, Ratha, Kuwa, Nahara, Marenje, Nyamwelo, Mihavani and Nikhukhu. These people have been migrating into Nyasaland over the last fifty years, and now predominate in the Cholo and Chiradzulu districts. 563

The Nyanja were the original inhabitants in these areas, but have been almost completely displaced by the Yao, except in Liwonde along the Shire River and in Kawinga along the Lake Shirwa shores. Linguistically they are more akin to the Yao than to the Lomwe, but their language is still unintelligible to the Yao. Culturally they appear to be similar to the Yao, and they have accepted certain Yao institutions such as the boys' initiation ceremonies (*lupanda*), and have been fitted into the social and political structure.

The Ngoni, of whom there are very few here, are concentrated on the south side of the Chikala Range, in the areas of Chamba and Mposa, who are subordinate chiefs to Kawinga. They are the remnants of various Ngoni armies that raided into Nyasaland during the last two or three decades of the nineteenth century. As far as I could ascertain they have adopted Nyanja ways and language.

Historical Background to the Modern Economic Situation

Nyasaland to-day, as part of the British Empire, is in the general world economic system, and the Africans in the tribal areas participate in this system, though not to the same degree as the White planters in the Shire and Dedza Highlands. If the Yao were ever a people who supported themselves by their agriculture alone, they had adopted a more complex economy long before the Whites came to Nyasaland. Later, when I discuss their historical background, I outline briefly the position 439

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

643 him about the laws it intends to introduce which affect his people. The Administration transmits new Ordinances and Regulations to the chief and he must then relay them to the village headmen. When it advises the chief of a new law it thereby advises the people of his chiefdom.

The Origin of Villages in Modern Chiefdoms

195 621 We have thus far been looking at the chiefdom as an organization of villages united by their common interests in and association with one chief. But the villages that compose the chiefdom are not all equally closely integrated into the political structure. This is most clearly seen against the background of how the modern chiefdoms came into being.

175 621 563 By the time that the 1912 Ordinance was introduced the social composition of the chiefdoms had undergone some change from what it was before the White conquest. Before the White conquest the Yao chiefs had overcome the indigenous inhabitants of Southern Nyasaland. Some of these had been allowed to remain in the area as subjects. Others were enslaved. There were some Nguru, Nyanja and Mpotola village headmen who had come to seek the protection of the Yao chiefs.

175 621 166 During the conquest, the territory was thrown into confusion, and villages fled in abandon from their own into neighbouring chiefdoms both in Southern Nyasaland and Mozambique. When the Administration allowed the chiefs to return, most of the important village headmen and their followers returned with them. Kawinga, for example, was allowed to return, not to Mount Chikala but to the area immediately to the north of it. He brought back with him most of his important headmen who had fled with him to the country of the Mpotola chief Nkanyela, in Mozambique. Jalasi was allowed to return from Portuguese Territory in 1906,[1] not to his mountain fortress Mangoche, but to a smaller hill Sakalwe some miles to the east. He gathered round him a few of his important headmen.

When hostilities ceased, there was a certain amount of internal readjustment. Some villages which had fled to other chiefdoms in the Protectorate started to come back while others stayed behind. To-day there are villages here and there which had left their chiefdoms in the confusion and had then joined their present

Total . . .	25	205	22	153	105	73	42	32	59	716

* In Ngokwe area, 39 villages are classified as Invaders who came into Nyasaland as refugees from the Portuguese military actions at the close of the nineteenth century.

easily the great majority of villages has come into the area since the White conquest. On the other hand, only 3·5 per cent are Aborigines. Just over a quarter (28·6 per cent) are direct descendants of the original Invaders or headmen of villages which have branched off from these. The remainder (67·9 per cent) are the Newcomers who have submitted themselves to the Invaders. Far more Newcomers came in during the decade following the White conquest than in any of the more recent decades.[1] We cannot argue directly from these figures that the greatest influx of Newcomers into Nyasaland took place before World War I. Newcomers in the more recent decades may be as numerous but may be passing out of the area more quickly, and therefore are not recorded in my survey. On the other

[1] Nguru immigration in 1908–27 was due to exceptional causes.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

622 hand, all villages tend to disappear in time. We should there-
●563 fore expect more of the headmen who came in during the
167 earlier decades to be forgotten, and the trend should be more pronounced than it is. In fact we know from other sources that immigration of the Nguru, who represent about one-half of the Newcomers, was greatest before 1930, and it is almost certain that the figures do reflect the change in the amount of Nguru immigration, and that the factors which may operate against the trend are not important. As a whole the set of figures suggests that immigration is slowly coming to an end.

622 The Aborigines are all Nyanja. Among the Invaders, 70·2 per
563 cent are Yao, 25·9 per cent are Mpotola, and the remainder 3·9 per cent are Nyanja and Nguru. The Mpotola Invaders are practically all in the Ngokwe and Chikweo areas, so that in the other areas (i.e. in Liwonde, Kawinga, Chamba and Mposa) the Yao represent 94·9 per cent of the Invaders; the remainder are Mpotola. Under Ngokwe and Chikweo who are Mpotola chieftains, 54·5 per cent (48 of 88) of the Invaders are Mpotola, and 37·5 per cent are Yao, and the remaining 8·0 per cent are Nyanja and Nguru. Among the 486 Newcomers, 35·8 per cent of the headmen are Yao, 15·4 per cent Mpotola, 43·8 per cent Nguru and 4·9 per cent are mainly Nyanja. In general, therefore, we may say that the Aborigines are all Nyanja; the Invaders are Yao in the major area and Mpotola in the other area; and the Newcomers are predominantly Nguru from Portuguese East Africa, though there is a fair proportion of Yao who have come from other Nyasaland districts.

622 There are significant differences among the three categories of
795 headmen in their religious affiliations. In general there are more
797 Moslems (71·8 per cent) among all headmen than Christians or Pagans. But there are more Moslems among the Invaders than among either the Aborigines or the Newcomers.[1] There are more Pagans among the Newcomers, but the proportion of Christians among the Aborigines and the Newcomers is about equal (25·0 per cent and 21·9 per cent). These differences in religious affiliations are consistent with the different historical backgrounds of the two groups. The Invaders are the descendants of the Yao slavers, who in the past had been in intimate

[1] Invaders = 91·1 per cent; Others = 63·9 per cent; Diff. of per cent = 27·2; S.E. of diff. = 3·7; C.R. = 7·2; $p < 0{\cdot}0001$.

2: Mitchell E-5 (1946-1949) 1956 FT7 Yao FT7

their councillors at the courts. If they were relatives of the chief it is almost certain that he would have mentioned them. We may assume then that the true proportion of unrelated headmen among the Newcomers is, as we would expect, very much greater than among the Invaders. 622 643

Of the total of 424 Administrative villages there were ten in which I did not record the formal relationship to the chief. In Table IX I set out the proportions in these categories among the Administrative village headmen, and there is no radical difference between these proportions and those for all village headmen. 622 643 602

TABLE IX

PROPORTIONS OF RELATIVES AND NON-RELATIVES AMONG ADMINISTRATIVE HEADMEN*

	Chief's Relatives						Non-Relatives	Total
	Direct			Clan				
	Mat.	Pat.	Aff.	Mat.	Pat.	Aff.		
Invaders . .	18 (13·2)	23 (16·9)	6 (4·4)	24 (17·6)	11 (8·1)	9 (6·6)	45 (33·1)	136 (99·9 %)

Total . .	18	32	18	44	22	21	238	393

$n = 6$; $\chi^2 = 90·5$; $p = 0·0001$.

* This table excludes the 21 Aborigines.

† Excludes 10 villages for which I have not recorded this information.

To summarize, we may characterize the Invaders as Yao, Moslems, and associates of their chiefs by historical connections and kinship ties. The Newcomers and the Aborigines on the other hand are of different tribes. They have more diverse religions, are not connected to the chiefs by kinship ties as closely as the Invaders are, and do not share with them the strong bond of being co-Invaders. It is in the struggle for prestige and rank that these bonds with the chiefs assume significance. 622 643 602 563 554

3:Stannus D-5 (ca. 1912) 1922 FT7 Yao FT7

Both before and after the introduction of guns, the Yao used spears, *lipanga*, and bows, *ukunja*. The spear is a five foot long throwing spear with metal head and wooden shaft. No shield was used. Bows and arrows are made from the wood of the *tesa* or *pimbinyole* tree. The string is made of tendon. A double-bellied bow called *ukunja wa mbama* was sometimes used, but, I believe, originally came from the Anyanja. The arrows, *mpomba*, have a metal arrow-head, and were often poisoned with *kombe*. 411

Hunting. The same weapons are used in hunting: the gun, the spear, and the bow and arrow. Smaller bows and arrows made with bamboo or reed shaft are also employed for shooting birds; one of the arrows has a blunt wooden head and serves to stun the bird. 224 411

From the Anyanja, the Yao learned the use of a harpoon for spearing the hippopotamus. The harpoon is a heavy spear-head of iron about eighteen inches long, attached to a rope and float. From the Anyanja, also, was learned the use of the falling block with spear for killing hippo. [177]

Elephants are caught in staked pits, and the larger antelopes are similarly trapped in pits with the sides sloping inwards towards the bottom, so that as the animal falls lower and lower with expiration, it is eventually suffocated. 224

Small buck are driven by dogs into nets set for long distances in the forest, and then speared or shot. Traps are also set for these smaller antelope and for many other small animals, rodents, etc. Birds are shot or trapped. Bird-lime is also employed. It is prepared from the juices of a number of trees by pounding the vegetable matter in water; the sticky mass so made is applied to sticks or poles. The sticks are placed near drinking places so that the birds alighting to take water become entangled. The poles are affixed to trees so that they appear to be the topmost boughs; this the native does, recognising the common habit of birds to sit on the very top of trees. The strength of the bird-lime is made according to the size of the bird he wishes to catch. [231] 223

Fishing. I am not sure how far the Yao is a natural fisherman. Not long ago he used only a many-pronged spear to catch his fish. Since then, he has acquired from the Anyanja the knowledge of making fish-traps and nets, and of using the fish poison. When the Yao came to live and intermarry among the Anyanja, there was one practice of the latter which they would not adopt and which caused a good deal of ill-feeling. A Mang'anja man coming home after fishing always used to prepare the fish and, leaving some ready to cook, he cooked others for his wife, bringing her water at the same time to wash her hands. After eating her own fish, she cooked the rest for her husband. A Yao would never cook for his wife. 226 [578 563]

Traps. The following is a list of some of the traps I have found in use among the Yao. The sketches will serve to explain their mechanism better than a lengthy description. Some are very ingeniously made, and most recall similar traps made in other parts of the world. 224

1. *Lukonji lwa litsuala*, a trap for the cane-rat (Pl. XIX, fig. 1).

2. *Lukonji lwa mbindi*, a trap for sharp-toothed gnawing animals, so called from

NOTES ON SOME TRIBES OF BRITISH CENTRAL AFRICA.

By H. S. Stannus, M.B.

[With Plates XXVI, XXVII.]

With reference to what follows, I deal with the inhabitants at the southern end of Lake Nyasa, more especially those near Fort Johnston. M Y 131

This people is very mixed, the original inhabitants, "Anyanja," belonging to Nyanja stock, one of the many branches of the Bantu, were many times overrun by invading waves from the east, Amangoche, Ajawa (Yao), Machinga, Maraninga, and their territory at this point was also raided from the other side by the Angoni. Though the Machinga may be said to have settled here and be the ruling spirit, the people are more Anyanja than anything else, and their customs, etc., though suffering by being those of a conquered race, yet have survived in great part. Those people are often called the Nyasa, only meaning the dwellers near the Lake, but it is a good collective name now. M Y 563

As far as possible these notes refer to Anyanja and their customs, and added matter and Yao elements have been eliminated; for this reason they will be found to differ in some ways from accounts given by others. M Y 128

Of the average native one may say that his physique is very fair; given regular work and food, conditions such as exist on some of the boats, he develops into a very fine muscular man. A man will carry between fifty and sixty pounds 40 miles in one day, or a number of days in succession covering half that distance per diem. A man could cover 50 to 60 miles in twenty-four hours. He can travel the whole day without food, and would do three or four days' march unloaded without food provided he had water to drink. M 147 482 481

Sensibility to pain is undoubtedly less than in the European, *i.e.*, the native can stand pain well if he be not afraid (*e.g.*, removal of sebaceous cyst without anæsthetic, extraction of teeth, etc.), the pain seems sometimes to be deferred, *i.e.*, in cases of tooth extraction appears to be perceptible a minute after the actual operation. An inflammatory condition seems to cause them intense agony, so that I would say they do not feel pain so acutely, but they do not bear it as well as a European. M 147 151

I would make another contrast, in fighting against disease a native will often go under from sheer apathy, whereas the white man keeps going by his nervous energy. I have seen the reverse in the case of a carrier who went through an M 147 157

643 and determine petty native cases was conferred
622 upon the headmen, though the District Commis-
175 sioner was supposed to seek their advice when
648 necessary.

Therefore, from the time of conquest a pattern of superordination of the Whites and subordination of the Africans was established and the indigenous political system remained largely without official recognition until the Native Authorities Ordinance was passed in 1933. The major change wrought by this Ordinance was that Native Courts were planned and instituted by the Native Courts Ordinance of the same year. At the same time a Native Treasury was founded.

IV. The Present POSITION

643 winga to Portuguese East Africa. They were
175 allowed to return later and they took up their
648 positions in an area roughly outlined in the early
131 part of this paper. At the same time, owing to military action by the Portuguese a certain number of refugees were crossing the border into the Lake Ciuta area of Nyasaland.

N.A. Liwonde (Yao)[2]	12,716	106	120	75	20	5	—
N.A. Nyambi (Yao)[2]	7,335	63[4]	116	73	27	—	—

631 that there is a relatively low proportion of Yao in the area whereas the Nguru are well represented. The term Nguru is applied by the Yao to any person from a certain part of Portuguese East Africa. It is indiscriminately applied to a number of tribes, though mostly to the Lomwe who form a congeries of related tribes.

Liwonde sub-district lies to the west of that of Kawinga and it has as its western boundary the Shire River. There is one S.N.A. in the area, Stora, appointed in 1940, but I could not visit him and there is no census information on this group. This new S.N.A. is a sister's son to the present Liwonde and actually stands in the direct line of succession to the name of Liwonde.

Nyambi sub-district is now a part of Fort Johnston District. It lies to the north of Kawinga's area and is small. The relationship of Nyambi to Liwonde and Kawinga has been noted above (p. 147). At the same time it was noted that Nyambi calls Jalasi "my child" (*mwanangu*). Jalasi, who had been a powerful leader, was recognized by the Administration as a superior chief in the area. The Nyambi who was living at the time resented the activities of a person who was genealogically inferior to him and therefore moved from the area he occupied then, to the present position which was under Kawinga at the time (about 1914). When the Native Authorities Ordinance was introduced Nyambi was made an N.A. independently of Kawinga. Recently (1947) the subdistrict under his jurisdiction was transferred from Zomba District Administration to Fort Johnston, largely at the request of the present Nyambi who said that he preferred to be with his own relatives (Jalasi's family).

563 The Table I shows that in some areas there is a considerable proportion of non-Yao under Yao chiefs. The reason for this is that the Yao came into these areas as conquerors, either eliminating the indigenous Nyanja or allowing them to remain there in a subordinate position. Later, from the turn of the century until about 1930, there was a gradual infiltration of Nguru peoples into Nyasaland from Portuguese East Africa. The presence of the different tribal

563 groups presents a problem to be considered but for the main purposes of this paper a brief comment is sufficient.

The Nyanja people who were allowed to remain in the areas, continued to live in their village communities in much the same way as the Yao did. In fact the Nyanja and the Nguru are so similar in culture to the Yao, that it was possible for them to fit into the Yao social structure fairly easily. For example, in Mposa's area Mbande and Mbeta are recognized by the local Yao sub-chief as important personages since they were the indigenous chiefs in the area before the Yao came in as invaders. Both, for example, have adopted the Yao practice of wearing a red band round the head to indicate rank. Both have the right to conduct the Yao indigenous initiation ceremonies. At one meeting I attended Mbande was allowed to sit in a chair while the only other person to do so was Mposa himself. This is a mark of honour since no commoner is allowed to sit in a chair in the presence of the chief.

[554]

[554]

In the same way the Nguru immigrants have come in small groups of matrilineal kin and have settled either in hamlets alone or set up small hamlets in close vicinity to kinsmen. Their headmen in turn have been absorbed into the general political structure though they have their own language and distinguishing cultural traits. Thus some Nguru initiate their boys according to their own *cidototo*, though others will allow their boys

V. THE POLITICAL STRUCTURE

642
177

The accompanying diagram is designed to summarize the main types of interaction that take place in the political structure of the three areas. Interaction between the social personalities in the political structure can be said to take place in reference to certain sets of values. One set of values is that which the Yao recognize and believe to belong to the White people. Another set of valuer they recognize and subscribe to as their own. A chief may interact with a village headman because he has broken a regulation which

[Text continues bottom of P. 151B]

563 to be initiated according to the Yao custom (*lupanda*). In general, the Nguru headmen are village headmen in the same way as the Yao are and they follow the same pattern in political behaviour.

563 At the moment, throughout the areas, the various tribal groups live in kinship clusters so 621 that under one Yao administrative headman there may be two or three unrelated Yao kin-groups and possibly one or two Nguru groups living quite separately. Though the population in the area as a whole is mixed, usually the village groups are tribally homogeneous. So far little inter-marriage has taken place. I shall not here analyse this situation, though it is politically pregnant. In many ways the Nguru immigrants [771] are more progressive than the Yao. Most Yao in this area are professed Moslems and do not attend the local schools which are Christian. However, the missions have been more successful among the Nguru and they are becoming more educated and advanced. A good proportion of the Government posts in the area is filled by Nguru for this reason. This is most significant in the context of the general situation as will become apparent in the description below. For the rest of the paper I shall consider the political structure as I see it, in terms of the social personalities in the structure, and the presence of these non-Yao groups is implicit in the rest of this analysis.

V. The Political STRUCTURE

648 642 the Administration has persuaded the chief to 177 pass and the full significance of which lies in a system of European values. These systems of values are foreign to each other in many features. Opposition between the two groups, White and Black, must arise if their behaviour is affected by different sets of values. The Yao, for example, believe that most deaths are caused by sorcery and claim the right to take punitive measures against the sorcerers. The Whites do not believe in this and prevent punitive action against people

648
642
177

who are, to them, innocent. The diagram has been divided obliquely to represent these two systems or fields of values. The division of the diagram into two parts depicts a major rift in local political relationships. While some political relationships, as say between village headmen, do not directly manifest this cleavage, in most, as say the chief with his subjects, though the Whites are not present in person, they are there in the context of the interaction. This will become evident as the analysis proceeds, but at this point it is sufficient to observe that the Whites and the White system of values are an integral part of the modern Yao political organization.

642

In addition to this, there is a hierarchy of status roughly conforming to the placing of the social personalities in the diagram, i.e., the White Administrator is of higher status than the African Civil Service which is roughly on the same level as the chiefs, but both are on a higher status than the Native Authority's clerk and officials are. The lines represent the main direction of interaction.

648
563

1. *The White Administrator and the African Civil Service*

By the White Administrator I mean the District Commissioners, Agricultural Officers and other Government officials who come into contact with the African populations, particularly in the rural areas. The social distance between a White person in general and the Africans is much larger than that between, say, an African chief and his meanest subject. Social interaction on an intimate basis cannot take place between chief and Administrator mainly because their relationship is dominated by the pattern of all South African territories, where White does not interact intimately with Black. I have already stated that not many Europeans come into the area. Those Whites that do come into the area are immediately accorded the status of an Administrative Officer and are apt to be thought of as such, though they may not be so. The Yao clearly recognizes that the Labour Recruiter is a different sort of person from the Missionary and both differ from District Commissioners, but

648 nevertheless the type of behaviour which is normal
563 between Labour Recruiter and African is dictated by the pattern of behaviour of African to Administrator. The Yao find it extremely difficult to separate out their attitudes to these different types of social personalities and the main reason is that they tend to categorize all White people into a general class "Whites" of whom the most common representative to them is the Adiministrator.

647 It is, however, impossible to consider the Administrator without reference to the African
648 Civil Service. I am using this phrase to mean those Africans who are in constant and direct interaction with the Administrator. I include the clerks, interpreters, messengers, policemen, and other intermediaries between the Administrator himself and the people. Probably of major importance is the interpreter who speaks directly to the people on behalf of the Administrator. In Southern Nyasaland the official language is Nyanja and officials are expected to learn it for their official business. Some of the Yao men
[191] in the area under study can understand and speak Nyanja but some men cannot and certainly most women cannot do so. Therefore, the tendency is for the Administrators to make use of interpreters in dealings with the Yao and other peoples in the area. The Administrators do not interact directly with various social personalities but do so rather through either their own civil service or through the N.A.'s Bureaucracy who, being educated, are able to speak and understand the official language. The Administrators are in direct interaction with their own Civil Service and only in indirect interaction with the other social personalities in the political structure.

The African Civil Service stands for a set of White values and for this reason is placed in the "Whites Values" part of the diagram.* The African Civil servant represents the District Commissioner or Agricultural Officer to the tribesman. The Tax Clerk, while he is collecting taxes, is part of the system of the Administrator. The Agricultural Capitao (African official) represents the Agricultural Officer to the villager when he instructs him in the building of contour ridges.

* [See p. 152 — Analyst.]

693 paid by the chief but still advise him, and retain
645 much of the prestige due to their rank, which is inherited. Others have been incorporated as court assessors though they may not actually take part in the duties. Some now combine both sets of duties and function both as councillors and court assessors. Some of the duties of both sets of officials, however, have been taken over by the court clerk and other court functionaries. Although the position of court assessor was part of the old tribal structure, modern court assessors see themselves as occupying a position in a structure largely of White fashioning. I once heard a court assessor when conducting an enquiry into a case of adultery, cut short the prolixity of a witness saying: "None of these long stories. We are conducting this case according to the custom of the Whites."

More illuminating still is the position that the court clerks occupy in the modern structure.
[212] They are differentiated from the vast majority of the population because they are literate. All of them have been educated, usually in a mission
[563] school. A high proportion of them are Nguru because more Nguru are Christian (hence educated) than Yao (see p. 151). Because he can read and write, the chief court clerk is the medium through which the chief expresses himself in writing and the medium through which he gets written information from the Administrators and others. The court clerk is therefore in a unique position of knowing all the business that comes into the chief's hand by letter. He, of course, must also write the replies so that he has a very good knowledge of what is going on in the territory. In addition, because of his education and knowledge of the ways of the White people the court clerk often makes a better councillor than the uneducated and naive traditional councillor does. Therefore in certain matters the court clerk, rather than the councillor, is the chief's most important adviser.

693 The various other officials have different
647 functions to perform, frequently of a semi-technical nature. There are sanitary inspectors, well inspectors, etc. The court sergeant who is present at the cases now performs many of the

chief that he must deal. If we give a present to a village it is to the village chief that we must give it'; and, 'It is when a man transgresses against his own village chief that *personal responsibility* is brought home to him. When he transgresses against another village, his own chief pays for him.'[1] The village headman accepted liability for offences committed by his villagers against members of other villages, but could punish his own villagers by fines and by putting them into slave-sticks. Within the village, according to MacDonald, 175 622

> The headman cannot make his villagers hoe his farm for him, or do such private work. Neither does he exact tribute from them. . . . Still he expects them not only to stand by him in war, but to support his government on all occasions, and to render special assistance in the trial of judicial cases. . . . He may pronounce a capital sentence, or order as large a penalty as the fine of four slaves—especially if he be a higher headman. But his judgements may be complained of by any of his free subjects (only such appeals are rare, unless by parties that want to leave his village altogether). His decision may be revised by some other headman, as the ruler of the village from which his own settlement broke off; but the ultimate appeal is to the chief of the country. While the village headman settles all smaller disputes without troubling the chief, he usually reports graver cases.[2]

The Chief and the Village Headmen: the Political Process

The village headmen in any particular area recognized the superiority of one of their number, the chief of the land (*asyene cilambo*). MacDonald classifies the headmen under one chief as follows: 175 565 622 643

1. Chief's blood relatives, usually called 'younger brother'.

2a. Settlers or refugees (*alambi*) who have come over with a large following from a hostile chief.

2b. Men who have gained the chief's favour by their services and been sent to occupy new spots in the kingdom.

'Other village headmen arise when a large village increases and sends forth smaller hamlets.'[3] All in the territory of a chief were integrated by a chain of authority. As he explains,

> 1. Headmen are under higher headmen and under the chief.
